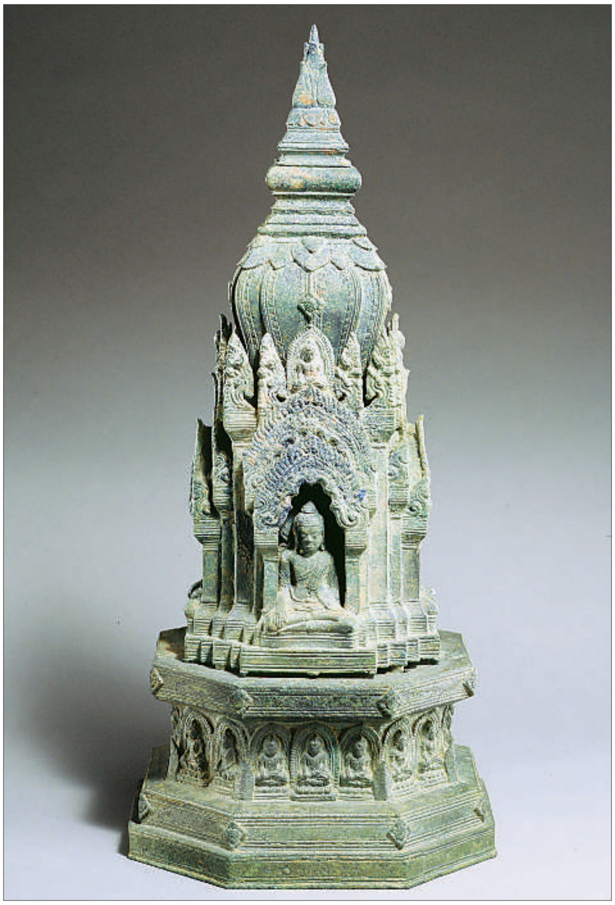
Sacred matter

# SACRED MATTER

Understandings of matter, of the physical, obdurate objects that make up the everyday world, vary considerably among religions. Matter is sometimes regarded as evil or void of real being, sometimes as infused with spiritual realities that animate it. In other traditions, matter and spirit are inextricably joined and the idea of a dualist split between the two is inconceivable. Likewise, the experience of matter as sacred varies from the idea of holy substance, to consecrated matter, to objects sacred to memory, to objects that are morally useful but in no manner sacred in the sense of being infused with an intrinsic power. But in every case the power or use ascribed to natural or artificial objects is inseparable from the cultural webs of meaning-making that invest them with the power to signify. It is in this sense that sacred matter of whatever kind helps construct the life-worlds of those who harness its power by using objects in their rites and ceremonies.

Perhaps the root of sacred matter in many if not all religions is the physical remains of saints, heroes, and founders. Bones, teeth, and hair endure far beyond the decay of flesh and viscera and are commonly prized as the material trace of the saint's existence. These items become relics when they are recognized as the locus of spiritual power and presence, and they therefore offer access to the holy figure for the sake of blessing. In many religions holy men and women are thought to acquire such an excess of merit that it forms a reservoir that may be accessed by prayer in the presence of the saint's relics. The relic becomes part of a metaphysical economy in which

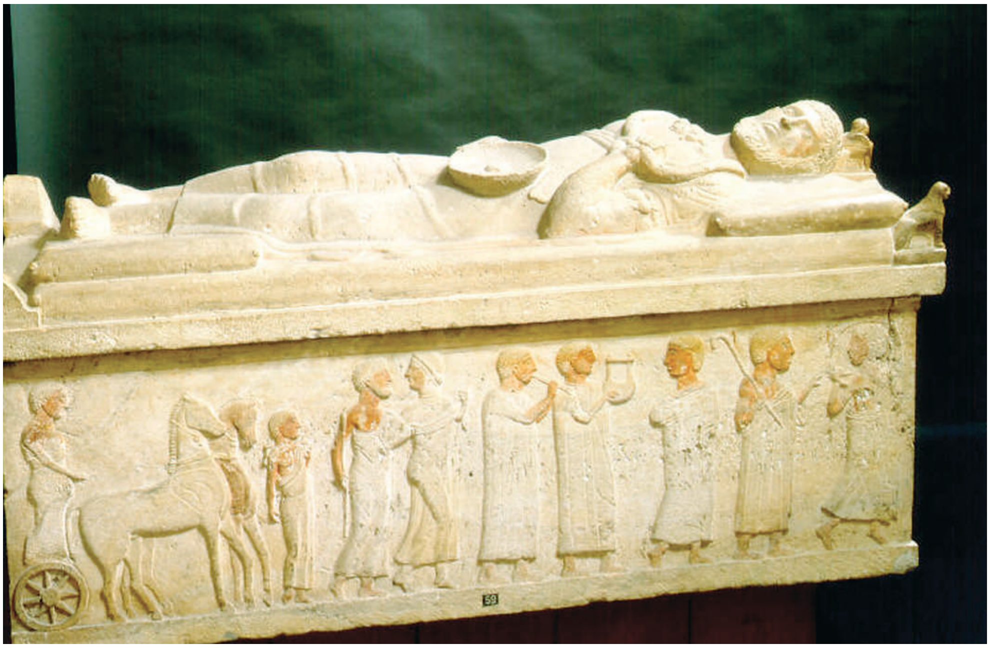
**(a)** Svayambhūnāth Stupa, west of Kathmandu, Nepal, during a celebration of the birth, enlightenment, and death of the Buddha. *[©Macduff Everton/Corbis]*



blessing is procured by pilgrimage, prayer, or penitential deed or offering. Within a few centuries of the Buddha's death a cult of relics of his body formed in India and Sri Lanka and moved with the faith as it spread north and south across Asia. The relics were placed in funerary mounds called stupas **(a)** and in portable shrines designed like stupas **(b)**. Stupas became major sites for local as well as international pilgrimage and were eventually surrounded by temple and monastery complexes and towns. Pilgrimage and relic veneration built their metaphysical economy over the commercial economies of local and far-flung populations, offering material well-being to craftsmen, townspeople, and religious communities.

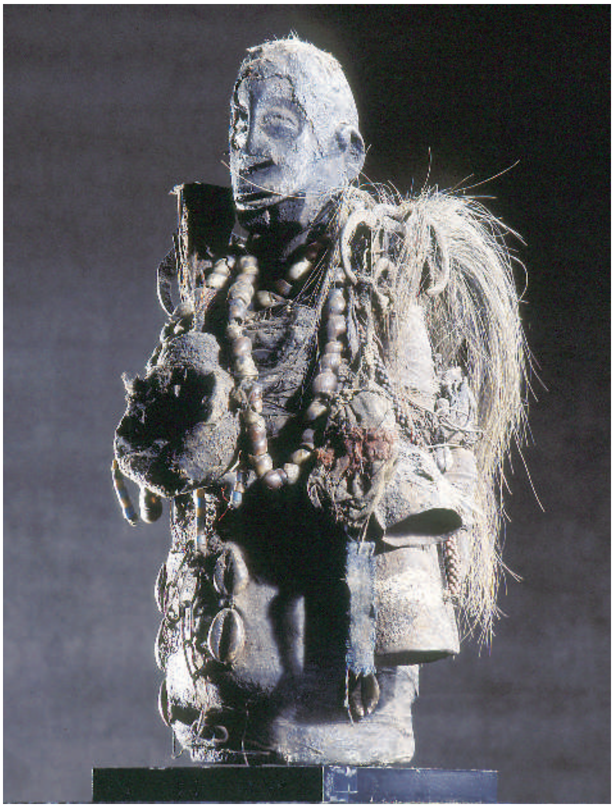
The veneration of relics likely originates in devotion to the deceased at the graveside and in the dynamics of proselytism as religions spread to new regions, where the convert's need for shrines and access to the founder and other saints is fueled by competition with indigenous rival religions. In the case of Roman Catholicism, the practice

**(b) LEFT.** Portable Buddhist shrine, thirteenth century, bronze, Thailand or Cambodia. The Metropolitan Museum of Art, Gift of Enid Haupt, 1993. (1993.387.7a-d) *[Photograph ©2001 The Metropolitan Museum of Art]* **(c) BOTTOM.** Etruscan sarcophagus made of carved travertine, from a tomb in Cerveteri, Italy, late fifth century BCE. *[©Scala/Art Resource, N.Y.]*



of relic veneration was energized by the cult of martyrs during the first centuries of the church's existence. But there is reason to believe that the cult of relics built on the ancient practice of ancestral worship and prayer to the dead to secure blessing in the present. Long before Roman Catholicism existed, inhabitants of the central Italian peninsula, the Etruscans, practiced an elaborate form of funerary cult in which the dead were interred in figural sarcophagi **(c)** in underground tombs carved as domestic interiors that collectively formed part of an ever-expanding necropolis, or city of the dead. The catacombs beneath Rome are their descendents.

Gothic cathedrals, much of the art, and many of the liturgical items of the later medieval Catholic Mass functioned as reliquaries to house the sacred items that had become especially important to European Christians, including the relics pilfered during the Crusades in Palestine and the Byzantine world. The bodily suffering and vindication of Jesus became the focal point of many different devotions, both cloistered and lay. Religious leaders and monastic orders endorsed devotion to saints and their relics and to the Eucharist. Elaborate monstrances **(d)** displayed the host or relics of Mary or other saints in crystal chambers housed in structures that depicted the church. Portions of the "true cross" were avidly collected in the Holy Land and brought back to cathedrals and chapels in Europe for veneration.



**(e)** **TOP.** A Fon *bocio* figure, a Vodou protective object, made of wood, hide, fiber, cowrie shell, and cord, southern Benin. *[©Werner Forman/Art Resource, N.Y.]*

Objects can also become sacred by ritual preparation, when spiritual power comes to reside in them. Such objects may be found or manufactured. Vodou and its West African precursor Vodun consist of ritual practices that are designed to solve problems of spiritual malevolence caused by one's misdeeds or the harmful intentions of another. Shamans or priests and priestesses are able to invest objects with a counteractive power **(e)**, or to enter trances or perform libations at altars **(f)**. Another Caribbean religion that originated in West Africa, Santería, fashions beautiful garments **(g)** for initiates and practitioners to wear when they are ritually transfigured into an *orisha*, one of the spirits of natural forces, such as thunder, fresh water, or the sea. The garments are worn only a few times, including during consecration as a priest and at one's burial.

Like the performative garment, masks are a familiar aspect of African and Oceanic as well as some Native

American religions. The mask and the costume it accompanies assume a sacred power and are kept by their owner, and even handed down among family members. The mask reproduced here **(h)** was worn by the Nootka people on Vancouver Island in dances in the spring and fall to invoke ancestral spirits. The founding myth of the group related that they descended from a family of eagles that flew from heaven and transformed themselves into human beings when they arrived. Accordingly, during the ceremonial dance the eagle mask transforms into a human face that is contained within. The annual performance of the rite connects the people with their primordial origins.

**(i)** Jewish worshipers parade Torah scrolls at the Western Wall in Jerusalem. *[©Peter Guttman/Corbis]*

But for some religions the idea of a spiritual energy inhering in material forms is repugnant because it confuses the divine with the merely phenomenal. Some Christians, Jews, and Muslims, as well as Sikhs and some Hindus and Buddhists, maintain that objects and rituals are merely convenient and time-honored forms of commemoration and the useful expression of devotion and communal solidarity. The very idea of sacred matter, substance endowed with power, conflicts with the stark distinction of spirit and matter of some religions, or the radical transcendence of the divine among others. For many Jews, for instance, liturgical objects **(i)** are prized for their association with orthopraxy, with strict adherence to the liturgical calendar and its prescription of ceremony. Some Christians, such as those of the Anabaptist and Puritan traditions, do not consecrate objects for use in worship spaces, and indeed, may not even set aside spaces to be exclusively used for worship. Any such privileging of objects threatens idolatry, the confusion of the divine with a created or material form.

Yet even within these traditions material forms can acquire a powerful quality that imbues their visual display with a meaning that is not merely symbolic, such as the

**(j)** Crystals, rocks, and statuary deposited at the center of a labyrinth in northwestern Indiana. ***[Photograph by David Morgan]***

display of the Torah scroll in Jerusalem **(i)**. For other religious traditions, material forms are an integral part of evoking divine power and communicating with forces that transcend the human sphere. Often these forms are found objects, as in the case of the rocks left by visitors to labyrinths **(j)** or other sacred spaces important to earth-centered spiritualities. Crystals are believed by many to possess healing powers in their vibrational energy, which is transferred to humans in therapies of placing stones on the body at the chakras, the seven centers of energy derived from yogic teaching.

Other powers are attributed to stones by priests and users. Joseph Smith, founder of Mormonism, used a seer stone, a small, brightly colored, perforated stone, in his practice of divining, looking for hidden treasures buried in the New York landscape. Smith is said to have claimed that possession of one such stone gave him the divine power of the all-seeing eye. He used the seer stones that he possessed to search for buried money, but it was on one such quest that he found the golden plates that he claimed were the source of the *Book of Mormon*.

Managing the sacred power of objects occupies a good deal of attention and ritual practice. Since they are

the locus of power, the objects must be stored properly and carefully prepared for use and display. Often, as in the case of the Australian Aboriginal sacred stone called *tjurunga* **(k)**, the object is kept from sight except when in ritual use since it embodies the totemic spirits of its owner and serves as the dwelling of creator spirits. The sacred stones are displayed during initiations and are used by elders to relate traditions to those undergoing initiation. Hindu priests dedicate themselves to the daily preparation of the stone lingam of Śiva **(l)** at temples around the world, where they ritually bathe the ancient stone in honey, milk, or fragrant water before covering it with a dress and mask in order for its presentation to the devout.

# D

**DACIAN RIDERS.** The so-called Dacian Riders were associated with a mystery religion of the Getae and the Dacians, peoples of Thracian stock who lived in ancient Dacia (roughly equivalent to modern-day Romania). The cult of the Dacian, or Danubian, Riders began to spread among Roman soldiers soon after 106 CE, when Dacia was conquered by Trajan and made a province of the Roman Empire. Traces of the cult have been found as far away as the Roman provinces of Gaul and Britain.

Numerous reliefs and gems depicting the Dacian Riders are extant. Of the 232 items catalogued by Dumitru Tudor (1969–1976), 60 were found in Dacia, 24 in Moesia Superior, 34 in Moesia Inferior, 47 in Pannonia Inferior, and 25 in Pannonia Superior. Most of the Dacian reliefs are made of marble. They were copied on a large scale in lead, a very expensive material whose use can be explained only by the magical purposes for which the images of the Dacian Riders were intended. Of the 90 lead copies extant, 44 were found in Pannonia Inferior.

The most ancient reliefs show only one horseman, whose iconography was influenced by that of the Thracian Rider. Later monuments show two riders at either side of a goddess whose principal symbolic attribute is a fish. Of the 31 pieces belonging to the one-horseman type, 18 were found in Dacia. The two-horseman type belongs to the later period of this cult, which flourished in the third century CE and declined in the fourth.

Besides the two horsemen and the goddess with a fish, the iconography of the monuments includes prostrated characters, attendants, and various symbols, such as the sun, the moon, stars, and numerous animals (including the ram, dog, lion, eagle, peacock, raven, cock, snake, and sometimes even the bull). Scholarly identifications of the goddess are widely divergent. The two horsemen have been identified with the Dioscuri by some scholars and with the Cabiri brothers by others. The Greek iconography of the Dioscuri has had a particular impact on that of the Dacian Riders, but all these scholarly hypotheses are more or less fanciful.

It is likely that certain beliefs and practices, borrowed especially from Mithraism, were added to a local Dacian cult and that these borrowings changed the cult into a mys-

tery religion. Although the myth of the Danubian Riders remains unknown, it is safe to state that it was based on some Dacian beliefs not shared by the Thracians south of the Danube. The two horsemen and the goddess were probably supposed to establish a link between three cosmic layers (heaven, earth, and underworld), as the partition of the reliefs into three registers seems to suggest.

Only three degrees of initiation were present in the mysteries of the Dacian Riders: Aries ("ram"), Miles ("soldier"), and Leo ("lion"). The first two were placed under the influence of the planet Mars, the last one under the influence of the sun. If we interpret the numerous animals depicted in the reliefs of the Danubian Riders as astrological entities, then we may surmise that the symbolism of this mystery religion was fairly complicated. Inscriptions are unusually scarce in number, short (especially those on gems), and indecipherable. Initiates in the mysteries identified their grade by badges and seals; for example, a gem of unknown provenance bears as its inscription the single word *leon*. In all probability, sacrifice of a ram played an important part in these mysteries.

## DACO-GETIC RELIGION SEE GETO-DACIAN RELIGION

## DADDY GRACE.

Charles M. "Daddy" (1881–1960) Grace was the founder of the United House of Prayer for All People of the Church on the Rock of the Apostolic Faith. A combination of Daddy Grace's grandiosity, his followers' intense devotion, and popular confusion between Grace and the controversial Father Divine caused outsiders to be skeptical of the church for decades. After Grace's death, new leadership made superficial changes that allowed the United House of Prayer to move away from its marginal status and closer to the American religious mainstream. Early in the twenty-first century, its long-term stability invites an appreciation of the strength of the institutional foundations designed and laid by Grace.

Daddy Grace was born Marceline Manuel DaGraca on the island of Brava, Cape Verde (at that time a Portuguese territory), off the northwest coast of Africa. With his parents and four siblings, Grace immigrated to Massachusetts at the turn of the twentieth century. In his first years in the New Bedford area, Grace held odd jobs such as picking cranberries, dishwashing, and selling patent medicines. During this time he also Americanized his surname and began using the first name Charles. Grace had two brief marriages, from which one daughter and two sons were produced. He died from heart ailments at the age of seventy-eight.

Grace was baptized Roman Catholic in Brava, but his religious calling in the United States led him to Protestant forms of worship, particularly the holiness movement. His early attempts to start a church were unsuccessful. He found himself rejected from the pulpit of a Massachusetts Nazarene church and was unable to gain a following in southern states despite extensive travels in his "Gospel Car." Grace finally met with success when he returned to Wareham, Massachusetts, opening his first House of Prayer in 1919, with himself as bishop.

Grace's church grew quickly in its first two decades, spreading both south and west to over a dozen states. Regardless of its growth, the church was commonly perceived as an invalid organization in which the leader exploited the working-class membership for profit. Journalists attempted to make a mockery of the bishop because his flamboyant personal style made for good press. Not only did he have long hair, painted fingernails, suits of bright colors, and jewels on his wrists and fingers, but he also traveled with an entourage that included a chauffeur, bodyguards, and occasionally lawyers and other assistants. Grace's visibility as a man of means and power was certainly one element of the House of Prayer's early growth, but it also contributed to outsiders' skepticism.

The United House of Prayer, though remaining nondenominational during Grace's lifetime, is squarely in the Pentecostal tradition. It is charismatic by nature, and Grace's theological teachings were based on the ideas of one God, one faith, one baptism, and one leader. Although popular lore holds that Grace claimed to be God, evidence demonstrates that this is a misconstruction. Instead, the church's theology focuses on the coming of the end-time and the importance of church leadership in helping to prepare. Worship services include demonstrations of the gifts of the holy spirit, as well as music led by their popular brass shout bands. The House of Prayer's traditions, including annual festive convocations and group baptisms (first on beaches, later by fire hose in the streets) added to its visibility during Grace's reign. There has long been an emphasis on member participation in church auxiliaries, which once included such clubs as the Grace Flower Girls, the Grace Willing Workers Club, the Grace Gospel Choir, the Grace Soul Hunters, and the Grace Soldiers. Beyond the church, members are expected to conduct themselves with conservative behavior, and are encouraged to read and understand the Bible.

Grace was the figurehead of the church, supported by a vast number of individual ministers and a set of General Council Laws prescribing overall operations. Grace was not accountable to anyone, and likewise the many ministers operating under him had a large degree of independence in their practices and teachings. After opening each new church or mission, Grace's involvement with individual Houses of Prayer was primarily based on financial management. Originally, Grace performed healings, but in time he encouraged people to believe they would heal because of their faith rather than because of his direct touch. As he aged, Grace took decreasing roles in religious services, though he frequently traveled to make church appearances. His sermons and other speaking roles were not as important as his mere presence at church events, and as a result very few records of his sermons have been preserved.

Grace's innovative investments and business ventures allowed the church to flourish, and this is where his genius was put to best use. Though often perceived by outsiders as using his working-class followers' donations for his own ends, Grace quietly used the money to build a wealthy corporate empire for the church. The church offered a pension fund for ministers and elderly members, as well as a small insurance plan. It owned several manufacturing businesses that generated revenue for the church corporation. Grace increasingly invested in real estate. For example, when he first opened a House of Prayer in Harlem in 1938, Grace purchased the headquarters of Father Divine's Peace Mission Movement and evicted them. This building was one of the first pieces of a trophy real estate collection that grew to include the El Dorado on Central Park West, two apartment buildings in the Sugar Hill neighborhood, a large swath of property on 125th Street in Harlem, and other mansions, apartment buildings, and businesses in places as varied as Los Angeles, Philadelphia, Detroit, Newport News, Washington D.C., and Havana, Cuba.

Following Grace's death in January 1960, the church experienced confusion over questions of succession to the bishopric and the extent of church assets. Several issues had to be resolved by the courts, and at least one splinter group formed. When the dust cleared, "Sweet Daddy" Walter McCollough (1915–1991) of Washington, D.C., was elected bishop of the multimillion dollar organization that included approximately one hundred Houses of Prayer nationwide. Under McCollough, congregants' attention was turned to issues of social justice, and church investments expanded to include projects that were of direct benefit to members, such as affordable housing and scholarship programs. McCollough's less ostentatious style of leadership helped move the House of Prayer closer to the mainstream of African American religion. Just as it was under Daddy Grace, the church today continues as a thriving, forward-thinking organization that provides an example of the harmonious mix of otherworldly theology with present-world practicality.

MARIE W. DALLAM (2005)

**DAGAN** (Dagān) was a West Semitic god, well known in ancient Syria and ancient Palestine. He is mentioned in texts from Ebla (Tell Mardīḫ, in Northern Syria) dating to the mid-third millennium BCE, in which his name occurs as part of theophoric anthroponyms with the element *Da-gan* or *Da-ga-an*. The logographic abbreviation BE (for *bēlum/ baʿalum;* lord) also occurs in texts from Ebla—both as part of personal names and independently as a deity present in diverse Syrian and Northern Mesopotamian towns. This BE has frequently been identified with Dagan. However, BE is most likely a divine epithet, which refers to Dagan only in some specific cases, primarily the BE of Tuttul (i.e., "the Lord of Tuttul" refers to Dagan), modern Tell Bīʿa, on the Balīḫ River. Outside Ebla, and also during the second half of the third millennium, Dagan is attested in texts from Mari (Tell Ḥarīri, Southern Syria), which had a temple devoted to this god, probably built toward the end of the third millennium, and Tell Beydar in the region of the upper Ḫābūr River. The mentions of the "King" of Terqa in early Mari documents also refer to Dagan ($^d$lugal *Terqa*, with the divine determinative $^d$ refers to DINGIR preceding the Sumerian word for king, *lugal*). In all these pre-Sargonic Syro-Mesopotamian texts (i.e., prior to c. 2340 BCE), the only clear attestations of Dagan are in personal names.

**SARGONIC AND UR III PERIODS.** During the Sargonic (c. 2340–2113 BCE) and Ur III periods (c. 2113–2004 BCE), Dagan appears in royal inscriptions of Mesopotamian kings, but always in a Syrian context and especially in personal names, as in previous periods. The only autochthonous Syrian mention of Dagan during these periods comes from a Mari inscription, in which he appears along with two properly Mesopotamian deities, Ishtar and Enki. In the Old Babylonian period (first half of the second millennium BCE), the figure of Dagan emerges as the most important deity in the pantheon of the Middle Euphrates region, and his name is abundantly attested in letters from Old Babylonian Mari, as well as documents from Terqa and Tuttul. Both at Mari and at Aleppo, Dagan appears as the recipient of funerary offerings. Moreover, he plays a role in prophecies and divination, especially extispicy (observation of the entrails of sacrificial animals). As in previous periods, Dagan is widely attested in theophoric personal names from the Middle and Upper Euphrates regions, as well as the Ḫābūr area.

**MIDDLE BABYLONIAN PERIOD.** In the Middle Babylonian period (second half of the second millennium BCE), Dagan is particularly well represented in texts from two Late Bronze sites: Emar (modern Tell Meskene), on the Middle Euphrates, and Ugarit (Ras Shamra) on the Syrian Mediterranean coast. In texts from Emar and smaller neighboring towns including Ekalte and Azu, along with the customary syllabic spelling of the name (*Da-gan*), one finds the logogram $^d$KUR, the determinative for divine names followed by the logogram KUR (mountain; land). This spelling may be an abbreviation of the epithet $^d$kur-gal (The Great Mountain), but it may also point to a chthonic nature of Dagan. The latter might be associated with a possible Indo-European etymology and with Dagan's funerary offerings. The most important religious festival in Late Bronze Emar, the *zukru* festival (related to the Semitic root **zkr*; to call, recall) was devoted to Dagan. Dagan also played an important role in most Emar rituals, as his temple seems to have been the epicenter of religious life in that city. An important corpus of mythological and epic narratives exists from Ugarit, in which Dagan is attested only in epithets of other gods (e.g, Ba⊂lu is "the son of Dagan") and in oblique references with no active role. On the other hand, in the ritual texts from Ugarit, Dagan is frequently mentioned and plays an important role.

**ETYMOLOGY.** In all these third and second millennium texts, Dagan appears as father of the gods and, along with his consort, Shalash, he belongs to the earliest generation of gods in the Syrian pantheon. In the first millennium, Dagan's name occurs as Dagon (Dāgôn) in the biblical historical narratives (with an expected *ā* to *ō* shift), in which he is designated a Philistine deity, with temples dedicated to him in Ashdod, Gaza, and probably Beth-Shan (*1 Sm.* 5:1–7; *Jgs.* 16:23; *1 Chr.* 10:10; *1 Mac.* 10: 83–84, 11:4).

Traditionally, three different Semitic etymologies of this theonym have been proposed: (1) the root **dg* (fish), which appeared already in Saint Jerome, the Talmud, and elsewhere, but which is now regarded as a folk etymology by most scholars; (2) the root **dgn* (grain; *dāgān*), with the expected fertility implications, but which works only in West Semitic and is likely to also be a folk etymology; and (3) the root **dgn* (cloudy, rainy), also bearing somehow a fertility connotation.

The latter possibility is not immediately evident, because the Semitic root in question (**dgn*) would seem to mean "cloudy, rainy" only in Arabic. Nonetheless, there is a related root in Syriac (a Christian Aramaic dialect) that occurs in a verb meaning "to be blind, to have blurry eyes" (*dgen*, with intransitive vocalization) and in nouns referring to ophthalmic maladies and blindness. The Arabic verb *dajana* means primarily "to be dusky, gloomy," as in *dujna*/*dujunna* (darkness) and *adjan* (dark). Nonetheless, Arabic exhibits occurrences of this root referring to rain or rainy conditions (*dajn*; heavy rain) and the Syriac cognate (*degnā, degānā*) has a distinctive secondary but frequent meaning concerning snow (packed snow).

Based on the problems posed by the aforementioned Semitic etymologies and the association of Dagan to the earth, an Indo-European etymology has been proposed for this theonym: *$d^he^hom$ (earth), as in Sanskrit *kam*, Greek *khthōn* (with metathesis), Latin *humus* (and probably also *homo*; terrestrial, human being), Tocharian *tkaṃ*, Hittite *tegan* (genitive *taknaš*), and perhaps even part of the name of the goddess Demeter (*Dēmētēr *Gdan-mátēr*, with *gd *$g^hd^h$ *$d^he^h$). As in most etymologies of proper names, tentative and speculative by nature, it is difficult to rule out this Indo-European hypothesis. Such an etymology would also match the possible linguistic identity of the Philistines.

## DAHOMEAN RELIGION SEE FON AND EWE RELIGION

## DAINAS.

In Baltic cultures, the songs known in Latvian as *dainas* and in Lithuanian as *dainos* deal with two fundamental cycles, the life cycle of humans and the festival cycle of the agricultural seasons. Although they are often referred to by the common designation *folk song*, this modern term is misleading, for the *dainas*, with their trochaic and dactylic meters, differ from the folk songs known to European scholars. The original Lithuanian *dainos* have to a great extent disappeared because of the influence of the European folk song, but Latvian *dainas* have survived in great numbers. About sixty thousand (not including variants) have been collected and published by scholars. Their content reveals that they were an integral part of daily agrarian life among Baltic peoples; as such, they bear directly on Baltic religion.

Regarding the etymology of the term, Suniti Kumar Chatterji has pointed out that

> the Baltic word *daina* had unquestionably its Aryan [Indo-Iranian] equivalent, etymologically and semantically, which is perfectly permissible. . . . An Indo-European root **dhi-*, **dhy-ei*, **dhei-*, meaning "to think, to ponder over, to give thought to," appears to be the source of the Vedic *dhēnā* and the Avestian *daēnā*. An Indo-European form **dhainā* as the sourceword can very easily and quite correctly be postulated. (Chatterji, 1968, pp. 69–70)

From the age of Vedic literature words derived from this source word deal with the following notions: speech, voice, praise, prayer, panegyric, and song. The Pahlavi *dēn* ("religion") developed into the Avestan *daēnā*, which, in turn, appears in modern Arabic as *dīn*, meaning "religion," specifically, orthodox Islam. These etymological derivations and semantic relationships suggest that *dhainā* is an ancient Baltic word that has retained the meaning of "song" through the years.

### LIFE CYCLE.

*Dainas* figure prominently in an individual's life cycle at three major points: birth, marriage, and death. Each of these events determines not only the content but also the form of the *dainas.*

**1.** In songs dealing with childbirth, the mother figure appears not only as the one who bears the child but also as the one who rears it and determines its fate. These *dainas* are characterized by their deep emotionality. This is particularly true of *dainas* dealing with the fate of foster children. *Dainas* sung directly after the birth of a child during the cultic feast (*pirtīžas*) in the sauna, the traditional place of birthing, have a special significance because of their cultic character. These *dainas* are devoted to the goddess of fate, Laima.

**2.** *Dainas* dealing with love, the selection of a partner, and marriage are rather different from those associated with birth. They are imbued with joy and contain erotic and sexual elements intended to chafe and mock others. Some of the songs are so caustic that the seventeenth-century bishop Paul Einhorn, having heard the wedding songs of Latvian peasants, failed to comprehend their deep religious and cultic character. He wrote in dismay in his *Historie lettice* in 1649: "Afterwards such improper, brazen, and flippant songs were sung without interruption, day and night, that even the devil himself could not have devised and put forth anything more improper and lewd." Yet such fertility *dainas* belong to the very old family cult.

**3.** The third group of life-cycle *dainas*, those dealing with death, are rich in content, representing the individual's preparation for death. Their cultic character becomes evident in songs that describe the bearing of the casket from the home to the cemetery, which was the site of the cultic feast. There a particular type of *daina* was sung to guarantee that the dead person would have a favorable relationship with the ruler of the grave and the realm of death, occasionally referred to as Kapu Māte ("grave mother").

### FESTIVAL CYCLE.

The second cycle includes *dainas* that describe the agricultural work routine and festivals. In their sequence they mirror the yearly cycle, including its holidays. The most important holidays are the summer and winter solstices. The commencement and conclusion of particular work phases also have an important place in the cycle. In the spring, when planting began, bread and meat were plowed into the first furrow. Similarly, the leading of the first cattle to pasture and the first horses to night watch were also observed as special events. All of these occasions were associated with sacral feasts under the leadership of the paterfamilias. Appropriate *dainas* were an integral part of these rituals. The commencement as well as the conclusion of certain jobs was observed, especially during the fall harvest. This was a time of relative abundance, and therefore the feasts were especially lavish.

### RELIGIOUS DIMENSIONS.

Both of these cycles mirror the framework of the Baltic peasant's life, which consisted of both hard work and joyous festivity, represented by work *dainas* and festival *dainas.* The peasants, in close harmony with nature, performed their tasks with songs that helped them to adhere to the rhythm of work. Festival *dainas*, whether of the first or second cycle, introduce another ancient element inherent in the name *dainas* itself: that of dance. The verb *dainot* really means "to sing and move rhythmically in a group," that is, "to dance" in the broadest sense of the word.

The great majority of *dainas* are songs describing various chores that have no specific religious content. Many describe nature, using explicit personifications of and metaphors for natural phenomena. A significant number of songs, however, do have a religious dimension, which can be explained by the significance of religion in Baltic daily life. Man's place in nature and his dependence on it forced him to ponder the basis of his existence and to determine his relationship with the forces of nature. The *dainas* are the clearest proof of this close relationship. Furthermore, because the source material relating to the religious life of the Baltic peoples is limited, the *dainas* represent an irreplaceable source for the reconstruction of this religious framework.

**DAIVAS.** The Iranian term *daiva* originally signified "god," as is shown in several occurrences of the word in the Avesta (Av., *daēva;* OPers., *daiva;* MPers., Pahl., *dēw*). Like the Vedic *deva* or the Latin *deus, daiva* may be related to the Indo-European root meaning "shine, be bright." In Zoroastrian Iran, however, *daiva* had a negative sense. Other terms were used to refer to divine beings, such as *baga* ("one who distributes"), *ahura* ("lord"), and *yazata* ("one worthy of worship"), while *daiva* was used to designate malefic or demonic powers. For that reason one speaks of a "demonization" of the *daiva* as a phenomenon characteristic of Zoroastrianism.

In all probability *daiva* acquired a negative value in the Iranian world because of the condemnation by Zarathushtra (Zoroaster) of traditional religion. The prophet of Ahura Mazdā propounded a faith and a doctrine of monotheistic inspiration, and the gods of ancient polytheism were repudiated as illusions or chimeras.

Later, after Zoroastrianism had reached a compromise with the older religious sensibility and with the various forms of polytheism that had spread throughout the Iranian world in the first millennium BCE, the *daiva*s were condemned not because they were considered, as Zarathushtra had seen them, the fruit of ignorance and superstition but because they were thought to be real demonic beings. The significance of *daiva* thus changed from "god" to "demon." In this later form of the religion, Indra, Saurva, and Nānhaithya—who had prominent positions in the Indian pantheon as Indra, Śarva, and Nāsatya—became archdemons. They were opposed, respectively, by the Amesha Spentas Asha, Khshathra Vairya, and Ārmaiti.

The Zoroastrian pandemonium is particularly rich. Among the most important *daivas* are Aēshma ("wrath, fury"), known throughout the Zoroastrian tradition; Apaosha ("dearth"), fought by Tishtrya, the *yazata* of the star Sirius; Astōvīdhātu ("dismembering of skeleton"); Būshyąstā ("sloth"); and Nasu ("corpse"), the demon of decay.

Zarathushtra's condemnation of the *daiva*s, intended as the rejection of the gods of polytheism, always remained, if only with the modification explained above, a characteristic feature of Zoroastrianism. In all its subsequent historical manifestations—as, for example, in an inscription of Xerxes at Persepolis—there are traces, even if partly distorted, of Zarathushtra's original teaching.

**DAI ZHEN** (*zi*, Shenxiu; *hao*, Dongyuan; 1724–1777), the most illustrious representative of the *kaozheng* school of evidential research and one of the leading philosophers of the Qing dynasty (1644–1911).

Dai Zhen was born into a modest mercantile family of Xiuning, Anhwei Province. He pursued his earliest education by borrowing books from neighbors. He learned very quickly and astonished his teachers by questioning the authority of everything he read. For a brief period he was apprenticed to a cloth merchant, but in 1742 he was sent to the home of a wealthy scholar and there studied with Jiangyong (1681–1762).

The scholar Jiangyong provided the formative influence during the first period of Dai Zhen's adult life. He was a specialist in the *Li ji* (Record of Rites) and in mathematics and phonology; the training he gave Dai Zhen in these areas became the foundation for much of Dai Zhen's later scholarship in the *kaozheng* tradition. This side of his education fitted him for the mainstream of Qing intellectual life. Jiangyong, however, also steeped his pupil in the philosophical systems of Song neo-Confucianism, inculcating the notion that practical scholarship and moral philosophy were the two legs of Confucian learning.

In 1754, Dai Zhen moved to Beijing, where he mingled with representatives of the *kaozheng* school of evidential research, notably Huidong (1697–1758). *Kaozheng* scholars accused the Song neo-Confucians of pointless speculation influenced by the Buddhists; such learning, they claimed, was disdainful of the practical problems of the real world and neglected solid scholarship in favor of subjectivism. Although during his early years in Beijing Dai Zhen defended the need to ask larger questions about morality and meaning, his writings published between 1758 and 1766 show the influence of *kaozheng* on his thinking. Some scholars interpret this period as a repudiation of his past philosophical training. It is certain that Dai Zhen brought to Beijing ideas that ran counter to the consensus of his peers, but whether his colleagues in Beijing convinced him to change his orientation, or whether he simply emphasized the nonphilosophical side of his work to gain acceptance at the capital, is a question that remains unanswered.

However superficial or profound his conversion to evidential research, Dai Zhen succeeded in gaining entry to the most illustrious intellectual circles. His publications in mathematics and waterway engineering earned him high renown. In 1773 the emperor appointed him to the elite board of compilers of the Imperial Manuscript Library (Siku Quanshu). He had risen to the very pinnacle of scholarship, yet even during his tenure at the library he continued to write books on philosophy.

His colleagues and peers tended to view his philosophical writings as incidental digressions from his scholarly work. Although one or two of his closest disciples recognized the importance of philosophy to Dai Zhen's intellectual life, none of them was able to carry on his philosophical work. Hu Shi revived Dai Zhen's philosophy at a memorial conference in 1923–1924, claiming that Dai Zhen, fully steeped in the empirical scholarship of his day, had attacked and transcended the errors and excesses of Song neo-Confucianism, laying the groundwork of a new Confucian vision. Others, notably Yu Yingshi, have argued that Dai Zhen's thought is in fact profoundly indebted to neo-Confucianism and is a continuous development of that heritage. Yu maintains that Dai was never fully converted to the antiphilosophical prejudices of his peers. He saw scholarship as a handmaiden to the larger task of philosophy. Arguing from Dai Zhen's letters and conversations, Yu contends that the real target of his philosophy was not the Song school, but his narrow and pedantic contemporaries in evidential research.

Dai Zhen's philosophy was based on a monism of *qi* ("ether"). He argued against the Song neo-Confucian distinctions between metaphysical and physical, between heaven-endowed nature and material nature. Such dualism, he claimed, led Confucians to neglect the empirical world and to believe that there was in human beings a dichotomy between nature and feelings. On the grand scale, Dai argued that the Dao was nothing other than the orderly patterns of the movements of ether; it was not a metaphysical principle. Analogously, he held that the realization of human nature was nothing other than the orderly patterns of one's feelings. As the sages had channeled the floodwaters to restore the order of Dao in the world, so feelings, properly channeled, are the manifestations of human nature. Human life in the material world is made up of feelings or response. When feelings are healthfully expressed and fundamental needs satisfied, both the body and *xin*, or mind and heart, of the person can be healthy and whole. To channel feelings and understand the order and movements of ether, the mind must weigh (*quan*) its perceptions and responses carefully. Weighing requires accurate and informed perceptions that take account of all the evidence and, carefully comparing the evidence, come to a balanced response.

An organic connection ran between Dai Zhen's scholarship and his philosophy. Only the former aspect of his work was appreciated during his lifetime, whereas the latter area is the subject of continued debate among Confucian scholars.

## BIBLIOGRAPHY

Although during his lifetime Dai Zhen was best known for his essays on mathematics, waterworks, and phonology (Liang, pp. 58–59), he is today highly regarded for his philosophical writings. His *Yuan shan*, composed in 1763 and revised in 1776, has been translated by Cheng Chung-ying as *Dai Chên's Inquiry into Goodness* (Honolulu, 1971). In it Dai developed his monism of ether and his views of human nature and feelings. *Meng-zi zi i su cheng* (Elucidation on the meaning of words in Mencius) in 3 *chüan* (Beijing, 1956) was composed in 1769, but revised during his final years at the Imperial Manuscript Library. The *Elucidation* is his most systematic philosophical work and grounds his monism and his view of human nature in the writings of Mencius.

Fang Chao-ying has written a very useful biography of Dai Zhen in *Eminent Chinese of the Qing Period, 1644–1912*, vol. 1, edited by Arthur W. Hummel (Washington, D.C., 1943), pp. 695–700. Regarding the thought of Dai Zhen, Hu Shi's *Dai Dongyuan di zhexue* (Shanghai, 1927) makes the case that the originality of Dai's philosophy lays the groundwork for a new Confucian school. Yu Yingshi's *Lun Dai Zhen Yu Chang Xuecheng* (On Dai Zhen and Chang Xuecheng; Hong Kong, 1976) argues that Dai's thought develops organically out of his deep knowledge of the neo-Confucian tradition and in dialogue with the concerns of the greatest minds of the *kaozheng* school. Hou Wai-lu, in volume 5 of his *Zhongguo sixiang tongshi* (Beijing, 1963), pp. 430–464, provides a lucid analysis of Dai Zhen's thought and a succinct account of the twentieth-century revival of his philosophy.

Three English-language works provide a brief introduction to Dai Zhen's philosophy. Cheng Chung-ying discusses the philosophical system in the introduction to his translation (above). Liang Qichao provides an appreciative introduction to Dai's thought and scholarship in *Intellectual Trends of the Qing Period*, translated by Immanuel C. Y. Xu (Cambridge, Mass., 1959), pp. 54–62. Fung Yulan provides a critique of his philosophical position in *A History of Chinese Philosophy*, vol. 2, 2d ed., translated by Derk Bodde (Princeton, 1953), pp. 651–672. Finally Yu Yingshi's article "Some Preliminary Observations on the Rise of Qing Confucian Intellectualism," *Tsing-hua Journal of Chinese Studies*, n.s. 11 (1975): 105–146, provides a larger picture of the rise of evidential research that shows that Dai Zhen's moral philosophy motivates his evidential research.

JUDITH A. BERLING (1987)

**DAKHMA.** The Iranian term *dakhma,* which probably originally signified "tomb," seems to be derived from the Indo-European root **dhṃbh,* "bury" (Hoffmann, 1965), and not from *dag,* "burn," as some scholars have proposed. It is occasionally used in the Avesta with a negative meaning, insofar as the burial of bodies was condemned: the funeral rites adopted by the Zoroastrian community (and which were already practiced in priestly circles in the Achaemenid period, as we know from Herodotus) were designed to avoid scrupulously any contamination of the earth, fire, and water and can be traced to earlier practices widespread among the nomads of Central Asia. These—as we learn from the *Vendidad*—prescribed that corpses, considered impure, be exposed to vultures so that the bones could be cleansed of flesh. Once they were purified of humors and putrefying flesh, the bones were placed in special ossuaries. According to Strabo, the exposure of corpses was also practiced in eastern Iran during the Parthian period.

Later, *dakhma* became the technical term for the "towers of silence," the buildings used for the rites of exposure of the corpses, whether in Zoroastrian communities in Iran or in Parsi communities of India. The modern translation "towers of silence" seems to have been used for the first time by R. Z. Murphy, Oriental translator for the British government at Bombay (Modi, 1937).

The *dakhma,* which continues to be used today, although in more limited forms, is a circular tower, constructed of stone and often located on a hill. An iron door opens onto a large platform consisting of three concentric circles. The first and largest is for the bodies of men; the second, in the middle, is for those of women; and the third is for those of children. After the corpse has been exposed and reduced to a skeleton, the bones are put in a large, deep hole at the center of the *dakhma.*

Zoroastrian ritual attaches great importance to funerals, which are consequently very detailed and complex, as well as meticulous in their purificatory practices. Equally complex are the rites for the consecration of the *dakhma,* which consist of ceremonies for the excavation of the site, for the foundation, and for the consecration itself.

***Translated from Italian by Roger DeGaris***

**DALAI LAMA,** title of the spiritual and formerly political leader of the Tibetan people, is a combination of the Mongolian *dalai* ("ocean"), signifying profound knowledge, and the Tibetan *blama* ("religious teacher"). The title dates from 1578 CE, when it was conferred by Altan Khan of the Mongols upon Bsod nams rgya mtsho (1543–1588), third hierarch of the Dge lugs pa school of Tibetan Buddhism, commonly called the Yellow Hat sect. The title was applied posthumously to the two preceding hierarchs, Dge 'dun-grub pa (1391–1475), founder of Bkra śis lhun po (Tashilhunpo) monastery near Shigatse in Gtsaṅ province, and Dge 'dun rgya mtsho (1475–1542), founder of the Dalai Lama's residence in 'Bras spung monastery near Lhasa in Dbus province. After 1578 the title was given to each of the successive reincarnations of the Dalai Lama. The present Dalai Lama is fourteenth in the lineage.

Incarnation (Tib., *sprul sku*), the manifestation of some aspect of the absolute Buddhahood in human form, is an ancient doctrine and one common to various schools of Mahayana Buddhism, but the concept of the reincarnation *(yaṅ srid)* of a lama is unique to Tibetan Buddhism. The concept emerged in the fourteenth century in the hierarchic lineage of the Black Hat Karma pa and was soon adopted by the other Tibetan schools.

From the inception of the institution, traditional procedures for discovering the rebirth of a Dalai Lama, similar to those used for other reincarnate lamas, were followed. Indicative statements made by the previous Dalai Lama during his lifetime, significant auguries surrounding his death and afterward, and meditative visions by special lamas were recorded and interpreted as guides to finding his rebirth. In time, but no sooner than nine months after the death of the previous Dalai Lama, the people began to expect reports of an exceptional male child born in accordance with various omens. Such a child, usually two or three years old when discovered, was subjected to tests to determine physical fitness, intelligence, and the ability to remember events and objects from his previous existence. If more than one likely candidate was found, the final selection was made by drawing a name from a golden urn. Once the true reincarnation was determined, he was enthroned in the Potala palace as the Dalai Lama. The monastic education of a Dalai Lama, directed by learned tutors of the Dge lugs pa school, occupied his time for years. When he attained his majority, at about eighteen years of age, he assumed the religio-political power of the office of Dalai Lama.

In the beginning, the religious power of the Dalai Lama was limited to the monastic members and lay patrons of the reformed Yellow Hat school. By the middle of the sixteenth century, religio-political power in Tibet was unevenly divided between the Red Hat Karma pa, supported by the lay king of Gtsaṅ, and the Yellow Hat Dge lugs pa, patronized by lay princes of Dbus. The third hierarch of the Yellow Hat school was subsequently invited to Mongolia by Altan Khan, who gave him the title Dalai Lama. When the Dalai Lama died in Mongolia, his reincarnation was discovered to be none other than the great-grandson of Altan Khan himself. The fourth Dalai Lama, Yon tan rgya mtsho (1589–1617), is the only one in the lineage ethnically not a Tibetan. Escorted from Mongolia to Lhasa, he was enthroned in the Dalai Lama's residence in 'Bras spung monastery. Recognition of this Mongol prince as the reincarnation of the Dalai Lama thereafter bound the Mongols by faith to the Yellow Hat school, and in time they were to protect it militarily from its enemies.

The power struggle in Tibet between the Red Hat Karma pa and the Yellow Hat Dge lugs pa continued to escalate in favor of the Red Hats and the lay king of Gtsaṅ. Finally in 1642, at the invitation of the fifth Dalai Lama, Nag dban rgya mtsho (1617–1682), Gu śrī Khan of the Mongols led troops into Tibet, defeated the Red Hat opposition, and executed the lay king of Gtsaṅ. In effect Gu śrī Khan had conquered Tibet, but true to his faith, he presented the country to the fifth Dalai Lama as a religious gift. Thus the Dalai Lama became the religious and political head of Tibet. Because he was a monk, a civil administrator was appointed to handle the day-to-day affairs of state.

After the enthronement of this Dalai Lama, a prophetic scripture was discovered. It revealed that the reincarnate Dalai Lama was also an incarnation of the Bodhisattva of Compassion, Avalokiteśvara (Tib., Spyan ras gzigs), traditionally regarded as the patron bodhisattva of Tibet. The relationship between the noumenal Avalokiteśvara and the phenomenal Dalai Lama was attested by symbolism. According to Buddhist doctrine, the mystical abode of Avalokiteśvara is a mountain called the Potala; so the fifth Dalai Lama ordered a massive fortress, also called the Potala, to be built on a mountain in the Lhasa area. Begun in 1645, the Potala at Lhasa served as the palace of the Dalai Lama for more than three hundred years.

The most common Tibetan prayer is the six-syllable "Oṃ maṇi padme hūṃ." Printed on prayer flags, contained in prayer wheels, carved repeatedly in wood and stone, and chanted daily by Tibetan Buddhists, this is the vocative mantra in Sanskrit of Avalokiteśvara. In view of his relationship to the Dalai Lama, the six-syllable mantra symbolically serves at once as an invocation to both the noumenal and phenomenal manifestations of the Bodhisattva of Compassion. Because of the belief that the Dalai Lama is an incarnation of Avalokiteśvara as well as a reincarnation of his predecessor, he is frequently, but incorrectly, called the "God-King" of Tibet in Western writings.

The fifth Dalai Lama was a learned scholar and the author of many texts, including a history of Tibet. During the forty years he was head of state, the Mongols helped to protect his newly established government and to expand its territorial control. In recognition of the important role he played in religio-political history, he is referred to in Tibetan literature as the Great Fifth.

The death of the fifth Dalai Lama was kept secret for fifteen years by the civil administrator for political reasons. His reincarnation, Tshaṅs dbyaṅs rgya mtsho (1683–1706), was discovered in due course but was not officially acknowledged as the next Dalai Lama until 1697. Unlike the monastic training of his predecessors, who had been publicly enthroned and tutored as children, that of the sixth Dalai Lama was not only kept secret but was apparently less than strict. Already in his teens when enthroned in the Potala, he soon gained notoriety for his addiction to wine, women, and song. Censure caused him to renounce his vows as a monk in 1702, but he remained in the Potala as the Dalai Lama. Finally in 1706, he was deposed by Lha bzaṅ Khan, a great-grandson of Gu śrī Khan, and deported to China; he died enroute. The sixth Dalai Lama is perhaps best remembered for sixty-two four-line verses, commonly referred to as his "love songs." A recurring theme in his poetry is the psychophysiological conflict between his monastic obligations as the Dalai Lama and his passion for mundane pleasures.

After the deposition and death of the sixth Dalai Lama, Lha-bzaṅ Khan became undisputed ruler of Tibet. He enthroned a puppet in the Potala, but the Tibetan people refused to accept him as the Dalai Lama. Instead, a boy born in eastern Tibet was recognized as the true reincarnation. Owing to the unstable situation in Lhasa, the seventh Dalai Lama, Bskal bzaṅ rgya mtsho (1708–1757), was taken to Kumbum monastery in the Kokonor region for safekeeping. In 1717 Mongols from Dzungaria, in support of the seventh Dalai Lama, invaded Tibet and killed Lha bzaṅ Khan. The puppet Dalai Lama was deposed and later deported to China. The seventh Dalai Lama was escorted to Lhasa by a Manchu imperial army and enthroned in the Potala in 1720.

A significant change was made in 1721 in the structure of the Tibetan government. The office of the civil administrator, which had concentrated political power in one pair of hands, was abolished and replaced with a council of four ministers collectively responsible for the secular branch of the dyadic hierocracy.

The death of the seventh Dalai Lama in 1757 led to the creation of a new government position. The office of the Dalai Lama had become institutionalized by then, and there was no question but that his reincarnation would succeed to his position of ruling power. Thus, the death of a Dalai Lama meant an interregnum of some twenty years, during which his reincarnation had to be discovered and educated, and his majority attained before he would resume power. During that period, another reincarnate lama of the Dge lugs pa school was appointed regent to rule Tibet on behalf of the minor Dalai Lama. Reluctance of successive regents and their supporters to hand over power each time a Dalai Lama reached his majority is blamed, perhaps unjustly, for the fact that the eighth Dalai Lama ruled only for a few years, the ninth and tenth died young without assuming power, and the eleventh and twelth Dalai Lamas ruled only for short periods before their death.

The thirteenth Dalai Lama, Thubbstan rgya mtsho (1876–1933), assumed full power in 1895. He survived an attempt on his life by his former regent, who purportedly resorted to witchcraft in hopes of furthering his political ambitions. During his long reign as head of state, the thirteenth Dalai Lama was forced to flee to Mongolia in 1904 to escape British troops invading from India. He spent years traveling in Mongolia and China. Not long after his return to Lhasa, he was again forced to flee early in 1910, this time to India to avoid the invading Chinese forces. The Chinese revolution of 1911 that overthrew the Manchu dynasty and established the Republic of China also marked the end of Manchu domination of Tibetan affairs. The Manchu imperial garrison at Lhasa, which had been set up early in the eighteenth century, was deported to a man by the Tibetan government. From 1913 until his death in 1933, the thirteenth Dalai Lama was the head of an independent government. Living in exile in British India motivated the thirteenth Dalai Lama to implement various reforms in Tibet to improve the welfare of his people. His importance in Tibetan history can be compared with that of the Great Fifth Dalai Lama in the seventeenth century.

The fourteenth Dalai Lama, Bstan 'dzin rgya mtsho, was born in 1935 of Tibetan parentage in the Chinghai province of China. Two other likely candidates were also found; but the one from Chinghai successfully passed all the tests, the omens were in mystical agreement, and he was confirmed as the true reincarnation by the State Oracle of Tibet himself. The Chinghai candidate was duly enthroned in the Potala at Lhasa in 1940. During the next decade, half of which was taken up by World War II in Asia, the young Dalai Lama was educated and prepared for the time he would assume his role as religio-political ruler of Tibet.

The invasion of eastern Tibet late in 1950 by forces of the People's Republic of China precipitated the empowerment of the fourteenth Dalai Lama when he was just fifteen years old. He was escorted to a village near the Indian border to avoid capture by the Chinese. In 1951, an agreement was reached between the Tibetan government and the Peking regime, and the Dalai Lama subsequently returned to Lhasa.

In 1956, the Dalai Lama and the Panchen Lama, the high-ranking reincarnate lama of the Yellow Hat monastery of Bkra śis lhun po, were invited to India to attend the Buddha Jayanti, a great celebration marking the twenty-five-hundredth anniversary of the birth of the Buddha. After the Dalai Lama returned to Tibet, however, the constrained political situation there continued to deteriorate, and in March 1959 the Tibetan populace revolted against the Chinese regime in Lhasa. The Dalai Lama fled to India. That month the Chinese abolished the traditional Tibetan government, ending over three hundred years of hierocratic rule by the Dalai Lama, incarnation of Avalokiteśvara, Bodhisattva of Compassion.

The present Dalai Lama continues to live in exile in India. He has traveled internationally, visiting various Asian countries as well as continental Europe, the United Kingdom, and the United States. The leaders of two great religious traditions met when the fourteenth Dalai Lama of Tibetan Buddhism was welcomed in the Vatican by Paul VI in 1973 and by John Paul II in 1979.

## BIBLIOGRAPHY

The only book dealing with the first thirteen Dalai Lamas in some detail remains Günther Schulemann's *Die Geschichte der Dalailamas,* 2d ed. (Leipzig, 1959). Charles A. Bell's *Portrait of the Dalai Lama* (London, 1946) is a biographical sketch based on the author's personal friendship with the thirteenth Dalai Lama, but part 2 of the book explains what a Dalai Lama is and how he is discovered and educated. A scholarly listing, but with basic dates and data only, of all fourteen Dalai Lamas, as well as the regents who successively served them, can be found in Luciano Petech's "The Dalai-Lamas and Regents of Tibet: A Chronological Study," *Tuoung bao* (Leiden) 47 (1959): 368–394.

English translations of three books by the fourteenth Dalai Lama, Tenzin Gyatso, are recommended. His autobiography, *My Land and My People* (New York, 1962), is an interesting narrative of his selection, education, and experiences. The *Opening of the Wisdom-Eye and the History of the Advancement of Buddhadharma in Tibet* (Bangkok, 1968) and *The Buddhism of Tibet and the Key to the Middle Way* (New York, 1975) provide lucid expositions of the fundamental philosophical teachings of Tibetan Buddhism that must be mastered by a Dalai Lama.

Also recommended are David L. Snellgrove and Hugh E. Richardson's *A Cultural History of Tibet* (New York, 1968), Rolf A. Stein's *Tibetan Civilization* (Stanford, Calif., 1972), and Tsepon W. D. Shakabpa's *Tibet: A Political History* (New Haven, Conn., 1967). Each of these works contains an excellent bibliography.

TURRELL V. WYLIE (1987)

## DAMASCENE, JOHN SEE JOHN OF DAMASCUS

**DAMIAN, PETER** (1007–1072), also known as Pier Damiani; Italian author, monk, cardinal, doctor of the church, and Christian saint. Born in Ravenna, Damian acquired his training in the liberal arts, his superior command of Latin, and his knowledge of Roman law at Ravenna, Faenza, and Parma, where an urban culture survived. Ravenna, capital of Romagna and the old Byzantine exarchate, regained importance through the Ottonian revival. Throughout his lifetime, Damian retained ties with Ravenna's civil and clerical circles.

In 1035, when already a priest and teacher, he changed careers to join the disciples of the extreme ascetic Romuald (d. 1027) in the wilderness at Fonte Avellana, a hermitage near Monte Catria in the Marches. Damian is reticent about his conversion, but it is known that it was not sudden. *Vita Romualdi*, Damian's first datable work (1042), is as valuable for its view of eremitical life as the apex of Benedictine observance as it is as a source for the life of Damian's revered mentor. Chosen prior in 1043, Damian turned the colony into a stable community with a written rule, a library, and a temporal base, and saw it grow into a widespread congregation.

Damian's conviction that his pursuit of evangelical perfection did not exempt him from public service helped him cope with an important challenge of his day, namely the reform of the church, appeals for which mounted from outside monasteries, from Emperor Henry III, from Archdeacon Hildebrand (later Pope Gregory VII), and from others. A rare insight into the mystery of the church as the union of every member in Christ complemented his strong support of its hierarchical structure in the Roman tradition. His collaboration with the popes began under Leo IX (1049–1054) and was closest with the moderate Alexander II (1061–1073). Damian became cardinal bishop of Ostia in 1057, carrying out delicate missions in Italy, France, and Germany. After reconciling the archbishop of Ravenna with the Roman see, he died at Faenza, where his cult began.

The flow of writings from Damian's pen, matching his tireless activity in the church, includes 175 letters, small tracts, some 50 sermons, saints' lives, prayers, hymns, and poems. His efforts at reform, based on the norms of church law, reflect the issues of his times: clerical immorality (*Liber Gomorrhianus*), theological problems raised by traffic in church offices (*Liber gratissimus*), and political-ecclesiastical strife (*Disceptatio synodalis*). Of lasting interest are the fruits of his beloved solitude: his ideal of Christian virtue and fidelity to duty in all walks of society, and his spiritual counsel, scriptural comments, and meditations. He was steeped in the Bible and drew on the church fathers, especially Augustine, whose works he procured for Fonte Avellana. Still prized in the twelfth century, his writings were eclipsed by the intellectualism of the Scholastic age, but Dante's praise assured Damian recognition outside the church as well (*Paradiso* 21.106–111). Thanks to excellent transmission of the manuscripts, Damian's corpus was secured for the modern age in the *Editio princeps* of Costantino Gaetani (four volumes, Rome, 1606–1640). Scholarship has shifted from its earlier selectivity to a consideration of Damian's whole legacy and of the man himself, as evidenced in the studies published in 1972 for the ninth centennial of his death. Perhaps the major significance of Peter Damian for Western religion lies in the fact that he, like the Camaldolese and Carthusians, gave new life and form to the strain of contemplative life and asceticism stemming from the Desert Fathers of Egypt.

## BIBLIOGRAPHY

The collected works are available in *Patrologia Latina*, edited by J.-P. Migne, vols. 144 and 145, (Paris, 1853). Single items have modern editions, and an edition of the letters is in preparation for the "Monumenta Germaniae Historica" series.

The only anthology in English is *Saint Peter Damian: Selected Writings on the Spiritual Life*, translated with an introduction by Patricia McNulty (London, 1959). Both Owen J. Blum's *Saint Peter Damian: His Teachings on the Spiritual Life* (Washington, D.C., 1947) and my own *Saint Peter Damiani and His Canonical Sources: A Preliminary Study in the Antecedents of the Gregorian Reform* (Toronto, 1956) have ample bibliographies. An expert portrayal is Jean Leclercq's *Saint Pierre Damien: Ermite et homme d'église* (Rome, 1960). Two important collections of new studies are *San Pier Damiano: Nel IX centenario della morte, 1072–1972*, 4 vols. (Cesena, 1972–1978); and *San Pier Damiani: Atti del convegno di studi nel IX centenario della morte* (Faenza, 1973).

THEATRICAL AND LITURGICAL DANCE [FURTHER CONSIDERATIONS]

## DANCE: DANCE AND RELIGION

Dance is part of many systems of belief about the universe that deal with the nature and mystery of human existence and involve feelings, thoughts, and actions. From a comparative worldwide perspective, dance may be seen as human behavior composed (from the dancer's point of view) of purposeful, intentionally rhythmical, and culturally patterned sequences of nonverbal body movements in time, in space, and with effort. Different from ordinary motor activities, these movements have inherent and "aesthetic" values; that is, they have both appropriateness and competency. According to historical and anthropological research, people dance to express an awareness that is often difficult to express in words, and to fulfill a range of intentions and functions that change over time. Perceptions of orthodoxy and authenticity vary. People dance to explain religion, to create and re-create social roles, to worship or honor, to conduct supernatural beneficence, to effect change, to embody or merge with the supernatural through inner or external transformations, to reveal divinity through dance creation, to help themselves, and to entertain. Specific knowledge of dance practices associated with the supernatural is acquired through initiation, divination, oracle, observation, and copying.

The power of dance in religious practice lies in its multisensory, emotional, and symbolic capacity to create moods and a sense of situation in attention-riveting patterns by framing, prolonging, or discontinuing communication. Dance is a vehicle that incorporates inchoate ideas in visible human form and modifies inner experience as well as social action. The efficacy of dance in contributing to the construction of a worldview and affecting human behavior depends upon the beliefs of the participants (performers and spectators), particularly their faith in their ability to affect the world around them.

Dance has potency through sensory sensitivity and perception: the sight of performers moving in time and space, the sounds of physical movements, the odors of physical exertion, the feeling of kinesthetic activity or empathy, and the sensations of contact with other bodies or the dancer's environment. Meaning in dance relies on who does what, and on when, where, why, how, and with and to whom it is done. Such variables can convey gender roles, class status hierarchies, race, and other group identities. Skilled dancing may show spiritual excellence.

More like poetry than prose, dance may have cognitive, language-like references beyond the dance form itself. Meaning may be conveyed through various devices, such as metaphor (a dance in place of another expression that it resembles to suggest a likeness between the two), metonym (a dance connected with a larger whole), concretization (mimetic presentation), stylization (somewhat arbitrary religious gestures or movements that are the result of convention), icon (a dancer enacting some of a god's characteristics and being regarded or treated as that god), and actualization (a portrayal of one or several aspects of a dancer's real life).

Meaning may also exist in the spheres of the dance event, including nondance activity, the human body in special action, the whole dance performance, performance segments as they unfold as in a narrative, specific movements or style reflecting religious values, the intermeshing of dance with other communication media such as music, and the presence of a dancer conveying a supernatural aura or energy.

It is not possible to know the origins of religious dance. Rock art verifies its antiquity, however, and many peoples have explanatory myths. The Dogon of Mali, for example, say that god's son the jackal danced and traced out the world and its future; the first attested dance was one of divination that told secrets in dust. A spirit later taught people to dance. Hindus of India believe that Śiva danced the world into being and later conveyed the art of dancing to humans.

A popularly held psychological and theological theory found in numerous histories of dance suggests that dance evolved instrumentally to cope with unknown happenings in the human environment. Spontaneous movement—an outlet for the emotional tension endemic in the perpetual struggle for existence in a baffling environment—developed into patterned, symbolic movements for the individual and group. When a desired situation occurred following an instrumentally intended dance (for example, rain followed a danced request), the dance was assumed to have causative power and sacred association. Over time, style, structure, and meaning in dance changed through the perception of supernatural revelation, individual or group initiative, and contacts with other people. When different religious groups come together, one may dominate the other, sometimes leading to complete acceptance or syncretism. In many parts of the world, a group may practice both the old and new religions, as when African deities share their altars with Christian saints.

**ACCEPTANCE OF DANCE AS RELIGIOUS PRACTICE.** Views of mind and body, especially concerning emotion and sexuality, affect dance in religion (as well as in other aspects of life). Whereas various arts use the body as an accessory to create sounds or visual objects, dance is manifest directly through the body and evokes bodily associations. Christian, Muslim, and Hindu beliefs and practices illustrate significantly different perspectives about dance and religion.

Christianity's love-hate relationship with the body and acceptance of a mind-body dichotomy—which the rationalism of sixteenth-century Europe intensified—has led to both positive and negative attitudes toward dance. Recognizing Christ's humanity, Christianity views the human body as a temple housing the Holy Spirit, and it calls its church the "body of Christ." Paul said, "Glorify Christ in your bodies" (*1 Cor.* 6:15–20). From the second century, Christians (e.g., Theodoret of Cyrrhus and Clement of Alexandria) described dance as an imitation of the perpetual dance of angels, the blessed and righteous expressing physically their desire to enter heaven. Christianity built upon the Hebrew tradition of demonstrating through pious dance that no part of the individual was unaffected by the love of God. Yet Christianity also scorned flesh as a root of evil to be transcended, even mortified. Misunderstandings of Paul's view of flesh, by which he meant to refer to the individual acting selfishly, led to negative attitudes toward the body in general that he did not share. Christianity's rejection of the body reflects an inability to come to terms with the passing of time and with death. Moreover that the body is the instrument of sex and of dance creates fear of unbridled arousal of the passions and sexuality. Consequently, religious and secular totalitarian governments try to exert control over dance.

Although the Greeks, Hebrews, and Christians took part in ancient fertility and sustenance dances, some of these dances took the form of unrestrained, sensual rites. This perceived debasement of religion led to the periodic proscription of dance and to penalties against dancers. Legends of Salome's sensuous dance, for which she received John the Baptist's head in reward (she either obeyed her revengeful mother in requesting this or expressed her anger about John's not reciprocating her sexual interest in him), have kept alive negative associations with dance. Some Christians hold any glorification of the body, including dancing, an anathema: outspoken enemies of physicality with an ascetic dislike of eroticism, which could undermine faith and unsettle the hierarchic status quo, they preach the ideal of the Virgin. Western philosophy and Victorian prudishness have not, however, affected the Eastern Orthodox Church to the extent of eliminating dance in worship.

Because the nineteenth- and twentieth-century European industrializing nations that imperialistically dominated the world economy were largely Christian, this religion has had a stifling impact on dance worldwide. Europeans recognized that non-European dance was intertwined with indigenous religions and moralities. Even though these dances often had themes and origins comparable to those of European folk dances, colonialists considered indigenous dances to be the manifestation of savage heathenism, and thus antagonistic to the "true faith." They therefore frequently sought to eliminate them. The British influence, for example, contributed to the demise of Hindu temple dancing without succeeding in spreading Christianity. However, even when proscribed or out of fashion, dance rises phoenixlike and transformed. The Hindu temple-dancing became an Indian nationalist symbol appropriated by middle-class women. Black slaves in the United States, members of Nigerian Yoruba Assemblies of God, and a number of white Christian groups have all included in their worship what appears to be dance—though under a different name, such as "play," "the shout," or "feeling the Lord."

As former European colonies in Africa, Latin America, and Asia regained independence, they frequently reevaluated and renewed their devalued dances. Moreover, counterreactions in the twentieth-century West to claims of the separation of mind from body have led to a renaissance of dance as religious practice in churches and temples. When Westerners developed more accepting attitudes about the body, and as biblical scholarship on dance increased after the 1960s, a sacred dance movement gave impetus to the resurgence of Christian congregational, choir, and solo dancing. Nevertheless, some Christian groups still ban dancing.

Islam generally disapproves of dancing as a frivolous distraction from contemplating the wisdom of the Prophet. Its religious leaders look upon dancing with contempt.

The sacred and secular, the ritualistic and playful, and the spiritual and sexual do not everywhere have the dichotomous character so common in Muslim societies and in industrial societies, where specialization and separation are hallmarks. For example, Hinduism generally merges the sacred and the sexual in a felicitous union. As religion is about mystery, potential danger, hope of heaven, and ecstasy, so too are sexual love and its ramifications. Rather than considering carnal love a phenomenon to be "overcome," as in some Christian denominations, a strand of Hinduism accepts sexual congress as a phase of the soul's migration. Through the path of devotion *(bhakti),* a surrender to the erotic self-oblivion of becoming one, a man and a woman momentarily glimpse spiritually and symbolically the desired absolute union with divinity. This is a microcosm of divine creation that reveals the hidden truth of the universe. The dance conveys this vision of life in telling the stories of the anthropomorphic gods. Hinduism has a pantheon of deities and is really a medley of hundreds of belief systems that share commonalities, as do Christian denominations. The supreme, all-powerful God is manifest in a trio of divinities: Brahma, Viṣṇu (who appears in the incarnation of Kṛṣṇa, of amorous nature and exploits), and Śiva (Lord of the Dance, who created the universe, which he destroys and regenerates through dance). Śiva's rhythms determine those of the world. The classic Indian sacred treatise on dance, the *Nāṭya Śāstra,* describes dance as an offering and demonstration of love to God, a cleansing of sin, a path of salvation, a partaking of the cosmic control of the world, and an expression of God within oneself.

**Typology of Sacred Dance Practice.** Dance is frequently an element of the process by which symbolic meanings related to the supernatural world of ancestors, spirits, and gods are exchanged among performers and spectators. From the perspectives of various religions and the functionalist, structuralist, feminist, and identity theories that view religion as part of the larger social system, there appear to be eleven categories of dance, which are neither exhaustive nor mutually exclusive. The specific dances referred to in the discussion below are from different times and cultures, removed from their rich historical and social contexts; they are chosen to illustrate kinds of beliefs and acts.

**Explaining religion.** Dance is part of ritual constructions of reality communicated to people so they may understand the world and operate in it. The lore of sacred and profane belief, often intertwined, is told and retold in dance.

In early Christendom, dancing began as metaphor and metonym for the mysteries of faith. During the first part of the Middle Ages, dancing accompanied Christian church festivals and processionals in which relics of saints or martyrs were carried to call attention to their life histories. Later, in the twelfth, thirteenth, and fourteenth centuries, dance was an accepted liturgical art form in mystery and miracle plays. Elaborate dramatic presentations flourished in the Renaissance, but then printed tracts, pamphlets, and books and other promotions of the ascendance of the mind began to erode the importance of dance as a medium of religious expression. The Jesuits sponsored ballet as honorable relaxation in the seventeenth and eighteenth centuries until its suppression for being veiled political commentary.

The Spanish Franciscans used dance dramas, especially those depicting the struggle of the church against its foes, to explain the Christian faith to the illiterate New World Indians they hoped to convert. Pageants of Moors and Christians were common. Appropriating indigenous Indian dances, the Franciscans suffused them with Christian meaning. Similarly, Muslims in East Africa at the end of the nineteenth century used indigenous attachment to the old Yao initiation dances to gradually introduce another dance that was regarded as an initiation into Islam.

Contemporary Western dance performances in places of worship, referred to as sacred, liturgical, or midrash dance (search for biblical meaning in the Torah through improvisational movement); public theaters; film; television; and on the internet perpetuate the tradition of dance explaining religion. Choreographers present biblical scenes, incidents, and concepts in addition to religious philosophy, characters, events, and processes. Of course, all religious dance may have an entertaining element.

**Creating and re-creating social roles.** Often used as a means to legitimize social organization, religion may employ dance as its agent to convey attitudes about proper social behavior at the same time that it fulfills other purposes and functions. An example comes from Hinduism, which has a rich ancient history in the arts and religion. Although both male and female royalty in early India may have been well versed in dancing, the *Nāṭya Śāstra* is the scripture of a male sage, Bhārata Muni, who upon receiving instruction from the gods later handed it down through his sons. Recognizing that dance is symbolic, he thought danced enactments of myths and legends would give people guidance in their lives.

Male Brahmans (members of the priestly class) taught dance to males who performed only as young boys *(gotipua*s*)*, to males who performed in all-male companies *(kathakali)*, and to women dedicated to serving in the temples *(devadāsī*s*)*. A dancer usually performs both male and female roles and movement styles for the deities in private devotions and at religious festivals involving the larger community.

Some common religious dance themes are about male-female relations. In the allegories of Rādhā (loveliest of the milkmaids) and Kṛṣṇa (the eternal lover dancing in the heart of every man), for example, their illicit love becomes a spiritual freedom, a type of salvation, and a surrender of all that the strict Indian social conventional world values.

Human analogies explain Hindu divinity; conversely, the tales of the gods—more powerful versions of men and women with the same virtues and vices—provide sanctified models for human actions as well as fantasies with vicarious thrills related to cultural sexual taboos. Danced enactments of legends send messages of patriarchal dominance—that it is acceptable for men to lustfully wander outside of marriage, whereas, in contrast, women are supposed to be faithful to their husbands, forgive them, and bear their children in spite of the pain, risk of death, and agony from high infant mortality.

In the West Sepik District of Papua New Guinea, the Umeda people convey gender status through the annual Idā dance, a ritual for sago palm fertility and a celebration of survival in the face of physical and mystical dangers. Although the sexual division of labor is supposedly complementary, in this dance the cultural creativity of men is pitted against the biological creativity of women, and female culture is opposed and ultimately conquered by male culture.

The myths and metaphors of religious codes present basic propositions concerning expected behavior between leaders and followers, other than relations between the sexes. Such codes are danced for all to see. The Indian *kathakali* (in which feminine-looking boys learn to dance female roles) draws upon the physical training techniques from Kerala's military tradition. This powerful and spectacular drama, staged as a public ritual for the entire community, has been claimed to be a reaction to foreign aggression and a reaffirmation of the priestly and warrior social status, as well as an affirmation of masculine pride in matrilineal and matrilocal society.

Dance in preconquest Mexico was devoted to deities and agricultural success; its performance, as well as its representation in artifacts, appears to have served contemporary sociopolitical designs: to create, reflect, and reinforce social stratification and a centralized integrated political organization encompassing diverse, geographically dispersed ethnic groups. Nobles, priests, and commoners, old and young, male and female, each had distinct dances and spatial levels for performing at the pyramid temple.

**Worship or honor.** At regularly scheduled seasonal times, at critical junctures, or just spontaneously, dances are part of rituals that revere; greet as a token of fellowship, hospitality, and respect; and thank, entreat, placate, or offer penitence to deities, ancestors, and other supernatural entities. Not only may dance be a remedial vehicle to propitiate or beseech, it may also be prophylactic—gods may be honored to preclude disaster.

Dance is a means of religious concentration as well as of corporeal merging with the infinite God. The Jews dance to praise their God in sublime adoration and to express joy for his beneficence. Hasidic Jews communicate with God through ecstatic dancing designed to create a mystical state. Hebrew Scriptures refer to "rejoicing with the whole being," as well as to specific dances performed for traditional festivals. The God-given mind and body are returned to God through dance. As a result of the destruction of the Temple in 70 CE Jews generally eliminated dance and song from regular worship until such a time as they could return from the Diaspora and rebuild the Temple. The Talmud, ancient rabbinic writings that constitute religious authority for traditional Judaism, describes dancing as the principal function of the angels and commands dancing at weddings for brides, grooms, and their wedding guests. Procreation is God's will, weddings a step toward its fulfillment, and dancing a thanksgiving symbolizing fruitfulness. Even in exile there could be dancing, because out of the wedding might be born the Messiah who would restore the people to the Land of Israel.

In Christianity the Catholic Church allowed dances created for special occasions, such as the canonization of cardinals or commemoration of their birthdays. Throughout Latin America, devotional dances are part of a pilgrimage and processional fiesta system that fuses Indian and Catholic tenets. Dance training and production preparation are often undertaken as part of a religious vow to a powerful saint, the Virgin, or a Christ figure. The Mormons believe that, when engaged in by the pure of heart, dance (excluding the embracing-couple position of Western social dance) prepares the individual and community for prayer meetings or other religious activity; devotion and recreation unite the individual with God. Brigham Young, who led the Mormon migration from Illinois to Utah, discovered that dance was a means to strengthen group morale and solidarity through providing emotional and physical release from hardship.

In Orissa, India, the custom of small boys dancing dressed as girls has coexisted with a female dance tradition since the fifteenth century. The *sakhībhāva* cult believes that, because Kṛṣṇa is male, the most effective way of showing devotion is as a female, like the milkmaids *(gopīs)* who dance their love for Kṛṣṇa.

The Gogo of Tanzania dance the Cidwanga as a sign of reverence in the annual ritual for good rains and fertility. Groups in Nigeria provide many illustrations of worshipful dance. The Kalabari believe that human beings make the gods great. Fervent worship adds to a deity's capacity to aid the worshipers, and just as surely the cutting off of worship will render them impotent, or at least cause them to break off contact with erstwhile worshipers. Among the Efik, the worshipers of the sea deity Ndem briskly dance in a circle at the deity's shrine to express metaphorically the affective intensity of a wish, whether it be for a child or a safe journey. The brisker the dance, the more likely Ndem is to grant requests. Because the Ubakala Igbo dance to honor and propitiate the respected living, it is not surprising that the spirits of the departed and other supernatural entities are also honored in this way. Some deities, such as the Yoruba Ṣango, love to be entertained and can best be placated with good dancing.

Like the human creatures they basically are, the ancestors of the Fon of Dahomey (or the other spiritual entities who are given anthroposocial attributes) are believed to love display and ceremony. Thus both living and spiritual entities are believed to watch a dance performance, and both categories of spectators may even join the dancers, the latter often doing so through possession. Supernatural beings are sometimes honored to ensure that they do not mar festivals.

**Conducting supernatural beneficence.** Dance may be the vehicle through which an individual, as self or other (masked or possessed), becomes a conduit of extraordinary power. Among the Ganda of Uganda, parents of twins, having demonstrated their extraordinary fertility and the direct intervention of the god Mukasa, danced in the gardens of their friends to transmit human fertility supernaturally to the vegetation. Yoruba mothers of twins dance with their offspring and promise to bless all those who are generous with alms. Here the motional, dynamic rhythm and spatial patterns of dance transfer desired qualities to objects or individuals.

The men and women of Tanzania's Sandawe people dance by moonlight in the erotic Phekʾumo rites to promote fertility. Identifying with the moon, a supreme being believed to be both beneficial and destructive, they adopt stylized signs or moon stances; they also embrace tightly and mimic the act of sexual intercourse. The dance, metaphorically at least, conducts supernatural beneficence.

Because dance movement is metonymical with life movement, dance parody of sorcerer-caused disease and death affects the ascendance of life spirits and health forces. The Tiv of Nigeria parody dropsy and elephantiasis through dance.

The Sun Dance of the hunting peoples of the Great Plains of North America was an elaborate annual pageant performed during full summer, when scattered tribal bands could unite in a season of plenty. Representatives danced to renew the earth, pray for fertility or revenge for a murdered relative, and transfer medicine. The typical Sun Dance involved a week of intense activity culminating in dramatic climactic rites. Male dancers participated in accord with personal vows made previously for success in warfare or healing of a loved one. Each dancer strove to attain personal power. Dancers were pierced through the breast or shoulder muscles and tethered with thongs to the central pole of a ceremonial lodge altar. Staring at the sun, they danced without pause, pulling back until the flesh gave way.

**Effecting change.** Dance may be used as a medium to reverse a debilitating condition caused by the supernatural or to prepare an individual or group to reach a religiously defined ideal state. This includes status transformation in rites of passage, death, healing, and prevention, as well as rites to reverse political domination.

The United Society of Believers in Christ's Second Appearing, commonly called Shakers because of their dramatic practice of vigorous dancing, believed that the day of judgment was imminent. Numbering about six thousand members in nineteen communities at its peak in the 1840s, the group held that salvation would come through confessing and forsaking fleshy practices. Notwithstanding their professed attitudes toward the body, the first adherents were seized by an involuntary ecstasy that led them to run about a meeting room, jump, shake, whirl, and reel in a spontaneous manner to shake off doubts, loosen sins and faults, and mortify lust in order to purify the spirit. In repentance they turned away from preoccupation with self to shake off their bondage to a troubled past. This permitted concentration on new feelings and intent.

Dancing for the Shakers, who believed in the dualism of spirit versus body, appears to be a canalization of feeling in the context of men and women living together in celibacy, austerity, humility, and hard manual labor. Shaker dance involved a sequence of movements, designed to shake off sin, that paralleled the sexual experience of energy buildup to climax and then relaxation. Individualistic impulsive movements evolved into ordered, well-rehearsed patterns. Shaking the hand palm downward discarded the carnal; turning palms upward petitioned eternal life.

For Buddhist Sherpa lamas, laymen, and young boys in Nepal, dancing is a means by which they resolve the necessity of simultaneously affirming and denying the value of worldly existence. The spring Dumje ceremony purges the forces of repression and guilt that oppose the erotic impulses so that life may continue. The young boys' highly lascivious *tek-tek* masked dances represent sexuality as well as the children who are its desired fruits.

Dance mediates between childhood and adult status in the Chisungu, the girls' initiation ceremony of the Bemba of Zambia. The women conducting the ceremony believe they are causing supernatural changes to take place as each initiate is "danced" from one group with its status and roles to another. Among the Wan of the Ivory Coast, a man must dance a female initiate on his shoulders. During the initiation to an ancestral cult, the Fang of Gabon carry religious statues from their usual places and make them dance like puppets to vitalize them.

Another form of status change occurs at death. The Ubakala perform the dance dramas Nkwa Uko and Nkwa Ese to escort a deceased aged and respected woman and man, respectively, to become ancestors residing among the spirits, later to return in a new incarnations. These forms are similar to the dances in the Christian tradition that enable one to enter heaven.

Among the Dogon, death creates disorder. But through the symbolism and orderliness of dance, humans metaphorically restore order to the disordered world. Symbolically spatializing things never seen, the Dogon represent heaven on earth. So too at the time of death the mask dance helps to mitigate the psychic distress and spiritual fear of the dead.

The funeral dance of the Nyakyusa in Tanzania begins with a passionate expression of anger and grief and gradually becomes a fertility dance. In this way dancing mediates the passionate and quarrelsome emotions felt over a death and the acceptance of it.

Dances related to death were common in medieval Europe, a largely preliterate society dominated by the Christian church. It interpreted an economically harsh and morally complex world as a fight between God and the devil. Part of a convivial attempt to deny the finality of death, dances also had other manifestations and functions. In the so-called Dance of Death, a performer beckoned people to the world beyond in a reaction to the epidemic Black Death (1347–1373), a bubonic plague outbreak in Italy, Spain, France, Germany, and England. Evolving with the image of the skeletal figure seen as one's future self, the dance was a mockery of the pretenses of the rich and a vision of social equality. The dance emphasized the terrors of death to frighten sinners into repentance. Hallucinogenic and clonic cramp symptoms of bread and grain ergot poisoning, called Saint Anthony's Fire, led some of its sickly victims to move involuntarily in dancelike movements. Such people were believed to be possessed. Other victims sought relief from pain through ecstatic dancing, considered to be of curative value and efficacious in warding off death. Dances were also connected with wakes for the dead and the rebirth of the soul to everlasting life. Dancing at the graves of family, friends, and martyrs was believed to comfort the dead and encourage resurrection as well as protect against the dead as demons.

Gregory of Nazianzus, bishop of Constantinople, Turkey, thought of dancing at the graves of martyrs as a means to cast out devils and prevent sickness. Dance could also trample vices and that which enslaves people and holds them down.

Among the Gogo, dance metaphorically effects a supernatural change through role reversal in a curative and preventative rite. When men fail in their ritual responsibility for controlling human and animal fertility, disorder reigns. Women then become the only active agents in rituals addressed to righting the wrong. Dressed as men, they dance violently with spears to drive away contamination.

The Hamadsha, a Moroccan Ṣufi brotherhood, performs the *hadrah,* an ecstatic dance, in order to cure an individual who has been struck or possessed by a devil. They seek a good relationship with a *jinni* (spirit), usually ʿĀʾishah. In the course of the dance, people become entranced and slash at their heads in imitation of Sidi, ʿAli's servant, who did so when he learned of his master's death. A flow of blood is believed to calm the spirit. The Hamadsha women fall into trance more readily and dance with more abandon than the men.

Dance was an integral part of many American Indian religious revivals and reaffirmations in response to historical, economic, and political situations they wanted to change. The northern Paiute and peoples of the Northwest Plateau believed that ceremonies involving group dancing, a visible index of ethnic and political alliances and action, would bring about periodic world renewal. The Indians thought certain group dances had the power to end the deprivation that resulted from defeat at the hands of whites and bring about the return of Indian prosperity. The Ghost Dance religion incorporated Christian teachings of the millennium and the second coming of Christ in order to attract acculturated Indians.

Mexican dance groups, known as *concheros, danza Chicimeca, danza Azteca,* and *danza de la conquista,* originated in the states of Querétaro and Guanajuato as a response to the Spanish conquest in the sixteenth century. The groups may also be seen as "crisis cults," syncretistic attempts to create prideful cultural identity and new forms of social integration. Participants, at the low end of the socioeconomic scale and heavily represented in the laborer and shoe-shine occupations, adopt the nomenclature of the Spanish military hierarchy and perform dances reenacting the conquest that were derived from Spanish representations of the Moors and Christians. The warlike dances involve women, the aged, and children as well as men.

**Embodying the supernatural in inner transformation: personal possession.** Dance may serve as an activating agent for a specific kind of change: giving oneself temporarily to a supernatural being or essence. This metamorphic process is usually accompanied by a devout state and altered consciousness aided by autosuggestion or autointoxication through learned frenzied movement that releases oxygen, adrenalin, and endorphins and sometimes promotes vertigo. Audience encouragement abets crossing the threshold into another state of being. The dance itself is often characterized by a particular type of musical accompaniment. A possessed devotee may achieve a consciousness of identity or a ritual connection with the supernatural iconically, metonymically, metaphorically, or experientially. Some practitioners retain their own identities; others become the spirit—and self-identity depends on the spirit that animates the body.

A supernatural possessor may manifest itself through the dancer's performance of identifiable and specific patterns and conventional signs. In this way it communicates to the entire group that it is present and enacting its particular supernatural role in the lives of humans. Thus fear of the supernatural entity's indifference is allayed. Possession may alter somatic states and cause a dancer's collapse. The specific characteristics of possession are culturally determined, and even children may play at possession.

There are four types of personal possession. Diviners, cult members, medicine men, and shamans are among those who participate in the first type "invited" spirit mediumship possession dances. Numerous African religions and their offshoots in Haitian vodou and Brazilian macumba, as well as other faiths, involve the belief that humans can contact supernatural entities and influence them to act on a person's behalf. The worshiper takes the initiative and lends his or her body to the tutelary spirit when there is an indication that the spirit wishes to communicate with the living or when the devotee desires a meeting. As a sensorimotor sign, the dance may indicate the deity's presence or a leader's legitimacy; as a signal, it may be a marker for specific activities. As a metonym, it may be part of the universe; and as a metaphor, it may refer to human self-extension or social conflict.

The Kalabari believe a possessed dancer invites a god as a guest into the village. "Dancing the gods" is considered an admirable achievement. Masquerade dancers may become possessed, and in some cases the performer is expected to await possession before dancing. In possession dances the ability of Water People gods to materialize as pythons is accented as they metamorphose from acting like people to writhing on the ground and slithering about the house rafters as the great snakes do. The *oru seki* (spirit) dancing occurs in the ritual to solicit a special benefit or to appease a spirit whose rules for human behavior have been infringed. Possession of the invoker, an iconic sign in the midst of the congregation, assures the spirit's presence, power, and acceptance of the invocation and offerings.

Among the Ga of Ghana it is through a medium, whose state of possession is induced by dance, that the god signifies its presence and delivers messages prophesying the coming year's events and suggesting how to cope with them. Possession legitimizes leadership among the Fanti of Ghana. Because the deities love to dance, the priests assemble drummers, become possessed, and then speak with the power and authority of the deity. The Korean shaman attains knowledge and power in the role of religious leader through trance possession induced by dancing.

Invited possession may be a mechanism for individuals to transact social relationships more favorably. Healing practices often mediate the natural, social, and supernatural. In Sri Lanka's Sinhala healing rites, an exorcist attempts to sever the relationship between a patient and malign demons and ghosts. The exorcist's performance of various dance sequences progressively builds up emotional tension and generates power that can entrance both the healer and the patient. Their bodies become the demonic spirit's vehicle, constitute evidence of its control, and convince spectators of the need, as the healer prescribes, for a change in social relations that will exorcise the demonic spirit and transform the patient from illness to a state of health.

A second kind of possession dance, known as "invasion" (also often a metaphor and signal of social pathology or personal maladjustment) indicates that a supernatural being has overwhelmed an individual, causing some form of malaise, illness, or personal or group misfortune. A deity or spirit who manifests itself in specific dances identified with the supernatural speaks or acts using the possessed's body. Some cultures—for example, in Africa, the Caribbean, the Middle East, Brazil, and Korea—recognize that a person's poor physical condition and related fear and helplessness may also be associated with difficult social relationships that the person feels helpless to remedy by himself or herself. Dance becomes a medium to exorcise and appease the being, thus freeing the possessed individual and ameliorating his or her irksome ascribed status or difficult situation. Meeting the wishes of a spirit as part of exorcism frequently imposes obligations on those related to the possessed.

The *vimbuza* healing dance of the Chewa and Tumbuka societies in Malawi is a socially sanctioned means of expressing those feelings and tensions that if otherwise broadcast would disrupt family or community relationships. The dance is medicine for the *vimbuza* disease, which causes terrifying dreams or visions, the eating of unusual meat, or the uttering of a specific groan.

A third kind of possession, called "consecration," involves initiation and the impersonation of a deity, during which time the dancer becomes deified. In India the audience worships the young performers in the Rāma-līlās who play Kṛṣṇa, Rādhā, Rāma, and other mythic heroes in the same way they would revere icons. Performers of the Tibetan sacred masked dance, or *ʿcham,* are viewed as sacred beings.

Not only may individuals be possessed by supernatural entities, they may also experience "essence possession," the fourth type, by an impersonal religious or supernatural potency. Among the Lango of Uganda, *jok* is liberated or generated in dancing. Similarly among the !Kung San of Namibia, dance activates *n/um,* that potency from which medicine men derive their power to protect the people from sickness and death. The medicine dancer may go into trance and communicate with spirits without being possessed by them. The ceremonial curing dance may be called for in crisis situations, or the dance may occur spontaneously; it is redressive and prophylactic.

**Merging with the supernatural toward enlightenment or self-detachment.** Illustrations of another form of inner transformation through dance come from Turkey and Tibet. In Turkey the followers of the thirteenth-century poet-philosopher Mawlana Jalāl al-Dīn Rūmī, founder of one of Islam's principal mystic orders, perform whirling dances. Men with immobile faces revolve in long white shirts with covered arms outstretched, slowly at first and then faster until they reach a spiritual trance. These men, the dervishes (the word refers to a person on the threshold of enlightenment), strive to detach themselves from earth and divest themselves of ties to self in order to unite with a nonpersonified God. This process occurs through revolving movement and repeated chanting that vibrates energy centers of the body in order to raise the individual to higher spheres.

The Tibetan Buddhist dance ritual called Ling Dro Dechen Rolmo permits imaging the divine. The dancer's circular path and turning movement aid the participants toward enlightenment by providing a means to realize that the deity is a reflection of one's own mind.

**Embodying the supernatural in external transformation: masquerade.** Sacred masquerade dances, part of a people's intercourse with the spirit world, make social and personal contributions through symbolic actions that are similar to those made through dances that explain religion, create and re-create social roles, worship and honor, conduct supernatural beneficence, effect change, and involve possession. The Midimu masked dancing of the Yao, Makua, and Makonde of Tanzania and Mozambique helps to explain religion by marking the presence of the supernatural (ancestors) in the affairs of the living. In effect, ancestors return from the dead to rejoice on the occasion of an initiate's return from the training camp. The Dogon's masked-society dancing patterns depict their conception of the world, its progress and order, and its continuity and oneness with the total universe. Dance is thus a model of the belief system. Participants in the Nyau society of Chewa-speaking peoples dance a reenactment of the primal coexistence of people, animals, and spirits in friendship and their subsequent division by fire. The people believe that underneath their masks the dancers have undergone transformation into spirits.

Social roles are emphasized when the Yoruba's Gẹlẹdẹ society masquerade figures appear annually at the start of the new agricultural year to dance in the marketplace and through the streets. They honor and propitiate the female *oriṣa* (spirits) and their representatives, living and ancestral, for the mothers are the gods of society and their children are its members—all animal life comes from a mother's body.

Although both men and women belong to the Gẹlẹdẹ cult (to seek protection and blessings and assuage their fear of death), only men dance, with masks portraying the appropriate sex roles of each character. Mothers have both positive (calm, creative, protective) and negative or witch (unmitigated evil affecting fertility, childbirth, and the functioning of men's sexual organs) dimensions. The mothers possess powerful *ase* (vital, mystical power). A man can have *ase* most fully when he is spiritually united with an *oriṣa.* When men symbolically externalize the vital life forces in dance, they may be asserting their virility and freedom in the presence of the powerful mothers and, in addition, recognizing and honoring their powers in order to appease them to ensure that they utilize their *ase* for male benefit.

Among the Nafana of the Ivory Coast, masked dancing occurs almost nightly during the lunar month of the year. The dancing is intended to worship and effect change. Living in the masks, the Bedu spirits bless and purify the village dwellings and their occupants and metaphorically absorb evil and misfortune, which they remove from the community so that the new year begins afresh.

The masked (antelope headdress) dance of the Bamana of Mali represents Chi Wara, the god of agriculture—a supernatural being who is half animal and half man—who first taught people how to cultivate the soil. Chi Wara's public presence is an invocation of his blessings. In a concretized form that makes appeals more understandable to the young, animal masked dances remind humans that they have some animal characteristics, and participants respond to the dancers both positively and negatively. In this way the masked dancing presents human foibles at a distance for examination without threat to individuals, thus helping to effect change.

Masked dancing can be a metaphor for both normative and innovative behavior. Under religious auspices the dancer is freed from the everyday restrictions on etiquette and thus is able to present secular messages and critiques. Presented by the unmasked, these messages might produce social frictions or hostilities rather than positive change.

Among the Nsukka Igbo of Nigeria, the council of elders employed masked dancers representing an *omabe* spirit cult whenever there was difficulty in enforcing law and order. In Zambia, Wiko Makishi masqueraders, believed to be resurrected ancestors and other supernatural beings, patrol the vicinities of the boys' initiation lodges to ward off intruders, women, and non-Wiko.

A Chewa man residing with his wife and mother-in-law often resorts to the male masked Nyau dancer to mediate between himself and a mother-in-law whose constant demands on him he resents. When the dancer dons the mask of the Chirombo (beast), he directs obscene language against her. No action may be taken against him, for in his mask he enjoys the immunity of the Chirombo. Afterward, the mother-in-law often reduces her demands.

Socially sanctioned ritual abuse with ribald and lewd movements and gestures in a highly charged atmosphere is permitted in the Bedu masked dance mentioned above. There appear to be humor and an underlying feeling that these acts are socially acceptable and that through them participants will be purged of whatever negative emotions they may harbor.

The masked dancer may be an iconic sign, revered and experienced as a veritable apparition of the being he represents, even when people know that a man made the mask and is wearing it. Because the Angolan Chokwe mask and its wearer are a spiritual whole, both in life and death, when a dancer dies, his mask is buried with him.

**Revelation of divinity through dance creation.** Within a Protestant Christian view, artistic self-expression is analogized to the creative self-expression of God as creator. Dancing a set piece is considered a reflection of the unknowable God's immanence, irrespective of the performer's intention. The dancer is to dance as God is to creation. The language of movement is God given, and both the progression of a dancer's training and the perfection of performance reveal God's achievement. Within the Franciscan view, God is present in good works and in the creative force of the arts. Through dance rituals in Latin America, performers become one with creation. When an individual dances with expertise—individuality, agility, and dexterity—the Gola of Liberia consider this to be a sign of a *jina*'s gift of love given in a dream.

**Self-help.** Many people wanting to stay well or to cope with stress seek out nontraditional spiritual pathways. They draw upon teachings from different religions and borrow movements for their own spiritual dances. Some people seek a "high" through vigorous dance and the release of endorphins.

**Nonsacred theatrical and recreational dance.** In many parts of the world that have become somewhat modernized and secularized, participants in nonsacred theatrical dance often choose to explain religion, to convey or to challenge its models for social organization and gender roles, to effect change, and to honor the divine by infusing their dances with elements drawn from religions worldwide. Many folk dances associated with religious holidays or events have been transformed into commercial theatrical, nightclub, tourist, and museum productions—and into performances (by dancers other than the "folk") for recreational purposes.

Choreographers interpretatively embody religious events in sensory storytelling or reflect theologically rooted affirmations and values without reference to specific stories in opera and dance concerts and on television and the Internet. Isadora Duncan, a pioneer of American modern (a form of dance that originally reflected a rebellion against formality) viewed her dance as a prayer through which one could become one with nature, itself sacred. Dance was an invocation for which Duncan desired audience participation. Yet women have mostly performed dances taught by male choreograpahers and interpreters, and thus helped to perpetuate both male dominance over females and stereotypes of women as virgin or whore. Good women in the Bible are tainted by using seduction (e.g., Judith). Martha Graham, another pioneer of modern dance, was a leader in choreographing a woman's viewpoint and dominance without guilt. Dancers in India are modifying the movement and story line of the epics to assert feminist perspectives.

**Technology and religious practice.** Access to new technology is sometimes manifest in ritual, such as the appearance of a telephone mask. Movements of contemporary disco have been incorporated into possession dance. Television broadcasts some rituals as they occur. There are replays and documentaries. Among the Edo in Benin City, Nigeria, videorecording capturing the span of real time became a mandatory assertion of the importance of individual participants. Visibility may effect efficaciousness. Choreography with the camera loses immediacy of the place of worship or theater but gains excitement through access.

**IN SHORT.** Dance is a barometer of theology, ideology, worldview, and social change within often overlapping categories of religious practice. Dance appears to be part of a cultural code or logical model enabling humans to order experience, account for its chaos, express isomorphic properties between opposing entities, and explain realities. Dance and religion merge in a configuration that encompasses sensory experience, cognition, diffused and focused emotions, personal and social conflicts, and technology. People dance to explain religion, convey sanctified models for social organization, revere the divine, conduct supernatural beneficence, effect change, embody the supernatural through internal or external transformation, merge with the divine toward enlightenment, reveal divinity through creating dance, engage in self-help, and convey religious themes in secular theater and recreation. Permeated with religious tradition, dance continually changes.

## DANCE: POPULAR AND FOLK DANCE [FIRST EDITION]

Dance and religion have been intertwined in various ways through the centuries. The attitudes toward dance expressed in ancient Greek writings and the Bible are part of a philosophical legacy that has been influential throughout the intellectual and cultural history of the Western world. The ancient Greeks believed that dance was supreme among the arts, indeed that it was fundamentally inseparable from music and poetry. In the *Laws*, Plato writes that all creatures are prompted to express emotions through body movements, and he notes that such instinctive response is transformed into dance by virtue of a gift from the gods: rhythmic and harmonic order. Other Greeks held the general belief that dance was originally transmitted directly from the gods to humans, and consequently that all dancing is a spiritual endeavor. Whatever the origin of dance, classical historians maintain that religious rituals were indeed the source of many Greek dances, though dancing was not confined to rituals or occasions of formal worship. Dance was also an integral part of Greek social life, as recreation and as a means of solemnizing events or experiences. The spiritual nature of dance was apparently considered so all-encompassing that the Greeks made no rigid distinction between religious dancing and secular dancing.

The Hebrew scriptures contain numerous references to the dance activities of the Israelites in biblical times. Dancing was an expression of joy in all realms of life, a celebration of mental and corporeal fulfillment as well as a personal declaration of spiritual devotion. Modern scholars have debated whether dance was a part of actual religious rituals or formal worship in the Jewish faith. Some believe that there was no role for dancing in the Temple or in performances of the religious officiants during services and ceremonies. Even so, dance clearly played a significant part in the public festivals that accompanied the holy days. For example, the pilgrimages associated with seasonal festivals were sanctified by dancing, singing, and the playing of musical instruments such as the harp. Also, the triumphs of the Jewish people over their oppressors were celebrated in victory parades with dancing and special songs.

By the dawn of the Christian era, two major factors affected the status of dance in the philosophy of the church establishment. The first was the tangible and immediate heritage of attitudes toward dancing found among the Jewish people; the second was the active dance traditions of the various pagan cults that were now converting to Christianity. The Christian community shared with the Jews the fundamental belief that dance was a means of expressing reverence to God. The angels danced in heavenly joy, and mortals danced to celebrate their faith. Many ancient pre-Christian customs found in European cultures were preserved (e.g., the practice of dancing at burial grounds) and coexisted alongside the new rites of the church. Other dance customs were actually integrated into Christian religious ceremonies. Religious dances performed by the clergy included the ring dance and the processionals that formed part of the various saints' festivals. Other dances were performed only by members of the congregation, including ribbon dances, ring dances accompanied by songs and hand-clapping, and processionals. Over the centuries as Christianity spread, local enthusiasm for dancing remained strong, and church officials were compelled to limit the types of religious events in which dancing was acceptable. Regional church authorities forbade dancing in the house of the Lord: dancing would be permissible (to varying degrees) only in the religious observances that took place in public festivals outside the church structure itself. The fact that such restrictions were issued repeatedly indicates that they were not always obeyed, nor were they always enforceable in local communities.

The continued strength and tenacity of dance customs in the face of the declining approval of church authorities suggest the depth of the fundamental Western belief in the spiritual nature of dance. In *Religious Dances* (1952), Louis Backman provides a chronicle of historical references that illustrates individual dance forms and activities and their relationship to the Christian church in various regions. The interconnection of dance and religion, however, must be considered in a context that extends beyond the confines of official, formalized religion. The very definitions of folk dance and popular dance have developed from a spectrum of cultural beliefs that ranges from the organized religious establishment to the vernacular spirituality that animates everyday life.

**FOLK DANCE AND POPULAR DANCE.** Although the terms *folk dance* and *popular dance* did not enter common use until the early twentieth century, the dance phenomena they describe have existed for centuries. Rather than referring to particular dance choreography, *folk dance* and *popular dance* refer to the dancing found in certain social strata of European society in a certain period of history.

As Peter Burke notes in *Popular Culture in Early Modern Europe* (1978), by the sixteenth century European society was sufficiently stratified to be able to distinguish between the culture of the common people and the culture of the elite. The elite were a minority who had access to formal scholastic training; they were the innovators and primary beneficiaries of such intellectual movements as the Renaissance and the Enlightenment. The rest of society went about everyday life, molding and adapting time-worn traditions and values to accommodate the inevitable shifts demanded by social and economic change. It cannot be assumed, however, that the common people were a homogeneous group, or that the elite educated minority did not participate in popular culture. Burke illuminates the complexity of these issues, noting the diversity of the common people: there were poorer peasants and richer peasants, freemen and serfs, uneducated laborers and literate merchants, rural dwellers and urban dwellers, religious sects and regional subcultures. The elite took part in a broad range of popular culture outside the boundaries of their intellectual pursuits, if simply because they were surrounded by that culture.

By the late eighteenth century factors such as dramatic population shifts, the radical expansion of commercial capitalism, and the advent of industrialization contributed to the disruption of traditional community life in many parts of Western Europe and the subsequent demise of many popular traditions. In the same period, a new intellectual movement took root in which the folk or rural peasants became increasingly idealized in the eyes of the elite, and "folk culture" became a national treasure embodying the survivals of the uncorrupted national past. In the nineteenth century the anthropologist E. B. Tylor pointed to folklore, especially old customs and beliefs, as providing evidence of the historical development of primitive culture into civilized society. Folklore materials were seen as the vestiges of primitive culture, somehow preserved by the folk memory in the midst of an otherwise relatively civilized society.

This argument was supported further by comparing folklore to parallel cultural elements found in existing primitive societies. Seemingly irrational folk beliefs or antiquated folk customs were explained on the basis of their full-fledged primitive counterparts; the original function and meaning of the folklore survivals were considered equivalent to those of the related primitive practices, even when the forms or contexts of performance differed greatly. Many scholars believed that primitive religion was the ultimate source of folklore because religion played such a prominent role in primitive life.

If folklore was what remained of ancient pagan religion, then it might follow that folk dance was what remained of ancient religious ritual. Yet it is curious that the genre of folk dance was neglected in the heyday of naming and documenting folk cultural genres in the nineteenth century. There is no doubt that the folk were dancing, but most scholars mention dancing only in passing, generally in reference to seasonal or religious festivals or the celebration of rites of passage.

This puzzle still remains to be explored fully, but two factors can be suggested as important elements in this regard.

The first factor is that as a cultural commodity vying for scholarly attention, dance was of comparatively low status. The young fields of folklore and anthropology were intent on establishing themselves as scientific pursuits, and toward that end researchers were concerned with the task of generating texts. Dance was not a literary genre that could be recorded in words, and unlike music it did not have associated with it a common form of notation. To be sure, scholars did not hesitate to describe folk customs and celebrations in written accounts that were often illustrated with drawings and, later, photographs. The first studies of the late nineteenth century that discussed dance in any detail used that type of descriptive narrative: they presented dance customs, complete with notes on costumes, other related material paraphernalia such as swords, ribbons, sticks, or bells, unusual dramatic characters such as a man or woman impersonator or a hobbyhorse, and the social event of which the dance activity was a part. Yet very little explicit or technical description was included of the actual dance forms or styles themselves. It seems that, while writing about dance customs was certainly possible, the difficulty of rendering dance into documentary evidence hardly encouraged early scholars to invest their intellectual enthusiasm in such an elusive genre.

The second factor in the scholarly neglect of folk dance is that it was indeed believed to manifest the remnants of ancient religious ritual. This is ironic because that type of connection with primitive culture would generally have been considered a favorable quality in the evolutionary school of thought that considered folklore to be descended from ancient religion. In the case of dance, however, it may have contributed to some intellectual discomfort. By the nineteenth century, dance style was socially stratified, although the choreographic forms danced in the elite ballrooms were not dissimilar to those danced in peasant villages. The elite were responsible for infusing these dance forms with an educated and refined style of performance appropriate to their social class, for the physical abandon and overt emotionalism displayed in much peasant dancing would have been judged quite improper, even uncivilized, by the upper classes. The contemporary observations of European missionaries and travelers of wild, impassioned dancing in primitive societies served as a graphic comparison to dancing in folk communities in Europe and may have intensified the elite's sense of a debasing impropriety of folk dance. More so than any other folk performance genre, dance may have seemed a bit threatening—too primitive and too close to home; for it could be argued that the only thing separating the dancing of the elite themselves from the blatantly uncivilized dancing of the folk was a fine line of decorum. In addition, scholars were well aware of the fact that the Christian clergy had long believed that dance and dance customs (which nineteenth-century scholars would have equated with folk dance) were the survivals of pagan religious rituals. For centuries, throughout Europe, the church had been waging campaigns to cleanse Christian ritual of any taints of paganism, of which dance was one of the most insidious elements. Whatever their intellectual creeds, nineteenth-century scholars in Europe and America were good Christian gentlemen and ladies, and there can be little doubt that the official religious prejudice against dancing influenced scholarly perceptions. It is possible that this Christian heritage contributed to a sense of discomfort with folk dance material, which in turn further discouraged researchers from working in that field.

In the last decade of the nineteenth century, dance began to be considered with some seriousness. James G. Frazer included dance as one of the myriad customs examined in his comparative treatise on magic and religion, *The Golden Bough* (1890). The development of the open-air folklife museum in Scandinavia with its focus on traditional folkways gave impetus to the founding of the Friends of Swedish Folk Dance in 1893. This was one of the first organizations of its kind, dedicated to the preservation and perpetuation of regional folk dances. Lilly Grove, in her history of dancing (London, 1895), included whole chapters on national dances and dance customs. English folklore journals published essays on seasonal festivities that discussed rustic examples such as maypole dancing and morris dancing. The year 1903, in saw E. K. Chamber's *The Mediaeval Stage* (London), one of the earliest uses of the terms *folk dance* and *Volkstanz* in a scholarly study, signalling a subtle shift in intellectual attitudes: dance was finally included in the rank of folk-compound genres, and a whole group of dance forms and customs associated with the romantic notion of the folk became "folk dance."

Throughout the early twentieth century, the concept of the folk dance was codified through the collecting and publishing of dance materials and through work in the now growing fields of folklore studies and dance education. To differentiate certain important features of dance culture, particularly the origin and transmission of dance forms and styles and the contexts of dance performance, the term *popular dance* began to be used. *Folk dance* referred to dances whose origins were obscured in ancient customs and ceremonies that derived from primitive religious ritual. Folk dances were passed on from one generation to the next and were performed as part of traditional folk community festivals. Though popular dances might be adopted into the folk repertoire and performed in traditional contexts, they were not native to the folk community. Popular dances originated from an external source, such as a foreign culture or a professional dance instructor. Popular dances were transmitted through a broader variety of social relationships than would generally have been included in the traditional folk learning process; that is, people learned from non-community members, from strangers, or from dance teachers. Popular dances were most often performed during recreational events organized for the purpose of social dancing, often in a public setting such as a dance hall. Folk dance was believed to be a pure expression of national identity, whereas popular dance was a commodity in the aesthetic marketplace of a heterogeneous, multicultural society.

The development of the concepts of folk dance and popular dance is critical to a larger understanding of dance and religion. The very definition of folk dance is inextricably tied to Western ideas about the history of religion and human culture. In the end, however, the definitions of folk dance and popular dance have to do not so much with types of dance activity as with the progression of intellectual judgments about social and economic class. According to the nineteenth-century models on which they are based, folk dance is the dance performed by the folk, and popular dance is the dance performed by the working class, or bourgeoisie. These intellectual constructions are so romantically idealized and oversimplified, however, that they do not reflect the cultural reality of the time. Even if nineteenth-century peasants had been the pristine, homogeneous group the folk were supposed to be, there was constant interaction between folk and popular culture. Popular dances did circulate among rural peasant communities and in some cases were regarded as having more prestige than older traditional forms because they were new, different, innovative, or exotic. Likewise, the dancing of the new working class was full of deeply embedded traditional elements: a foreign or popular dance form would be performed in the traditional, regional body movement style of the performer, reflecting traditional concepts of the body; a laborer who paid an admission fee to enter a public dance hall would pursue social interaction with members of the opposite sex and different age groups according to traditional—and commonly shared—rules. Perhaps most importantly, the new popular dances were evaluated and accepted on the basis of how well they satisfied current fashions, but those fashions were at least partially rooted in a folk aesthetic. The complexity of the historical interrelations between folk dance and popular dance and the disparity between intellectual ideals and cultural reality must be considered seriously.

Fundamental beliefs about dance as a form of expresion run deep in Western culture and have influenced the intellectual fashions of every age. Whatever the criteria used to delimit folk dance and popular dance, it is in the meaning of dance in vernacular culture that the relationship between dance and religion can be explored most profitably. Vernacular dance, then, refers to dancing that is integral to the everyday life and beliefs of a given group of people, irrespective of whether that dancing might also be classified as folk or popular. Religion must also be contemplated in terms of everyday culture, ranging from the dogma of the official religious establishment to the traditional beliefs and practices that embody spirituality.

**VERNACULAR DANCE, SPIRITUALITY, AND RELIGION.** There are three general categories of dance as it relates to religion and spiritual values: religious dance, ceremonial dance, and social dance. Each of those categories can be distinguished on the basis of context, belief, and—to a lesser extent—form. *Religious dance* is dance performed as part of religious worship, often taking place in the church or sanctuary. It is believed to be devotion incarnate, more than just a symbol or gesture of piety. Common forms of religious dance include the processional, circle, and solo individual dance. In performance the dancer seeks to express reverence and to interact directly with the divine.

*Ceremonial dance* is a much broader category and includes dancing that is part of a whole spectrum of celebratory events, from the religious to the secular. Religious events such as saints' festivals and secular events such as civic parades frame a continuum of events that manifest many types and degrees of spiritual belief. Celebrations such as Carnival, certain rites of passage, and seasonal festivities embody an ambiguous spirituality that lies somewhere between the sacred and the secular, or perhaps encompasses elements of both. Ceremonial dance is believed to transcend the realm of everyday life, reaching toward a higher spiritual power, be it a deity, luck, or art. Of any category, ceremonial dance embraces the largest variety of dance forms including processionals, circle and line dances, various set formations, couple dances, and solo dancing.

*Social dance*, finally, refers to dancing that is performed for recreation, generally as part of events that are oriented around leisure activity and social interaction. Social dance is believed to be the expression of the individual or a social relationship and does not refer directly to any religious or spiritual concept, except in one sense. In that dancing is considered artistic performance, it attends to the immanent spirituality of art as a vehicle of power and meaning. The forms of social dance include various group and couple formations and solo individual dancing.

These three categories of dance—religious, ceremonial, and social—are somewhat fluid. Changes in one factor or another can result in a shift in category for a given dance. For example, with a change in context, social dance can become ceremonial dance; with a change in belief, ceremonial dance can become religious dance (this is what occurs in many cases when a dancer becomes "possessed" by a spirit or deity.) Thus it is clear that dance cannot be considered an inanimate cultural object. Its significance must be assessed in performance as it is actively employed in a social process. Following is a sampling of dance customs found in different cultures in Europe, the Middle East, and the New World, illustrating primarily examples of religious and ceremonial dance.

**Europe.** The religious revival movement of Hasidism developed in Europe in the eighteenth century. In reaction to the Jewish orthodoxy of the time, Hasidism emphasized the individual expression of devotion that was within the means of every man and woman and not limited to those educated few who were privileged to study the Torah. Dance became a primary mode of religious expression, and as Hasidism spread through eastern European Jewish communities, ecstatic dancing became an identifying marker of Hasidic worship. In fact, critics of the revival sometimes mocked or ridiculed the exaggerated dance style when voicing disapproval of religious extremism. Hasidic dance is religious dance in the fullest sense; it is a means of inspired communication with God. Not only is dance and ritual movement a revered element of religious services but dancing infuses the spirit of religious devotion into numerous other festivities and celebrations. A prominent form of Hasidic dance is solo improvisation, which sometimes consists of little more than simple shuffling steps or weight shifts, various distinctive body postures, and gestures of the arms and hands, which are often raised above the head. Specific dance steps are not required, and any decorous movement performed with a spiritual intent can be acceptable. Group and couple formations are also common, though men and women are strictly segregated in all aspects of religious worship, including dance. Couple forms include simple variations of linking elbows and turning, and of forward and back patterns; group forms include complex set dances in square and circle formations. The Ḥasidim have apparently never hesitated to adopt dance forms from surrounding gentile cultures, and this process continues in Hasidic communities today.

One end of the spectrum of ceremonial dance, that which is associated with the religious or sacred, is found in the Romanian ritual Căluş. For approximately one week beginning on Whitsunday, the villagers of southern Romania observe Rusalii, a period when the spirits of the dead are believed to return to be among the living. Also during this period, evil forces are believed to be unusually threatening, and various types of behavior are restricted or forbidden in efforts to ward off the illness caused by being "possessed by Rusalii." Such an illness can only be cured through the ritual Căluş. In addition to the general healing and protective properties of Căluş, the ritual is also seen as a source of good luck and fertility. Handerkerchiefs or small articles of clothing are sometimes attached to the dancers' costumes in hopes that they will be imbued with this luck, which is then brought back to the owner of the object. Likewise, threads from the dancers' costumes are throught to be charmed, and spectators often pluck them in hopes of deriving some magical benefit. Căluş involves a complex of performance genres, material culture, and beliefs, and it is believed they work together to effect some modicum of human control over nature and the supernatural.

In Căluş, women of the community sing long, emotional laments in the traditional manner to maintain contact between the dead and the living. All the dancing, however, is performed only by a select group of men, the Căluşari. These men are all highly skilled dancers and must take an oath not to reveal the secrets of Căluş and to obey certain behavioral interdictions. Dancing is a primary vehicle of ritual magic and healing and is performed with great seriousness and sense of responsibility. The Căluşari visit each house in the village, dancing in the courtyard to a group of eager spectators. The performance includes exhibition dances that are done only by the Căluşari and a final group dance in which the villagers dance with the Căluşari. The exhibition dances are of two types, one consisting of simple walking figures done in circle formation, the second being a combination of complicated steps, jumps, and acrobatic leaps that demand virtuosic skill from each dancer. In Căluş, dancing is an act of magic, an inexorable part of the healing ritual and beliefs about supernatural forces.

The Tuscan *veglia* offers an example of dancing that straddles the boundary between social and ceremonial dance. The *veglia* is the traditional evening social gathering that is held regularly through the winter season. This custom lingers on to this day in some areas but was common throughout Tuscany until a general decline that began in the 1970s. At the *veglia*, family and friends gather around the kitchen hearth in rural homes, and amid general socializing and merriment, the performance of traditional narratives unfolds. Through storytelling, children are instructed in the moral values of the community, young unmarried couples court each other with the singing of love songs, and the elders reflect on their experiences by exchanging tales of insight, happiness, and woe. Though the *veglia* is primarily a social occasion, it also has ceremonial qualities: it is a seasonal event; it is only open to people who have a certain relationship to the host family; there are prescribed rules for social intercourse between age groups; and there is a particular sequence that is appropriate for the performance of certain artistic genres. The *veglia* is a time of heightened social interaction defined by a community reverence for traditional values and a group negotiation of the boundaries of artistic performance.

Though dancing takes place throughout the year except during Lent, Carnival season is especially devoted to dance events. The "Carnival *veglia*" is often organized by the young unmarried men, who arrange for a suitable location, hire a musician, and provide refreshments. They then invite young women to the dance, who always come accompanied by a chaperon. At other times, the dance *veglia* is hosted by a given household, in which case one's attendance is dependent on being acquainted with the family and garnering an invitation. In either case, the dance *veglia* is specifically an event for the young to socialize. Every year during Carnival, the landlords hold a dance party to which people of all social classes are invited. Peasants and landowners dance together as equals, temporarily nullifying class differences.

There are also two instances when the dance *veglia* is held in a public hall. In one case, the young men arrange for a dance party to be held on a Sunday afternoon following the religious service. This dance is semi-secretive in that it is not announced formally in the community, thereby allowing the young women to attend without the knowledge of their mothers and chaperons. A public hall is also the setting for the special dance parties that are held on the three most important days of the Carnival period. These are organized by private social clubs whose members are confined to representatives of the families from a given village. The young people dress in elaborate finery, the men in dark suits with white gloves, the women in special outfits that are supposed to have never been seen before. The proceedings of the dance event are directed by the *caposala*, who is a well-known and respected man from the community. The *caposala* formally presides over the various and sundry forms of social interaction. He coordinates the sequence of dances, dance and courting games, and dancing competitions, and he serves as a matchmaker, employing both overt and covert methods to bring certain young couples together to dance and enforcing the etiquette that demands that no favoritism be shown in choosing dancing partners so that all the young women have at least one dance with each young man. He also maintains peaceful social equilibrium, settling any dispute and expelling troublesome participants. These dance *veglie* often last until dawn, although the party held on the final night of Carnival ends promptly at midnight, which marks the beginning of Lent. The last part of the Carnival season was, in years past, distinguished by the appearance of two costumed characters. The first of these masked men, dressed in fancy black formal attire, was the incarnation of Carnival itself, and he arrived just in time to dance the last dance of the evening. The second man entered at midnight, cloaked in a long gray coat decorated with smoked herrings; he was the embodiment of Lent, and he brought the festivities to a ceremonious end.

The dance forms performed at a *veglia* are always the same and are always danced in a particular sequence. The first dance is a polka, followed by a mazurka, a waltz, and a quadrille. The quadrille was considered the climax to the dance sequence, as it involved a variety of complicated steps and patterns and allowed the greatest opportunity for flirting during the changing of partners. Recently, other couple dances have been inserted after the waltz, such as the tango and the one-step. All of these forms are popular dances, and though they are all based on folk dance forms to varying degrees, none is specifically native to Tuscany. Despite the fact that these dances have been, at some point in history, imported into the Tuscan countryside from some foreign source, they have been unabashedly adopted into the community repertoire and through generations of performance have become thoroughly naturalized. The dancing that takes place at a *veglia* is social dancing in the most straightforward sense: young men and women dance together to be with each other, confirming and expanding an everyday relationship. It can also be considered ceremonial dancing by virtue of its central role in the *veglia*, transforming everyday life and social interaction into festivity and artistic performance.

**MIDDLE EAST.** The Middle East is the birthplace of three of the world's major religions—Judaism, Christianity, and Islam—and home to a variety of regional cultures and linguistic groups. Though all three religions and their subdenominations are found in the Middle East today, Islam predominates. In *The Middle East* (1976), anthropologist John Gulick distinguishes between the "great tradition" and "little tradition" in Islamic religion. The "great tradition" refers to the tenets of official religion based on the sacred written texts. The "little traditon" refers to the belief systems surrounding the veneration of saints, the control of evil spirits, and other spiritual endeavors. The beliefs and customs of the little tradition are not specified in the official religious texts and are, in fact, frowned upon by some religious functionaries. They are, nonetheless, an integral part of everyday religious prescriptions of devotion. It is in this little tradition of vernacular spirituality that we find dance customs related to religious life. There are few studies that discuss dancing in Muslim and Jewish communities, and virtually none that examine Christian settlements. Even these limited materials, however, suggest some cultural consistency or interrelationship between customs, and possibly dance forms, found among different religious groups in the Middle East. It remains for future research to explore fully the implications of ethnicity, religion, and regionality on artistic performance.

The "little tradition" of many Muslim communities includes a type of ceremonial dancing that plays a key role in a ritual process of exorcism known as the *zār*. Though found in several Middle Eastern countries, the *zār* appears to be most well known and vital in the Nile region, particularly in Egypt. The spirit that must be exorcised in the *zār* ceremony is also known as *zār*. The *zār* ceremony is performed to cure an individual of spirit possession. Though anyone is potentially vulnerable to possession, women are the most commonly afflicted. It is believed that pure spirits are ever present, wandering around the earth. These spirits demand respect, and humans are required to observe rules of spiritual etiquette, such as giving thanks or asking permission for certain actions. Pure spirits can impose good or evil upon human beings, but it is believed that committing some infraction or allowing a breach in deferential protocol will provoke a spirit to possess an individual and wreak punishment. Such possession can manifest itself in a variety of physical and mental symptoms, such as chronic aches and pains in certain body parts, general indolence, allergies, rheumatism, epileptic fits, and different feminine complaints, including barrenness.

The *zār* ceremony requires the services of two important ceremonial functionaries, as well as an ensemble of musicians. One role is that of the *shaykhah*, who is a spiritual intermediary. Through consultations, divination, and the prescription of different types of ritual behavior, the *shaykhah* ascertains what is needed to appease and expel the spirit. The second role is that of the *munshidah*, who is a singer versed in the specialized traditional repertoire of *zār* songs. The *munshidah* sings different songs throughout the ceremony, entreating the spirit to make itself known and interact with the *shaykhah*. Both the *shaykhah* and *munshidah* are generally hereditary roles passed on from mother to daughter.

The *zār* ceremony itself can last anywhere from one to several days, depending on the wealth of the possessed woman who has come for help. The "patient" must follow the advice of the *shaykhah* to wear special garments and ornaments or to consume certain foods and drinks. The patient provides whatever offerings the *shaykhah* determines are necessary, generally a combination of a few fowl and pieces of gold or silver jewelry. At sunset, a large circular table is covered with an elaborate meal, accompanied by chants and special songs. At two o'clock the following morning, the animals are ritually slaughtered according to Islamic custom, and the possessed woman is smeared with the warm blood. The next day the *zār* ceremony continues as the *shaykhah* guides the patient through various rituals while the *munshidah* sings the appropriate songs.

The emotional climax of the ceremony is reached when the possessed woman starts to dance. Individual spirits are associated with distinctive rhythmic patterns, and as the musicians play a particular beat the possesed woman will be drawn to dance. The dancing is frenzied and ecstatic, and the dancer speaks in the voice of her possessing spirit. The spirit makes demands that the *shaykhah* must then interpret and satisfy. The dancing continues and the excitement builds as the musicians, *munshidah*, and *shaykhah* encourage the dancer, who will dance until she is thoroughly exhausted. The dance is always a solo improvisational form, consisting of torso bending and swaying, head and arm gestures, and some simple stepping and floor patterns. The dancing performed in the *zār* ceremony is considered a vehicle for the spirit to express itself and a critical cathartic element in the process of exorcism.

Yemenite Jewish culture provides a vibrant example of the range of dance activity in the religious and spiritual life of a community. Jewish communities in Yemen were among the most isolated in the Middle East, and many ancient customs were preserved as an ongoing part of daily life. For example, religious dancing was an integral part of the observation of certain holidays, such as Simḥat Torah. In celebration of the yearly cycle of reading the Torah, the congregation sang special verses of the *pizmon*, which are religious texts sung only in the synagogue. Along with their joyous, exuberant singing, the congregation danced around with the Torah scrolls, carrying them from the central desk of the synagogue, where they were placed for reading, back to the ark, where they were stored. The dancing consisted of simple walking steps without much elaboration or stylization, but the dancing was considered an expression of devotion to Jewish religious law as written in the Torah.

There was also ceremonial dancing in Yemenite Jewish communities. Celebrations and rites of passage such as circumcisions or the two weeks of preparations and festivities that accompanied a wedding were commemorated with dancing and singing. Traditionally, men and women danced separately, each to the singing of special dance songs and the playing of a drum. The dance songs sung by the men had fixed religious texts in Hebrew, Aramaic, or literary Arabic and were performed by two singers who sat apart from the dancers. The women sang songs about everyday life, including the importance of the event being celebrated at the time. Their song texts were sung in local Yemenite Arabic dialect and were performed by the women as they danced. Though the women's songs were less overtly religious, the dancing of both men and women was considered a means of rejoicing and of honoring the celebrants.

**NEW WORLD.** Among the European cultures in the New World, the religious sect known as Shakers offers a unique example of religious dancing in community worship. The Shakers originated in England in the mid-eighteenth century and settled in America shortly before the Revolution. They held that the second appearance of Christ was imminent and that true believers must follow certain tenets in order to transcend wordly existence and achieve everlasting life. The foundations of Shaker faith were observed through keeping apart from the world at large, the two sexes living separately and remaining celibate, sharing all property in common, diligently pursuing craftwork with their hands, and worshiping with joyful abandon. The early Shakers were overcome with ecstasy in their worship and were given to fervent and eclectic displays of divine inspiration including speaking in tongues, whirling or shaking, singing song fragments, shouting, and jumping.

As the sect grew and developed, their deranged array of spiritual responses was institutionalized into orderly forms of song and dance. Though the expression of their religious zeal was largely disposed to tidy devotional exercises, the Shaker's faith was no less impassioned. Dancing was considered a spiritual gift, or the "work of God," which they were most happy to receive. Devotional dancing was also believed to function as a means of expelling and pacifying carnal desires, thereby allowing a pure bodily manifestation of faith. There were instances of individuals dancing by themselves while receiving the spirit, but most Shaker dancing was performed in large groups consisting of all the able-bodied Believers. Men and women formed separate lines or circles and danced a variety of floor patterns and simple figures. There were dances in square and circle formations as well as processionals and sacred marches. Many of the dance patterns were said to have originated in spiritual visions and dreams received by the Shakers and were imputed with specific symbolic meanings illustrating Shaker beliefs.

The population of the New World is a panoply of different cultural groups, with a broad spectrum of religious beliefs and customs. Over the centuries different cultures have come into contact, influencing each other to varying degrees. Rather than dissolving into a homogeneous mass, however, distinct aspects from different cultural traditions were reblended into new creole forms. These creole cultures, languages, or performance traditions often contain elements that can be easily identified and traced to specific Old World origins, but the new incarnation is not an exact replica of the original. In all cases, there has been change, development, and adaption to suit new conditions and social contexts.

One of the most dramatic examples of this reblending process is found in Afro-American culture. The historical circumstances of the slave trade threw together Africans from several different national territories in west Africa, including at least five major cultural groups. The intermingling of different African traditions and beliefs has yielded an array of new Afro-American forms, which have also intermingled with other non-African traditions according to regional and historical conditions.

The *vodou* religion practiced in Haiti is one instance of this intermingling of African and non-African traditions. It incorporates a synthesis of different African beliefs and rituals that further interface with Roman Catholic practice and symbolism. Vodou is based on a complex mythology that relates major gods to lesser divinities. These spirits are called *lwa*, a Kréyol term, and they include ancestor spirits, gods and goddesses of nature, a trickster, a god of creativity, and a supreme god who presides over all the others. Every spirit has an individual personality and is associated with certain domains of everyday life or spiritual well-being. To ensure the goodwill of the *lwa* and be taken under their protection, a person must be initiated into the spiritual society. A priest or priestess, known as *hungan*, coordinates the ceremonies and rites that take place in their sanctuary and tends to community needs requiring divination, exorcism, and healing.

Vodou ceremonies and dances are generally performed in a covered shed that has a post standing in the center of the floor space. This center post is considered the means by which the spirits descend into the peristyle. Though the spirits communicate with initiates through symbolic dreams and visions, they commonly possess people and make their will known. Each spirit expresses itself through a distincitve repertoire of speech mannerisms, body movements, special dances, and a predilection for certain objects, such as a hat, bottle, or stick. It is said that a spirit "mounts" its "horse" when a person becomes possessed; the person is a vehicle for the spirit, an expressive body through which the spirit interacts with the crowd and other spirits. Possession behavior is regarded as tangible evidence of a spirit's personality and temperament, and watching the possessed during vodou ceremonies is believed to be an important way for potential initiates to learn about the spirits.

Dancing and possession are closely interrelated. Three dances are performed to honor each spirit, accompanied by songs and the playing of a drum ensemble. Rhythm acts as a kind of supernatural intermediary and entices the spirits themselves to dance. Each spirit has its own particular dances through which it reveals its power and aesthetic agility. Dancing is considered a ritual act on several levels. In one sense, dancing is held to be a gift, performed by initiates as an offering to please the spirits. In another sense, dancing is believed to be a means of divine communication by which a spirit imparts its essence or intentions to a devotee. On yet another level, dancing is transcendental, in that aesthetic fulfillment has spiritual significance. Both humans and spirits dance, seeking to achieve greater spiritual power through artistic performance. The dancing in vodou worship that is associated with possession is undeniably religious dancing, as it is the actual practice of religious belief and devotions.

## Bibliography

A well-rounded and detailed study discussing the nature of dance in Greek civilization is Lillian B. Lawler's *The Dance in Ancient Greece* (London, 1964). This book also outlines the important Greek philosophical tenets that have influenced Western ideas about dance. A good historical study of literary references to dancing and Christianity, especially focusing on the dance epidemics, is Eugène Louis Backman's *Religious Dances in the Christian Church and in Popular Medicine*, translated by E. Classen (London, 1952). An excellent introduction to the history of popular culture and folk culture is Peter Burke's *Popular Culture in Early Modern Europe* (New York, 1978). This book also has a very useful bibliography.

The classic work that epitomizes the nineteenth-century study of comparative religion and ideas of cultural evolution is James G. Frazer's *The Golden Bough*, 3d ed., rev. & enl., 12 vols. (London, 1911–1915). Though his source materials are quite uneven, Frazer includes a multitude of references to dance-related customs. A further elaboration of evolutionary ideas is found in Curt Sachs's *World History of the Dance*, translated by Bessie Schönberg (New York, 1937). While this book has been used as a standard text for many years and offers interesting examples of dance customs, it ignores twentieth-century developments in the study of human culture and restates outdated nineteenth-century philosophy. One of the few examinations of dance by a historian of religions can be found in Gerardus van der Leeuw's *Sacred and Profane Beauty* (New York, 1963).

Additional source material on the history of folk dance, popular dance, and vernacular dance is discussed in my article "Folkdance," in the *International Encyclopedia of Dance* (New York, forthcoming). One of the first works to develop the concept of vernacular dance is Marshall Stearns and Jean Stearns's *Jazz Dance: The Story of American Vernacular Dance* (New York, 1964). A varied collection of short essays is *The Chasidic Dance*, edited by Fred Berk (New York, 1975). Of particular interest in that collection is the article by Jill Gellerman, "With Body and Soul: The Dance of the Chasidim" (pp. 16–21), which recounts the contemporary practices of Hasidic communities in Brooklyn, New York. A recent monograph that offers detailed description and analysis based on first-hand observations is Gail Kligman's *Căluş: Symbolic Transformation in Romanian Ritual* (Chicago, 1981). A delightful account of traditional social life, which includes a collection of song and narrative texts, is Alessandro Falassi's *Folklore by the Fireside: Text and Context of the Tuscan Veglia* (Austin, 1980). A good introduction to the culture of the Middle East written from an anthropological perspective is John Gulick's *The Middle East* (Pacific Palisades, Calif., 1976). This book contains useful annotated bibliographies after each chapter.

There are very few sources on dance in the Middle East, but a good overview is found in Lois Ibsen al-Faruqi's "Dance as an Expression of Islamic Culture," *Dance Research Journal* 10 (Spring-Summer 1978): 6–13. Two short studies that contain interesting history and illustrations are Metin And's "Dances of Anatolian Turkey," *Dance Perspectives* 3 (1959): 5–76, and Morroe Berger's "The Arab Danse du Ventre," *Dance Perspectives* 10 (1961): 4–67. Two longer studies that offer detailed descriptions and contextual information based on contemporary observations are Magda Ahmed Abdfel Ghaffar Saleh's *A Documentation of the Ethnic Dance Traditions of the Arab Republic of Egypt*, 2 vols., Ph.D. diss., New York University (Ann Arbor, 1979), and Shalom Staub's *The Yemenite Jewish Dance*, M.A. thesis, Wesleyan University (Ann Arbor, 1978).

The classic work on the Shaker sect remains Edward Deming Andrew's *The Gift to Be Simple: Songs, Dances, and Rituals of the American Shakers* (New York, 1940). A revealing examination of Afro-American art and the process of creolization, much of which is in relation to religion, can be found in Robert Farris Thompson's *Flash of the Spirit: African and Afro-American Art and Philosophy* (New York, 1981). A classic study in the field of Afro-American religion remains Alfred Métraux's *Voodoo in Haiti* (New York, 1959).

LeeEllen Friedland (1987)

## DANCE: POPULAR AND FOLK DANCE [FURTHER CONSIDERATIONS]

Traditionally, dance scholarship has privileged classical and theatrical dance over popular and social dance. Folk dance has been viewed since the nineteenth century as a special case study in expressions of group identity and of interest for specialists in folklore, mythology, and ritual. Popular dance has been a study in class distinctions and in modes of transmission, especially with regard to the ever-widening forms of late twentieth-century mass media. The dearth of scholarly publications related to popular and folk dance continues even among dance ethnologists and anthropologists.

Dance anthropologists Joanne W. Kealiinohomoku and Adrienne Kaeppler and dance sociologists like Helen Thomas, have found that dance—like language, art, and religion—is found in all human societies. Popular and folk dances are powerful forces in the shaping and experiencing of culture and values, but these terpsichorean modes are culturally distinct idioms, such as in Mircea Eliade's discussion of the *călușuri* (1985).

However, the fundamental difficulty for any form of academic research is that the vehicle for dance is the human body, so that the ephemeral nature of dance presents a difficulty for "objective" analysis, as do the varied cultural attitudes toward the body. Further, all forms of popular dance, whether as a formal social dance such as the waltz or as informal and fleeting as teenage dance crazes, are perceived more as an "entertainment" than as a historically significant subject for scholarly attention.

Into the 1980s, dance scholarship had been divided into two groups: dance historians and critics who operated chronologically and based their evaluations upon traditional aesthetic criteria; and dance ethnologists and anthropologists who focused on the cultural role(s) and effects of dance. Ironically, the historians and critics traditionally concentrated their research efforts on the West while the ethnologists and anthropologists considered the non-western countries. The now classic hierarchy of dance forms from ballet through ballroom continues to function. However, since 1987 attention has been paid to the expanding universe inspired by gender studies, cultural attitudes toward the body, and the inclusion of the marginalized—that is, those who for reasons of race, ethnicity, gender, or class were omitted from earlier academic research and thereby the history of civilization. This transformation can be partially credited to the almost simultaneous airing of the eight-part television series *Dancing!* with its companion volume (1992) and the publication of the multi-volume *International Encyclopedia of Dance* (1998).

Throughout the 1990s, the oral history project of the Dance Collection of the New York Library for the Performing Arts has expanded its efforts into the collecting, supporting, and curatoring of the interviews, papers, ephemera, and film related to both popular and folk dance. In particular, the Dance Collection received funding support to coordinate with the Smithsonian Institution the videotaping of the American Folklife Festivals.

As an artistic, religious, and social practice, popular and folk dances generate a cultural and political identity for both dancer(s) and audience. These forms of dance have garnered the attention of folklorists, anthropologists, and historians of religion who typically study the interrelations among the arts, mythology, and dance of indigenous peoples as a way of learning and communicating cultural values and religious identity. Some expansions of the traditional boundaries of the interdisciplinary nature of the study of the religious connections with folk and popular dance have expanded into the realms of American Studies, Performance and Display, Popular Culture, and Religious Studies.

**New Perspectives.** Both from the perspective of religious studies and dance theory, the primary objective is to remove the "stigma of entertainment" from any intellectual analysis of either social or folk dance. The varied interpretations of the body and performance in contemporary scholarship may proffer a methodology for dance as kinesthetic modes for the politics of identity and difference. The category of "vernacular dance" (Spalding, 1995) has opened the borders within which dance had functioned and promises to re-shape the meaning and values of popular and folk dance for a new generation of scholars.

## DANCE: THEATRICAL AND LITURGICAL DANCE [FIRST EDITION]

A distinction often drawn between dance in the West (the Euramerican tradition) and dance in the rest of the world is that the latter is closely tied to religion, while dance in the West, especially theatrical dance, has developed outside religious institutions and often in opposition to them. Most of the major Asian dance–drama forms originated in religious contexts, involve religious themes, and, especially in the past, were often performed by religious practitioners. Outside Europe and Asia, dancing intended for presentation to an audience has been rare until recently and has usually taken place in a religious context. Divine possession has often been a vehicle for quasi-theatrical performance.

A dichotomy can also be discovered between the history of Western dance on the one hand and that of Western music, visual arts, and architecture on the other. While religion provided a legitimate context and a source of patronage for the growth of other European arts, this was not the case for dance. For the most part, the church not only did not support dance, it vehemently opposed it.

Yet, such broad generalizations about the divorce of dance from religion tend to obscure recognition of how influential religion has in fact been. While direct religious intent has been relatively rare, it has been strong in some periods and for some choreographers. A few have been motivated to express their religious conviction in dance, and others have sought in dance the wellsprings of spirituality. These choreographers have often found inspiration in non-Western religions where the connection between the spirit and the body is often a key principle. Whereas in earlier centuries myth and ritual were used as plot devices or as political metaphors, often in recent decades the choreography has explored the deeper dimensions of their symbolism.

Religious content has entered Western theatrical dance in a variety of ways, including (1) the use of biblical or folkloric religious themes; (2) the depiction of characters, rituals, and myths of non-Judeo-Christian religions or of unorthodox sects; (3) the influence of religious philosophies; (4) explorations of the concept of ritual or the stylizations of specific rituals; (5) the enactment of myths or the probing of mythic symbolism; (6) the use of general religious concepts or central characters, events, or processes, such as Death, Creation, and the Devil; (7) plots involving supernatural characters and stories; (8) the theme of religiously motivated sexual repression; (9) the use of religion as a device for exploring cultural identity; (10) explorations of altered states of consciousness as often occurs in sacred dance; and (11) settings of the Mass as theatrical works. In addition, many dance plots presuppose a knowledge of Judeo-Christian ethics, symbolism, ritual, and history in order to be understood fully. Religion has also indirectly affected theatrical dance history by its varying attitudes toward dance, which have included suppressing, supporting, and ignoring it.

Conflicting attitudes toward the human body and, by extension, toward dancing have characterized all three of the major monotheistic religions in the West—Judaism, Christianity, and Islam. Although the negative view has generally won out, alternative models and solutions constantly challenge any overwhelming orthodoxy. Biblical literature, for instance, provides both favorable and unfavorable pictures. On the one hand, there is the model of King David's joyous dance before the Ark of the Covenant (2 *Sm.* 6:14–16); on the other hand, there are the Israelites' idolatrous dance around the Golden Calf (*Ex.* 32:19) and Salome's allegedly lascivious dance before King Herod (*Mt.* 14:6, *Mk.* 6:22). Contradictory, too, are possible interpretations of the words of the apostle Paul. For instance, his statement that the "body is a temple of the Holy Spirit" (1 *Cor.* 6:19) has been interpreted as indicating the appropriateness of using the body in dance as a vehicle of worship and also as justification for condemning dance as a defilement of the "temple." Ambiguity about the relation of body and soul has plagued Jews, Christians, and Muslims alike, and has militated against the acceptance of dancing.

Interestingly, some heterodoxies in monotheistic religions have incorporated dance as a major focus of expression—the gnostic sects of early Christianity, the Sufis in Islam, the Hasidim of Judaism, and the Shakers of American Christianity. The Mormons are unusual in their embrace of dancing as both a social and theatrical experience.

There has been more interrelationship between religion and theatrical dance in the twentieth century, in quantity as well as in diversity of expression, than at any other time. With organized religions in general neither condemning nor supporting dance, perhaps dance has been freer to adopt religious themes without political ties or negative consequences. Perhaps the apparent secularization of society has rendered religious themes more neutral raw material. On the other hand, the growing popularity of dance has made this medium of expression more acceptable in religious contexts. In addition, while primarily growing up outside of religious institutions, theatrical dance in the twentieth century has returned to the church and synagogue in the burgeoning liturgical or sacred dance movement.

**EARLY CHRISTIANITY THROUGH THE MIDDLE AGES.** The strongest evidence that there was dancing connected with religion in the early Christian church is the persistent condemnation of dance chronicled in the writings of over six hundred years of church councils. At this time, dancing was particularly associated with ceremonies at the shrines of martyrs.

The disdain of the church for dancing stemmed in part from the state of dancing at the time. Much of the refinement of Greek and Roman dance and theater had degenerated into generally bawdy mime and acrobatic shows, or else the dancing had become associated with pagan rituals. The church even refused baptism to performers. A growing asceticism further divorced Christianity from dance. In addition, certain heretical movements incorporated dance into their liturgy, further fueling orthodoxy's condemnation of it. For instance, the gnostic sects enacted the "Round Dance of the Cross" from the *Acts of John* as an actual sacred ritual dance that enabled the participants to identify with Christ and to transcend human suffering. Such lines as the following have become a rallying point for other religious sects that wish to recognize sacred dance: "To the universe belongs the dancer. Whoever does not dance does not know what happens" (Acts of John 95:16–17).

Condemnation of dancing continued into the later Middle Ages. However, the inherent theatricality of the Christian liturgy, as well as of the biblical literature, could not be ignored. Dramatic performances were often elaborate, sometimes involving processionals and dancing. Dance roles tended to be comic or grotesque character parts. Starting around the twelfth century through about the fifteenth century, plays were associated with Easter and Christmas. Corpus Christi festivals involved dancing, often by guild members or under government sponsorship. Los Seises, a ritual dance performed by boy choristers, was initiated in Seville and is still performed today. The Pelota of Auxerre is thought to have been a complex dance in which the clergy passed a ball among themselves along the stations of a labyrinth. Dances moving along the paths of labyrinths on the floors of cathedrals, such as the one at Chartres, were also integrated into the liturgy.

Dancing in both a recreational and performance context took place mostly outside the church, often in conjunction with local saint days and religious festivals. Christmas was particularly enlivened by popular dancing often involving mumming, a practice that still accompanies this holiday in parts of the United Kingdom and in North and South America. The Feast of Fools provided the opportunity for burlesques of the established church. Many of the celebrations on these holidays had pagan roots, providing further reason for official condemnation.

The miracle, mystery, and morality plays of the Middle Ages were performed in the churchyards and contained some of the beginnings of professional dance. The dancing parts tended to be fools, shepherds, and demons. The Devil was often blamed for inventing dancing, and it is the Devil who was one of the most danced characters. Minstrels, jongleurs, and other traveling performers of this period often included acrobatics, mime, and dancing in their performances. Pageants included *tableaux vivants* depicting biblical scenes. While generally not dance per se, they involved the communication of meaning through postures and movement rather than through words. The Dance of Death was a pervasive visual and literary symbol.

Social dancing was practiced in the feudal manors of the Middle Ages, and performances including dancing began to enter the courts toward the end of the period. However, it was in the courts of Renaissance Europe that the roots of theatrical dancing emerged, roots not directly linked to religion, but affected by religious ideas in indirect ways.

**RENAISSANCE.** With the rediscovery of classical antiquity during the Renaissance came a desire to discover the relationship between Greek philosophy and dance. Renaissance courtiers viewed dance as a medium that could express cosmological, moral, and political principles. Aristotelian ethical theory, Plato's mystical geometry, and Neoplatonist ideas of love were exemplified in dance. While dance in the Renaissance was for the most part composed of simple patterns of stepping, there was also an emphasis on elaborate spatial formations. Much like the members of a contemporary marching band at a football game, the performers constantly created floor patterns that they skillfully transmuted to other patterns. To the Renaissance dancer and spectator, the geometrical figures that were formed had symbolic significance: the dissolution of the patterns revealed the mutability of nature, but underlying these shapes and changes was a grand unifying order emanating from God. The patterns of the dancing were interpreted in different ways. For example, in cosmological terms, they might reveal the harmony of nature as in the cycles of the heavenly bodies; in moral terms, they might exemplify order and virtue and the resolution of extremes; and in political terms they might demonstrate the court's control over these cosmic patterns. It was felt that dancing helped create order within the individual's soul and thereby could promote order and peace in political affairs as well. Dance linked the political, moral, and cosmological orders in an inseparable cycle. Dance did not just portray ritual, it was felt to affect the cosmic and mundane realms of existence.

The dance-plays had primarily mythological themes. The best-documented ballet of this period, *Le ballet comique de la reine* (1581), related the triumph of Minerva (Wisdom) and Jupiter (Virtue) over the evil Circe. The king is seen as her ultimate conqueror, restoring the cosmos to peace. Another important later work has a historical theme relating to Christianity. In *Le deliverance de Renaud* (1617), the Christian crusader Renaud is seduced away from battle by the enchantress Armide. Subsequently, the Christians lose, but Armide's powers fail and Renaud is able to escape and liberate Jerusalem. The plot was interpreted as an allegory for the king freeing France from chaos.

Thus although in European history dance has often been associated with immorality, the Renaissance also offered an alternative interpretation: the conception of dance as virtue. There are examples of this attitude in antiquity, in the writings of Plato and Cicero, for instance, but a fuller development of this theme blossomed in the sixteenth century with the developing concept of the gentleman. Sir Thomas Elyot's *Boke Named the Governour* (1531) and Sir John Davies's poem *Orchestra* (1594), among other works, reveal this perspective. Adapting the concept of correspondences, they discovered the symbolic relationship between dance and particular virtues or states of being. Elyot associated dance with prudence, reason, and order. Particular dance movements were analyzed for their moral symbolism. Davies saw the correspondence between dance and chastity and marriage in contradistinction to the usual correlation between dance and lust. Both authors describe couple dancing in terms of a model of cosmic harmony. Dance was elevated to the status of an ethical ideal. Political concepts were couched in mythological themes that were revealed in dance.

During the Renaissance, *Tanzhausen* were important institutions in the Jewish ghettos of northern Europe. They fostered many choreographers, then called "dance masters," who traveled throughout Europe, often arranging dances at various courts. The best-documented Jewish dance master was, however, a product of the court tradition of southern Europe: Guglielmo Ebreo (William the Jew of Pisaro) is the author of one of the earliest extant dance manuals, dating from the mid-fifteenth century.

In the later Renaissance and early Baroque period in Italy, ballet developed in conjunction with the growth of opera. Monteverdi's *Il combattimento di Tancredi e Clorinda* (1624) featured a duel between the Christian crusader Tancredi and the disguised Muslim maiden Clorinda whom he loved. He kills her, and as she lies dying she asks for baptism. The same theme has been treated by others, most notably by the American choreographer William Dollar in his 1949 ballet *The Duel*.

With the rise of Protestantism, the opposition to dancing grew and was taken to extremes in Calvinist contexts. Although the Puritan condemnation of dance was not so vehement or all-encompassing as often painted, it was strong enough to squelch much social dancing and to thwart theatrical dancing in America and in some strongly Calvinist countries in Europe.

The objection was especially strong to "mixed" or couple dancing and to women appearing on the stage. Such ambivalance toward dance persists to the present and was dramatically represented until well into the twentieth century in the United States in the so-called blue laws, which prohibited dancing and similar activities on Sunday. From the eighteenth century into the twentieth, dance performances often had to be billed as lectures or sacred concerts. Puritanical repression of the body and dancing has been a theme in several twentieth-century choreographies, especially in the works of Martha Graham.

**BAROQUE AND PRE-ROMANTIC PERIODS.** It is in the French court of Louis XIV (r. 1643–1714), called the Sun King, that theatrical dance germinated. In numerous court pageants the king himself was the star dancer, and his favorite role was Apollo, the personification of the sun. The subject matter of court ballets continued to be mythological or pastoral, and the message was still a political one. Professional dancers began to appear, and with the establishment of the Paris Opéra, ballet finally left the confines of the court. With the evolution of the proscenium stage, the figure-based style of the Renaissance with its attendant symbolism was no longer viable; the frontal view of the body was the focus. The ballet vocabulary rapidly expanded in this context. The aesthetic still had a moral overtone; *complaisance*, an air of refined constraint, was the ideal.

Religious institutions were also directly involved in the ballet of the Baroque period in the form of the performances regularly produced by the Jesuit colleges. These colleges were not seminaries, but rather institutions of higher secular education. Unlike most other orders, the Jesuits embraced dance as *divertissements honnêtes.* They performed plays at different times throughout the year, but the principal event was during graduation. They generally staged a five-act tragedy with a biblical, classical, or national theme. A four-act ballet was performed between the acts of the play. The ballets were sometimes loosely connected to the play, but they did not deal overtly with religious themes, favoring the Greek mythological or allegorical plots prevalent also in the court and opera ballets. They were performed in the colleges throughout Europe by the students and were immensely popular. They served as a welcome relief from the heaviness of the often obscure Latin rhetoric of the plays. In Paris the students were joined by the most famous dancers of the Paris Opéra, and the ballets were choreographed by the same preeminent dance masters, such as Pierre Beauchamps and Louis Pécour, who created the masterpieces of the secular theater.

The ballets were often veiled social and political commentaries couched in mythological terms. Themes ranged from "Crowns," a depiction of methods of royal succession, to "The History of Dance," an apologia for dance, to "The Empire of Fate," a critique of the doctrine of predestination promoted by the Jansenists, a group that was ultimately to cause the downfall of the Jesuits in the mid-eighteenth century. Dancing was compatible with the Christian humanist, this-worldly orientation of the Jesuit order. Their ballets differed from their secularly sponsored counterparts in having no female performers or romantic plots and in always having a moral point.

Dance also developed in England, where choreographer-scholars like John Weaver (1673–1760) debated the significance of the dance. The French choreographer Jean-Georges Noverre (1727–1810) shared similar concerns with Weaver, and both were instrumental in the development of *ballet d'action*, which led into another phase of dance history, the pre-Romantic. The characters were still mythological or pastoral, but rather than being merely allegorical symbols, they often displayed emotions and showed some sense of characterization. Important ballets of this period were the mythologically based *The Loves of Mars and Venus* (1717) of Weaver and Noverre's *Medea and Jason* (1763). It was the Age of Reason, and theatrical dance also emulated these ideals.

The French Revolution affected the development of ballet in several ways. For one, it dispersed many of its aristocratic dancers to other countries, including the United States, where theatrical dancing ran up against Puritan disdain. At this time, too, a different energy was at work outside the Opéra in the boulevard theaters of Paris. Catering to the middle class, they featured comic, acrobatic movements, themes from exotic lands and medieval times, grand visual spectacles, and sometimes characters drawn from life rather than from mythology or antiquity. The boulevard theater also discovered the potential for spectacle in biblical themes, producing such ballets and pantomimes as *Samson*, *Suzanne et les vieillards*, *Daniel*, and *David et Goliath* during the period from 1816 to 1838. Many of the production techniques and themes of this Theater of Marvels were adopted and refined at the Opéra.

One curiosity of this period was the highly popular, somewhat sacrilegious, political satire *The Ballet of the Pope* (1797) by Dominique Le Fevre, performed at La Scala in Milan. The choreographer danced the role of Pope Pius VI, who engaged in most unpopelike behavior. An important work of this period was Salvatore Viganó's *La vestale* (1818), which told the story of the forbidden love of a Roman Vestal Virgin, ending in the dual murder of the two would-be lovers. Pierre Gardel's *L'enfant prodigue* (1812) was perhaps the first of a long succession of interpretations of this story.

**The Romantic Ballet.** With the rise of romanticism in the arts, another type of religious theme entered ballet. The beginnings of the Romantic ballet are commonly traced to the 1831 opera *Robert le diable* in which Marie Taglioni, the dancer who was to become the quintessential ethereal ballerina, led a group of the spirits of nuns in a supernatural scene. The development of ballet technique, especially the beginning of *pointe* work, created a mechanism to promote the otherworldly ideals of romanticism. *La sylphide* (1832) and *Giselle* (1841), versions of which are still widely performed, are considered the epitomes of romanticism in ballet. Both exist in a context of the depiction of otherworldly spirits and the desire to escape from this-worldly reality. Because of the Romantic emphasis on emotionalism, subjectivity, malaise, and the attraction to ungovernable forces, this aesthetic trend has often been labeled as un-Christian. Yet a pervasive theme is the contrasting of these uncontrolled states with the tranquility and harmony of nature and Christian values.

Overtly religious themes were rare, but Christian ethics were pervasive. The conflict between Christian values and the supernatural or wild unknown was displayed in many guises. The Romantic litterateur Théophile Gautier characterized the two leading ballerinas of his day, Marie Taglioni and Fanny Elssler, respectively, as a Christian and a pagan dancer, referring to the virginal ethereality of the former and the voluptuous passion of the latter. The roles available to the Romantic ballerina in this era also reflected this kind of dichotomy: supernatural wood and water nymphs alternated with female bandits, gypsies, and exotic temptresses. Plots often contrasted the two.

In *Giselle*, the peasant girl is betrayed by an aristocratic suitor, goes mad, and dies, joining the ranks of avenging *wilis*, spirits who dance men to death. At one point, Giselle protects her lover by shielding him against the cross on her tomb. Thus, religious symbolism often entered the ballet in incidental or subtle ways. The Devil also showed up in many

Romantic ballets—for example, *Le Diable boiteux* (1836) and *Le violin du Diable* (1849).

Another variation of the Romantic ballet thrived in Denmark under the choreographer Auguste Bournonville (1805–1879). His ballets also reveal the fascination with the supernatural and the exotic, but Bournonville emphasized the optimistic and harmonic aspects of the Romantic spirit, for the most part eschewing the darker emotionalism of the Romantic ballets in France, England, and Russia. Contemporary Danish dance critic Erik Aschengreen noted: "Bournonville's ballets rest on the idea of spiritual aspiration, with poetry and beauty as important qualities and with Christianity as the conqueror of all dissonances" (Aschengreen, 1979, p. 111).

While rarely dealing with religious subject matter per se, Bournonville's ballets are suffused with Christian values and symbolism. His ballets contrast social harmony with uncontrolled forces outside society. Christian symbols often are the devices that effect the triumph of human values over the danger of the irrational. He often uses two women (or one woman in two transformations) as a device for contrasting the rational and irrational, Christian and pagan. A striking example of this is in his extant ballet *A Folk Tale* (1854). This is the story of the human baby Hilda who was snatched from her cradle and replaced by the troll baby Birthe. Each grows up unaware of the truth. Birthe struggles to conform to the human world, but bursts of temper and uncontrolled and vulgar movements reveal her troll nature. Hilda, on the other hand, instinctively bows to church bells in the distance and fashions herself a cross from sticks. Her calm nature soothes the chaos around her. The ballet ends happily with each character acknowledging the rightness of remaining true to one's nature. A wedding, the sanctioning of love by the church, ends this ballet, as in many other Romantic works. In *Napoli* (1842) and *The Flower Festival in Genzano* (1858), the heroine invokes the aid of the Madonna. In *Napoli*, for instance, the heroine is saved from her transformation into a sea nymph by an amulet of the Virgin Mary.

The theme of another ballet, Arcona (1875), is overtly Christian—a chronicle of the christianization of the Slavs in Denmark. The heroine is about to be initiated into the pagan religion when she sees the cross worn by a Danish prisoner. Bournonville's libretto states: "No sooner has Hella hung the cross around her neck . . . than her whole being is suffused with a religious feeling hitherto unknown to her" (McAndrews, 1982–1983, p. 330). She proceeds to free the Christian prisoner. In Bournonville's *La sylphide* (1836), which is still his most widely performed work, the hero's rejection of home to quest after the sylphide results in his losing everything, an example of how the choreographer contrasted the virtues of the Christian home with the disruptive forces of the nonsocial.

**CLASSICAL BALLET.** The Romantic ballet began to decline in Europe and the United States, and the values changed to promote spectacles that were often merely vehicles for flaunting women's legs. Ballet became more the province of the music hall. However, the evolution of ballet continued in Russia, where the great classical ballets *Swan Lake* (1895), *The Nutcracker* (1892), and *Sleeping Beauty* (1890) were choreographed. The themes were primarily fairy tales or exotic spectacles, but the choreographic quality of the works of Marius Petipa (1818–1910) and Lev Ivanov (1834–1901) elevated the genre. Few ballets from this period are extant, but it seems that very few had more than a gloss of religious significance. Thus, Petipa's *La bayadère* (1877) continues a tradition of depicting Hindu priests and temple dancers, and his *La fille du pharon* (1862) depicts his notion of Egyptian religion. Ironically, Ivanov's *The Nutcracker*, and the many versions of this work rechoreographed by others, has become almost synonymous with Christmas. It takes place at a Christmas party, but it has no Christian significance per se although it involves religious phenomena such as magical transformation. It is probably performed by more companies in more performances all over the world than any other work and might be said to be a symbol of the secular Christmas.

**DELSARTE.** During the nineteenth century, another trend with religious overtones was developing that was to have profound impact on the growth of twentieth-century dance. François Delsarte (1811–1871) developed a system for analyzing and explaining the source of expression in movement, especially as it relates to singing, acting, and oratory. In the United States, a primary application was to dance. Underlying his quasi-scientific categorization of movement possibilities and their meanings are two basic laws. The Law of Correspondence states, "To each spiritual function responds a function of the body; to each grand function of the body corresponds a spiritual act." The Law of Trinity led him to divide all nature, and therefore movement too, into a series of triads. For instance, he presented the following series:

| | | |
|---|---|---|
| Life | Soul | Mind |
| Physical | Emotional | Mental |
| Ease | Coordination | Precision |
| Motion | Space | Time |
| Energy | Love | Wisdom |

There were three corresponding zones of the body: limbs (or lower torso), torso (or upper torso), and head. Each body part could be further subdivided into three areas, each of which replicated the physical, emotional, and mental layering. Thus, which body part one used, in conjunction with which other parts, in what section of space determined the expressive message of the movement. Outgrowths of Delsarte's work were the art of statue-posing, in which the performers created *tableaux vivants* according to Delsartean principles; aesthetic gymnastics, a form of physical fitness for Victorian women; and pantomiming of poetry. These forms of performance were precursors of modern dance.

To some followers of Delsarte, the system was "the basis of a new religious education, destined to perfect the children of men . . . and redeem the earth" (quoted in Ruyter, 1979, p. 20). An underlying idea was that since man was made in the likeness of God, then his movements must inherently reveal God. The three great precursors of twentieth-century dance—Isadora Duncan, Ruth St. Denis, and Ted Shawn—were explicitly influenced by Delsartean philosophy, and through their teachings Delsarte indirectly affected the first generation of modern dancers.

**EARLY TWENTIETH-CENTURY MODERN DANCE.** Isadora Duncan (1878–1927) is usually credited with pioneering the break with the past and ushering in a twentieth-century dance form. She discarded what she felt was the artifice and vulgarity of the theatrical dance that surrounded her and looked to an idealized conception of Greek spirit embodied in dance. She found her models also in nature, as in the curves and flow of waves and shells. She drew on Delsartean principles and philosophy, but she also developed her own ideas, which were impregnated with religion and politics. Through dance she believed that one could liberate not only the body but also the soul. One could become united with nature, and nature was sacred. She wrote: "This is the highest expression of religion in the dance: that a human body should no longer seem human but become transmuted into the movements of the stars" (quoted in Pruett, 1982, p. 57).

She found inspiration in the writings of the philosopher Friedrich Nietzsche, often quoting his statement: "Let that day be called lost on which I have not danced" (Duncan, 1928, p. 77). She was fascinated by his distinction between the Apollonian and the Dionysian. She wanted the audience to experience her work as more than entertainment, as participation in her "invocation."

She searched for inspiration in Greek antiquity. She contemplated the Parthenon and sought a dance form that would be worthy of this temple. When she found it, she exclaimed, "And then I knew I had found my dance, and it was a Prayer" (Duncan, 1928, p. 65). Her dancing was composed of simple runs, skips, and walks, often accompanied by gestures pregnant with meaning. Although one of her best-known pieces was *Ave Maria* (1914), her dances rarely had overtly religious themes.

The next major figures of twentieth-century dance were Ruth St. Denis (1879–1968) and Ted Shawn (1891–1972), her husband. Out of Denishawn, their school and company, came the three most influential pioneers of modern dance: Martha Graham, Doris Humphrey, and Charles Weidman. Not only were St. Denis and Shawn seminal in the development of modern dance but they were also the most directly involved in exploring the relationship between religion and dance in their choreography and in their teachings—and both pioneered the return of dance to the church.

St. Denis (born Ruth Dennis) ransacked the world's dances searching not only for visually exciting forms but insight into the use of dance in religion that was so prevalent outside the West. While the religious intent of her choreography was so often buried in the spectacle of her performances in the vaudeville circuit, her writings and teachings emphasized spiritual intent. In her later years, she was able to fulfill some of her dreams to create religious theatrical dancing, becoming the first major choreographer to develop liturgical dance.

In St. Denis's biography, appropriately titled *Divine Dancer*, a distinction between her own and Duncan's views on dance in relation to religion is succinctly phrased as follows: "[Duncan and St. Denis] followed the polar paths of mysticism: one, seeking the Self in the Universe; the other, seeking the Universe in the Self. St. Denis . . . probed toward an unseen center, cultivating an interior space. Duncan . . . created an expanding consciousness that seemed to consume the cosmos" (Shelton, 1981, p. 97).

From childhood St. Denis had been exposed to various forms of spiritual philosophy, from "American Transcendentalism to Swedenborgian mysticism of her parents' Eagleswood colony, to her explorations of Christian Science and, ultimately, the Vedanta" (Shelton, 1981, p. 93). Her dance was deeply influenced by Delsartean principles both in the techniques of movement and in her belief in the correspondence between the physical and the metaphysical. She believed that "the Creative Dancer is always striving to give expression to Divine Intelligence" (quoted in Cohen, 1974, p. 134) and that "dancing is a living mantra" (quoted in Shelton, 1981, p. 244).

As early as St. Denis's first concert, she choreographed works based on Eastern religions. In *Radha* (1906) she was a goddess surrounded by worshiping priests. She danced a solo built on each of the five senses, culminating in a final dance in which she renounced all sensuality, ending in the yogic Lotus Position, lost in *samādhi* (meditative trance). Her costume featured a bare midriff, and even more daring, she danced in bare feet. Other of her signature works were *Incense* (1906), in which she performed a *pūjā* ritual, and *The Yogi* (1908), based on a passage from the *Bhagavadgītā*, which was a very austere unfolding of a few simple gestures revealing a yogin's spiritual state. She also danced *White Jade*, in which she portrayed Guanyin, the Chinese goddess of mercy, and in other dances she took the roles of various goddesses (Isis, Ishtar, et al.) and biblical heroines. In her later years, she danced Madonnas. She presented pageants in churches and theaters dancing the role of the Virgin in *Masque of Mary* (1934), *Ballet of Christmas Hymns*, and *Healing*. In the *Blue Madonna of St. Mark's* she portrayed Mary's life from the birth of Christ to the crucifixion. She was eighty years old at its premiere. In the "He Is Risen" section of *Resurrection*, she danced Mary Magdelen. She formed the Society of Spiritual Acts, a Christian Science discussion group for which she choreographed dances based on religious themes. Out of this grew her Rhythmic Choir, which performed in churches.

Edward (Ted) Shawn had studied to be a Methodist minister but found dance instead. He described the basis for the Shawn-St. Denis relationship as follows: "She, pursuing the dance upstream to its source, found there religion, and

I, pursuing religion upstream, found the dance was the first and finest means of religious expression, and so we have wedded artistically and humanly ever since" (Shawn, 1926, p. 12). In a taped interview he explained his calling as follows: "I feel my whole life as a dancer has been a ministry . . . because it includes in it every attribute of God; it has lightness and rhythm and proportion and expressiveness . . . the only way you can describe God is to describe him in the terms of a great dancer." He often quoted Nietzsche's comment, "I could not believe in a God who did not know how to dance." He was more directly Christian in his intent and choice of themes, while St. Denis was immersed in Eastern religions and mystical philosophy.

Among his many works were *Brothers Bernard, Lawrence, and Masseo: Three Varieties of Religious Experience*; *O Brother Sun and Sister Moon, a Study of Francis of Assisi*; *Dance of the Redeemed*, inspired by religious visual arts such as William Blake's illustrations for the Book of Job; and Mevlevi Dervish. He often incorporated the dancing of the Doxology into his concerts.

The religious import of St. Denis's dances was usually lost to the audience, which saw only exotic spectacle. Realizing this, Shawn and later St. Denis turned to explicit Christian themes and contexts. As early as 1917, Shawn choreographed an entire church service held in the Scottish Rite Temple of San Francisco. (In 1921 the same work was censured by the local clergy and the commissioner of public safety of Shreveport, Louisiana.)

An accompanist and composer for Denishawn was to become a major force in shaping American modern dance choreography. Louis Horst (1884–1964) became mentor to at least two generations of modern dancers. He developed a systematic method for composing dances, using musical composition as a guide to teach dancers about form and style. One of his choreographic devices was based on "modern dance forms," that is, stylistic models garnered from the arts of an era and translated into dance. What he called Primitivism embraced two styles, Earth Primitive and Air Primitive. Both were characterized by awkward asymmetrical movements, the former revealing a sense of vitality, the latter of awe. The Archaic style was conceived of as ritualistic, and the movement style was based on Egyptian and Greek bas-reliefs. Medievalism had two aspects, religious and secular. It included the symbolism of denial of the flesh as revealed in off-balance, distorted postures. The ecstasy of saints and the exuberance of courtly love and minstrelsy were the essence of secular life. In Horst's outline, the nineteenth and twentieth centuries were characterized by Introspection/Expression, Cerebralism, Jazz, Americana, and Impressionism. Primitivism, the Archaic, and Medievalism took clues from visual arts and music, and all had religious connotations. Those themes have been repeated throughout twentieth-century modern dance and ballet, whether or not directly as a result of Horst's teaching. Stylized gestures have often been used to evoke an archaic context, as in Nijinksy's *L'après-midi d'un faune* (1912), which predates Horst, and in Paul Taylor's *Profiles* (1979). The stylization of religious ecstasy has characterized the many versions of *The Rite of Spring*. Horst worked with almost all the early modern dancers, but he had an especially close collaboration with Martha Graham.

**Doris Humphrey and Martha Graham.** Nurtured by "Miss Ruth's" spiritual lectures and later influence by Horst's methodology and theories of movement style, the two great pioneers of American modern dance, Martha Graham (1894–1991) and Doris Humphrey (1895–1958), brought to their independent careers Delsartean principles and religious themes. During the early period of modern dance, in the late 1920s and the 1930s, ritual was a common theme. Two classics are Graham's *Primitive Mysteries* (1931) and Humphrey's *The Shakers* (1931). The former was inspired by the rituals of the Native American Christians of the southwestern United States. It is an abstraction of the passion play as seen through the experience of the Virgin Mary. The three sections—"Hymn to the Virgin" (adoration), "Crucifixus" (Virgin's grief), and "Hosannah" (exaltation)—are punctuated at the beginnings and ends by processions of the Virgin and her attendants, composed of weighted, solemn steppings. Processions are a frequent device in Graham's works, and they lend to virtually any theme a ritualistic quality. In the same year, *The Shakers* depicted the essence of the dance ritual of the American religious sect, the Shakers, who used dance and song as their primary modes of worship. Both works created fictitious rituals based on actual sources.

Religious themes per se were not common in Humphrey's choreography or that of her colleague Charles Weidman (1901–1975). Their choreography was, however, religious in the wider sense of showing a concern for the fundamental issues of human life. For instance, Humphrey described her *New Dance* (1935) trilogy as having the theme of the relationship of man to man. To her, *New Dance* represented "the world as it should be, where each person has a clear and harmonious relationship to his fellow beings" (quoted in Cohen, 1972, p. 137). It conveys its message without overt narrative; it is through the organization and disorganization of group relationships that the theme is developed.

Humphrey's *Passacaglia and Fugue in C Minor* (1938) is a plotless work to Bach's music. However, she found in the music religious import that colored the dance. For instance, in a program note she points out that the "minor melody . . . seems to say 'How can a man be saved and be content in a world of infinite despair?'" (quoted in Cohen, 1972, p. 149). Dancing to Bach was highly controversial. Even his secular music has been interpreted as being suffused with spirituality. One of Humphrey's earliest pieces was to Bach's so-called *Air for the G String* (1929), which consists of a group of women with a leader who basically walk, pose, dip, and sway in sumptuous draperies inspired by the paintings of Fra Angelico. Although there is no plot or context, the costumery, music, and the rapturous poses (often in Gothic sway as in sculptures of the Madonna), suggest a pious ritual. Humphrey later defended her use of Bach, especially in the context of World War II, by stating: "Now is the time for me to tell of the nobility that the human spirit is capable of" (quoted in Cohen, 1972, p. 243). Choreographers continue to use Bach as a means of lending a spiritual aura to their works. In later years Weidman choreographed *Christmas Oratorio* (1961), *Easter Oratorio* (1967), and *Bach's St. Matthew's Passion* (1973).

It is impossible to look at Martha Graham's towering sixty-year career without considering the role of religion. Her work can be seen as falling into several periods. Her earliest works were stark, ascetic, often ritualistic pieces. She later turned to more narrative works, exploring facets of female psychology and aspects of Americana. In the 1940s she began her epic treatment of mythological and biblical themes, which has continued for forty more years. Almost all her early works are lost, but some of their titles are suggestive: *Figure of a Saint, Resurrection, Vision of the Apocalypse, Heretic*, all choreographed in 1929, stand out among other titles.

*El penitente* (1940), inspired by the Spanish-Indian flagellant sects of the American Southwest, is the depiction of Christ's journey to Calvary as performed by a troup of touring players. *Appalachian Spring* (1944) is the story of a wedding in the nineteenth-century frontier. The figure of the Revivalist who weds the couple is a crystallization of one aspect of American religion. The ambivalence about physical enjoyment (whether in the sexual connotations of marriage or in the abandonment of dance and play) is expressed in the Revivalist's movements. He dances a tormented solo of self-condemnation characterized by crawling on his knees, breast beating, and fervent praying. The moralistic dilemma of ambivalence toward sexuality is explored in many of Graham's works, especially in her treatment of women, such as in her *American Provincials: Act of Piety, Act of Judgment* and the *Scarlet Letter*. In Graham's *Letter to the World* (1940), the poet Emily Dickinson battles repression as personified in an ancestress figure. Graham's family was staunchly Presbyterian, and her father had objected to dancing for moral reasons.

Graham's *Dark Meadow* (1946) is a ritual of rebirth and procreation with strong erotic overtones and pervasive Jungian and Freudian symbolism. Archetypal characters, such as She of the Ground (representing the female principle), dance a myth of rebirth. There are allusions to the worship of phallic monuments and to sacrifice in the name of fertility. Her monumental works based on Greek mythology include *Cave of the Heart* (1946), retelling the Medea legend; *Night Journey* (1947), the Oedipus story through the experience of Jocasta; the full length *Clytemnestra* (1958); and *Cortege of Eagles* (1967), the story of Hecuba; and lesser-known works, such as *Phaedra* (1962), *Circe* (1963), and *Andromache's Lament* (1982). Other biblical works include *Herodiade*, the Salome story as seen through the psyche of her mother; *Judith* (1950) and *Legend of Judith* (1962); *Gospel of Eve* (1950); *Embattled Garden* (1958), a major retelling of the Adam-Eve-Lilith myth; and *Lucifer* (1975). A major historical work, *Seraphic Dialogue* (1955), is based on the story of Joan of Arc. The characters are Saint Michael, Saint Catherine, Saint Margaret, and Joan at the moment of canonization. Joan recalls the three facets of her life as the Maid, the Warrior, and the Martyr.

Graham uses religious themes as a device for probing psychological dimensions. She treats mythology as the psychology of another age and seeks to reveal the "inner landscapes" of the human psyche in her dance. Even in her less frequent plotless works there are religious reverberations. *Diversion of Angels* (1948) is a rare lyrical and joyful work for four couples and three solo women, yet at the end the soloist in white is crowned with the splayed fingers of a symbol of benediction. The title of *Acrobats of God* (1960), derived from the name of a group of early church fathers who lived in the desert, alludes to a comparison of the ascetic spiritual life of the Desert Fathers to the arduous training of dancers. Both works celebrate the dancer, and their titles may reveal Graham's conception of their superhuman quality. In the last section of the abstract *Acts of Light* (1981), the "Ritual of the Sun" is evoked by the stylization of a technique class.

**Other first-generation American modern dance choreographers.** Two other pioneers were Lester Horton (1906–1953) and Helen Tamiris (1905–1966). Very few of their works survive. Horton often used themes from other cultures that were inherently religious: *Siva-Siva* (1929), *Voodoo Ceremonial* (1932), *Sun Ritual* (1935), and *Pentecost* (1935) are examples of works utilizing such themes. His three best-known works all have religious themes: *Salomé* (several versions from 1934 to 1950), *Le sacre du printemps* (1937), and *The Beloved* (1948). *The Beloved* is still in active repertory. Although it is not expressly religious, it is an example of the theme of sexual repression implicitly derived from religious beliefs. It is a duet for a husband and wife. The man, outwardly a symbol of rectitude, proceeds to manipulate and then to strangle his wife, who presumably is guilty of a sexual transgression.

Tamiris (born Becker) choreographed many works of social protest. She is best known for her *Negro Spirituals*. This is a suite of dances (solos and group pieces) to which she added over a period of fifteen years beginning in 1928. She is credited as the first to use black spirituals. *Negro Spirituals* is set to music representing a gamut of moods. Partially pantomimic in degrees of abstraction, each piece is a distillation of a theme. The crucifixion section, for instance, was inspired by the visual imagery of medieval religious paintings. Her goal was to reveal the human side of suffering, oppression, and joy. Ted Shawn also choreographed *Negro Spirituals* in 1933, and the theme became very popular among black choreographers beginning with Alvin Ailey's *Revelations* (1960).

**Central European modern dance.** In Europe, another approach to modern dance developed. The foremost figure there was Rudolf Laban (1879–1958), better remembered today for his theoretical work (now called Laban Movement Analysis) and the development of a dance notation system (Labanotation or Kinetography Laban), than for his choreography, which has been lost. Laban believed in the spiritual source of movement and felt that dance was a means of attuning to the harmony of the universe. He had been impressed in his youth by the dancing of Muslim dervishes and sought to find and understand the link between movement and spirituality. He developed the idea of "movement choirs," communal dancing of lay dancers, as an expression of the festive spirit of humanity. His stage choreography often dealt with cosmic themes. For example, *The Swinging Temple* was a choreodrama of all types of dancing from primordial rhythms through priestly processions, to ecstatic, comic, and combative dances. His writings and the scenarios for many of his dance works have a strain of mysticism, a search for the divine power of movement, whereas the system for the analysis of movement that developed from his theories is known for its objectivity.

Laban's two most famous students were Mary Wigman (1886–1973) and Kurt Jooss (1901–1979). Wigman is considered the principal dancer-choreographer of central European modern dance. While not concerned with themes from any specific religion, her work in general grapples with spirituality and the larger issues of life. Many of her works deal with death or the cycle of nature. Her signature work was the solo *Witch Dance* (1914, rechoreographed in 1926), which probes the demonic side of human nature. Many of her works revolved around the darker, grotesque aspects of life, themes that seem to have been appropriate to Germany between the two world wars, her most productive period.

Jooss is best known for *The Green Table* (1932), an antiwar ballet still widely performed. In this work, he draws on the medieval image of death as the Grim Reaper, placing the work in a religious historical context.

The European tradition of modern dance was established in America by Wigman's student Hanya Holm (1898–1992). Her works of the 1930s often made social and political statements but can also be seen as having an underlying moral message. Her masterwork, *Trend* (1937), was nonliterary, but its theme was the discovery of the meaning of life.

At the same time that Laban was beginning his experimentation, there were several others in Europe exploring the relationship between movement and spirituality in the context of new religions. Among these were Rudolf Steiner (1861–1925) and G. I. Gurdjieff (1877?–1949). Steiner developed a comprehensive religious and philosophical system called Anthroposophy, which encompassed a movement and dance system called Eurythmy. In this practice, specific gestures and floor patterns are correlated with specific sounds and spiritual functions. Performing the movements thereby promotes physical and spiritual health. Structured choreography to works of classical music is one form of expressing this philosophy. Gurdjieff, influenced by Sufism, developed dancelike movement exercises designed to effect certain mystical states. The work of Steiner and Gurdjieff was part of a tradition that centered on the belief that mystical knowledge could be manifested in physical behavior and that the altered states of consciousness generated by movement could put one in touch with the underlying patterns of the universe.

**SECOND GENERATION OF AMERICAN MODERN DANCE.** Humphrey's closest protégé was José Limón. Several of his major works were based on religious themes. He often drew on his Mexican and Native American heritage. *La Malinche* (1949) is a form of the passion play as performed by a troupe of traveling Mexican peasants. *The Visitation* (1952) is based on the Annunication; *The Apostate* (1959) captures a battle between Christianity and paganism; and *There Is a Time* (1956) is a danced version of *Ecclesiastes* 2. Limón's *Psalm* (1967) includes the theme of the Jews under Hitler, and *The Unsung* (1970) deals with the spirituality of Native Americans. In *The Traitor* (1954) he retells the story of Jesus and Judas, casting Judas as a symbol of modern man. *Missa brevis* (1958), first performed in a bombed-out church in Budapest, is a dance of pain and an affirmation of faith. At certain points, women dancers are carried like the statues of the Madonna in Mexican religious processions.

The choreography of Alwin Nikolais, a student of Holm, rebels against the emotionalism of the first generation of modern dance. He turns instead to portraying the moving body as just one element of a multimedia theater. He has often been criticized for dehumanizing the dancer, but he interprets his work in a religio-philosophical manner; he sees man as a "fellow traveller . . . rather than the god from which all things flowed. . . . He lost his domination but instead became kinsman to the universe" (quoted in Siegel, 1971, p. 11). His pieces often are glimpses into the ritualistic lives of what seem to be alien tribes of people whose activities make profound comments on human existence. His *Tower* (1965), for example, details the building of a metaphorical Tower of Babel to which each dancer contributes a piece only to have the whole monument topple at the end.

Erick Hawkins is among those choreographers who worked with Graham. His choreography is notable as a rejection of her aesthetic and technique. He has been inspired by Zen philosophy and feels that an audience should be brought to enlightenment. His goal has been to develop a technique that would be harmonious with nature, gentle and free of tension. His choreography is often ritualistic and deals with the human relation to nature and the oneness of body and soul. The mood of his works is often meditative with poetic resonances. In *Plains Daybreak* (1983), for example, masked dancers represent the essences of animals during a mythical time near the beginning of creation. *Lords of Persia* (1965) is a portrayal of an ancient game of polo stylized as sacred ritual.

Paul Taylor has produced a wide range of works that frequently make comments on the human condition and social relationships. Sometimes his works involve religious themes. One of his most enduring works is *Three Epitaphs* (1960), in which dancers covered in black appear as figures whose postures and gestures convey both humor and pathos. The title of this work and the accompaniment of early New Orleans jazz funeral music provide an ironic commentary to the antic interactions of these creatures. His *Churchyard* (1969) is a dance of piety transformed into wild eroticism; *Runes* (1975) creates a prehistoric ritual of sacrifice and regeneration.

Merce Cunningham made a radical break with the past. He creates plotless works in which movements, music, and decor are conceived of as separate elements. Pure movement is the primary content of his works, and therefore religious themes are irrelevant. However, underlying Cunningham's choreography is a philosophy based on Zen Buddhism. Like his principal musical collaborator, John Cage, Cunningham often composes according to chance principles; for instance, throwing the *I ching* (casting lots) determines the order in which movement phrases will be combined. Such an indeterminate method of choreography helps him to feel liberated from becoming attached to his possessions, which are his choreographic creations.

**POSTMODERN DANCE.** Cunningham signaled the beginning of a reconception of dance. The idea that theatrical dance was marked by storytelling, emotional expression, and a fixed relationship to music and decor was shattered by his work. Many choreographers in the next generation of modern dance have been called "post-Cunningham" or postmodern. One of the more prominent characteristics of this trend in dance has been the focus on movement for movement's sake. Dances were often composed of everyday movements danced by untrained performers. They wished to return dance to the people, rather than reserving it for the virtuosic performer. Religious themes would not seem relevant to plotless works that aimed to expose the nature of movement rather than the nature of human and spiritual existence. Yet, a major stream of postmodern dance has been the exploration of the concept of ritual. Many choreographers shared the aims of the experimental theater of the 1960s and 1970s, especially the idea that dance and theatrical performances could be rituals for both performers and audience. A goal was to provide a transformative experience, a function of many religious rituals. The means of effecting these changes in physical and mental states were also modeled on a conception of ritual that often emphasized symbolism, manipulations of time and space, repetititons, nonlinear development of actions, and a highly formal structure. Some aimed at the creation of a feeling of community; others reached for a spiritual experience, a feeling of holism or integration with the universe. They were concerned with experiencing dance as a metaphor for life.

Anna Halprin has been a pioneer in this area. She explored the use of trance, the expression of communal feeling through dance, and the healing nature of movement. Deborah Hay created a series of Circle Dances based on simple movements to be performed in a group with no spectators. She was influenced by *taiji quan* and Daoist philosophy. The goal of these dance experiences was to understand the inner self, the power of the group, and the individual's connection to the cosmos. Meditation as well as ecstatic movements have characterized these ritualistic dances.

Meredith Monk, on the other hand, creates multimedia theatrical works that are often ritualistic in character. She creates layers of evocative imagery and archetypal characters and transforms ordinary speech into chants and spectacular sounds. Her *Vessel* (1971) dealt with Joan of Arc. Many of her other works, such as *Quarry* (1976) and *Education of the Girlchild* (1972), have presented themes of human life and history in a ritual structure.

**TWENTIETH-CENTURY BALLET.** While modern dance grew out of a desire for self-expression, ballet traditionally has been concerned with telling stories. The twentieth century saw the development of plotless (or abstract) works that inherently give limited scope for interior states or religious themes. Yet, ballet also expanded its expressive powers in such a way as to become a vehicle for religious ideas as well.

The first major break with nineteenth-century ballet in both form and content was Sergei Diaghilev's Ballets Russes. This company produced a few biblical works: *Salomé* (1913), *The Legend of Joseph* (1914), and *Prodigal Son* (1929). *Le dieu bleu* (1912) was based on the Hindu god Kṛṣṇa. The most remarkable religious work was also perhaps the most revolutionary ballet in dance history—*Le sacre du printemps* (1913), choreographed by the great dancer Vaslav Nijinsky. The dance and its music by Igor Stravinsky caused a riot at the premiere, and the ballet was performed only a few times. It drew on a mythic history of Old Russia, but its pounding rhythms, ecstatic dancing, circular floor patterns, and sacrificial dance of death became a model for many other rituals in twentieth-century dance. There have been many other rechoreographings of the Stravinsky music, including Léonide Massine's 1930 reworking for Diaghilev (in which the Chosen Maiden was danced by Martha Graham, who fifty-four years later was to choreograph her own *Rite of Spring*). Other notable examples were by Horton, Wigman, ballet choreographer Maurice Béjart, German Expressionist modern-dance choreographer Pina Bausch, and Paul Taylor, who transformed the ritual into a gangster play within a play.

Two of the last works that Diaghilev produced were *Apollon musagète* (1928) and *Prodigal Son* (1929), both choreographed by George Balanchine, who was to become the most influential ballet choreographer in the United States, if not the world. Though Balanchine is known primarily for his plotless works, these two early ballets with religious themes are counted among his greatest, and both are performed in many companies around the world. *Apollon musagète*, now titled *Apollo*, retells the birth of the god and his coming of age under the tutelage of three of the Muses. In

*Prodigal Son*, Balanchine drew on motifs from his native Russia, including visual imagery from religious icons, especially the two-dimensional quality, and certain gestures and liturgical movements from the Russian Orthodox church, such as beating the chest and back.

Other Balanchine works of some religious significance include his *Nutcracker* (1954), *Noah and the Flood* (1962), and his Greek mythological masterpiece, *Orpheus* (1948). His *Don Quixote* (1965) also has much religious imagery. Despite the relative lack of religious themes in his choreography, religion was very important in Balanchine's personal life. One of the last works he created incorporated much religious symbolism and has been interpreted as his comment on death. In 1981, he choreographed the last movement of Tchaikovsky's *Pathétique* Symphony as a ballet of the same name. A dance of grief is followed by a procession composed of angels with enormous wings, hooded figures, and monks who prostrate themselves in the form of a cross. A child extinguishes a candle to the final notes of the symphony.

Another choreographer for the Ballets Russes was Léonide Massine. Although he is best known for his character ballets, he also choreographed several ambitious but short-lived works based on religious themes. Seventh Symphony (1938), set to Beethoven's *Seventh Symphony*, was a chronicle of the world from its creation to its destruction; *Noblissima visione* (1938) was the story of Saint Francis of Assisi; and *Laudes evangelii* (1952) was the translation into dance of a fourteenth-century text depicting eight episodes from the life of Christ.

Frederick Ashton has been the principal choreographer in Great Britain. Like British ballet in general, his works tend to be literary, although he occasionally has used religious themes. An early Ashton work was the choreography for the Virgil Thomson-Gertrude Stein opera *Four Saints in Three Acts* (1934). His *Dante Sonata* (1940), based on the *Inferno* of Dante's *Commedia*, was a reaction to World War II. It was conceived as a battle between the Children of Light and the Children of Darkness. *The Wise Virgins* (1940) was also an antiwar ballet. Performed to Bach cantatas and chorale preludes, it created visual images reminiscent of Baroque art. The work had a devout atmosphere. He also occasionally used mythical themes, as in *Cupid and Psyche*, *Leda*, *Mercury*, *Mars and Venus*, and *Daphnis and Chloe*. His *The Quest* (1943) was the story of Saint George; his *Tiresias* (1951) depicted a Cretan athletic ritual.

Other choreographers in England include Ninette de Valois, founder of the Royal Ballet. One of her most successful works was *Job, a Masque for Dancing* (1931) based on William Blake's drawings. As an example of Western ambivalence toward the relationship between religion and dance, censors prohibited the depiction of God in this work, leading de Valois to create a character called Job's Spiritual Self. *Miracle in the Gorbals* (1944) by Robert Helpmann was a morality play in dance in which Christ comes to the slums of Glasgow, revives a suicide, and in turn is murdered by the crowd.

Antony Tudor is known for his psychologically motivated ballets, and few of his works are religious in content. His *Shadowplay* (1967), which depicts a wild boy as lord of the jungle, however, was influenced by Zen Buddhism. Underlying his masterwork *Pillar of Fire* (1942) is the theme of religiously induced sexual repression. His *Dark Elegies* (1937) is a ritualization of grief.

In modern ballet, mythic characters are often used to create a psychological dimension. Tudor's *Undertow* (1945), for example, is a contemporary murder story, but the characters have mythological names, and his *Judgment of Paris* (1938) is set in a Paris bar where Juno, Minerva, and Venus are tawdry showgirls.

The American John Butler, who choreographs in both the ballet and modern dance idioms, has produced a large opus of religious works. He was the principal choreographer for the American religious television series *Lamp unto My Feet* in the 1960s. One of his major works is *Carmina burana* (1959), which is set to thirteenth-century poems discovered at a Benedictine monastery. The monks and nuns of the dance temporarily discard the discipline of their order to engage in the passions of secular life and to experience the wheel of fate.

Robert Joffrey and Gerald Arpino, choreographing for the Joffrey Ballet, have created several works based on religious themes. Joffrey's *Astarte* (1967), which has been called the first psychedelic ballet, is a contemporary depiction of the Akkadian Ishtar, moon goddess of love and fertility who was called Astarte by the Greeks, though audiences are often unaware of this theme. Set to loud electronic rock music, flashing lights, and projected film, the dance evokes the atmosphere of an après-discotheque seduction. The man strips to his briefs, the goddess lets down her hair, and an erotic *pas de deux* of power and submission takes place in a hallucinatory sequence. It was the first multimedia rock ballet to receive widespread attention, and it ushered in a new trend in ballet, enticing new audiences into the theater. Arpino's *Sacred Grove on Mount Tamalpais* (1972) is a paean to the "flower children" of the 1960s, an innocent romp of renewal depicting a wedding ceremony and the birth of a son who promises to be a kind of prophet to the celebrants. His *Trinity* (1969) is a three-part contemporary ritual of young people employing some popular dance movements set to a rock orchestration of Gregorian chant and other sacred music styles. In the third section, "Saturday," the dancers carry lighted candles. A male soloist dances to a rock version of the hymn "Ite, missa est" that concludes the Latin Mass. The final image is of the stage, empty except for the pattern of votive candles on the floor.

Contemporary European choreographers have been more attracted to religious themes than their American counterparts. John Neumeier, mainly choreographing for the Hamburg Ballet, created the four-hour *Saint Matthew's Passion* (1981) set to Bach's work. The story is conveyed through *tableaux vivants* interspersed with dancing commenting on the deeper aspects of the drama. Neumeier's *Mahler's Third Symphony* has a theme of redemption and incorporates Mahler's idea of the quest for divine love.

The Czech Jiri Kylian, working primarily for the Nederlands Dans Theater, has offered *Psalm Symphony* (1978), based on Psalms 39, 40, and 150, among other works. Further examples include John Cranko's *Kyrie eleison* (1968) and Kenneth Macmillan's *Requiem* (1976). Maurice Béjart, choreographer for his Belgian company, Ballet of the Twentieth Century, is known for tackling grand epic themes. Several of his works have themes with religious connotations. In his *Nijinsky—Clown of God* (1971), the Ballets Russes is cast as Nijinsky's Paradise with Diaghilev as its overseeing God. His *Bhakti* (1968) draws on Hindu mythology, and his *Notre Faust* (1975) is one of several dance treatments of this work over the centuries.

Contemporary ballet has incorporated many movements and much of the sensibility of modern dance. It often does not use *pointe* work but may reserve this kind of movement to portray particular ideas. A ballerina on *pointe* sometimes is cast in a higher spiritual mode. For instance, in Ashton's *Illuminations* (1950), Sacred Love dances on *pointe*, while Profane Love has one bare foot; in Neumeier's *Mahler's Third Symphony*, the figure of idealized love dances on *pointe* while most of the other dancers do not.

**BIBLICAL THEMES.** The flexibility of interpretation inherent in biblical literature has been an inspiration for many different treatments that range from literal interpretations to the probing of universal psychological truths to political and social commentary. Several characters and episodes have been particularly appealing. These include: the theme of creation, the garden of Eden, the story of Cain and Abel, Noah and the Flood, Job, David and Goliath, Joseph, Samson and Delilah, Salome, the Prodigal Son, the Wise and Foolish Virgins; and the many biblical heroines, including Miriam, Jephthah's Daughter, Esther, Deborah, Judith, Ruth, the Virgin Mary, and Mary Magdalene. The life of Christ and interpretations of various psalms have also been frequently choreographed themes. One of the more popular subjects has been the story of Adam and Eve. Treatments of this theme indicate some of the range of interpretations of biblical stories. Graham's *Embattled Garden* (1958) introduces Lilith into the domestic routine of the Garden of Eden, whereas Butler's *After Eden* (1966) and Limón's *The Exiles* (1950) both deal with the fate of Adam and Eve after the expulsion, while Roland Petit's *Paradise Lost* (1967) featured a pop interpretation with Adam plunging into a backdrop of a huge lipsticked mouth at the end of the dance. The story has been treated with awe and wonder and irony, and as tragedy and comedy.

The *Book of Genesis* has provided a source of comedic ballets. *Billy Sunday* (1946), choreographed by Ruth Page, is the retelling of these familiar stories as they might have been explained by the baseball-player-turned-preacher Billy Sunday, who used the vernacular and often employed baseball analogies in his exuberant evangelical addresses. In this work Bathsheba does a striptease behind a screen fashioned from a scarf, and Joseph's seducer is the contemporary Mrs. Potiphar. Page emphasizes those stories that portray women betraying men. Taylor's *American Genesis* (1973) recasts the stories as episodes in American history, using bits of Americana—such as minstrel-show techniques—as ironic commentary on both United States history and the biblical stories themselves.

Other ways in which biblical stories have served as a means of social commentary include interpreting the story of Joseph as a message about overcoming political oppression and the story of Esther as a metaphor for Nazism's "final solution." Jooss's *Prodigal Son* found his downfall not in the pursuit of decadent living but in the quest for power, a poignant theme for Germany in 1931.

**RELIGIOUS THEMES AND CULTURAL IDENTITY.** Modern dance, built on a philosophy of the expression of emotions and personal identity, has provided a vehicle for the exploration of ethnic and religious identity through dance. This has been true, in particular, for Jewish, Afro-American, and Asian choreographers.

Jewish history, ritual, and music have inspired several twentieth-century works in both modern dance and ballet. Several topics have been particularly popular: Jewish village life of tsarist Russia and eastern Europe, the Holocaust, Hasidism, Sefardic Judaism, and Jewish folk tales. Some works employ movement qualities and steps associated with dances from Jewish communities or with prayer movements, while others use Jewish themes or music without any particular ethnic movement style.

The second generation of modern dancers were particularly drawn to social and political themes. This period of growth also coincided with World War II and the attendant Holocaust, providing thematic material for powerful dances. Many of the works of Pearl Lang have Jewish themes. Perhaps her best-known work is *The Possessed* (1975), based on the dybbuk legend. She also choreographed dances using Hasidic themes, biblical stories, and poems composed by Holocaust victims. Her *Tailor's Megillah* is the retelling of Esther's story in a tailor's shop.

Anna Sokolow created the solo *Kaddish* (1946); *Dreams* (1961), an abstract enactment of the horrors of the Nazi concentration camps; and *The Holy Place* (1977), based on Psalm 137 and dealing with the theme of the Jews in exile. The first part of *The Exile* (1939) is set in ancient times, the second deals with persecution, culminating in Nazism. She created both *The Bride*, in which a shy Jewess faces a wedding to an unknown groom, and *Mexican Retablo*, in which she danced a Madonna.

Tamiris choreographed *Memoir* (1957), depicting themes of Jewish life. Holm offered *Tragic Exodus* (1939) and *They Too Are Exiles* (1940), which dealt with the dispossession and persecution of all peoples, but at that time, reference to the Jews in Hitler's Germany was all too apparent. Sophie Maslow choreographed *The Village I Knew* (1950) as an evocation of Jewish life in tsarist Russia.

In ballet, Eliot Feld has contributed *Tzaddik* (1974), a representation of a scholar's intensely emotional introduction of two students into the world of religious study. His *Sephardic Song* (1974) was influenced by traditional Sefardic music. Jerome Robbins choreographed *The Dybbuk Variations* (1974), an abstract version of this story. Robbins is also well known for his staging and choreography of the musical-theater work *Fiddler on the Roof* (1964), which drew on many dance forms and images of turn-of-the-century Jewish life in Russia.

Israel has a very active theatrical dance culture. Many choreographers there naturally turn to Jewish and biblical themes. One of the more prominent companies, the Inbal Dance Theatre, whose principal choreographer is Sara Levi-Tanai, draws on the dances and rituals of the Jewish minorities of the Middle East, especially the Yemenites. Some examples of works by Israeli choreographers include Levi-Tanai's *Psalm of David* (1964), which features the story of Avishag, the girl brought to the aging David; Margalit Oved's *The Mothers of Israel*, choreographed for Ze'eva Cohen, draws on the image of the biblical Sarah, Rebecca, Rachel, and Leah; the Bat-Dor Company performs Domy Reiter-Soffer's *I Shall Sing to Thee in the Valley of the Dead My Beloved* (1971), which tells the history of Israel through the story of King David's loves; Rina Schoenfeld choreographed *Jephthah's Daugher* for the Batsheva Company; and the Russian dancer Rina Nikova founded the Biblical Ballet of Israel.

African Americans have also drawn on dance as a vehicle for the expression of cultural identity. Religious practices and music are a major component of this identity and have formed the basis for many ballet and modern dance works. *Revelations*, a work by Alvin Ailey, was one of the first of these works, and it has also proved to be the most popular and enduring. It is a suite of dances to black hymns and gospel music, each section revealing the theme or spirit of the song—from the solemn abstraction of "I've Been 'Buked'" to the rousing church service of the finale. The audience is often whipped into an enthusiastic hand-clapping and foot-stomping participation that is akin to the atmosphere of many black churches. In this way, *Revelations* has introduced to the Western theater a different model for the role of the spectator at a ballet performance. Some of the other religiously inspired Ailey works include *Three Black Kings* (1976) and the often humorous *Mary Lou's Mass* (1971), in which biblical stories are reenacted.

Many African and African American choreographers also draw on African religious practices. Katherine Dunham, Pearl Primus, and Asadata Dafora were among the first to do this. Dunham's *Rites of Passage* (1941) depicted a fertility ritual, and *Shango*, a vodou rite. Primus's Fanga (1949) created a ritual in an African context.

Asian religious themes have often been popular in Western dance history. In the past, Eastern themes tended to be used as a device for creating exotic spectacle. St. Denis promoted a form of Orientalism that adopted the color and sensuality of Asian dance but also attempted to expose its spiritual import. Cunningham, Hawkins, and Tudor have been influenced by Zen Buddhism. Starting in the 1960s, but especially in the 1970s and 1980s, there has been an explicit attempt to create a dance form that assimilates Eastern and Western dance and that especially captures the spiritual quality of Asian dance. Asian and Asian-American choreographers have been particularly active in adopting Eastern techniques and themes to the modern dance context, often emphasizing the creation of ritual. Kei Takei and the duo Eiko and Koma are particularly noteworthy for their use of Japanese rituals and movement qualities, and Mel Wong is known for his synthesis of Chinese culture and American modern dance.

The discovery of Asian religions in the context of the drug-influenced counterculture of the 1960s led to works such as Béjart's *Bhakti*, a ballet about love as manifested in the relationships between Rāma and Sitā, Kṛṣṇa and Rādhā, and Śiva and Śakti. In the 1970s and 1980s, there has been a growing interest in Ṣūfī dancing, and choreographers have adopted spinning techniques, as in the work of Laura Dean, and have explored the mystical symbolism of Muslim faith.

Modern dance also took root in Japan, where a unique synthesis of American and central European Expressionist modern dance, Japanese *nō*, and *kabuki* combines with a post-World War II sensibility. An avant-garde trend called *butoh*, a word referring to an ancient dance, exists in the shadow of Hiroshima and Nagasaki and lends itself to the creation of ritualistic theatrical probings of primordial and postapocalyptic images.

**SACRED OR LITURGICAL DANCE.** Dance has returned to the church and synagogue in the twentieth century. With St. Denis and Shawn as its foremost pioneers, the sacred dance or liturgical dance movement has grown rapidly. Another early experiment with ritual dancing in the church took place at Saint Mark's-in-the-Bowerie Church in New York, beginning in the 1920s. Choreographed by the rector of the church, William Norman Guthrie, the dance, depicting the Annunication, was performed by six barefooted women robed in flowing white material probably dancing in the Duncanesque style of the avant-garde of the time. For this scandalous act, Saint Mark's was suspended from the Episcopal church. The ritual dance was performed annually for many years and continued to cause controversy.

Contemporary sacred dance covers a range of ways in which movement can be incorporated into the liturgy. These include (1) rhythmic or dance choirs, analogous to singing choirs, (2) performances based on religious themes or stories by lay or professional dancers, which the congregation watches, (3) congregational dancing in which everyone participates, (4) dancing based on ritual dances of other cultures,

(5) charismatic dancing, (6) danced individual prayers, and (7) dance with therapeutic intent (spiritual healing through dance). Aims of sacred dance include promoting the affirmation of the body, offering dance to God, creating a sense of community, finding the festive nature of life and religion, and integrating body and soul. Leaders in the sacred dance movement have been, among others, Margaret Fiske Taylor, Douglas Adams, Mary Jane Wolbers, Judith Rock, and Carla de Sola. Exponents of liturgical dance have also been unusually prolific writers. In the United States, the Sacred Dance Guild was formed in the late 1950s, and the movement grew rapidly in the 1960s and 1970s in many countries, fed by other related trends: the reemergence of exuberant social dancing, the growth of alternative religions and religious practices, and the rise of dance therapy. While the sacred dance movement is mainly a Christian movement, there is also a growing following in Judaism. A central controversy within the movement is whether to emphasize the liturgical aspect or the aesthetic aspect, whether sacred dance should be performed by the laity with a communal, participatory focus or whether it should be performed by professionals with an aesthetic goal. Ironically, the success of theatrical dance in America, despite the opposition of religious orthodoxies, has led to the addition of a new (or rediscovered) dimension of religious practice—the expressive power of dance.

## BIBLIOGRAPHY

There has been very little written about religion and theatrical dance. Aside from a few isolated articles or books on particular topics, most information must be gleaned from general books on dance. There are, however, a few anthologies that cover aspects of this topic. In 1979, an International Seminar on the Bible in Dance was held in Israel. The papers from the conference were not published as a group, but the manuscripts are available at the Dance Collection, New York Public Library at Lincoln Center, and elsewhere. Papers of special interest to this topic are those on Limón, Graham, The *Prodigal Son*, *Billy Sunday*, labyrinths, and biblical dance on television. In conjunction with this event, Giora Manor published an extensive study of the use of biblical themes in ballet and modern dance, *The Gospel according to Dance* (New York, 1980). *Worship and Dance*, edited by J. G. Davies (Birmingham, 1975), is particularly useful for information on dance in the church, both historically and as part of the contemporary liturgical dance movement. *Focus on Dance X: Religion and Dance*, edited by Dennis J. Fallon and Mary Jane Wolbers (Reston, Va., 1982), includes Lynn Matluck Brooks's "The Catholic Church and Dance in the Middle Ages," Diane Milhan Pruett's "Duncan's Perception of Dance in Religion," and Georganna Balif Arrington's "Dance in Mormonism: The Dancingest Denomination." A thought-provoking article by Douglas Adams and Judith Rock, "Biblical Criteria in Modern Dance: Modern Dance as Prophetic Form," also delivered at the seminar in Israel, is an application to dance of Paul Tillich's four categories of the relation between religion and visual arts. About half the articles in this volume are devoted to the liturgical dance movement. The journal *Parabola*'s issue on "Sacred Dance," vol. 4, no. 2 (May 1979), contains articles on the dance of Jesus by Elaine H. Pagels and on labyrinths by Rosemary Jeanes. Jamake Highwater's *Dance: Rituals of Experience* (New York, 1978) is a personal view on the importance of reaffirming the ritual nature of dance; his book includes a discussion of which contemporary theatrical choreographers create works that fulfill his conception of ritual.

Most information about religion and theatrical dance must be pieced together from a general history of Western dance. A basic introduction to this topic is Jack Anderson's *Dance* (New York, 1979). A more detailed, although somewhat out-of-date book is Lincoln Kirstein's *Dance: A Short History of Classical Theatrical Dancing* (New York, 1935). Marcia B. Siegel's *The Shapes of Change* (Boston, 1979) analyzes some of the important works of American dance including *Negro Spirituals, Shakers, Revelations*, and several of Graham's works. A brief description and listing of dances by major modern dance choreographers can be found in Don McDonagh's *The Complete Guide to Modern Dance* (Garden City, N.Y., 1976). Anthologies of primary sources include *Dance as a Theatre Art*, edited by Selma Jeanne Cohen (New York, 1974), and, for theoretical essays, *What Is Dance?*, edited by Roger Copeland and Marshall Cohen (New York, 1983). One of several books of synopses of ballet librettos is *101 Stories of the Great Ballets* by George Balanchine and Francis Mason (Garden City, N.Y., 1975).

For dance in the early Christian church and in the medieval European tradition, see Eugène Louis Backman's *Religious Dances in the Christian Church and in Popular Medicine* (London, 1952). For later attitudes held about dance by the Christian church, see *The Mathers on Dancing*, edited by Joseph E. Marks III (Brooklyn, N.Y., 1975), which contains an extensive bibliography of antidance literature from 1685 to 1963. On the Renaissance, see James Miller's "The Philosophical Background of Renaissance Dance," *York Dance Review* 5 (Spring 1976), and Roy Strong's *Splendour at Court* (London, 1973).

For the Baroque, see Shirley Wynne's "Complaisance, an Eighteenth-Century Cool," *Dance Scope* 5 (Fall 1970): 22–35, and Wendy Hilton's *Dance of Court and Theater: The French Noble Style*, 1690–1725 (Princeton, 1971). On the Jesuit theater, see Régine Astier's "Pierre Beauchamps and the Ballets de Collège," *Dance Chronicle* 6, no. 2 (1983): 138–151. for pre-Romantic ballet, the principal history is Marian Hannah Winter's *The Pre-Romantic Ballet* (Brooklyn, N.Y., 1975). Ivor Guest has written extensively on the Romantic ballet; his books include *The Romantic Ballet in Paris*, 2d rev. ed. (London, 1980), and *The Romantic Ballet in England* (Middletown, Conn., 1972). On Bournonville, see his autobiography, *My Theater Life*, translated by Patricia N. McAndrew (Middletown, Conn., 1979), and Erik Ashengreen's "Bournonville: Yesterday, Today and Tomorrow," *Dance Chronicle* 3, no. 2 (1979): 102–151. His librettos have been translated by McAndrews in various issues of *Dance Chronicle* (1980–1983).

On Delsarte and his impact, see Nancy Lee Ruyter's *Reformers and Visionaries: The Americanization of the Art of Dance* (New

York, 1979), which also contains an extensive bibliography of primary sources, and Ted Shawn's *Every Little Movement* (Pittsfield, Mass., 1984). Duncan's own writings in *The Art of the Dance* (New York, 1928) reveal her thoughts on religion and dance. Suzanne Shelton's *Divine Dancer* (Garden City, N.Y., 1981) gives an excellent analysis of St. Denis's beliefs and choreography. Some of Shawn's ideas are in *The American Ballet* (New York, 1926). On Humphrey, see Selma Jeanne Cohen's *Doris Humphrey: An Artist First* (Middletown, Conn., 1972) and my "The Translation of a Culture into Choreography: A Study of Doris Humphrey's *The Shakers*, Based on Labananalysis," *Dance Research Annual* 9 (1978): 93–110. *The Notebooks of Martha Graham* (New York, 1973) provides unique perspective on the development of her choreographic ideas. For information on Laban, see his autobiography, *A Life for Dance*, translated by Lisa Ullmann (New York, 1975). On Wigman, see her *The Language of Dance*, translated by Walter Sorell (Middletown, Conn., 1966). For information on Steiner and Gurdjieff, see the "Occult and Bizarre" issue of *Drama Review* 22 (June 1978).

For the second generation of modern dance, Margaret Lloyd's *The Borzoi Book of Modern Dance* (New York, 1949) is the most detailed. Hawkin's ideas are explained in *Erick Hawkins: Theory and Training*, edited by Richard Lorber (New York, 1979). Nikolais discusses his work in "nik: a documentary," edited by Marcia B. Siegel, *Dance Perspectives* 48 (Winter 1971). For an overview of the Ballets Russes, see John Percival's *The World of Diaghilev* (New York, 1971). For Balanchine, see among others, *Choreography by George Balanchine: A Catalogue of Works*, edited by Harvey Simmonds (New York, 1983), and Marilyn Hunt's "*The Prodigal Son*'s Russian Roots: Avant-Garde and Icons," *Dance Chronicle* 5, no. 1 (1982): 24–49. Postmodern dance is introduced in Sally Banes's *Terpsichore in Sneakers* (Boston, 1980). Anna Halprin's *Movement Ritual* (San Francisco, 1979) is an example of one of the outgrowths of this movement.

On the sacred dance movement, see Carlynn Reed's *And We Have Danced: A History of the Sacred Dance Guild and Sacred Dance, 1958–1978* (Austin, 1978), which contains a useful bibliography.

SUZANNE YOUNGERMAN (1987)

## DANCE: THEATRICAL AND LITURGICAL DANCE [FURTHER CONSIDERATIONS]

Academic studies related to the topic of theatrical and liturgical dance have remained predominantly within the circles of dance scholarship. Traditionally, such studies have been divided into two categories of analysis: dance history and criticism, which have premised their evaluations according to chronological and classic aesthetic criteria; or ethnography and anthropology, which have inquired into the cultural formations and functions of dance. The former has emphasized typically the West and the latter non-Western cultures. The publication of the *International Encyclopedia of Dance* (1998) and the televised presentation of the eight-part series *Dancing!* (1992), with its companion volume, generated both scholarly and public interest in the global and multi-cultural correspondences among dance traditions. Since 1987, the central investigations by dance scholars have moved beyond the "how, what, where, and why" of dance to those related to dance as a communicator of meaning and values throughout world cultures and religions.

Interest in the investigation of liturgical and theatrical dance has extended into the realm of religious studies—especially world religions—beyond the traditional categories of "dance and liturgy," ritual studies, and the umbrella of art and religion. These are evidenced in the work of Ann Cooper Albright, Diane Apostolos-Cappadona, and Ann Dils. While J.G. Davies' texts remain as classics for the study of liturgical dance in Christianity, Doug Adams, Helga Barbara Gundlach, Thomas A. Kane (in *Introducing Dance in Christian Worship*), Judith Rock, and Carla De Sola continue to expand the discussions about the nature, styles, and meaning of Christian liturgical dance into the contemporary scene. Other religion scholars have incorporated analyses of ritual and ceremonial dance into their studies of individual religious traditions, i.e., Hinduism and Native America, which might otherwise not culturally identify these dances as "liturgical." Issues of gender studies, investigations of the body, and the study of the economic, ethnic, engendered and/or racial minorities have affected the modes and methods for studying liturgical and theatrical dance. This appears in the work of Jane C. Desmond, Brenda Dixon Gottschild, Judith Lynn Hanna, and Cynthia Novack.

Both the performance and the study of liturgical and theatrical dance have incorporated the technologies of video, mass media, and the internet as well as a place within the academic spectrum in the newer categories of "performance and display," and "visual culture" (Mitoma, 2003). Scholarship in the fields of liturgical and theatrical dance has entered geographic areas previously investigated to a lesser extent, such as Southeast Asia, Pre-Columbian Latin America, Oceania, and Africa. These are shown in the work of Judy Mitoma, Richard Anderson Sutton, Robert Farris Thompson, and Elizabeth Zimmer. The influence—historically and from post-1960s global cultures—of non-Western religious dance traditions on Western dance, whether religious or secular, is emerging as an investigative focus for both dance history and religious studies scholars. However, more often than not the study of the influences of non-western dance and religion is in terms of a particular dancer in historical studies, such as Isadora Duncan, Ruth St. Denis, José Limon, and Martha Graham. Exciting possibilities for new scholarship include analyses of the "east-west" connectives in such contemporary choreography as that of Eiko and Komo, Meredith Monk, Peter Sparling, and Yin Mei.

**NEW PERSPECTIVES.** The new directions for the study of theatrical and liturgical dance will emerge in coordination with a growing recognition of global and multi-cultural discourses, especially in terms of cross-cultural analyses of the creative process and the human body as evidenced for example in the work of Mitoma and Zimmer. New questions about the definition of dance—liturgical and/or theatrical—are raised with the advent of technology and the merging of dance with other media to create "performance pieces," such as the collaboration between architect Zaha Hadid and the Charleroi Dance Company (2001). Analyses of dance as a communicator of cultural values and ideas will re-frame the mode and methods of studying theatrical and liturgical dance from the perspective of dance studies in the work of Ruth Solomon and John Solomon, and in religious studies as evidenced in the work of a new generation of scholars, most notably Kimerer Lewis LaMothe.

DIANE APOSTOLOS-CAPPADONA (2005)

## DAN FODIO, USUMAN

(AH 1168–1232, 1754/5–1817 CE), renowned Fulbe Islamic teacher and shaykh. Shehu (Hausa for *shaykh*) Usuman dan Fodio was born in the Hausa kingdom of Gobir, in the north of the present-day state of Sokoto, Nigeria. He came of a line of Muslim scholars of the Fulbe clan Torodbe that had been established in the area since about 854/1450. They worked as scribes, teachers, and in other literate roles and contributed over several generations to the dissemination of Sunnī Islam among the inhabitants of Gobir. As a result, the Gobir royals were superficially won over to Islam. Nonetheless, authority in Gobir still rested on customary norms, not the Islamic *sharīʿah*, at the end of the eighteenth century CE. This caused mounting frustration among these Muslim literates and resulted in the emergence of an Islamic reform movement that reached its peak at that time. The Shehu Usuman became widely accepted in Gobir and neighboring kingdoms as its leader.

The Shehu Usuman spent his early manhood as a teacher and preacher of Islam in Gobir and the nearby kingdoms of Zamfara, Katsina, and Kebbi. He appears to have had no initial intention of pursuing reform by force, but the prolonged resistance of the Gobir chiefs and courtiers to demands for stricter adherence to Islam built up tension. After several violent incidents, organized warfare broke out between the Gobir forces and the Shehu's followers in 1219/1804. For the Muslim reformers this was *jihād*, war against unbelievers.

The campaigns in Gobir ended in 1223/1808, when the Gobir dynasty collapsed and was replaced by a polity organized along Islamic lines that the reformers described as a "caliphate" (Arab., *khalīfah*). The Shehu remained its titular head until his death in 1232/1817, when he was succeeded by his son, Muhammadu Bello. Elsewhere in the Hausa kingdoms and even as far south as Yorubaland and the Nupe kingdom other *jihāds*, led by the Shehu's "flag bearers," or military commanders, continued until brought to a halt by the colonial occupations of the late nineteenth and early twentieth centuries.

The Shehu was not only a war leader but also a scholar and poet in the classical Arabic tradition. Best known among his verse works is his panegyric to the prophet Muḥammad, *Al-dālīyah (The Ode Rhyming in Dāl)*, that helped to spread the prophet's Ṣūfī cult and was seminal to a genre of Hausa prophetic panegyric (Hau., *madahu*) among the generations that followed him.

His Arabic prose works are numerous (see Last, 1967). Their main thrust is against all manifestations of indigenous, non-Islamic Hausa culture—song, music, ornate dress, architecture, social mores, and so on—and an insistence that these be replaced by Islamic alternatives. His works also influenced his society, and posterity, by disseminating the ideas of the Qādirī order of Ṣūfīs, to which he was deeply committed, especially as regards the cult of the *awliyā'* (Arab.; sg., *walī*, "one near" to Allāh). Indeed, the Shehu's own charisma stems largely from his reputation as a *wali*.

The immediate political consequences of the *jihād* were to overthrow the discrete Hausa principalities based on traditional, unwritten customary codes and to substitute the unified Islamic system of the caliphate governed by the revealed and written *sharīʿah*. More long-term cultural and religious consequences were to displace, to some extent, indigenous African notions about cosmology and replace them with the Islamic celestial architecture, to challenge African cyclical explanations of life and death with the finality of the Islamic doctrine of divine punishment and reward, and to enhance the status of Arabic literacy in Hausa society.

The Shehu is still a much revered personality among Hausa Muslims, having become something of a symbol of Hausa Muslim nationalism. However, the Ṣūfī aspects of his teaching are now less emphasized than in the past, perhaps because the Wahhābī doctrine has become more influential in West Africa.

## BIBLIOGRAPHY

The bibliography on the Fulbe *jihād* is extensive, and the student is advised to consult lists in Murray Last's *The Sokoto Caliphate* (London, 1967). The following will also be found useful in the first instance: my edition and translation of *Tazyīn al-waraqāt* (Ibadan, 1963), an account of the Shehu's life and the *jihād* from the Muslim reformers' own viewpoint; my *The Sword of Truth* (New York, 1973), a study of the life and times of the Shehu based on the Arabic and Hausa sources; my *The Development of Islam in West Africa*, (New York, 1984), which places the Fulbe reform movement in the wider West African context; and *Bayān wujūb al-hijrah ʿalā al-ʿibād*, edited and translated by F. H. el-Masri (Khartoum and Oxford, 1978), the edited Arabic text and English translation of one of the Shehu's major works with an excellent critical introduction. There are also many articles in learned journals that deal with aspects of the Shehu's life and writings. These are conveniently listed in Hiskett (1973 and 1984) and Last (1967).

MERVYN HISKETT (1987)

**DANIEL,** or, in Hebrew, Daniyye'l; hero of the biblical book that bears his name. Daniel is presented as a Jew in the Babylonian exile who achieved notoriety in the royal court for his dream interpretations and cryptography and for his salvation from death in a lion's pit. He also appears in the last chapters of the book as the revealer of divine mysteries and of the timetables of Israel's restoration to national-religious autonomy. As a practitioner of oneiromancy in the court, described in *Daniel* 1–6 (written in the third person), Daniel performs his interpretations alone, while as a visionary-apocalyptist, in *Daniel* 7–12 (written in the first person), he is in need of an angel to help him decode his visions and mysteries of the future. It is likely that the name Daniel is pseudonymous, a deliberate allusion to a wise and righteous man known from Ugaritic legend and earlier biblical tradition (*Ez.* 14:4, 28:3).

The authorship of the book is complicated not only by the diverse narrative voices and content but by its language: *Daniel* 1:1–2:4a and 8–12 are written in Hebrew, whereas *Daniel* 2:4b–7:28 is in Aramaic. The language division parallels the subject division (*Daniel* 1–6 concerns legends and dream interpretations; 7–12 concerns apocalyptic visions and interpretations of older prophecies). The overall chronological scheme as well as internal thematic balances (*Daniel* 2–7 is chiliastically related) suggest an attempt at redactional unity. After the prefatory tale emphasizing the life in court and the loyalty of Daniel and some youths to their ancestral religion, a chronological ordering is discernible: a sequence from King Nebuchadrezzar to Darius is reported (*Dn.* 2–6), followed by a second royal sequence beginning with Belshazzar and concluding with Cyrus II (*Dn.* 7–12). Much of this royal dating and even some of the tales are problematic: for example, *Daniel* 4 speaks of Nebuchadrezzar's transformation into a beast, a story that is reported in the Qumran scrolls of Nabonidus; Belshazzar is portrayed as the last king of Babylon, although he was never king; and Darius is called a Mede who conquered Babylon and is placed before Cyrus II of Persia, although no such Darius is known (the Medes followed the Persians, and *Darius* is the name of several Persian kings). Presumably the episodes of *Daniel* 2–6, depicting a series of monarchical reversals, episodes of ritual observances, and reports of miraculous deliverances were collected in the Seleucid period (late fourth to mid-second century

BCE) in order to reinvigorate waning Jewish hopes in divine providence and encourage steadfast faith.

The visions of *Daniel* 7–12, reporting events from the reign of Belshazzar to that of Cyrus II (but actually predicting the overthrow of Seleucid rule in Palestine), were collected and published during the reign of Antiochus IV prior to the Maccabean Revolt, for it was then (beginning in 168 BCE) that the Jews were put to the test concerning their allegiance to Judaism and their ancestral traditions, and many refused to desecrate the statutes of Moses and endured a martyr's death for their resolute trust in divine dominion. All of the visions of Daniel dramatize this dominion in different ways: for example, via images of the enthronement of a God of judgment, with a "son of man" invested with rule (this figure was interpreted by Jews as Michael the archangel and by Christians as Christ), in chapter 7; via zodiacal images of cosmic beasts with bizarre manifestations, as in chapter 8; or via complex reinterpretations of ancient prophecies, especially those of *Jeremiah* 25:9–11, as found in *Daniel* 9–12.

The imagery of the four beasts in chapter 7 (paralleled by the image of four metals in chapter 2), representing four kingdoms to be overthrown by a fifth monarchy of divine origin, is one of the enduring images of the book: it survived as a prototype of Jewish and Christian historical and apocalyptic schemes to the end of the Middle Ages. The role and power of this imagery in the fifteenth- and sixteenth-century work of the exegete Isaac Abravanel, the scientist Isaac Newton, and the philosopher Jean Bodin and among the Fifth Monarchy Men of seventeenth-century England, for example, is abiding testimony to the use of this ancient topos in organizing the chiliastic imagination of diverse thinkers and groups. The schema is still used to this day by various groups predicting the apocalyptic advent.

The encouragement in the face of religious persecution that is found and propagandized in *Daniel* 11–12 contains a remarkable reinterpretation of *Isaiah* 52:13–53:12, regarding the suffering servant of God not as all Israel but as the select faithful. Neither the opening stories about Daniel and the youths nor the final martyrological allusions advocate violence or revolt; they rather advocate a stance of piety, civil disobedience, and trustful resignation. Victory for the faithful is in the hands of the archangel Michael, and the martyrs will be resurrected and granted astral immortality. Presumably the circles behind the book were not the same as the Maccabean fighters and may reflect some proto-Pharisaic group of *ḥasidim*, or Pietists. The themes of resistance to oppression, freedom of worship, preservation of monotheistic integrity, the overthrow of historical dominions, and the acknowledgment of the God of heaven recur throughout the book and have served as a token of trust for the faithful in their darkest hour.

***Revised Bibliography***

**DANTE ALIGHIERI** (1265–1321), Italian poet, theologian, and philosopher. Dante offered in his *Commedia* a "sacred poem" of enormous erudition and aesthetic power, which more than any other work of Christian literature merits the appellation conferred on it by a mid-sixteenth-century edition: "divine." After producing the *Vita nuova* in 1295, Dante entered the volatile world of Florentine politics, which, however unjustly, subsequently led to his banishment from the city in 1302. In exile for the remainder of his life, he wrote the *Convivio*, the *De vulgari eloquentia*, and the *De monarchia* in the following decade, works that together reveal a commonality of themes: an admiration for the Latin classics, a dedication to the study of philosophy, and a commitment to the revival of the Roman imperial ideal. These concerns are all transfigured in the long and elaborate course of the *Commedia* (*Inferno, Purgatorio, Paradiso*), which represents an encyclopedic synthesis of late medieval thought subsumed within an overarching theological vision. The poem is at once profoundly traditional in its religious ordering of human experience and an innovation of substance and form that suggests an utterly new mentality at work. It can be seen both as an attempt to exorcise what would shortly become the spirit of the Renaissance and yet also as a brilliant precursor of it.

Dante came of age in Florence at a time when the papacy was embroiled with the Holy Roman Empire over temporal jurisdiction in Italy. Widespread corruption in the church, as well as within the powerful mendicant orders of the Franciscans and the Dominicans, seemed to give rise to many individualistic and charismatic expressions of piety that, while passionately Catholic, nonetheless found themselves alienated from the established religious institutions and hierarchies. It is in this context that a devout layman like Dante, discovering himself a mere "party of one," could dare to arrogate to himself the quasi-biblical role of prophet. He became a voice crying in the wilderness, instructing the powers of church and state in their true responsibilities at the same time that he was attempting to woo the ordinary reader (in a daring use of the vernacular for so ambitious a poetic work) into a full conversion of the heart.

Whatever the poet's personal upbringing may have given him, it is known that he studied for an extended period "in the schools of the religious orders and at the disputations of the philosophers" (*Convivio* 2.12). At Santa Croce he would have been exposed to the wealth of Franciscan piety, while at Santa Maria Novella the Dominican Remigio de' Girolami expounded the theology of Thomas Aquinas with special regard for the Aristotelian philosophy that subtends it. In such an intellectual atmosphere Dante found validated what was to be one of the most impressive characteristics of his own work: the massive appropriation of pagan and classical writers for Christian reflection and use.

In assessing Dante's relation to medieval theology and religious thought it is commonplace to emphasize the formative influence of "the Philosopher" (Aristotle) and the "Angelic Doctor" (Thomas); that is, to stress his strong debt to Scholasticism. It must be remembered, however, that the poet everywhere shows himself to be an independent and eclectic thinker, whose imaginative meditation on the Christian faith leads him far and wide: to the systematics of Peter Lombard, the Platonism of Bonaventure, the mysticism of Bernard of Clairvaux and the Victorines, the biblical exegesis (as well as the retrospective confessional mode) of Augustine. Thus, while we may well speak of Dante as standing at the crossroads of medieval religious thought, the intersection is one that he personally constructed rather than discovered ready-made. The synthesis of the *Commedia* is idiosyncratically his own.

As a propagator of the Christian religion Dante must, of course, be assessed by the achievement of his great poem, with its account of the state of the soul after death portrayed in the course of a journey undertaken by the poet himself (lasting from Good Friday 1300 to the Wednesday of Easter Week) through the realms of damnation, purgation, and beatitude. Granted this extraordinary experience through the intercession of his deceased love, Beatrice, the pilgrim-poet is led step by step through a process of conversion by a series of guides and mediators: the pagan poet Vergil, Beatrice herself, and the churchman-mystic-crusader Bernard. But in its larger aspect, the poem is itself an invitation to conversion: to the individual reader, to rediscover the Gospels' "true way"; to the church, to recover its spiritual mission; and to the state, to exercise its divinely ordained mandate to foster temporal well-being.

There are other transformations as well. Hell is portrayed not as a place of arbitrary horror, but as the eternal living out of the soul's self-choice, whereby punishments not only fit but express the crimes of sin. Dante also brings Purgatory aboveground and into the sun, turning the traditional place of torturous penance into more of a hospital or school than a prison house. No less striking is the presentation of Beatrice, at once the earthly lover praised in the youthful pages of the *Vita nuova* and the Christ-event for Dante: a woman in whom we see human eros accorded an unprecedented place in the scheme of human salvation. But perhaps most significant of all—and most singularly responsible for the *Commedia*'s immense and enduring popularity—is Dante's superb representation of the self: ineradicable even in death; more vivid than the theological context in which it is eternally envisioned; more subtly and realistically portrayed than in any other work of medieval literature. The poem's itinerary leads us along the paths of theology to a vision of God, but its hundred cantos offer an investigation of human nature and culture that grounds the reader's attention in the complex realities of earth.

## BIBLIOGRAPHY

The quantity of secondary material on Dante written in English alone is staggering. Carole Slade's extensive and somewhat annotated bibliography in *Approaches to Teaching Dante's Divine Comedy* (New York, 1982) gives a fine sense of the whole range. Among those works that deal sensitively with Dante's relation to Christian belief and tradition, one needs to accord special tribute to the critical oeuvre of Charles S. Singleton, who has exerted a powerful influence on American studies of Dante by underscoring the importance of the poem's theological assumptions. In addition to Singleton's translation and commentary (Princeton, 1970–1975), there are his earlier works: *An Essay on the Vita Nuova* (Cambridge, U.K. 1949), *Dante Studies 1: Commedia, Elements of Structure*, 2d ed. (Baltimore, 1977), and *Dante Studies 2: Journey to Beatrice*, 2d ed. (Baltimore, 1977). Charles Williams's *The Figure of Beatrice* (London, 1958) gives a coherent theological reading of all of Dante's works, whose point of view informs not only Dorothy Sayers's commentary and notes (Harmondsworth, 1951–1967) but her *Introductory Papers on Dante* (New York, 1954) and *Further Papers on Dante* (New York, 1957). There are also brilliant insights into the religious ethos of the *Commedia* in Erich Auerbach's *Dante: Poet of the Secular World* (Chicago, 1961) as well as in an important chapter of his *Mimesis* (Princeton, 1953). Robert Hollander's *Allegory in Dante's Commedia* (Princeton, 1969) and *Studies in Dante* (Ravenna, 1980) deal masterfully with the poet's claim to write an "allegory of the theologians" (and therefore in the manner of scripture itself). John Freccero's many brilliant essays on the *Commedia*, collected under the title *The Poetry of Conversion* (Cambridge, Mass., 1986), stress the poet's debt to Augustine's *Confessions* and the Christian Neoplatonic tradition. The latter connection is explored in Joseph Anthony Mazzeo's *Structure and Thought in the Paradiso* (Ithaca, N.Y., 1958). Finally, William Anderson's *Dante the Maker* (Boston, 1980) takes seriously the visionary origin of the *Commedia* and therefore forces us to examine again the literal level of the poem and its bid to be believed as a genuine vision of God.

PETER S. HAWKINS (1987)

**DAO'AN** (312–385), also known as Shi Dao'an, Chinese Buddhist monk, scholar, and gifted exegete whose organizational abilities and doctrinal acumen helped shape the direction of early Chinese Buddhism. Dao'an was born to a family of literati in what is now Hebei Province in North China. He became a novice at the age of twelve. In 335 he journeyed to Ye (Hebei Province), the new capital of the Later Zhao kingdom, where he studied with Fotudeng (d. 348), the thaumaturge-monk whose magical prowess and success at predicting the outcome of battle had served to recommend Buddhism to the non-Chinese rulers of the kingdom. With the death of Shi Hu, then ruler of the Later Zhao, in 349, Dao'an left Ye and began a peripatetic career in North China that was to last until 365, when he was forced by war to flee south to Xiangyang (Hubei Province). During this period he gathered around himself an ever-growing band of disciples and developed the scholarly and organizational skills for which he is esteemed.

Dao'an's interests during the period 349–365 were conditioned by the pronounced orientation of the Buddhism of North China around primarily Hinayanistic techniques of meditation designed to advance the practitioner through successively rarefied transic states (Skt., *dhyāna;* Chin., *chan*). The enumeration of these states constituted the topic of several sūtras introduced to China in the second century CE by the Parthian translator An Shigao. During his time in the North, Dao'an wrote commentaries to no fewer than six of An Shigao's translations, remarking at one point that the study of *dhyāna* categories constituted "the very pivot of the religious life." That the practice of the techniques described in An Shigao's translations occupied a central role in the community of monks gathered around Dao'an can scarcely be doubted.

This interest in some of the earliest products of the interaction between India and China may reflect something of the growing historiographical and text-critical concerns that would become the hallmark of Dao'an's later years. His biographies emphasize his concern lest the meaning of the scriptures be obscured by the translation process or by the efforts of well-meaning exegetes to couch Buddhist ideas in equivalent Chinese terms bearing only a nominal relationship to the original Sanskrit. Like no one before him in the history of Chinese Buddhism, Dao'an recognized that profound differences separated the original teachings of the scriptures from the hermeneutical framework devised for them in China. In light of this, he undertook his own program of textual exegesis, including careful notation of the history of various texts in China, and formally repudiated a prevailing method of textual interpretation known as *geyi* (matching meanings), under which numerical categories from the scriptures were paired with terms from secular literature.

The year 365 found Dao'an in Xiangyang with an entourage of over four hundred disciples. Once there he moved quickly to establish a monastic center and to forge links with the local government and aristocracy that would ensure its institutional stability. Aware of the difficulties in regulating monastic life in the absence of a complete translation of the Vinaya, or monastic rules, he promulgated a series of ordinances of his own devising. These appear to have treated the daily regimen of the monks and their observance of the Upoṣadha (Pali, Uposatha), or fortnightly confessional ceremony.

But the distinguishing feature of Dao'an's fifteen-year stay in Xiangyang was his shift in attention from *dhyāna* texts and practices to the Mahāyāna Prajñāpāramitā (perfection of wisdom) literature. Although there is evidence that he had become acquainted with these sūtras prior to 365, the years in Xiangyang were characterized by a radical reorganization of his religious interests: six of Dao'an's commentaries from this period are devoted to the Prajñāpāramitā literature. He is also said to have lectured twice yearly on the *Fangguang jing*, Mokṣala's translation (291 CE) of the *Prajñāpāramitā Sūtra* in twenty-five thousand *ślokas*. It is as an outgrowth of this interest in speculations on *prajñāpāramitā* that he is credited with establishing the teaching of original nonbeing (*benwu zong*), one of seven so-called *prajñā* traditions that flourished in China during the fourth and fifth centuries. From the scant evidence remaining to us, Dao'an's teaching appears to have emphasized the existence of an underlying substrate (*benwu*) that stands to phenomena (*moyou*) as both fundamental substance and source. By focusing the mind in meditation upon this radically other, empty absolute, Dao'an taught, release from phenomenal existence can be won.

Two other hallmarks of Dao'an's stay at Xiangyang bear mentioning. The first is his compilation, in 374, of the first critical catalog of Chinese Buddhist texts. As a culmination of his lifelong interest in the fidelity of the sources available to the Chinese, the *Zongli zhongjing mulu* (Comprehensive catalog of the collected scriptures) became a model for all future works of this sort. Dao'an personally inspected each of the more than six hundred works in the catalog, laboriously copied the colophons, where available, and scrupulously passed judgment on the authenticity of the information given there. The other noteworthy feature of Dao'an's career in Xiangyang is his inauguration of a cult to the *bodhisattva* Maitreya. In this cult, clearly the model for his disciple Huiyuan's own Amitabha confraternity (402 CE), Dao'an and seven other devotees gathered before an image of Maitreya and collectively vowed to be reborn in Tusita Heaven, the abode of the *bodhisattva* prior to his rebirth in this world. His biography relates how, in a miraculous visitation to Dao'an shortly before his death, Maitreya vouchsafed to him a vision of Tusita.

The final era of Dao'an's career began in 379 when Fu Jian, ruler of the Former Qin kingdom, laid siege to Xiangyang. In the aftermath of the capitulation of the city Dao'an was brought to Chang'an to preside over a monastic community several times larger than that at Xiangyang. With Fu Jian's restoration of Chinese hegemony over Central Asia, Chang'an was once again the eastern terminus of a trade and information network that stretched through Chinese Turkistan, beyond the Hindu Kush, and into India itself. In the final years of Dao'an's life a number of important missionaries and translators arrived in Chang'an from the western regions, especially from Kashmir, where the Sarvastivada community was exceptionally strong. They brought with them texts that gradually began to fill the lacunae in the canon so lamented by Dao'an. The *Ekottara* and *Madhyama Āgama*s, the *Jñānaprasthāna* (the central work in the Sarvastivada Abhidharma Pitaka), and important sections of the Sarvastivada Vinaya were all introduced at this time. As head of an officially sponsored translation bureau, Dao'an advised the translation team in matters of style (Dao'an, of course, knew no Sanskrit), and composed prefaces to some of the texts. His classic guidelines for translators, consisting, formulaically, of five parameters for changing the text (*wu shiben*) and three conditions under which deviation from the original was not encouraged (*san buyi*), date from this period.

Dao'an's influence over the exegetical and bibliographical traditions of Chinese Buddhism during its formative years can scarcely be overestimated. As the first Buddhist on Chinese soil to confront the problem of understanding Buddhist texts on their own terms, free from the conceptual distortions imposed on them by their association with indigenous thought, Dao'an brought to the young church a new measure of maturity. He is also significant for having combined in a single career the emphasis on Pietism and *dhyāna* practices characteristic of the Buddhism of North China with the Gnostic speculations of Prajñāpāramitā and *xuanxue* thought that engaged the Buddhist thinkers of the South. That Buddhism emerged with the doctrinal and institutional autonomy that it did during the fifth century is attributable in no small measure to Dao'an's efforts.

### BIBLIOGRAPHY

Extensive discussions of Dao'an's role in the development of Chinese Buddhism can be found in Tang Yongtong's *Han Wei liang-Jin Nan-bei chao fojiao shi* (Shanghai, 1938), vol. 1, pp. 187–277; Itō Giken's *Shina bukkyō seishi* (Yamaguchi-ken, 1923), pp. 111–206; and Erik Zürcher's *The Buddhist Conquest of China* (1959; reprint, Leiden, 1972), vol. 1, pp. 181–204. Kenneth Ch'en's *Buddhism in China: A Historical Survey* (Princeton, 1964) offers a summary of Dao'an's career on pages 94–103.

For a good introduction to the Buddhism of North China in Dao'an's time, see Arthur Wright's essay on Dao'an's teacher, "Fo-t'u-têng: A Biography," *Harvard Journal of Asiatic Studies* 11 (1948): 321–371. Dao'an's biography in the *Gaoseng zhuan* has been translated by Arthur Link in "The Biography of Shih Tao-an," *T'oung pao* 46 (1958): 1–48. Useful for their treatments of Dao'an and the *prajñā* traditions of the fourth and fifth centuries are Arthur Link's "The Taoist Antecedents of Tao-an's Prajñā Ontology," *History of Religions* 9 (1969–1970): 181–215; Kenneth Ch'en's "Neo-Taoism and the Prajñā School during the Wei and Chin Dynasties," *Chinese Culture* 1 (October 1957): 33–46; and Fung Yu-lan's *A History of Chinese Philosophy,* vol. 2, *The Period of Classical Learning,* translated by Derk Bodde (Princeton, 1953), pp. 243–258. Ui Hakuju's *Shaku Dōan kenkyū* (Tokyo, 1956) reviews Dao'an's career and includes annotated editions of his major prefaces. For a discussion of Dao'an's translation guidelines, see Ōchō Enichi's "Shaku Dōan no hon'yakuron," *Indogaku bukkyōgaku kenkyū* 5 (1957): 120–130.

MARK D. CUMMINGS (1987)

**DAO AND DE,** the "way" and "virtue," respectively, are basic Chinese philosophical concepts with particular relevance in the Daoist tradition. They are important separately as politico-philosophical and religious terms. Joined as a binomial, *dao-de* appears first in the third century BCE and plays a key role in religious Daoist speculation. In modern Chinese, *dao-de* means "morality."

*Dao* is the word for "road" or "pathway." It has no other sense in the earliest texts—that is, in the oracle bones of the Shang dynasty (c. 1200 BCE). By the time of the Eastern Zhou (770–256 BCE), *dao* comes to mean the correct or natural way something is done, especially in the actions of rulers and kings (Vandermeersch, 1980). Used as a verb, *dao* also means to "show the way," "tell," or "guide," and hence gains the meaning "teaching" or "doctrine." In both these senses, the term is central to the various philosophical schools of ancient China and the formulation of political doctrines; it often designates a meta-way of talking about specific ideas or political measures (Hansen, 1992). A. C. Graham accordingly entitled his volume on ancient Chinese thought *Disputers of the Tao* (1989).

In the philosophical texts, *dao* means both "the way the universe operates" and "the teachings people follow." Thus, the *Lunyu* (the *Analects* or "Sayings of Confucius," dated to about 400 BCE) speaks of the "*dao* of the ancient kings" and says a state "has *dao*" if it is well governed. A Confucian gentleman "devotes himself to *dao*" and people do not all "have the same *dao*" if they adhere to different principles. The classic of all texts on *dao*, the *Dao de jing*, states, "*dao* that can be *dao*'ed is not the eternal *dao*" (chap. 1), emphasizing the ineffable nature of the way that underlies existence.

Despite this, it is possible to create a working definition, such as that by Benjamin Schwartz in his *The World of Thought in Ancient China* (1985). He describes *dao* as "organic order"—organic in the sense that it is not willful. It is not a conscious, active creator, not a personal entity, but rather an organic process that just moves along. It is mysterious in its depth and unfathomable in its essence.

Beyond this, *dao* is also order, clearly manifest in the rhythmic changes and patterned processes of the natural world. As such, it is predictable in its developments and can be analyzed and described in ordered patterns. These ordered patterns are what the Chinese call *ziran,* or "self-so," which is the spontaneous and observable way things are naturally. Yet while *dao* is very much nature, it is also more than nature. It is also the essence of nature, the inner quality that makes things what they are. It is governed by laws of nature, yet it is also these laws itself.

In other words, it is possible to explain the nature of *dao* in terms of a twofold structure. The "*dao* that can be *dao*'ed" and the "eternal *dao*." The latter is the mysterious, ineffable *dao* at the center of the cosmos; the former is the *dao* at the periphery, visible and tangible in the natural cycles. About the eternal *dao*, the *Dao de jing* says:

> Look at it and do not see it: we call it invisible. Listen to it and do not hear it: we call it inaudible. Touch it and do not feel it: we call it subtle. . . . Infinite and boundless, it cannot be named;. . . Call it vague and obscure. (chap. 14; see LaFargue, 1992)

This *dao* is entirely beyond the perception of ordinary humans. It is so vague and obscure, so subtle and so potent, that it is utterly beyond all knowing and analysis, and cannot be grasped however much one may try. The human body, the human senses, and the human intellect are not equipped to deal with *dao* on this level, and the only way a person can ever get in touch with it is by forgetting and transcending his or her ordinary human faculties, by becoming subtler and finer and more potent, more like *dao* itself.

*Dao* at the periphery, on the other hand, is characterized as the give and take of various pairs of complementary opposites, as the natural ebb and flow of things as they rise and fall, come and go, grow and decline, are born and die. The *Dao de jing* says:

> To contract, there must first be expansion. To weaken, there must first be strengthening. To destroy, there must first be promotion. To grasp, there must first be giving. This is called the subtle pattern. (chap. 36)

Things, as long as they live, develop in alternating movements, commonly described with the terms *yin* and *yang*. It is the nature of life to be in constant change, and of things to always be moving in one or the other direction, up or down, towards lightness or heaviness, brightness or darkness, and so on. Nature is in a continuous flow of becoming, latent and transparent, described as the alternation of yin and yang, complementary characteristics and directions, that cannot exist without each other. This is the nature of *dao* as it can be observed and followed in politics and self-cultivation. If practiced properly, following this aspect of *dao* will ultimately lead to a state of spontaneous alignment with the ineffable *dao*, the creative force at the center (see Roth, 1999). Attaining this state of perfect alignment is described as sagehood and being in complete nonaction *(wuwei).*

*De* as a term goes back further than *dao*. It has been identified in the oracle bones, where it seems to indicate a psychic quality of the king that is approved by the spirits and that gives him influence and prestige (Nivison, 1978–1979). Thus, in the Shang dynasty, heaven or the ancestors would recognize and "approve" the *de* of a sacrificer, preferring the "fragrance" of his offerings to those of others (*Shangshu* 30). The good king observes the religious duty to care for *de* in himself, seen as a psychic entity implanted in the person by heaven. Not unlike the concept of *mana* in Polynesian religions, *de* is thus the personal power inherent in a person that allows him or her to be vibrant and strong and rule in harmony with the wishes of the gods and ancestors. By extension, the word also came to mean a basic "goodness" or "generosity," as well as "to admire someone for his generosity," indicating the moral quality (virtue) and psychic force of a person (Munro, 1969).

Used frequently in the politico-philosophical texts of ancient China, *de* denotes an energy in the ruler that enables him to found or continue a dynasty. The theory was that heaven, surveying the world and finding the people suffering from disorder, conferred its mandate (*ming*) on the person with the greatest *de*. His subsequent success attested to and supported heaven's choice. Usually, the first ruler of a dynasty is heavy with *de* and thus able to govern without effort (*Lunyu* 2.1). He does not need to use punishment to gain obedience; the wisest of the land are eager to serve him, knowing that he will heed their advice. Accordingly, the dialogue of Mengzi with the king of Qi is centrally concerned with the question: "What innate *de* does one need to be king?"

Following the establishment of a dynasty, the usual pattern was that the ruler's *de* diminished over time, until a new dynasty needed to be established and received the mandate of heaven. This diminishing, however, was not inevitable, but involved the active forfeiture and loss of *de* by subsequent rulers. It could be prevented through personal restraint and ritual correctness, and many political texts serve to advise rulers on just how to maintain these. If not prevented, a bad last ruler, who was entirely without *de*, would appear on the scene. He would neglect the proper rituals, engage in sensual indulgence, follow the advice of greedy counselors, exploit the people to build grandiose palaces, and govern by punishment and harsh measures.

The result of this vision of *de* is a paradox: the ruler who needs to be straightened out most lacks good counsel and would not listen if he had it, while the one who has good counselors and is wise enough to recognize their wisdom and listen to them is "virtuous" already. As the concept of *de* becomes more recognizably "virtue," which all people may have, it leads to a persistent difficulty in moral philosophy: the question of how *de* is to be imparted to the person who lacks it. The problem exasperated Confucius (e.g., *Lunyu* 5.9, 6.10). Later philosophers had various solutions, such as Mengzi and his famous principle of the inherent goodness of human nature.

Another paradox arises not from the aspect of *de* as moral virtue but from its aspect as psychic force. The person with *de* has prestige, effectiveness, and status—things people desire. However, in order to acquire and strengthen *de*, one must be self-denying, sincerely generous, and generally good. Therefore, efforts to gain more *de* must be self-defeating, unless one seems to be trying to avoid it. The *Dao de jing* solves this issue by saying:

> The person of superior *de* is not conscious of his *de*; therefore he has *de*. The person of inferior *de* never loses sight of his *de*; therefore he loses *de*. The person of superior *de* takes no action and has no ulterior motive

> for doing anything. The person of inferior *de* takes many actions and follows ulterior motives in doing so. (chap. 38)

Thus, the person with the greatest *de* is unassuming and unimpressive, follows the patterns of *dao* in nonaction, and comes to serve all. Again, the text says: "Strong *de* appears as if unsteady; / true substance seems to be changeable" (chap. 41).

The person in the *Dao de jing* who has perfect *de* is also most in line with *dao*: the sage, who can be, but does not have to be, the ruler. The sage is described as unobtrusive, inactive, and independent, free from all possessions or attachments and without a formal teaching or program of action. Because he is all these things, which match him to the natural forces of heaven and earth, "the sage is whole" (chap. 22) and his accomplishments are thorough and long-lasting. Part of his permeating effect is that he subtly and imperceptibly—like the *dao*—spreads *de* by just being, imposing some of his psychic force and inherent goodness on others. Thereby he "causes people to be unknowing and free from desires, so that the smart ones will not dare to impose" (chap. 3). He is "always there to help the people, rejecting no one and no creature" (chap. 27), never puts himself forward in any way yet finds himself a nucleus of social and cosmic activity.

> Not presenting himself, he is radiant. Not thinking himself right, he is famous. Not pushing himself forward, he is meritorious. Not pitying himself, he is eminent. (chap. 22)

The *Dao de jing* is a good example of a text where the political quality of *de* as virtue is conflated with the more psychological aspect of *de* as inherent life force. In this latter sense, *de* indicates the essential character of anyone or anything, effective in interaction with people and things. The same is also apparent in other philosophical texts. Thus, Confucius says that "the *de* of the ruler is wind; that of the people is grass" (*Lunyu* 12.19); and the correspondence system of the five phases, which fully developed in the Han dynasty, describes its different aspects as the *wu de* or the "five powers" (see Yates, 1997).

In the *Zhuangzi* (the *Book of Master Zhuang*, the second major text of ancient Daoism, compiled in the third century BCE), this more physical yet intangible aspect of *de* is made clear in a chapter called "The Sign of Virtue Complete" (chap. 5), and particularly in the story of the suckling pigs. Told in the voice of Confucius, it tells of a group of little pigs nursing at the body of their dead mother. "After a while they gave a start and ran away, leaving the body behind, because they could no longer see their likeness in her. . . . They loved not her body but the thing that moved her body"( i.e., her *de*). By the same token, several other stories in the same chapter tell of people who have lost a part of their body (maimed in war or as punishment) but are in no way impaired in their *de*, their inherent life force—the thing that moves the body—still being complete.

To sum up, *de* means the inherent force and power that moves the world and makes people and animals come to life. It can be held to a greater or lesser degree, be purer or cruder, superior or inferior. When strong and radiant, it imparts itself to others and creates harmony and good government, thus resulting in a "virtuous" situation and imbuing its carrier with virtue—in the original sense of *virtus*, the power that makes a man strong and valiant. When lost, it results in death or the loss of inherent integrity—both cosmic and moral—which in turn causes political corruption and the downfall of dynasties.

*Dao* and *de* in combination occur mainly in Daoist texts. The *Dao de jing* is the classic example. Divided into eighty-one chapters, the text also has two major parts, a *Dao jing*, and a *De jing*. The former discusses the more cosmic dimensions of life and the larger perspective of Daoist thought; the latter focuses on the concrete activities and patterns of daily life. *De* here describes the activation of *dao* in the visible cycles of existence; that is, *dao* at the periphery. Both parts are of equal importance in the text, but while the standard version of the *Dao de jing* places the *dao* part first, the manuscripts found at Mawangdui (168 BCE) reverse the order (see Henricks, 1989).

A fifth-century religious Daoist text that takes up the *Dao de jing* in its mystical dimension and links it to practices of ritual and self-cultivation also discusses the relationship between *dao* and *de*. Section 10 of the *Xisheng jing* (Scripture of western ascension) relates *dao* and *de* and connects both to the social virtues of Confucianism:

> In *dao*, make nonbeing the highest; in *de* make kindness your master. In ceremony, make righteousness your feeling; in acting, make grace your friend. In benevolence, make advantage your ideal; in faith, make efficaciousness your goal. . . .When kindness, social responsibility, ceremony, and faith are lost, *dao* and *de* are also discarded, they perish and decay. When social *de* is not substantiated by *dao*, it will be supported only by material wealth. (Kohn, 1991, p. 242)

In the same way, the texts suggests that "the way the good person acts in the world can be compared to the bellows: he never contends with others, his *de* always depends on *dao*. This is because he is empty and void and utterly free from desires" (sect. 18). *Dao* and *de* in this text are thus seen as closely related, and one cannot be cultivated without the other. More importantly, the concept of *de* is expanded to include the various specific virtues of Confucian society.

The most detailed Daoist discussion of the relation of *dao* and *de* is found in the *Daoti lun* (On the embodiment of *dao*), a short scholastic treatise associated with Sima Chengzhen (647–735), the twelfth patriarch of Highest Clarity (Shangqing) Daoism. According to the text, "*dao* is all-pervasive; it transforms all from the beginning. *De* arises in its following; it completes all beings to their end. They appear in birth and the completion of life. In the world, they have two different names, yet fulfilling their activities, they return to the same ancestral ground. *Dao* and *de* are two and yet always one. Therefore, there is no *dao* outside of the omnipresence of *de*. There is no *de* different from the completion of life through *dao*. They are one and still appear as two. *Dao* is found in endless transformation and pervasive omnipresence. *De* shines forth in the completion of life and in following along. They are always one; they are always two. Two in one, they are all-pervasive. All-pervasive, they can yet be distinguished. Thus their names are *dao* and *de*" (*Daoti lun* 1a; see Kohn, 1998, p. 130).

According to this, *dao* and *de* are two aspects of the underlying creative power of life; they need each other and depend on each other. They are different yet the same, separate yet one, nameless yet named, at rest yet in constant movement. Pervading all, penetrating all, they are indistinct, yet can also be distinguished and named, creating a particular vision of reality. Names and reality, then, raise the problem of epistemology and knowledge of *dao*. Both names and reality ultimately belong to the same underlying structure that essentially can never be grasped. But they are also an active part of the world.

The practical application of this concept of *dao* and *de* as two aspects of the same underlying power is realized in Daoist cultivation. Through mystical practice, adepts strip off all names and classifications in their minds, and allow the "chaos perfected" nature of *dao* to emerge. *Chaos*, as the text explains, means "without distinctions," something, not a thing, that cannot be called by any name. *Perfected* means "total and centered in itself," some not-thing that has no referent outside of itself. Speaking of self or beings as "chaos perfected" thus creates a dichotomy that is not there originally. Any name, even that attached to the human body, arises from a conscious self and is mere projection. The concept is a formal expression of a perceived difference—it is unrelated to the being as being, as chaos perfected (*Daoti lun* 5a).

Knowledge of *dao* is thus a contradiction in terms, yet that is precisely what Daoism is about, what adepts strive to realize. It can only be attained in utter so-being, a state that is both empty and serene and not empty and not serene at the same time. It thereby comes close to *dao*, which embodies emptiness and rests originally in serenity, yet is also actualized in the living world and moves along with beings and things (*Daoti lun* 5b).

The close connection of *de* to *dao* in this vision is applied to guide practitioners to an integrated mystical vision of the universe and lead them toward the attainment of sagehood and oneness with *dao*. *De* helps to explain why, "if there is no difference between all beings and *dao*, should one cultivate it at all?" The answer is that "cultivation makes up for the discrepancy, however minor, between the root and its embodiment, and leads back to original nonbeing" (*Daoti lun* 8b). *De*, the visible, tangible, and active part of *dao* in the world is the bridge that allows the first step in this direction—a major stepping stone in the recovery of the original flow of life in *dao*.

LIVIA KOHN (2005)

**DAOCHUO** (562–645), known in Japan as Dōshaku; Chinese pioneer of Pure Land Buddhism in East Asia. Daochuo advocated devotion to Amitābha Buddha and rebirth in his Pure Land as the only practice in our age that would guarantee salvation. Although Pure Land devotion was popular among most Mahāyāna Buddhists as a supplementary practice, Daochuo followed Tanluan (c. 488–c. 554) in regarding it as necessary for salvation. Other forms of Buddhism he branded as the "path of the sages" *(shengdao),* too difficult to practice during these times.

A religious crisis caused in part by the bewildering demands of Indian Buddhist texts in the eyes of Chinese practitioners was exacerbated by famine and war in the Bingzhou area of Shansi Province where Daochuo lived, and he became the first Pure Land thinker to proclaim that the ten-thousand-year historical period predicted by the scriptures for the final decline of Buddhism (i.e., the *mofa;* Jpn., *mappō*) was at hand. Accordingly, he deemed traditional practices inadequate since no one could attain enlightenment based on self-effort. For Daochuo, the only hope was through outside help. He preached that the *Wuliangshou jing* (the *Larger Sukhāvatīvyūha Sūtra*) was designed for this period and that reliance on the compassionate vows of the Buddha Amitābha—which guarantee people of ordinary religious capacities rebirth in his Pure Land followed by speedy and painless enlightenment there—was the only soteriologically effective action remaining.

After his conversion to Pure Land in 609, Daochuo took up residence in the Xuanzhong Monastery. There, he lectured over two hundred times on the *Kuan wu-liang-shou ching (*Amitāyurdhyāna Sūtra)* and advocated its practices, especially the vocal recitation of Amitābha's name *(nianfo;* Jpn., *nembutsu).* Departing from the view of Tanluan, for whom *nianfo* involved a transcendent quality of mystical union with Amitābha's name, Daochuo was the first Chinese Buddhist to teach reliance on verbal recitation, which was to be aided by bushels of beans or rosaries to record the number of recitations. (Daochuo himself is alleged to have recited the name of Amitābha as much as seventy thousand times a day.) As a consequence, Pure Land devotion spread rapidly among the laity under the slogan "chant the Buddha's name and be reborn in the Pure Land" *(nianfo wangsheng)* and rosaries became ubiquitous in Chinese Buddhism.

Because the prajñāpāramitā literature affirmed that reality is characterized by both form and emptiness, Daochuo argued for the legitimacy of using verbal recitations and attention to the physical aspect of Amitābha and his Pure Land. These practices, he believed, were temporary expedients to lead people to formlessness, nonattachment, and nonduality after rebirth in the Pure Land. In his only surviving writing, the *Anloji,* Daochuo acknowledges that understanding the Pure Land as formless is superior to seeing it as form, and that one's original motivation should be a desire for enlightenment *(bodhicitta)* in order to save others, not just desire for the bliss of Pure Land. However, according to the Mahāyāna doctrine of "two truths," those who understand the ultimate truth of emptiness are able to use the conventional truth of form to save beings, thus legitimizing temporary attachment to concrete forms in Pure Land devotionalism.

The most important disciple of Daochuo was Shandao (613–681), who wrote systematic works that firmly established Pure Land as a major religious tradition in East Asia and influenced Honen in Japan. It was the sense of crisis and urgency that permeates the *Anloji* that dramatized the necessity of Pure Land devotion, while the concrete methods of practice that Daochuo promoted made Pure Land attractive and accessible to common people. Pure Land devotion thus became a popular social movement in China for the first time, and the sound of Amitābha's name has been chanted unceasingly in Chinese Buddhist worship ever since.

AN OVERVIEW
THE DAOIST RELIGIOUS COMMUNITY
DAOIST LITERATURE
HISTORY OF STUDY

## DAOISM: AN OVERVIEW

The English word *Daoism*, with its nominalizing suffix, has no counterpart in the Chinese language. The term has been used in Western writings on China to refer to a wide range of phenomena. First, scholars employ the term *Daoism* to designate early philosophical texts classified as representing *daojia* (schools of the Dao) in early Chinese bibliographic works. Some of these, such as the *Dao de jing* (The classic of the way and its power), also known as the *Laozi* after its supposed author, propounded methods of governance based on mystical gnosis, inaction on the part of the ruler, and a metaphysics centered on the concept of the Dao. Others, such as the eponymous *Zhuangzi*, emphasized mystical union with the Dao and equanimity in the face of death and other natural processes.

Second, given the staunch antipathy toward Confucian methods of social organization common to texts classified *daojia*, the term *Daoism* has been employed in modern scholarship to mark a wide range of anti-Confucian, utopian, and escapist strains of thought. For instance, eremitic withdrawal from government service, a practice with deep roots in the Confucian tradition, was until recently routinely portrayed as "Daoism."

Third, and even more loosely, *Daoism* has been used in works on China to express a sort of free-flowing effortlessness informing individual endeavors, especially the arts of calligraphy, painting, music, and the like. Fourth, *Daoism* has been used to refer to any Chinese religious practice that is not identifiably Confucian or Buddhist. Fifth, and more strictly, the term *Daoism* is used by scholars to translate the Chinese term *daojiao* (literally, "teachings of the Dao"), the closest analogue for our term *Daoism.* The Chinese, like the Japanese, had no formal name for their native religion until the arrival of Buddhism. The term *daojiao* was thus fairly widely adopted to distinguish Daoist religious practice from *fojiao,* "the teachings of the Buddha," or Buddhism.

The present entry deals solely with these religious movements. Even with our narrower focus, problems of definition remain. Most Daoist organizations lacked or failed to emphasize elements deemed essential in other religions. With some exceptions, most Daoists throughout history would agree that their religion did not have a single founder, a closed canon of scriptures, a unified creed, exclusive criteria of lay membership, or a stable pantheon. Historically speaking, the most important structuring force was not internal, but external to the religion. In its efforts to impose order on the realm, the state from time to time sought to control Daoism through overseeing the initiation of clerics, the number of temples, the approved canon, and the like. While none of these attempts were ultimately successful, they did provide impetus for stricter organizational cohesion than would otherwise have been the case.

The high degree of doctrinal flexibility deployed by Daoist organizations often leads modern scholars to debate which specific ideas and practices might or might not be called *Daoist.* A more productive approach, one that emphasizes not what Daoism is, but how various traditions functioned within society, will notice how Daoism has remained an open system, accepting elements drawn from diverse sources and organizing them according to a constellation of key principles and practices. None of these constituents are exclusive to or original with the Daoist traditions. Yet the distinctiveness of the religion lies in the combination of such elements into a structure of beliefs and practices with distinct priorities. These priorities are explored in the following section.

**KEY ASPECTS OF DAOISM.** The defining concept of the Daoist religion is the Dao itself, understood in a particular way. The term *dao,* originally denoting a "way" or "path," came to be used in pre-Han philosophical discourse to refer to the proper course of human conduct and, by extension, to the teachings of any philosophical school, especially insofar as these were based on the venerated ways of the sages of antiquity. In the *Laozi,* the *Zhuangzi,* and other early writings, the Dao came to be seen not as human order, but as the metaphysical basis of natural order itself, inchoate yet capable of being comprehended by the sage, primordial yet eternally present. This *Dao* of the early thinkers informs religious Daoist texts as well, but with an added dimension of great significance. For Daoists, the Dao underwent further transformations, analogous to those it underwent at the beginnings of time, to incarnate itself in human history. The Dao itself is seen as anthropomorphic, possessed of likes and dislikes, desires, sentiments, and motivations—the full range of human emotions. At the same time, the Dao might act in history through avatars, such as Laozi, who were fully human in appearance. Finally, a number of deities, including those resident in the human body, are regarded as divine hypostases of the Dao.

*Qi* has been variously translated as "breath," "pneuma," "vapor," or "energy." Seen as the basic building block of all things in the universe, *qi* is both energy and matter. In its primordial form, before division, the Dao is described as "nothingness," void and null. The first sign that it was about to divide, a process that would eventuate in the creation of the sensible world, was the appearance within this nothingness of *qi,* a term that originally seems to have meant "breath" or "steam." All physical objects in the universe are thus composed of relatively stable *qi,* while rarified *qi* is responsible for motion and energy and is the vital substance of life. In that the Dao is characterized by regular and cyclical change, the transformations of *qi* could be described in terms of recurring cycles, marked off in terms of *yin, yang,* the five phases, or the eight trigrams of the *Yi jing.* In such interlocking systems, *qi* was the intervening matrix by which things sharing the same coordinates in the cycle might resonate and influence one another.

Daoists, building both on such cosmological speculation and on various practices for extending life that featured the induction into the body of pure, cosmic *qi,* came to regard *qi* as the primary medium by which one might apprehend and eventually join with the Dao. Most meditation practices, in one way or another, involve swallowing *qi* and circulating it within the body. The primary difference between Daoist meditations and similar hygiene practices is that Daoists visualize the substance either in deified form or as the astral sustenance for *qi*-formed deities resident in the body. In fact, all of the gods are held to be concretions of *qi* from the earliest moments of the Dao's division. *Qi,* particularly that mysterious substance known as *yuan qi* (primal *qi*) thus bridges the gulf between the sensible and the supramundane worlds.

**Macrocosm-microcosm.** While all existence is seen to be part of the Dao, movements away from its primordial condition of unity are held to be destructive, evil, and transgressive. The perfect human is thus imagined to be a flawless microcosm of the cosmic whole, with the bodily spirits perfectly attuned to their counterparts in the macrocosm. The most common depiction of the body in Daoist writings holds that it is divided into three realms, corresponding to the tripartite cosmic division into heaven, humanity, and earth. A spot in the brain, between and behind the eyebrows, controls the palaces of the head; the heart, organ of sentience and emotion, controls the center; and a spot above the pubis, center of reproduction, controls the life force. These are sometimes called the "three primes" or the "three cinnabar fields." From an initial unity before birth, the human body moves towards increased diversity and closer to death.

Daoist ritual is much concerned with identifying and combating the forces of aging, degeneration, and illness. The goal, at once temporal and spatial, is to bring the various aspects of the body back into unified harmony. Beings who existed in this state are called *xian* (Transcendents) or *zhenren* (Perfected). Generally, *xian* had once been human, while *zhenren* are pure manifestations of aspects of the Dao, though this distinction is not always strictly maintained.

In the correlative cosmology of Chinese science developed during the early Han dynasty, the earth was held to mirror the heavens, so that each portion of the realm corresponded precisely with a sector of the heavens. This correspondence was the basis for the determination of the celestial omens that were regularly reported to the throne. The pole star and surrounding constellations corresponded to the emperor and his court, so that "invasions" of meteors or comets in that portion of the sky were held to be particularly dire portents. In addition, four (and later five) mountains, or "marchmounts," were designated the corners and center of the square earth, symbolically encompassing the realm and corresponding to the five phases. These mountains, which support the sky dome, were thus points where communication with heaven was easiest. Most important in this regard was the eastern marchmount, Taishan, associated with the east, the rising of the sun, and new beginnings. Here a number of Chinese emperors ascended to perform a rite called the *fengshan* to seal with heaven their mandate to rule.

These concepts were further developed in Daoism. Daoist ritual often focuses on the northern dipper, whose movements mark the passage of time, and on the palaces of the apex of heaven, the higher gods of which are described in great detail. The other asterisms, the sun, and the moon also house gods responsible for the orderly revolutions of these celestial bodies who could be accessed through ritual. Eventually, all of the marchmounts boasted Daoist temples.

**Bureaucratic pantheons.** Imperial symbolism extends into almost every aspect of the Daoist religion. Aspects of the Dao are visualized as the lord of heaven with a dizzying number of spirit-officials. Just as the well-run kingdom depended on the labors of its bureaucracy, so the workings of the cosmos depend on this pantheon of spirits. The human body is held to house a corresponding pantheon of spirits. Daoist methods for communicating with the spirits of the body and the heavens involve both visualization meditations and the actual delivery of documents, swallowed for the internal spirits and buried, submerged, or burned for delivery to the cosmic pantheon. Illness, like disorders in the human realm, can be cured through such petitioning rites, the goal of which is to bring disharmony to the attention of the highest gods. When the priest presents such documents, he or she is acting as an official in this celestial pantheon. Because of this, Daoist priests are sometimes called "officials of the Dao."

The gods who fill various ranks in the pantheon, including the highest, are not fixed. Daoists hold that gods, as part of a changeable cosmos, are themselves subject to change and can be promoted or demoted. A number of rituals end with a procedure to "establish merit," whereby the gods invoked in the rite are recommended for promotion in gratitude for their prompt aid. Divinities from Buddhism and the gods worshiped by local cults could also be absorbed into the pantheon. New revelations almost always include information on new gods or rearrangements of the existing pantheon.

**Ritual.** Meditations and ritual practices are designed to bring individuals and communities back to a state of integration with the Dao. Modeled on the dawn assemblies held by the human monarch to review his officials, the basic ritual program brings the Daoist priest in vision before the assembled bureaucracy of heaven where, through his merit, he can formally request the rectification of disease or other disorder. Ritual robes, headgear, and paraphernalia, all carefully described in Daoist manuals, are fashioned after the styles of the imperial court. Communication with the spirits of heaven takes place sometimes through recitation of petitions, sometimes through their presentation by burning. In addition, some documents—talismans and longer texts—are written in "celestial script," an imaginative form of writing loosely resembling ancient forms of Chinese graphs, but illegible to ordinary mortals.

One striking feature of Daoist ritual is the way it collapses space and time. The ritual space is constructed to symbolize the cosmos, overlaid with the vertical dimension of the center, which represents the highest courts of the heavens. Temporally, Daoist ritual seeks to bring its performers back to the moment of cosmogenesis, when the Dao was integrated and whole. In its fully developed form, Daoist ritual became a colorful pageant that had a marked influence on Chinese drama. The ascent of the priests to the courts of heaven is outwardly symbolized with banners, retinues of acolytes bearing incense and flowers, and ritual pacing accompanied by austere music.

**Eschatology.** In its concern with time, Daoism adopted the notion of cyclical return common to ancient Chinese metaphysics. One component of the "Mandate of Heaven" concept was that empires rose and fell in a regular cycle, a cycle that was eventually associated with the cyclical progress of the five phases. Daoist contributions to this system of thought came to the fore particularly when the religion was employed by one or another aspirant to the throne to support his program. But, given that Daoism came into being as a religious entity during the final days of the Han empire, dire pronouncements concerning an imminent sweeping away of the unjust and the establishment of a new kingdom of Great Peace were always part of the religion, helping to support its program of moral reform. One early version promised that the righteous would be the "seed people" of the coming age, chosen to repopulate the new divinely sanctioned kingdom. Equally important were the contributions of Buddhist scripture, whose vast cosmological visions and descriptions of "kalpa cycles" came to inform eschatological writings.

**Morality.** The idea that humans, through indulging their desires and hoarding what should be shared, block the correct circulation of energies that should exist in the ideal Daoist kingdom has been present from the beginning. As noted above, illness was seen by early Daoists as a sign of such transgression. Followers were urged to repent of transgressions and to petition the deities to repair the imbalances caused thereby. The primary transgression mentioned in Daoist writings seems to be covetousness or desire. Even when providing explanations for the *Laozi*, however, early Daoists did not follow that text in its rejection of Confucian virtues such as humaneness and responsibility. Instead, they argued that such virtues were too often merely outward and advocated the practice of "secret virtue," good acts performed secretly so that only the gods would know and reward the agent. Eventually, Daoist texts and morality tracts regularly came to include lists of precepts to be followed by priests and by the laity.

**Relations with other religions.** The doctrinal flexibility of Daoist practice meant that the system was quite accommodating to Buddhism, and later to such foreign imports as Manichaeism. This ability to absorb the beliefs and practices of other religions could elicit a negative response from proponents of the targeted religion. One idea that resurfaced several times in Chinese history was that Buddhism was but a foreign version of Daoism, created by Laozi himself when he disappeared through the western gates of the Chinese kingdom. Insofar as this story was related to show that Daoism was fit for the Han peoples, while Buddhism had been specifically crafted for "foreign barbarians," it was rightly seen by Buddhists as an attempt to co-opt their religion. Books propounding this theory were imperially banned several times.

Most Daoist adaptations of Buddhist doctrine and practice were innocent of such motives. Since Buddhist sūtras were translated into Chinese, it was natural that Buddhist doctrine had to be explained in native terms. Daoism often informed or, through adapting Buddhist doctrine and practice to its own uses, reconfigured those native understandings. While appropriations went both ways, it is undeniable that many features of the Daoist religion are adaptations of ideas brought in with Buddhism. The distinctive Daoist ideas of rebirth, of the underworld purgatories, of monastic life—to name but a few—all grew from productive interactions with Buddhism. Generations of Chinese scholar-officials and Buddhist scholiasts sought to clarify the boundaries between the two religions, but the attempt proved less than successful. Indeed, as Erik Zürcher (1983) has remarked, China's three great religions—Buddhism, Daoism, and Confucianism—might be envisioned as a floating iceberg with three peaks. Above the waterline, the peaks are distinct, but below, where the religion of the common masses is situated, they merge into undifferentiation.

Such is not the case for Daoist interactions with the popular, or common, religion of the Chinese people, which is centered on cults to the powerful dead who are often consulted through mediums and propitiated with meat sacrifice. Originally, Daoist organizations forthrightly banned all such worship of "blood eaters," arguing that these unholy gods only drained the sustenance of those who worshipped them. Eventually, a few such figures were admitted to the Daoist pantheon and other associated practices, such as fortune-telling, were allowed. Nonetheless, most Daoist lineages strove first and foremost to distinguish their practice from that of common cult religion.

**DAOISM AT THE BEGINNING OF THE IMPERIAL ERA: FIRST AND SECOND CENTURIES CE.** As mentioned above, the Daoist religion began with the founding of the Way of the Celestial Masters (*Tianshi dao*) in the second century CE. Recent archeological finds and increased scholarly attention have begun to clarify the lively religious scene of the Han dynasty (206 BCE–220 CE) that provided the backdrop to this event and contributed elements that were shaped into the Daoist synthesis.

From later Warring States times, shadowy *fangshi* or "masters of prescriptions" sought patronage with various rulers, promulgating esoteric techniques passed from master to disciple. These included knowledge of paradises beyond the seas, alchemical, magical, and medical techniques, and the ability to contact spirits. From such sources there grew a widespread popular belief in the existence of *xian*, "Transcendents" or "Immortals," winged beings who could bypass death, travel vast distances to inhabit remote paradises, or confer blessings on deserving mortals. One of the most powerful of these was the Queen Mother of the West, who was held to reside on the mythical cosmic mountain Kunlun. In the opening years of the common era, a panic spread through the Shandong peninsula when farmers left their fields and traveled west to greet what they said was the imminent arrival of this deity. The Queen Mother would eventually find a place in the Daoist pantheon. From around the same time we have records of others sacrificing to the deified Laozi, regarding him as a salvific, cosmic deity in the fashion of the archaic deity Taiyi.

Another aspect of Han belief that was adapted into Daoism was the idea that documents addressed to the bureaucracy of the otherworld should be interred with the dead to facilitate the transfer from one realm to the other and to ensure that the dead did not return to injure the living. Archeologically recovered documents, addressed to the Yellow, or Heavenly, Thearch and his officers attest to this belief.

Perhaps the most important ingredient, however, was the constellation of ideas surrounding Han imperial religion. These include the belief that heaven responds directly to human actions, rewarding good and evil, and that heaven forecasts its will through signs and portents. The Han court invested a good deal of administrative energy in collecting and analyzing such portents. This led to the composition of apocryphal addenda (*chenwei*) to the imperially-sanctioned Confucian classics that detailed the systems underlying celestial omens and explained how to interpret them. According to these texts, heaven regularly intervened in human history by sending its envoys in human form. Normally, these divinely engendered beings were seen to be the founders of new dynasties. But cultural heroes, such as Confucius, were also born in this fashion.

In the chaotic years leading up to the fall of the Han dynasty, a number of aspirants to the throne, holding that celestial approbation had departed from the Liu house, employed religious persuasions of the sort that had supported the divine mandate of the dynasty to mobilize followers. Among the rebel groups mentioned by court historians was the organization to which later Daoists traced the beginnings of their dispensation, the Celestial Masters. Sometimes mentioned by historians in the same tone was a more infamous group, the Yellow Turbans.

Centered in the eastern reaches of the Han empire, the Yellow Turban rebellion, led by a man named Zhang Jue, was a well-planned insurrection organized around a millennial religious ideology. Zhang called his movement the "Way of Great Peace" and, under the slogan that the "Yellow Heaven is about to rise," sought to position himself and his followers as the vanguard of a new and perfect society. It is likely that this ideology was drawn from a revealed book, the *Scripture of Great Peace*, perhaps a version of a work that had been promulgated earlier in the Han dynasty by a court faction. The *Scripture of Great Peace*, which survives only in fifth- or sixth-century recensions, promotes an ideal social structure based on cosmic principles, particularly the idea that the moral action of each person determines not only individual wellbeing, but also the health of the body politic and the smooth functioning of the cosmos.

The Yellow Turbans converted people to their cause through healing practices, including incantation, doses of water infused with the ashes of talismans, and confession of sins. The *Scripture of Great Peace* relates confession to the idea that political and cosmic disease is caused by humans and must be cured on the individual level. Sin, in this text, is the failure to act in accord with one's social role, thereby blocking the circulation of the Dao's energies. Those who should labor with their bodies fail to do so, but live in idleness; those who possess wealth keep it for their own enjoyment rather than allowing it to circulate; and those who should teach virtue only "accumulate" it for their personal benefit. These and other blockages to the circulation of goods and life forces lead, by this account, to illness and death. This strict correspondence between microcosm and macrocosm was to be a prominent feature of later Daoist practice.

Zhang Jue organized his followers into thirty-six administrative regions. The new age of the Yellow Heaven was to dawn in the year 184, the beginning of a new sexagesimal cycle by the Chinese calendar. Despite well-laid plans, news of Zhang Jue's uprising reached the court and the Yellow Turbans were defeated within the year.

The ideologies and practices of the early Celestial Masters were superficially similar to those of the Yellow Turbans. Historians note that the early Celestial Masters knew of the *Scripture of Great Peace*, but there is no conclusive evidence of any direct connection between the two movements. The Celestial Masters revered as founder Zhang Ling (Zhang Daoling in Daoist texts), a man of Pei (in modern Jiangsu province) who traveled to the kingdom of Shu (the western part of modern Sichuan) to study the Dao on Mount Cranecall. Daoist texts record that there, in the year 142 CE, he was visited by the "Newly appeared Lord Lao," the deified Laozi. Laozi granted him the title "Heavenly [-appointed] Teacher" or Celestial Master. On Ling's death, the title of Celestial Master was passed on to his son Heng, and eventually to his grandson, Lu. The line of transmission, it is claimed, remains unbroken this day, but the first three Celestial Masters, and their wives, are the most important. Later Daoist ritual regularly includes the invocation of their names.

Some scholars have suggested, however, that the legends of the first two Celestial Masters were fabrications, since only Zhang Lu is mentioned in non-Daoist historical records. Nonetheless, a stele inscription found in the modern province of Sichuan, recording the initiation of a group of libationers, or priests, in 173 CE, attests to the fact that Celestial Master practice existed at that time and already had produced a corpus of scriptures.

The Celestial Masters divided their followers into twenty-four parishes or dioceses, each headed by a libationer. But this hierarchy was not organized along traditional lines. Women and non-Han peoples—two groups so devalued in traditional Chinese society that accounts of them, if they appeared at all, were placed at the end of standard histories—were welcomed as full members of the Celestial Masters' community. Both could serve as libationers, and men were encouraged to emulate virtues specifically associated with women.

Libationers instructed the people by means of the *Dao de jing*, which was to be recited chorally so that even the illiterate could be instructed. The *Xiang'er* commentary to the *Dao de jing*, attributed to Zhang Lu and surviving in part in a Tang dynasty manuscript recovered from Dunhuang, attests to the novel ways in which they interpreted the text.

As Terry Kleeman (1994) has shown, the central teaching of the Celestial Masters, called "the Correct and Orthodox Covenant with the Powers," held that "the gods do not eat or drink, the master does not accept money." This stricture, as clarified in the *Xiang'er* commentary, mandates the rejection of blood sacrifice, central to popular and imperial cult. In place of gods, and their priests, who could be swayed by offerings, the Celestial Masters revered deities who were pure emanations of the Dao and ate only *qi.* Agents of this unseen bureaucracy resided even in the human body and so could not be deceived. They would be moved only by good deeds or ritually presented petitions of contrition. In any event, they kept detailed records of each person's merits and demerits.

The Celestial Masters cured illness with confession and the ingestion of talisman water. The ill were to confess their transgressions in specially constructed "chambers of quietude" and to present the necessary written petitions to the offices of heaven, earth, and water. Three times a year—the seventh of the first month, the seventh of the seventh month, and the fifth of the tenth month by the lunar calendar—people were to assemble at their assigned parish. There, libationers would verify records of death and birth, and communal meals would be held. On this occasion, members of the community were to present a good-faith offering of five pecks of rice. This gave rise to an alternate name for the community, the "Way of the Five Pecks of Rice" or, in less favorable sources, "the rice bandits." Beyond these faith-offerings, the community was enjoined to perform acts of merit, such as the building of roads or the provision of free food for travelers.

As Kristofer Schipper (1982) shows in detail, libationers were also responsible for bestowing on the faithful registers recording the number of transcendent "generals," residents of their own bodies, that they were empowered to summon and control. Children of six years of age received a register with one general. By marriageable age, initiates could receive registers listing seventy-five generals, a number that they could double by performing the Celestial Master marriage ritual. This ritual, known as "merging *qi*" included instruction in a precise method of intercourse that could replenish the bodily forces of male and female participants, normally deficient in *yin* and *yang qi* respectively, without the exchange of bodily fluids that led to reproduction. As the *Xiang'er* commentary explains, the Dao wishes people to reproduce, but not to squander their vital energies. Later reformers were to criticize and rectify this practice, which was considered "lascivious" by outsiders.

By the end of the second century, Zhang's grandson, Zhang Lu, then head of the community, took sanctuary in the Hanzhong Valley, just north of the Sichuan basin and over 200 kilometers southwest of the Han capital of Chang'an (modern Xian). In 215 CE, Zhang Lu surrendered to Cao Cao, the Han general whose son was to inaugurate the Wei dynasty (220–265) of the Three Kingdoms period. As a result of this act of fealty, a large portion of the Celestial Master community was relocated from Hanzhong to areas farther north, while many of its leaders were enfeoffed or otherwise ennobled. While some followers doubtless remained from the early period in Sichuan, the spread of Daoism throughout China as a whole begins with this diaspora of the original Celestial Master community.

A fascinating document found in the Daoist canon, the "Commands and Admonitions for the Families of the Great Dao," dated to the first of the three yearly assemblies in 255, gives us some idea of how the community fared under the Wei kingdom. Delivered in the voice of Zhang Lu, who had doubtless died by that time, the document warns the community of the impending fall of the dynasty and excoriates them for lapses in practice. From this document, we learn that the system of parishes had fallen into disarray and that a number of new texts, including the important *Scripture of the Yellow Court* were in circulation. The "Admonitions" further states that Zhang Lu himself, or at least the medium who now spoke in the voice of Zhang, authored the *Scripture of the Yellow Court,* which presents detailed meditations on the gods of the body.

**DAOISM OF THE SIX DYNASTIES: FOURTH THROUGH SIXTH CENTURIES.** We hear no more of the Celestial Masters until the Jin dynasty's (265–420) hold on northern China began to weaken early in the fourth century. A group of ethnic Ba families, some two hundred thousand strong, returned to the region of Chengdu where Li Te inaugurated the short-lived theocracy known as the Cheng-Han (302–347). Other Celestial Master adherents came into the region around present-day Nanjing when the Jin dynasty relocated there in 317. The writings of Ge Hong (283–343), a member of an influential southern gentry family, provide detailed information on the vibrant religious scene that the Celestial Masters encountered.

At a young age, Ge Hong formally received from his tutor—a man who claimed that his lineage extended through Ge's great-uncle—"Grand Purity" alchemical scriptures and the *Esoteric Writings of the Three Sovereigns.* Throughout the remainder of his life, Ge collected as many such texts as he could. Though his poverty prevented him from ever concocting an elixir himself, Ge Hong became an ardent proponent of practices of transcendence that extended back to the *fangshi* of the Han. Two works bearing his name have survived. The inner chapters of the eponymous *Baopu zi* (Master who embraces simplicity), known by Ge Hong's style name, represent a spirited defense of the arts of transcendence and include transcriptions of some of the methods Ge studied. Ge ranks such practices, listing herbal recipes meant to prolong life as a distant second to the ingestion of the mineral and metallic products of the alchemist's furnace. The *Traditions of Divine Transcendents,* which survives only in later redactions, provides vivid hagiographies of important transcendent figures, including Laozi and Zhang Daoling, who is here portrayed as a practitioner of alchemy.

While Ge Hong shows only a limited awareness of Celestial Master religion, as Robert Campany (2002) has shown, his writings provide invaluable testimony to the ways religious practitioners operated in the society of the time, gaining reputations for their esoteric arts, seeking patronage, and initiating disciples. Further, Ge's written works attest to several scriptural traditions that were eventually to find their way into the Daoist canon. The most important of these are the two traditions into which Ge was initiated as a youth and the *Five Talismans of Lingbao*, a book of visualization practice and herbal recipes. Indeed, it was through Ge's own family, as well as families related to his by marriage, that Celestial Master Daoism was to be reshaped through an infusion of these southern traditions.

Between the years 363 and 370, the Daoist Yang Xi (330–c. 386) was employed as a spiritual advisor by a gentry family related to Ge's through marriage. Yang's patrons, who had employed before him a Celestial Master libationer, were Xu Mi (303–373), a minor official at the imperial court, and his son Hui (341–c. 370). From his meditation chamber, Yang brought to them enticing revelations from the unseen world. These concerned both the whereabouts in the underworld or heavens of the relatives and acquaintances of the Xus and their circle, as well as complete scriptures outlining new practices. Transmitted from person to person among this privileged group, Yang's *Shangqing* (Upper clarity or supreme purity) scriptures and revealed fragments of divine instruction eventually came to be collected in the first of the tripartite divisions of the Daoist canon. Thereafter, the Shangqing scriptures, augmented by later revelations and additions, became the center of one school of Daoist practice, with its own patriarchs, priests, temples, and liturgies.

Several features distinguished the Shangqing scriptures from the mass of scriptural material produced during this period. First of all, the texts emanated from the highest reaches of the heavens. The Transcendents (*xian*) of earlier scripture occupy only lower positions in the celestial hierarchy. Above them are ranks of even more exalted and subtle beings, the Perfected (or "Authentic Ones," *zhenren*), a term originating in the *Zhuangzi* but here made part of a bureaucratic pantheon of celestial deities. The Perfected, male and female, are clothed in resplendent garb, described in terms of mists and auroras. They are decked out with tinkling gems, symbols of their high office. Their bodies are formed of the purest *qi* and glow with a celestial radiance as they move about the heavens in chariots of light. The texts such beings brought were likewise exalted in that they described the practices the Perfected themselves employed to subtilize their bodies. In fact, one form the Shangqing scriptures take is that of a biography of one or another of the Perfected, replete with descriptions of the practices associated with that deity.

Secondly, the Shangqing scriptures clearly earned their eventual popularity in large part through the compelling way in which they are written. Yang Xi must be counted among the major innovators in the history of Chinese letters. The language of his texts—both poetry and prose—is abstruse, dense, and obscurely allusive. It seems to exemplify as much as express the mysterious qualities of the spirit world to which he had been granted privileged access as the result of his strivings. The macrocosm-microcosm identity familiar from other Daoist texts becomes for Yang license for a multivalence of signification whereby literally whole passages refer simultaneously to, for instance, the placement of palaces in the heavens and the arrangement of spirit-residences in the viscera. Yang frequently uses such devices as synesthetic metaphor to portray how apparent contradictions collapse in the Dao. In addition, because Yang's revelations described spirit marriages with young female Perfected awaiting both him and the Xus, one cannot discount the erotic component of Yang's productions. Yang's unique style was immediately and widely imitated, both by writers of Daoist scripture and by later secular writers.

Finally, the Shangqing texts were prized for their message. The Shangqing texts do not represent a radical break with the past. All of the meditations and rituals found in them have analogues in earlier religious literature. A number of scriptures contain improvements on earlier Celestial Master techniques, while one fragment proves to be a rewritten version of the Buddhist *Sūtra in Forty-two Sections.* What is really new is the way in which the constituent parts are modified to give preeminence to the guided meditations and visualizations of the practitioner. The meditation practice of the Shangqing scripture includes both visionary journeys into the heavens and more direct ways of working with the body.

Visionary journeys have an ancient pedigree in Chinese religion. In the Shangqing scriptures, the adept is instructed to perform purifications and then to visualize his or her body ascending to the sun, moon, stars, or up into the celestial timekeeper, the northern dipper. There, the adept imbibes astral sustenance, the food of the gods, pays homage to the gods, or exchanges documents with them. Practices aimed at perfecting the body also typically involve visualization. While there are quite a few references to drugs and elixirs in the Shangqing texts, the tradition tended to transform more physical practices into meditative experience. Generally, the spirits that inhabit the body are energized through the ingestion of pure *qi*, enjoined not to leave, and merged with their celestial counterparts. In some practices, the joining of bodily gods with those of the macrocosm functions as an interiorization of the Celestial Master sexual practice known as "merging *qi*." Other techniques teach ways of reenacting the process of gestation using the *qi* of the nine heavens to create an immortal body.

After the death of Yang and the Xus, the fragments of personal revelation and the scriptures Yang had received from the Perfected were scattered. The preservation of such a significant portion of Yang's writings is due to the efforts of Tao Hongjing (456–536), perhaps the foremost scholar of early Daoism. Tao collected the more personal revelations that Yang Xi wrote for the Xus in his *Zheng'ao* (Declarations of the Perfected), an extremely diverse work that includes records of the Perfected mates promised to Yang Xi and Xu Mi, injunctions to Xu Mi and Xu Hui concerning the details of their practice, letters between them, accounts of the underworld topography of Mount Mao, and even records of dreams. As this work cites a number of scriptures, it has proven invaluable to scholars' attempts to reconstruct Daoist history. In addition, Tao Hongjing edited a number of the scriptures that he was able to acquire and preserved annotated passages from them in his *Dengzhen yinjue* (Secret instructions on the ascent to perfection), which survives only in part.

At the very beginning of the fifth century, another southern corpus of scriptures began to emerge, attesting to yet another attempt to reform Daoist practice. These scriptures, collectively known as *Lingbao* (Numinous gem), represent at once a return to the communal practices of the Celestial Masters and a renewed attempt to make Daoism the common religion. The Lingbao scriptures drew upon the religious traditions of the day (*fangshi* practice, Han-period apocrypha, southern practices known to Ge Hong such as those found in the *Lingbao wufu jing* itself, Celestial Master Daoism, Shangqing Daoism, and Buddhism), sometimes copying entire sections of text and presenting them so as to accord with its central doctrines in order to fashion a new, universal religion for a unified China. While Lingbao proponents failed in this attempt—the emperor upon whom they based their hopes, Song Wudi (r. 420–422) failed to reunify the kingdom, and monks expert in the texts they plagiarized, Buddhist and Daoist alike, denounced their productions as forgeries—the Lingbao texts they produced did lead to a new Daoist unity.

While Lingbao descriptions of the spiritual cosmography of the human body differ little from those of the Shangqing scriptures, their soteriology are very different. The Lingbao texts describe an elaborate cosmic bureaucracy that has survived the destruction of the cosmos through countless kalpas, or "world-ages," a concept adapted from Buddhism. At the apex of the pantheon is the Celestial Worthy of Primordial Commencement, a deity who plays somewhat the same role in the Lingbao scriptures as the cosmic Buddha in Buddhist scriptures. By joining with the enduring Dao through keeping its precepts and conducting rituals for the salvation of others, adherents hope to ensure for themselves either a favorable rebirth "as a prince or marquis" or immediate promotion into the celestial bureaucracy. The hymns and liturgies of the scriptures reenact and prepare practitioners for this latter, final destination. This was the first instance in which a version of the Buddhist concept of rebirth was fully integrated into Daoist doctrine. Significantly, Daoists, holding that their religion valued life while Buddhism valued death, did not forward *nirvāṇa* (cessation) as a religious goal. Because later Daoist ritual practice was based on these early Lingbao texts, this explanation of rebirth was to become an enduring feature of the religion.

The moral component of the Lingbao scriptures—a mixture of traditional Chinese morality and Buddhist salvational ethics—is much more prominent than that found in earlier texts. There is also a pronounced proselytizing emphasis. The texts argue that contemporary Daoist and Buddhist practices are but variant paths that lead to the same goal and that the rewritten versions of some practices found in their pages are the original, authentic pronouncements of the Celestial Worthy from prior kalpas. As a result, the Lingbao scriptures give what amounts to the earliest attempt to grade religious practices, an emphasis that led Lu Xiujing (406–477), the Daoist who first catalogued the Lingbao scriptures, to also make a listing of all Daoist texts, entitled the Catalog of the Three Caverns. Lu's catalog originally comprised 1,228 *juan* (scrolls) of texts, of which 138 had not yet been revealed on earth. The texts were divided into three "caverns" or "comprehensive collections": *Dongzhen* (comprehending perfection, containing Shangqing texts), *Dongxuan* (comprehending the mysterious, containing Lingbao texts), and *Dongshen* (comprehending the spirits, containing early southern scriptures). All subsequent Daoist canons were organized into these "three caverns." Three deities, each regarded as a transformation of the former, were designated the ultimate sources of these three collections of texts. These were: (1) for Dongzhen, the Lord of Celestial Treasure, residing in the Heaven of Jade Clarity; (2) for Dongxuan, the Lord of Numinous Treasure, residing in the Heaven of Upper Clarity; and (3) for Dongshen, the Lord of Spiritual Treasure, residing in the Heaven of Grand Clarity. With some modifications, this trinity, also known as the "three pure ones," continued to be central to later Daoist ritual traditions.

In the north of China, reform of the Celestial Masters' practice took a different turn. In 415 and again in 423, Kou Qianzhi (365–448), a Celestial Masters' priest, received from the deified Laozi revelations containing codes explicitly meant to reform aberrant practice and lead to a more tightly organized ecclesia. With the help of a high official, he presented these to the throne of the Toba (a Turkish people) Wei dynasty (386–534). Because the foreign rulers in the north of China were interested in controlling religions that might disguise rebellion, the Toba emperor agreed to make Kou's new dispensation the official religion of the kingdom. The demand for orthodoxy increased to the extent that the emperor was eventually urged to proscribe Buddhism. The Daoist theocracy barely outlived Kou.

Subsequent northern emperors continued to harbor suspicions of unregulated religious practice, however, leading to a series of court debates between Buddhists and Daoists and concomitant attempts to abolish one religion or the other. The best documented of these occurred during the reign of Yuwen Yong, Emperor Wu of the Zhou dynasty (r. 560–578). Harboring the ambition to reunify China, Emperor Wu, who had himself received initiation into Daoist scriptures, held several debates between Buddhists and Daoists to determine which of their doctrines would best complement the Confucian state orthodoxy. Daoist apologists argued, apparently with some success, that their practice extended back into the prehistorical golden age of the Central Kingdom, while the Buddhist religion was a recent foreign import. But the debates were still inconclusive and the emperor charged one of his officials, Zhen Luan, to compose a treatise comparing the two religions. When Zhen produced the "Treatise Deriding the Dao," which debunked the claim of antiquity of Daoist scriptures and undermined the hope for a unifying ideology, the emperor ordered it burned and commissioned the scholarly monk Dao'an to write a new treatise, "Treatise on the Two Teachings." Both works survive in the Buddhist canon, providing scholars with opposition views regarding the Daoist practice of the day. Daoist apologists, on the other hand, preserved no similarly detailed documentation of the debates.

As would happen again and again throughout Chinese history, Emperor Wu's attempts at central control of religion were neither effective nor long lasting. In 574, he ordered that Buddhist and Daoist monks return to lay life and confiscated temple holdings. Later in the same year, he established a central Daoist temple, the Tongdao guan (Observatory for Comprehending the Dao) and commissioned the composition of an encyclopedic collection of Daoist writings, the *Wushang biyao* (Secret essentials of the most high). While the proscriptions did not endure beyond Emperor Wu's death in 578, the controversies continued as subsequent emperors attempted to co-opt the prestige of Buddhism and Daoism to bolster their dynastic designs. Within Daoism, the *Wushang biyao* did have the effect of providing its contents with the stamp of orthodoxy, though at some point the more egregious passages claiming that Buddhist doctrine and practice originated with Daoism were expunged from the collection.

**DAOISM UNDER THE TANG (618–907).** The rulers of the short-lived Sui dynasty (581–618), which did manage to unify China, favored Buddhism to lend cosmological authority to their state orthodoxy. But millennial expectations, drawn from both Buddhism and Daoism, arose in force again to contribute to the downfall of the dynasty. Foremost among these expectations was the idea, derived from early Daoism and given prominence in the Shangqing scriptures, that the "Perfect Lord" Li Hong would soon descend to sweep away the unjust and establish a rule of great peace. Among those who took on the mantle of the Perfect Lord was Li Yuan, founder of the Tang dynasty. Further, he claimed descent from Laozi, whose given name was said to have been Li Er. Given this, Tang emperors tended thereafter to favor the Daoist religion.

As a result, the Tang period marked a time of consolidation and expansion for the Daoist tradition. Even Wu Zhao (r. 684–705), who proclaimed herself "emperor" and renamed the dynasty Zhou, while giving secondary status to the religion that had lent support to those she sought to replace, took recourse to Daoist symbolism, ritual, and prestige to establish her rule. The most fervent imperial supporter of Daoism was Li Longji (the Xuanzong Emperor, r. 712–756). The emperor's personal involvement with the cult of the dynastic ancestor built up slowly over the course of his long reign. At first he sponsored rituals for the welfare of the state, employing prominent priests such as Sima Chengzhen (647–735) to help revise state ritual and music. He also introduced Laozi's text, the *Dao de jing*, into the state exam system, even composing an imperial commentary to the text. The favor he bestowed on the religion was matched by imperial oversight. He instituted the office of commissioner for Daoist ritual to control at the national level the ordination and registration of the priesthood. Similar oversight was accorded Buddhist institutions.

It was during the second half of Xuanzong's reign that his enthusiasm for the religion came most fully to the fore. The watershed events were the appearance of the divine ancestor to the emperor in dreams and the discovery of a talisman, the whereabouts of which was also revealed by Laozi. As a result of this latter discovery, the emperor changed the reign-name to "Celestial Treasure." He distributed images of Laozi, fashioned after his dream vision, throughout the empire, granted grand titles to the sage, and established official institutes for Daoist study in each prefecture of the realm. As Timothy Barrett (1996) shows, graduates of these institutes could take part in the newly inaugurated Daoist examination in the capital and enter the civil service, the first time religious examinations had ever been used for this purpose. Meanwhile officials reported apparitions of Laozi and other signs of divine approbation with great frequency. Even Xuanzong's flight from the capital as a result of the An Lushan rebellion and his removal from power are not without legends of Laozi's continued support of the emperor.

Due in part to this imperial favor, the Tang dynasty marked a rapid expansion of Daoist belief and practice into the gentry class, with a concomitant growth in Daoist scholarship. A number of encyclopedias, annotations, and local histories survive from the period. In response to the subtleties of Buddhist philosophy, Daoist scholars evolved a number of philosophical approaches to Daoism, from meditations on the self and nurturing life to analyses of the processes by which one might join with the Dao. Distinctive styles of music, art, and dance were also developed. With the regularization of Daoist monasticism, we learn more about women who entered Daoist orders, some clearly attracted by the prospect of gaining more control over their lives. A few gained kingdom-wide reputations for their piety. Once such was Huang Lingwei (c. 640–721), who after a long period of training restored and occupied the shrine of the Shangqing goddess Wei Huacun. Her reconstruction of the site was aided at each step by divine visions and dreams. The number of poems presented to her by famous figures and the laudatory biography written after her death by the official and calligrapher Yan Zhenqing (709–784) attest to her fame.

The practice of alchemy also came into prominence during the Tang. As in other areas of Daoist scholasticism, ancient texts were collected and compared. One representative work is the *Essential Instructions from the Scriptures on the Elixirs of Great Clarity* (Sivin, 1968) by the physician and pharmacologist Sun Simiao (581–682). While the exact extent of elixir ingestion is unknown, a number of literati mention the practice in their writings. In addition, Tang emperors patronized masters of alchemy and several of the later emperors may have died as a result of such experimentation. Meanwhile, the use of alchemical experimentation as a means to observe the workings of the cosmos led to the gradual creation of "inner alchemy," a term that refers to various methods for merging "cinnabar" and "lead" within the body to create the immortal embryo without actual ingestion of mineral or metallic substances. As Fabrizio Pregadio (2000) has shown, this trend began during the late Six Dynasties period (220–589 CE) with the *Zhouyi cantong qi* (Token of the concordance of the three, based on the *Book of Changes*), a work that shows operative alchemy to be a replication of cosmic processes as defined by the symbol systems of the ancient fortune-telling manual, the *Book of Changes.* Widely studied during the Tang, this work, together with the dangers of elixir ingestion, led to the eclipse of operative alchemy.

Later Daoists were to look back on the Tang as a golden age, and often traced their own lineages to real or mythological Tang figures. A more balanced picture of the religion appears in the works of Du Guangting (850–933), the foremost Daoist priest of the Shu kingdom (in present-day Sichuan). Writing as the Tang dynasty lay in ruins, Du's collections of hagiographies, miracle tales, inscriptions, and ritual summaries attest to aspects of the religion that are given short shrift or lacking in earlier sources (Verellen, 1989). Here we learn of the importance of Daoist practice at the local level, the veneration of holy women, and the importance of lay benefactors for the maintenance of temples and images.

**DAOISM UNDER THE SONG (960–1279) AND YUAN (1206–1368).** In gauging the development of Daoism during the Song and Yuan dynasties, we must avoid the "documentary fallacy." More than half of the texts found in our primary source for the study of the religion, the Ming canon printed in 1445, were compiled after the mid-twelfth century. This dramatic increase in documentation, in part the result of the invention of printing and consequent spread of literacy, provides evidence, unavailable from earlier times, on how the religion operated at all strata of society. This has sometimes led scholars to underestimate the penetration of Daoism into lower levels of society in earlier periods and to overstate the spread of the religion during the Song and Yuan. Even accounting for this distorting factor, however, it does appear that social changes—especially the rise in mercantilism, increased literacy, and the relaxation of governmental control—led to new forms of organization, an increase in the number of literate priests, heightened religious competition, and a consequent burgeoning of pantheons and practices. Increasingly, localities, regional associations of various kinds, and minority communities came to adopt Daoist deities and practices. At the same time, scholarly Daoists composed vast ritual compendia, consolidating and formalizing practice. And, again under foreign rule in the north of China, another counter-trend emerged. This was Quanzhen Daoism, a well-organized and highly centralized monastic movement.

These disparate features of the religion endure to the present day. In many ways, then, scholars tend to see the Song period as the beginning of modern Daoism. The most thoroughly studied example of a local therapeutic and exorcistic tradition that rose to national prominence, and eventually received court recognition, is the Rectifying Rites of Tianxin (the center of heaven, that is, the northern dipper). While serving the fourth ruler of the state of Min (present-day Fuzhou) during the years 935 to 939, a Daoist priest by the name of Tan Zixiao was asked to interpret a set of talismans that had come to light. These, he pronounced, were part of a secret patrimony, the Rectifying Rites of Tianxin, passed down from Zhang Daoling. The talismans, as they developed in the tradition, were held to embody the power of the celestial emperor of the north, of the Department of Exorcisms, and his agents, the fearsome generals Tianpeng, Heisha, and Zhenwu, among others. Daoist priests visualized Tianpeng in Tantric form and the latter two with disheveled hair, bulging eyes, brandished weapons, and martial dress. And thus they are depicted in Daoist statuary and painting. The rites of Tianxin were passed from master to master, finally coming to the Daoist Deng Yougong, who between 1075 and 1100 wrote ritual manuals that were eventually included in the imperially sponsored Song Daoist canon of 1120, the first ever to be printed.

Another ritual tradition was founded by Lu Shizhong (fl. 1100–1158), a native of Chenzhou (modern Henan) who received visits from the deified Zhao Sheng, who had been a disciple of the first Celestial Master. Lu's manuals, known as the Rites of the Jade Hall, blend the Rites of Tianxin with Lingbao funeral rites and show an increased emphasis on meditation practice. Characteristic of these and other therapeutic rituals of the early Song was the practice of *kaozhao*, "summoning for investigation." In *kaozhao* ritual, the master transforms himself into a martial deity, identifies the demon causing problems, seizes it, and causes it to descend into the troubled person or a surrogate where it might be interrogated and the problem resolved (Davis, 2001). Such practices could only arise once illness was no longer linked to morality, as it had been in earlier Daoist traditions.

Early Song rulers, who like the Tang rulers before them traced their ancestry to a Daoist deity, here the Yellow Emperor, had recourse to the protection offered by demon-quelling ritual. Threatened by peoples to their north, they found special protection from the celestial general Heisha, whom they ennobled with the title "the Perfected Lord who Supports the Sage [ruler] and Protects [his] Virtue." They also ordered the construction in the capital Kaifeng of a massive temple complex dedicated to Zhenwu, the Perfected Warrior. In addition, rulers patronized ritual specialists, built temples throughout the realm and sponsored the collection and printing of Daoist texts. The *Yunji qiqian* (Seven slips from the book bags of the clouds), a 120-chapter collection of Daoist texts extracted from the canon of 1120, survives from this period.

The imperial support of Daoism culminated in the brief theocratic reign of Huizong (r. 1101–1125), who called to court Daoists from the major ordination centers. In addition to confirming the prestige of old Daoist lineages—Shangqing was represented by its putative twenty-fifth patriarch and the Celestial Masters, now centered at Mount Longhu (in modern Jiangxi), by their thirtieth—several new lineages were also created in response. Lin Lingsu (1076–1120) arrived in the capital with revelations he had received from *Shenxiao* (Divine empyrean), the highest reaches of heaven. Lin revealed the divine identity of Huizong as the deity "Great Thearch of Long Life" and promulgated a set of rituals based on earlier Shangqing and Lingbao texts. Yang Xizhen (1101–1124) claimed to have emerged from the caverns hidden in Mount Mao, the ancient center of Shangqing practice, with a set of therapeutic rituals that had been bestowed upon him in this underworld study center. These were called the "Rites of Youthful Incipience." Huizong's enthusiasm for these Daoist traditions went to such extremes that he commanded that all Buddhists of the realm be demoted to Daoists of the second rank. This and other excesses incited further disputes between Buddhists and Daoists. But Huizong's reign was short and in 1127 the court moved south to evade the Jurchen Jin dynasty (1115–1234).

During the southern Song, the most noteworthy developments involved the codification of innovations begun in the north. Lin Lingsu had presented his Shenxiao tradition as an extension of the ancient Lingbao canon and the culmination of Shangqing revelation. In line with these claims, he had presented to the throne a sixty-one-chapter version of the originally one-chapter Lingbao *Scripture of Salvation.* This important text formed the basis for another ritual tradition, the Lingbao *dafa* (Great Rites of Lingbao). While there were regional variations, the centerpiece of this tradition was the rite of *liandu* (roughly, "salvation by fiery smelting"). Through an extremely elaborate external ritual—involving chants, pacing, and the use of talismans—and an equally complex internal ritual through which the bodily spirits of the master descended into the hells, the rite aimed to purify and rescue the dead.

Under the Jin in northern China, several new traditions appeared. The most important and enduring of these was the Quanzhen ("Perfect Realization" or "Completion of Authenticity"). The movement was inaugurated by the ascetic and visionary Wang Zhe (1113–1170), also known as Wang Chongyang. After achieving enlightenment in 1167, Wang wandered the Shandong peninsula, converting followers and founding associations for the promulgation of his doctrine. Wang gathered around him a coterie of favored disciples, all highly literate men among whom Ma Danyang (1123–1184) was his designated heir. The later tradition settled on a list of *qi zhen* (Seven Perfected or "Authentic Ones") as the foremost disciples. This list included Sun Bu'er (1119–1183), Ma's wife, thus signaling the vital role female clerics had come to play in the movement.

Wang's most famous disciple, Qiu Changchun (1148–1227), was summoned to the Jin court in the 1180s and, in 1220, to the itinerant court of Chinggis Khan (r. 1206–1227), who hoped to obtain the drug of immortality from him. Although Qiu allowed that he knew only hygienic techniques for prolonging life, he made a favorable impression on the khan, who bestowed special privileges on the Quanzhen order, including authority over the religious in his realm. Quanzhen Daoism grew explosively during the Yuan dynasty, despite prescriptions of the order ordered by Kublai Khan (r. 1260–1294) in retribution when his armada sent against Japan was destroyed by a typhoon in 1281. According to the estimates of Vincent Goossaert (2001), by 1300 there were some four thousand Quanzhen temples in northern China, housing an estimated twenty thousand clerics, around one-third of whom were women.

As an order, Quanzhen was devoted to both communal discipline and self-cultivation. Priests and nuns took vows of celibacy and left the home to live communally in one of the many temples. There, submitting to monastic discipline, they would work to cultivate lack of attachment, purity of mind, and immortality through the practice of inner alchemy. As they often took up residence in the temples of local cults or other orders, the rituals conducted by Quanzhen clerics derived from all the major traditions of Daoism. Sometimes their eclecticism led them into difficulties, as when Quanzhen clerics championed a later version of the *Huahu jing,* the scripture that held that Laozi was the Buddha, before the Yuan emperors in a series of debates with Buddhists. In a final debate before Kublai Khan in 1281, the enraged emperor ruled against them and, as we have seen, eventually suppressed the order. In mature form, Quanzhen doctrine was less doctrinaire, drawing from the quietist aspects of Confucianism and Ch'an (Jpn., Zen) Buddhism and revering both the Buddhist *Heart Sūtra* and the Confucian *Classic of Filial Piety.*

The remarkable spread of Quanzhen during the Yuan period can be attributed to several factors. First, clerics tended to travel widely, spreading the doctrine. Second, Quanzhen adepts, more than those of other contemporary religious groups, tended to use literary works—dialogic treatises, poetic accounts of practice, public inscriptions, organizational histories, and the like—as proselytizing tools. Third, Quanzhen adepts easily assimilated themselves to existing religious establishments, reinterpreting the texts of their rivals and even occupying their temples.

**DAOISM IN THE MING (1368–1644) AND QING (1644–1911).** Scholars have only recently begun to turn their attention to post-Yuan developments in the Daoist traditions traced above. One difficulty derives from the often-strained relationship between Daoist practitioners and the throne. Increasingly stringent controls placed on Daoist institutions and practitioners during the Ming and Qing attest to the continued vitality of the religion. At the same time, tight imperial oversight tended to erase from the public record much that we would like to know.

The first Ming ruler, Taizu (r. 1368–1399), attempted to manage Daoism by establishing various agencies governing the religion, regulating the number of monks and nuns who could be ordained, and mandating the maximum age at which they could do so. Taizu favored the Zhengyi order, but tolerated the Quanzhen movement. Clerics of many ritual traditions thus began to take refuge in these two orders, a situation that continues. It is clear, however, that Taizu's restrictions, though continued by subsequent emperors, only superficially limited the numbers or activities of Daoists.

Chengzu (r. 1402–1425), also known by his reign-title as the Yongle Emperor, provided more protection for Daoism. He ordered the compilation of a new canon (completed after his death) and designated Zhenwu, the Perfect Warrior, the dynastic protector. Claiming that Zhenwu had aided him in unifying the realm, the emperor set up a sanctuary for this deity in Beijing's forbidden city when he took residence there in 1421. He also provided support for the god's cult center on Mount Wudang in Hubei. For similar reasons, Chengzu supported other deities, including the popular "god of war," Guandi, one of a list of popular deities who were adopted into the Daoist pantheon.

Subsequent Ming emperors continued the dual policy of support and control begun by the first rulers of the dynasty. Despite official patronage for some, there seem to have been few doctrinal developments during this period. The main trend seems to have been one of amalgamation of diverse practices into a single way, something that pleased rulers as evidence of unity. One important tradition that provided a foundation for this search for unity was the tradition of inner alchemy. Zhao Yizhen (d. 1382), a master trained in Quanzhen and Qingwei ritual, proposed a strict course of self-examination through the use of "ledgers of merit and demerit," a widespread practice at the time. Such self-criticism, he held, could bring human emotions into harmony with reason, dispel illusion—whether that of demons, spirits, or *bodhisattvas*—and prepare the way for proper absorption of cosmic essences through meditation. Zhang Yuchu (1361–1410), the forty-third Celestial Master of the Zhengyi tradition, carried on Zhao's understandings of inner alchemical practice, explicitly incorporating into his system the insights of Chan Buddhism on inner nature.

An even more syncretic teaching was propounded by Lin Zhao'en (1517–1598), scion of an official family from Fujian who studied with various Daoist masters and eventually styled himself "Master of the Three Teachings." His group became the "Three in One Teaching," merging insights from Confucianism as the principle doctrine, with Daoism and Buddhism. Lin taught a method of inner cultivation in nine stages, culminating in "breaking through the void," a final step of inner alchemical practice for forming the internal embryo. To this stage of ultimate attainment, Lin assimilated the "perfect sincerity" of neo-Confucian understanding of the *Doctrine of the Mean* and the Buddhist concept of moving beyond illusion into the ground between being and nonbeing. The group spread throughout southeastern China and endured for about 150 years after Lin's death.

Another result of Ming attempts at religious control was the strengthening of lay associations, both trade guilds and those local groups organized for the purpose of sponsoring a temple or religious site. One prominent example is the famous Yongle Gong (Palace of Eternal Joy), a temple dedicated to Lü Dongbin first occupied by Quanzhen adepts in the 1240s that had, by the mid-Ming, fallen into disrepair. Beginning in 1614, local leaders organized subscription campaigns for the repair and ritual use of the temple. To the efforts of such associations we owe the remarkable preservation of fourteenth-century murals depicting scenes from the life of Lü Dongbin, perhaps drawn from popular Yuan plans, and depictions of Daoist divinities used in ritual (Katz, 1999). The support of temple associations is also responsible for the incorporation into Daoism of popular deities such as Ma Zu, goddess of merchants and fishermen.

Another sign of popularization was the printing and distribution of Daoist tales. Among these, one of the most completely studied concerns the mysterious figure Zhang Sanfeng. Pierre-Henry de Bruyn (2000) relates the origins of this figure: When Chengzu (r. 1402–1424) usurped the throne by having his nephew murdered, he still entertained doubts that the burnt corpse presented to him was in fact his nephew. He consequently sent secret police throughout the realm on the pretext of seeking the immortal "Zhang Sanfeng," but actually to seek for his nephew. As a result of this apparent imperial interest, all sorts of legends began to circulate concerning this figure. These were duly published and circulated by the faithful, and a cult arose.

The same trends—strict imperial control, standardization of Daoist traditions under the aegis of Zhengyi and Quanzhen, and growing lay involvement—intensified during the Qing dynasty. The Manchu rulers of the Qing venerated Tibetan Buddhism and promoted neo-Confucian doctrine as state orthodoxy, even to the extent of promulgating its tenets among the populace through imperial "sacred edicts." The Confucian elite, feeling that excessive emphasis on personal cultivation had led to the collapse of the Ming, tended to support the state orthodoxy. As a result, officially sanctioned "three teachings" movements during the Qing tended to exist for the purpose of spreading Confucian morality. An unintended consequence of this imperial initiative was an upsurge in lay associations and sectarian movements organized under the pretext of spreading morality. *Shanshu* (Morality books) promoting Confucian ethics based on Buddhist notions of *karma* and Daoist concepts of longevity and of the bureaucratic organization of the unseen worlds had circulated since the Song dynasty but now were produced in even greater numbers.

Beginning in the Ming, sectarian movements published similar works, known as *baojuan* (precious volumes) of a more striking religious character. A number of these were produced by "spirit writing," a type of revelation whereby spirits of gods, Transcendents, or even cultural heroes were believed to compose texts by taking control of a writing implement. The most common means, still in use today, involved two mediums wielding a double-handled planchette that would inscribe the deity's words, graph by graph, in a shallow box filled with sand. This message would then be "transcribed" by several observers. Texts produced in this way began to appear as early as the Song dynasty (Kleeman 1994), but the popularity of such works seems to have increased radically during the Ming.

One of the most widespread of the sectarian movements, named by Susan Naquin (1985) "White Lotus Sectarianism," centered on the Maitreya-like goddess, the Eternal Venerable Mother, who, it was believed, would reappear to eradicate evil and create a new heaven and earth. These movements, only loosely organized, were a threat both to the Buddhist and Daoist establishments and to the government. Imperial attempts at suppression only succeeded in spurring millenarian movements.

While Qing rulers gave precedence to the Zhengyi order in state ritual, they also appreciated the organizational strengths of Quanzhen, with its strict rules for clerics. Over the course of the dynasty, the Longmen branch of Quanzhen rose to domination. The Longmen branch traces its founding back to Qiu Chuji of the Song, but, as Monica Esposito (2000) has shown, it actually originated during the Ming among southern Daoist movements. The importance of the Longmen branch can with assurance be traced to Wang Changyue (d. 1680), who from 1656 until his death served as abbot of the Baiyun guan (White Cloud Abbey) in Beijing. Wang reorganized Quanzhen precepts to include neo-Confucian rules for living that were favored by Qing rulers. He divided the precepts into three ascending stages: (1) initial precepts of perfection; (2) intermediate precepts; and (3) precepts of celestial transcendence. He also held that anyone could gain immortality through their careful cultivation. Under Wang's direction, Baiyun guan became a central training center for all Daoist traditions, formally granting the precepts to male and female clerics from all over the kingdom as part of their official investiture. This, in itself, was crucial to the spread of Longmen branch teachings.

As Wang Changyue's example shows, while Quanzhen and other Daoist organizations continued to discourse on and practice the inner alchemy of earlier days, there was an increased emphasis on universalism. Simplified descriptions of the discipline were promulgated not only by Daoists, but by sectarian groups and lay organizations, and even in popular plays and novels. Schools of martial arts and physical cultivation adopted some inner alchemical learning to their own purposes, leading to the widespread practice of *qigong* (roughly, "breath achievement") in modern times. While many *qigong* schools have their own origin myths, a more scholarly account of their origins is that, while some of their practices are quite ancient, they in fact grew from the intellectual and social conditions of Ming and Qing times.

**DAOISM IN JAPAN.** There is no clear evidence of the transmission of organized Daoism to Japan. No records of Daoist investiture or even the presence of Daoist priests have yet been detected. A number of scholars have cited references to immortality seeking, alchemy, and other practices and words associated with Daoism in texts from the seventh century CE forward. For example, the *Nihonshoki* (Chronicle of Japan), under entries for the years 456 to 479, mentions several mountaintop establishments it styles *dōkan* (Daoist temples), but it is uncertain what sort of establishment might have been meant. Most Japanese scholars, then, agree with the 1933 findings of Tsukami Jikiryō that "Daoist ideas transmitted to Japan in ancient and Heian (794–1185) times came first under the umbrella of esoteric Buddhism and yin-yang divination, and then spread to the wider populace" (cited in Masuo, 2000, p. 824). A number of the practices scholars point to in support of this assertion, however, are best considered part of Chinese common religion, rather than specifically Daoist.

One example is the practices associated with the *gengshen* (Jpn., *kōshin)* day, the fifty-seventh day of the sexagesimal cycle of days according to the Chinese calendar. According to texts as early as the *Baopuzi*, the human body played host to three worms or "corpses" that sought the death of their host and would, on the night of this day, ascend to heaven to report on his or her transgressions. Since these evil-minded residents might depart the body only during sleep, one method to frustrate them included an all-night vigil. While Daoist texts taught that abstention from meat, sexual abstention, and purification procedures were also necessary, the vigil in Japan (as sometimes in China) became the occasion for an all-night party.

Introduced in the mid-ninth century, *kōshin* practice was modified in the eleventh century by Tendai monks, who added further Daoist and Buddhist elements from a variety of scriptural sources. During the Edo period (1603–1687), esoteric monks and *yamabushi* began delivering morality lectures on the practice throughout the country and a number of *kōshin* halls were established to accommodate those holding vigils. Thriving *kōshin* halls still exist in Osaka and Nara. Although specific practices for ridding the body of the three worms found a place in Daoism, the belief in the three worms was not confined to Daoism, as its presence in Buddhist texts composed in China attests.

Other practices associated with Daoism—methods of appeasing the celestial bureaucracy, the use of apotropaic talismans and spells, even the ritual "pace of Yu" (a magical gait held to avert evil originating in ancient Chinese occult traditions and adapted into Daoism)—can be found in similar form, mixed with Chinese common religion and Buddhism. One group that seems to have been particularly receptive to Daoist practice was the *yamabushi* practitioners of Shugendō (roughly "way of practice for inciting auspicious response"). According to legend, Shugendō began in the seventh century, but was certainly widespread by the end of the Heian period. The practice of *yamabushi*, who undergo austerities in the mountains to gain spiritual powers, includes healing, the dispelling of misfortune, a version of the pace of Yu, and the use of spells and talismans. While some of these can be traced to Daoist works, the precise vectors of transmission are unknown. In addition, the twelfth-century Shintō schools of Ise and Yoshida developed a view of spirits (Jpn., *kami*) divided according to function and sometimes associated with the northern dipper and other asterisms that made specific use of Daoist works.

In the seventeenth and eighteenth centuries, a number of Daoist practices, including those associated with Quanzhen Daoism, arrived in Japan as a result of the popularity of neo-Confucianism. Morality books were another source of knowledge of Daoist deities, such as the martial god Guandi, and of practices meant to satisfy the moral oversight of the celestial bureaucracy. In line with the flexible nature of Daoist belief, such foreign elements were easily modified to conform with Japanese society.

**DAOISM IN KOREA.** Unlike the case of Japan, there are records of the formal transmission of Daoism into the Korean peninsula. In the early seventh century, Tang emperors, who traced their lineage to Laozi, sent priests on at least two occasions to teach Daoist ritual in the court of the king of Koguryŏ (37 BCE–668 CE). During the late Tang, monks of the unified Silla (668–935) are recorded as having visited the Chinese capital to study Daoism. Not much is known, though, about how well established the religion became as a result of such exchanges.

During the Koryŏ dynasty (918–1392), however, Daoist ritual became part of imperial practice. King Taejo (r. 918–943) set up some fifteen Daoist sites, ordered rites for the welfare of the state, and gave Daoism a ranking equal to that of Buddhism. Subsequent emperors followed suit. Under King Sŏnjong (r. 1083–1094), Daoist rituals were no longer confined to the capital and, in 1115, Song Huizong provided clerics to assist in imperial Daoist rites. Jung Jae-seo (2000) has found that there were a total of 191 recorded *jiao* rituals performed during the Koryŏ. During this period, Korean intellectuals also became interested in Daoist practice, sometimes modeling their associations on the hagiographies of Chinese Transcendents.

The Chosŏn dynasty (1392–1910) promoted neo-Confucianism as the state doctrine and closed many of the temples built during the Koryŏ, but still allowed some Daoist rituals for the welfare of the royal family. A version of Chinese methods of control was instituted early in the dynasty whereby candidates for the priesthood were examined in the Lingbao scriptures, a *Zhenwu* scripture, and other important texts. Eventually only one temple, the Sogyŏk sŏ, with one hall dedicated to Grand Unity and another to the Three Pure Ones and patronized by officials, was allowed to conduct formal Daoist rituals. These were entirely Chinese-style Daoist rites. The temple was finally abolished as a consequence of the Japanese invasion. Nonetheless, private study of inner alchemy continued in the form of private *danhak pai* (schools of alchemical studies), which developed in distinctive ways and began to claim transmissions from shadowy ancient figures of Korean history.

The "new religions" that developed in Korea in the nineteenth century drew extensively on Daoist scriptures and practices. The Donghak (Eastern Doctrine), established in 1860 by Choi Jaewu (1824–1864) and others, includes sacrifices to Daoist gods, the use of talismans, and the practice of visionary journeys to the celestial realms.

**DAOISM TODAY.** The official body governing Daoist practice in modern China is the Chinese Daoist Association, formed in 1956 and officially approved by the Ministry of Internal Affairs on May 20, 1957. Operating from the White Cloud Temple in Beijing, the organization coordinates Daoist practice and controls the initiation of priests and nuns. At first, the association, following Qing precedent, recognized only Zhengyi (Celestial Master) and Quanzhen traditions. During the government-sponsored mass movements of the 1960s and 1970s, all Daoist holdings were returned to state control. Following the Cultural Revolution, and particularly from 1979 forward, governmental control of religious practice has relaxed considerably and researchers report a resurgence of Daoist practice throughout the country. This has been matched by an exuberant growth of scholarship on all aspects of the religion.

In Taiwan, free exercise of religion existed since the founding of the Nationalist government in 1949. All forms of religious practice flourished and the crafts necessary to ritual—the painting of religious images, construction of ritual garb and implements, and so on—thrived. Many early Western researchers into the Daoism, beginning with Kristofer Schipper, began their studies with fieldwork on the island. In 1951, Zhang Enpu, the putative sixty-third generation Celestial Master founded the Taiwan Daoist Society to provide coordination for Daoist activities. This quasi-governmental organization represents only one facet of the vibrant Daoist practice seen in Taiwan; Daoist practitioners and scholars have also entered into fruitful communication with their counterparts in mainland China.

Outside of China, Daoist practice exists wherever there is a substantial Chinese community. In premodern times, one of the vectors of transmission seems to have been non-Han peoples who had been converted to Daoism as part of strategies of Sinification. For instance, the Yao people, resident in northwest Thailand, practice a form of the Rectifying Rites of the Center of Heaven, dating to the Song. Michel Strickmann (1982) has provided evidence that the Yao acquired their traditions from officially sponsored missionaries, perhaps as early as the Song. Comparable evidence for the Daoism of other parts of Southeast Asia has not so far been discovered.

More common was the spread of Daoism with Chinese mercantile communities, something that we know to have occurred from early times. Today Singapore and Malaysia host the most widespread practice of the religion. Active associations for the coordination of Daoist practice were founded there in 1979 and 1995, respectively. These umbrella organizations frequently coordinate with the Daoist Associations of China, Hong Kong, and Taiwan.

## BIBLIOGRAPHY

### General Works

Bokenkamp, Stephen R. *Early Daoist Scriptures.* Berkeley, Calif., 1997. A translation and study of the *Xiang'er* commentary to the *Laozi* and other Celestial Master, Shangqing, and Lingbao Daoist scriptural works from the third to the fifth centuries CE.

Boltz, Judith M. *A Survey of Taoist Literature: Tenth to Seventeenth Centuries.* Berkeley, Calif., 1987. A comprehensive survey of genres of writing found in the Daoist canon and the traditions that produced them.

Campany, Robert Ford. "On the Very Idea of Religions (In the Modern West and Early Medieval China)." *History of Religions* 42, no. 4 (2003): 287–319. This article contains important insights on the ways "religion" was referred to in medieval China.

Ch'en Kuo-fu. *Daozang yuanliu kao.* 2d ed. Beijing, 1963. An important early Chinese study of Daoist history.

Dean, Kenneth. *Taoist Ritual and Popular Cults of Southeast China.* Princeton, N.J., 1993. A study based on fieldwork that attests to the vivacity of modern Daoist practice.

Granet, Marcel. *La pensée chinoise* (1934). Reprint, Paris, 1968. A classic on the systems of Chinese thought with their symbols and categories. A brilliant pioneering study, it contains interesting chapters on the Daoist schools and the techniques of longevity.

Maspero, Henri. *Mélanges posthumes sur les religions et l'histoire de la Chine,* edited by Paul Demiéville; Vol. 2: *Le taoïsme.* Paris, 1950. Reprinted in *Le taoïsme et les religions chinoises* (Paris, 1971) and translated by Frank A. Kierman Jr. as *Taoism and Chinese Religion* (Amherst, Mass., 1981). Written by one of the founders of modern French Sinology, this posthumous work contains important essays on religious Daoism.

Needham, Joseph. *Science and Civilisation in China.* 5 vols. Cambridge, U.K., 1954–1983. This work is an ambitious and successful undertaking on Chinese scientific thought, with chapters on Daoism (vol. 2) and a presentation of alchemy and the techniques of longevity (vol. 5).

Ren Jiyu, ed. *Zhongguo daojiao shi.* Shanghai, 1990. The best general account of Daoist history produced in China to date.

Robinet, Isabelle. *Les commentaries du Tao Tu King jusqu'au septième siècle.* 2d ed. Paris, 1981. A study of the main commentaries of the *Laozi.*

Robinet, Isabelle. *Histoire du taoïsme des origines au XIV siècle.* Paris, 1992. Translated by Phyllis Brooks as *Taoism: Growth of a Religion.* Stanford, Calif., 1997. One of the foremost scholars of Daoist texts here traces the early development of the religion.

Schafer, Edward H. *The Divine Woman: Dragon Ladies and Rain Maidens in T'ang Literature.* Berkeley, Calif., 1973. A survey of Chinese mythology on water goddesses, some of whom were adapted into Daoism.

Schipper, Kristofer. *Le corps taoïste.* Paris, 1982. Translated by Karen C. Duval as *The Taoist Body.* Berkeley, Calif., 1993. Schipper offers an overall analysis of the Daoist religion with an excellent chapter on ritual.

Sivin, Nathan. "On the Word 'Taoist' as a Source of Perplexity." *History of Religions* 17 (1978): 303–330.

### Historical Studies

Barrett, Timothy H. *Taoism Under the T'ang.* London, 1996. A survey of relations between the state and the Daoist religion drawn largely from the official histories.

Davis, Edward L. *Society and the Supernatural in Song China.* Honolulu, Hawaii, 2001. A study of spirit-possession and its relationship to Daoist and Buddhist practice.

STEPHEN R. BOKENKAMP (2005)

## DAOISM: THE DAOIST RELIGIOUS COMMUNITY

There is no trace in the historical records of any organized Daoist community before the Latter Han dynasty (25–220 CE). Among the various politico-religious movements that sprang up during the second century as the dynasty went into decline, the most famous are the Way of the Heavenly Masters (Tianshi Dao) and the Way of Great Peace (Tai ping Dao). Although the historical evidence linking these two groups is slim, both clearly aimed at the total transformation of society and the establishment of a Daoist utopia; both were founded by people surnamed Zhang, probably because the Zhang clan was thought to be descended from the Yellow Emperor, who, together with Laozi, was revered in Han Daoism as the divine source of Daoist teachings; both organized the faithful into cosmologically determined units; and both considered sickness a sign of sin and therefore prescribed confession as a prerequisite for healing.

**HAN PERIOD.** At least partly inspired by a *Tai ping jing* (Scripture of great peace), presented to the throne during the reign of the emperor Shun (r. 126–145 CE), the Way of Great Peace was founded by three brothers who called themselves the generals of the lords, respectively, of Heaven, Earth, and Man. In addition to healing by means of confession and "symbol-water" (*fu-shui*), they and their subordinates spread the message that a new era, the era of Yellow Heaven, was about to begin. Having organized their adherents, known as the Yellow Turbans, into thirty-six military regions (*fang*) covering eight of the twelve provinces of the empire (all of eastern China), they rose in revolt in the first year of a new sixty-year cycle, a *jiazi* year (184 CE). It took government forces a full ten months to crush the revolt.

The Way of the Heavenly Masters was founded, according to the mid-third century *Zhengi fawen Tianshi jiao-jie k'o-jing* (Scripture of the rules and Teachings of the Heavenly Masters, a Text of the Method of Orthodox Unity), by Zhang Daoling. He is there said to have received, in the year 142, from the Newly Manifested Lord Lao (Xinzhu Laojun), the "Way of the Covenant of Orthodox Unity with the Powers" (zhengyi mengwei dao). He set up twenty-four "governances" (*zhi*) and "divided and spread the energies of the mysterious (celestial), the original (terrestrial), and the beginning (the Way) in order to govern the people." The earliest list of these governances appears in the late sixth-century *Wushang biyao* (Essentials of the supreme secrets): it places all but one of the governances in what is now Sichuan province and clearly confirms that the movement started in the western part of that province.

According to the dynastic histories, Zhang Daoling was succeeded by his son Heng, and Heng by his son Lu. Zhang Lu controlled northeastern Szezhuan for over thirty years, until he surrendered in 215 to Cao Cao, future founder of the Wei dynasty (220–264). Cao Cao gave him the title "General Who Controls the South" (*zhennan jiangjun*), enfeoffed him, and married his son Pengzu to Lu's daughter. It was probably at this time that the last of the twenty-four governances was located in the capital city of Luoyang and that the Way of Orthodox Unity (Zhengyi Mengwei Dao) became the dominant religion in the state of Wei. It remains to this day the most important form of religious Daoism.

**SIX DYNASTIES PERIOD.** The dynastic histories note that the adherents of Zhang Daoling were called "rice rebels" because a tax of five bushels of rice was levied on initiates. Throughout the Period of Disunion (220–589), the nickname Way of the Five Bushels of Rice (Wudoumi Dao) continued to be applied to the "church" of the Heavenly Masters. Its original organization consisted of a hierarchy of laypeople called "demon soldiers" (*guizu*), low-level priests called "demon clerks" (*guili*), higher-level priests called "libationers" (*jijiu*), and chief priests called "head libationers." Each of the libationers was in charge of an "inn of equity" (*yishe*). Said to be like the postal relay stations of the Han government, these inns were open to travelers, and free "meat and rice of equity" were supplied them.

That the "church" had in fact virtually supplanted the state may be seen from the fact that justice was administered by the libationers. Minor infractions were punished by the obligation to repair the routes between the inns: the word *dao* means "way, route," and free circulation of goods, persons, and ideas was considered essential to a society built on Daoist principles.

The basic institutions and attitudes of the movement all reveal its utopian character. Perhaps most striking in this regard is the equal treatment accorded to men and women—both could become libationers—and to Chinese and tribal populations. There were, as a result, a large number of these tribal people among the adepts of the Heavenly Masters. The various titles given the leaders of the movement, and in particular that of libationer, were taken from the Han system of local administration, where they referred to individuals selected locally for their moral qualities and their wisdom. The hierarchy envisaged was one that was communally oriented and merit based. Although the position of Heavenly Master was in later times a hereditary one, it is not certain that this was true at first; until as late as the Five Dynasties period (907–960) there are many references to heavenly masters of surnames other than Zhang.

In addition to running the inns of equity, the libationers were charged with the task of explaining the *Laozi* (*Dao de jing*) to the faithful. Part of a commentary on the *Laozi,* the *Xiang'er zhu,* found in the Dunhuang caves at the beginning of this century, is generally attributed to Zhang Lu. The commentary insists above all on the moral conduct of the faithful: "Who practices the Dao and does not infringe the commandments will be profound as the Dao itself; Heaven and Earth are like the Dao, kind to the good, unkind to the wicked; therefore people must accumulate good works so that their spirit can communicate with Heaven."

The "demon clerks"—so called, no doubt, because they had direct charge of the "demon soldiers"—had as their chief task the recitation of prayers for the sick. After the sick person had first meditated on his sins in a "quiet room" (*jingshi*), the demon clerk would write down the person's name and the purpose of his confession. He drew up this "handwritten document for the Three Officers" in three copies, one to be sent to each of these governors of Heaven, Earth, and the Waters. It was for this service that the faithful contributed five bushels of rice, as well as the paper and brush for preparing the documents.

An early Daoist text, the *Tai-zhen ke* (Regulations of the most perfect) states that every household should set up a meditation room and place the list of the names of its members in five bushels filled with "faith-rice" (*xinmi*). Every year, at the beginning of the tenth month, all the faithful were to gather at the governance of the Heavenly Master himself and contribute their faith-rice to the Heavenly Granary. They would then go in to pay their respects to the Heavenly Master and listen to an explanation of the rituals, ordinances, and commandments. The family registers of all the faithful were to be brought up to date at this time, that is, births, deaths, and marriages were to be recorded, so that the centrally held registers agreed with the family registers.

Similar gatherings were held in the first and seventh months, the former to determine, according to their respective merits, the advancement of the officers of the movement, the latter that of the laypeople. On each of these three "days of meeting" (*huiri*), linked respectively to the Three Officers (San Guan) of Heaven, Earth, and the Waters, a "memorial stating the merit [of each and all] was sent up." These days of meeting, especially the grand assembly of the tenth month, are clearly the origin of the community Offerings (*jiao*), which continue to constitute, to this day, the most elevated service performed by Daoist priests at the request of temple communities.

Progress in this vast meritocracy was marked by the graded transmission of a whole series of commandments and registers. According to the *Regulations of the Most Perfect,* the first series of commandments was transmitted to seven-year-old children. Starting at the age of eight, they could receive a register with the name and description of one general on it, then the register of ten generals at age twenty. Next came the registers of seventy-five generals, of which there were two, a feminine (*yin*) one giving control over seventy-five immortals (*xian*), and a masculine (*yang*) one, to which were attached the same number of potentates (*ling*). The *Regulations* state simply that these two registers are to be transmitted successively to the same person. It is probable, however, that the second transmission occurred only after successful accomplishment of the rites of sexual union called "mingling the energies" (*heqi*), for the reform-minded Heavenly Master Kou Qianzhi (d. 448), in forbidding the practice of these rites by other than married couples in his *New Regulations,* refers explicitly to the "registers of male and female officers."

These registers gave the names and physical descriptions of these generals and the armies of immortal and spiritual officers under their command. The role of these armies was to guard and protect the adept, just as the gods of the popular pantheon, who are also often called generals, were supposed to do. The adept who received further registers was called a "Daoist who distributes his energies" (*sanqi Taoshi*), that is, one who had moved beyond self-protection to saving others: a priest.

In general, each additional register increased the adept's power over the invisible world of the spirits and added thereby to his understanding of the Covenant of Orthodox Unity with the Powers. To enter the Way of the Heavenly Masters meant to worship only those powers enrolled, like the adepts themselves, on official registers and to cease to worship the "gods of ordinary people" (*sushen*). According to the *Xiang'er* commentary, "the Way is most venerable, it is subtle and hidden, it has no face nor form; one can only follow its commandments, not know or see it." The ultimate goal was to know this invisible way, to "hold on" to its mysterious—"orthodox"—Unity. This required forswearing all contact with the multiple "heterodox cults" (*yinsi*) current among the people. Throughout the Period of Disunion and, in somewhat diluted form, down to the present day, Orthodox Unity Daoists have been, like the Confucians, implacable opponents of these cults.

This well-formed, cosmologically comprehensive ecclesiastical organization survived, more or less intact and with appropriate modifications, through the Tang dynasty (618–907). One of the reasons for its survival was its readiness to come to terms, in the manner of Zhang Lu, with the state. The Scripture of the Teachings of the Heavenly Master cited above explicitly criticizes the Yellow Turbans as a "perverse way" (*Xiedao*) responsible for the death of millions. The same text states that the Dao, that is, Lord Lao, had often in the past appeared as the "teacher of kings and emperors." But after his "new manifestation" in the year 142, he would appear no more, for "Lord Lao had then bestowed on Zhang Daoling the position of Heavenly Master." Now, in the year 255, the Heavenly Master urges the faithful to obey the "pure government of the Wei."

The power and the appropriateness of this conception in the context of the Confucian state may be seen from the fact that in 442 the emperor Taiwu (r. 424–452) of the Northern Wei (386–535) became the first of a long line of emperors to "receive registers" (*shoulu*), that is, to receive a Daoist initiation that was tantamount to ecclesiastical (divine) investiture. Emperors—especially, but not exclusively, those favorable to Daoism—perpetuated this practice until the end of the Northern Song dynasty (960–1126).

The man who thus invested the emperor Taiwu was Kou Qianzhi. In 425, Kou was named Heavenly Master and his *New Regulations,* partly of Buddhist inspiration, was promulgated throughout the realm. In 431, in what may be considered a forerunner of the system of officially sponsored abbeys (*guan*) begun under the Tang and continued through the Qing (1644–1911), altars (*tan*) were set up and priests assigned to officiate on them in every province.

It is also noteworthy that the first great persecution of Buddhism occurred under the reign of the emperor Taiwu: inspired by Kou's Confucian friend, Cui Hao (381–450), and with Kou's reluctant cooperation, a decree promulgated in the year 444 attacked, in the same breath, the "heterodox cults," with their mediums and sorcerers, and Buddhism. Although the proscription of Buddhism that followed in the year 446 was rescinded by a new emperor in 454, these events proved to be the opening round of a long competition for imperial favor. In southern China, in 517, the emperor Wu (r. 502–549) of the Liang dynasty (502–557) abolished all Daoist temples and ordered the return of Daoist priests to the laity. In the year 574, after a series of debates between representatives of the "three teachings" (*sanjiao*)—Buddhism, Daoism, and Confucianism—the emperor Wu (r. 560–578) of the Northern Zhou dynasty (557–581) proscribed Buddhism and made Daoism the state religion. Daoists were later instrumental in bringing about the suppression of Buddhism by the Tang emperor Wuzong (r. 841–847) in the year 845 and its reduction to subordinate status by the emperors Huizung (r. 1101–1126) of the Northern Song dynasty, in 1119, and Taizu (r. 1206–1229) of the Yuan dynasty, starting in 1224.

The most telling arguments used in these various conflicts were, on the Buddhist side, that the only authentic Daoist works were those of its philosophers, the *Laozi* and the *Zhuangzi* and, on the Daoist side, that Buddhism was a foreign religion suitable only for barbarians. The court debates themselves often focused on a Daoist text called the *Huahu jing* (Scripture of the conversion of the barbarians). The idea that Laozi, at the end of his life, had gone into the western regions beyond China and there transformed himself into the Buddha in order to convert the barbarians is first attested in a memorial presented to the throne in the year 166 by one Xiang Kai. At that time, Buddhism was still perceived in China as a form of Daoism, and so the legend was useful, even complimentary to the Buddhists. But by the time the libationer Wang Fou wrote the first known (now lost) version of the *Huahu jing* around the year 300, Buddhism had become an entirely autonomous force in Chinese life, and the compliment had turned into a polemic slur.

The Daoists rarely won the court debates, and the *Huahu jing* was regularly proscribed over the centuries, starting in 668 with its suppression by Tang Gaozong (r. 650–684). But before the work disappeared definitively from circulation, after Yuan Shizu (r. 1260–1295) ordered all copies burned in 1281, it had served for nearly a millennium as a means of conveying a central Daoist conviction, based on many a passage in the *Laozi,* that the Dao embraced all things, large and small, high and low, Chinese and barbarian. To the Daoists it followed logically that "Daoism"—the "teaching of the Way" (*daojiao*)—included within itself all other teachings.

Outrageous from the Buddhist point of view, Daoist universalism was most attractive to Chinese emperors. The emperor Wu of the Northern Zhou dynasty, for example, began the decree in which he ordered the foundation of the Abbey for Communicating with the Way (Tongdao Guan) a mere eleven days after proscribing Buddhism as follows: "The supreme Way is vast and profound: it envelops both being and nonbeing; it informs highest heaven and darkest hell." According to Buddhist sources, the people appointed to staff this state abbey were all "enthusiasts of the *Laozi* and the *Zhuangzi* and proponents of the unity of the Three Teachings."

Another expression of Daoist universalism constantly attacked by the Buddhists was its regular "fabrication" of new texts by plagiarizing Buddhist sūtras. This criticism applied especially to the Lingbao ("numinous treasure") scriptures that began to appear in southeastern China in the 390s. The most important of these texts, the *Wuliang duren jing* (Scripture of universal salvation), may be described as pure "Mahāyāna Daoism." From start to finish, it has the flavor of a Buddhist scripture, but the revealed words come from the mouth, not of the Buddha, the "World-honored One" (*Shizun*), but from that of the "Heaven-honored One of the Primordial Beginning" (Yuanshi Tianzun), that is, the Dao. These texts also take over Buddhist notions of karmic retribution and introduce Buddhist-inspired rituals for the dead.

Some twenty years prior to the appearance of the first Lingbao texts, another group of texts had been revealed in the same part of China that was to play an extremely important role in the court Daoism of the Tang dynasty. Owing little to Buddhism, this new Shangqing ("high purity") literature completely transformed the methods of the traditional, eremetic Daoism of the South—alchemy, gymnastics, diet, visualization, and sexual practices—by incorporating them into a complex system revealed in ecstatic prose and poetry by a kind of automatic writing during séances. Recitation of these sacred texts and visualization of the spirits described in them became the high roads to spiritual realization in this movement.

The milieu in which these revelations occurred was that of the southern aristocracy, a group that recently had been supplanted by émigrés fleeing North China after the barbarian capture of the capital city of Luoyang in 311. These émigrés, who founded the Eastern Jin dynasty (317–420), with its capital in Jiankang (modern Nanking), brought with them the Way of the Heavenly Masters, and many Southerners—among them the father and uncle of Xu Mi (303–373), one of the main recipients of the new revelations—had adopted the Northerners' religion. Wei Huazun (d. 334) herself, the "teacher in the beyond" of the inspired calligrapher of the revealed texts, one Yang Xi (330–?), had been, during her life on earth, a libationer. Xu Mi continued to employ his father's libationer, Li Tung. One of the "real persons" (*zhenren*) who was revealing to Xu the new methods for spiritual (as opposed to physical) rites of union criticized Xu for his excessive use of the old methods of the Heavenly Masters: "The method for mingling the energies is not practiced by the Real Persons; it is an inferior Way that destroys the orthodox energies of the real vapors." Also, illness was attributed not to sin and consequent attacks by demons, but to physiological causes, and massages and drugs were therefore prescribed instead of the confession of sins. The demons of the Shangqing texts are those forces that try to keep the adept from achieving the level of concentration necessary for the spiritual union with a divine spouse, which alone can lead to "realization" (immortality).

It was probably a second- or third-generation practitioner of the new techniques of realization who first classified Daoist literature into the "three caverns" (*sandong*). Traditionally, it is Lu Xiujing (406–477) who is credited with this hierarchical classification, which places Shangqing texts first, Lingbao second, and Sanhuang (Three Sovereigns) last. The Sanhuang scriptures, of which only small portions survive, represent the talismanic, exorcistic literature of popular Daoism. It may be that they represent the tradition of the Yellow Turbans, for the Three Sovereigns are those of Heaven, Earth, and Man, whose lords the brothers Zhang served as generals.

Heavenly Master texts are conspicuously absent from this classification, but it may well be that they were felt by Lu, who is one of the most important liturgists in Daoist history, to be unnecessary: not only would he have shared, as a practitioner of Shangqing methods, the dim views of the sexual rites of the Heavenly Masters, but also, and more importantly, he had incorporated the basic Heavenly Master liturgy into the Lingbao texts, which he himself had edited. The Three Caverns thus constituted a complete and self-contained canon of exorcistic, liturgical, and meditational texts: together, they met every religious need, from that of a sick peasant requiring an exorcism to that of the refined aristocrat seeking sublime spiritual union.

The idea of this tripartite division was no doubt inspired by the Buddhist Tripiṭaka, but whereas the division of the latter was generic, that of the Daoist was practical. Correspondingly graded registers, moreover, were created to accompany initiation into each successive level of texts. Five separate rituals of transmission were included in the original *Wushang biyao* (compiled c. 580 at imperial behest): progressive initiation into the texts of the Three Caverns was preceded by the transmission of ten commandments (against murder, robbery, adultery, etc.) and of the *Laozi.*

The addition of these two rituals of initiation was a clear sign that the idea of the Three Caverns, however coherent ideologically, was too far removed from the reality of Daoist practice to survive without major modifications. The other ritual chapters in the *Wushang biyao* provided further evidence of this: nine of ten chapters were taken directly from the texts of the Three Caverns, but one, the "mud and soot fast" (*tutan zhai*), a ritual of confession, required an officiant who was at once a "libationer belonging to a diocese of the Heavenly Masters" and a "ritual master of the Three Caverns." This situation was remedied, probably in the early Tang period, by adding the Four Supplements (*gsifu*) to the Three Caverns. In the resulting initiation hierarchy, Orthodox Unity texts occupied, appropriately, the bottom of the seven rungs: emperors interested in Daoism invited Shangqing masters to court and received their registers, but the typical country priest required no more than the registers of Orthodox Unity—and the skills they implied. The remaining three of the Four Supplements also incorporated older Daoist traditions: alchemy, the Scripture of Great Peace, and the *Laozi.*

**TANG PERIOD.** The Tang dynasty saw the development of the more or less definitive forms not only of the Daoist canon, but also of Daoist messianism and monasticism. Closely related to its utopianism, Daoist messianism always had an intensely political character. In the second-century *Laozi bianhua jing* (Scripture of the transformations of Laozi), Laozi puts himself forward as the messianic leader. But during the Period of Disunion, it was usually a "descendant" of Laozi, the Perfect Lord (*zhenjun*) Li Hung, who excited the messianic hopes of the people. Thus Kou Qianzhi, in his *Laojun yinsong jiejing* (Scripture of the recitation of the prescriptions of Lord Lao), complains that many false prophets "attack the orthodox Dao and deceive the common people. All they have to say is, 'Lord Lao should reign, Li Hung ought to manifest himself.'" Li Hung messianism even appears in the Shangqing scriptures: according to the *Shangqing housheng daojun liji* (Shangqing biography of the Latter-day Saint and Lord of the Way), Li Hung will appear in a *jen-renchen* year (the twenty-ninth year of the sixty-year cycle, possibly 392) to establish a new world populated by the chosen and governed directly by the Latter-day Saint.

The centuries-old conflict between this popular Daoist messianism and the Heavenly Master tendency—seen in the careers of both Zhang Lu and Kou Qianzhi—to opt for the role of spiritual advisor to the emperor, found its perfect resolution in the Tang dynasty when, at last, not Li Hung himself, but another family of the same surname as Laozi, Li, came to power. This advent, moreover, is said to have been predicted toward the end of the Sui dynasty (589–618) by one Ji Hui, a Daoist who had entered the Abbey for Communication with the Way at the beginning of the Sui dynasty: "A descendant of the Lord Lao is about to rule the world, and our teaching will prosper." No sooner had Tang Gaozu (r. 618–627) come to power than he asked Ji Hui to celebrate an Offering to pray for divine benediction on the dynasty. He then ordered the complete rebuilding of the Lou Guan (Tower Abbey) and, in 620, changed its name to Zungsheng Guan (Abbey of the Holy Ancestor). In 625, after holding a debate between representatives of the "three teachings," Gaozu ranked them in the order Daoism, Confucianism, and Buddhism.

Tower Abbey occupied the site where Laozi was said to have revealed the *Laozi* to the keeper of the pass, Yin Xie, before disappearing into the western regions. Daoist sources make it out to have been a center for the cult of Laozi already in the time of Qing Shihuang (r. 221–209 BCE) and describe it as an important northern Daoist center throughout the Period of Disunion. In the Tang dynasty it became a dynastic cult center. In 679 its abbot, Yin Wencao (d. 688) compiled, on the order of the emperor, the *Sheng Ji* (Annals of the saint) in ten volumes. Judging on the basis of its Song-dynasty successor, the *Hunyuan sheng ji* (Annals of the saint of the womb), this was a "salvation history" of Daoism, presented as the successive divine interventions of Lord Lao in human history. In 741, after the emperor Xuanzong (r. 713–756) had encountered his divine ancestor in a dream, a statue corresponding to the face he had seen in his dream was found near the Abbey of the Holy Ancestor. The emperor had the statue set up in the inner palace for his own worship. He then ordered that similar statues be cast and sent to all the state-sponsored abbeys in the country, declared a general amnesty, and had an inscribed tablet set up at the Zongsheng Guan to commemorate these events.

The first network of Daoist buildings was that associated with the twenty-four governances of Heavenly Master Daoism in the second century. The first state-sponsored Daoist abbey in history is generally thought to be the Chongxu Guan (House for the Veneration of the Void) founded in 467 by the emperor Ming of the Liu Song (420–479) for Lu Xiujing. But it was not until 666, after performing the *feng-shan* ritual of celestial investiture on Taishan, that the Tang emperor Gaozong (r. 649–683) decreed the creation of a system of state-sponsored Daoist (and Buddhist) monasteries in each of the prefectures—there were over three hundred—in the empire. This dual system was perpetuated under all successive dynasties, until the fall of the empire in 1911.

It is generally assumed, with good reason, that these and other non-state abbeys were populated by monks and nuns. First, people who entered these institutions were said, like their Buddhist counterparts, to have "left the family" (*chujia*). Second, from the mid-sixth to the mid-eighth century, a new type of Lingbao scripture, clearly designed for monastic living was very much in vogue: the vocabulary and long-winded style of these texts is that of Buddhist scholastics; repeatedly, they recommend such Buddhist virtues as charity and compassion and such Buddhist practices as scripture-copying, recitation, and preaching; above all, they explicitly recommend celibacy. The *Taishang icheng Haikong zhizang jing* (The reservoir of wisdom of sea-void, a scripture of the unique vehicle of the Most High), after speaking in derogatory manner of Orthodox Unity Daoists, affirms that only those who "leave the family" can liberate themselves from all attachments and achieve enlightenment. Preaching is important in this *ekayāna* ("unique vehicle") Daoism because it frees people from doubt and ignorance.

Other texts in this group, however, such as the *Yuanyang jing* (Scripture of the primordial Yang) suggest that these Buddhist practices are but a preparation for more traditional Daoist ones, among which it names the rites of sexual union. Indeed, Daoist monks and nuns often lived in the same community and are known to have practiced these rites: they had "left their families," but Daoist commandments forbade only concupiscence, not intercourse. On the contrary, carefully regulated sexual intercourse was one of the oldest of Daoist roads to immortality, said to have been practiced by Laozi himself.

State support entailed state control. The emperor Xuanzong introduced registration of Buddhist and Daoist monks and nuns and restriction of their movement. He set limits on the size of monastic communities and on their land holdings. He ordered all monks who had not received official ordination certificates to pass an exam. A commissioner was appointed for each religion to ensure that these various ordinances were respected. Specific ritual services were also required of these state clergy: both Buddhists and Daoists were to perform services for the deceased of the imperial family on the anniversaries of their deaths; Daoists also celebrated rituals for the prosperity of the state on the three "days of origin" (the fifteenth day of the first, seventh, and tenth months) and on the emperor's birthday. This latter was made a three-day national holiday, to be celebrated with feasting throughout the empire.

Xuanzong favored Daoism in still other ways: he inaugurated imperial use of a ritual known as "throwing the dragon and the prayer slips" (*tou longjian*), its aim was to report dynastic merit to the Three Officers and to pray for personal immortality. In 731, upon the suggestion of the Shangqing patriarch Sima Chengzhen (647–735), sanctuaries dedicated to the Daoist Perfect Lords of the Five Sacred Peaks were set up on these mountains and Daoist priests selected to staff them. In early 742 the emperor ordered all Daoist temples in the empire to copy the *Benji jing* (Scripture of the original term) throughout the coming year. At the end of the year he issued a second decree attributing the good harvest to the merit thus obtained. In 748 he added to the Daoist monastic network a system of shrines on all forty-six mountains that had "cave-heavens" (*tongtian*). He also ordered the establishment of abbeys on the various sites where famous Daoists of the past had "obtained the Way." Between two and five Daoists were appointed for each of these new shrines and abbeys.

Xuanzong also went to considerable lengths in giving institutional form to the special relationship between the ruling house and its divine ancestor: in 737 he placed the Daoist clergy under the jurisdiction of the Office of the Imperial Clan; in 741 he ordered the creation of temples for the worship of Laozi in the two capitals (Chang'an and Luoyang) and in each prefecture, as well as a parallel network of Daoist academies and examinations. The imperial ancestral tablets were henceforth to be kept in the temple dedicated to Laozi in Chang'an, and statues of the imperial ancestors were set up in the Taiqing Gong (Palace of Grand Purity), which had been built in Pozhou, Laozi's birthplace. In the mid-740s Xuanzong had his own image set up next to that of Laozi in the Taiqing Gong in Chang'an, and later added those of his chief ministers as well. A first imperial commentary on the *Laozi* was published in 732, a second in 735, and in 745 the *Laozi* was declared superior to the Confucian classics. Among Xuanzong's successors—at least five of whom died of elixir poisoning in their Daoist-inspired quest for immortality—only Wuzong (r. 840–846) found anything to add to Xuanzong's ideological edifice: he made Laozi's birthday a three-day national holiday.

**FIVE DYNASTIES, SONG, AND YUAN PERIODS.** Later dynasties naturally could not make use of this link with Laozi; the Song replaced it with a similar genealogical tie to the equally Daoist Yellow Emperor, but the Tang system of state control and support survived. Registration statistics preserved over the centuries provide interesting insight into the shape and functioning of the system. (See table 1.)

The figures for the year 739 show that even the extravagant patronage of Xuanzong did not suffice to bring the number of Daoist monastic centers on a par with those of the Buddhists. This is not a reflection of the relative popularity of the two religions, but of the fact that lay clergy continued to be the norm among Daoists. A text compiled at imperial behest around 712, the *Miaomen youqi* (Origins of the school of mystery) distinguishes between hermits and those who "leave the family," on the one hand, and libationers and those who "live at home," on the other. These latter categories, whose chief function is healing, are said to be particularly numerous in Sichuan and the South.

The figures from the eleventh and seventeenth centuries show a marked decline for the Buddhists and remarkable stability for the Daoists. Although Buddhism is generally said to have lost much influence under the last two dynasties, what these figures really demonstrate is the success of the policy restricting the number of ordinations. Ordination implied exemption from taxation, conscription, and corvée. A Southern Song-dynasty (1127–1260) compilation of the Qing-Yuan period (1195–1201) restricts the number of Daoist novices to one per fifty and of Buddhist to one per hundred of the population as a whole. Qing-dynasty (1644–1911) law allowed monks and nuns of both religions to adopt a single pupil to whom they could transmit their ordination certificate. No religious institution could be founded without imperial permission.

**Monastic Populations**

| Year | Registrations | Buddhism | Daoism |
|---|---|---|---|
| 739 | Monasteries | 3,245 | 1,137 |
| | Convents | 2,113 | 550 |
| 1077 | Monks | 202,872 | 18,513 |
| | Nuns | 29,692 | 708 |
| 1677 | Monks | 110,292 | 21,286 |
| | Nuns | 8,615 | —— |

TABLE 1.

All nineteenth-century observers note that the result of these restrictive policies was a glaring gap between the law and reality. At the beginning of the Qing dynasty, a state census revealed 12,482 monasteries and temples founded with imperial permission and 67,140 without. Already in the eighth century, Zhang Wanfu (fl. 711), in his *Shou sandong jingjie falu zheri li* (Calendar for the selection of days for the transmission of the registers, prescriptions, and scriptures of the Three Caverns), complains that the Daoists of these areas paid attention neither to the fasts of the official liturgy nor to the proper transmission of ritual knowledge: "Their only interest is in Offerings and sacrifices." Moreover, their "vulgar ways" had become popular of late in the capital cities of Chang'an and Luoyang as well.

These comments of Zhang suggest that, by his time, the aristocratic, meditative Shangqing tradition already was losing ground to more popular forms of Daoism. Other indications of this are the gradual rise of a "Confucian" Daoist movement called the Way of Filial Piety (Xiaodao). First heard of in the seventh century, claiming to have been founded by one Xu Sun (239–292?), it was in fact a local cult whose growth from its base in Hongzhou (Jiangxi) had led to its adoption and absorption by Daoism. This process was to be repeated many times in the future, most notably in the case of a local Fujian cult of two brothers, which was converted by imperial decree in 1417 into a state Daoist cult. The emperor Chengzu (r. 1403–1425) decided on the elevation of these two "perfect lords of boundless grace" (*hong'en zhenjun*) after a nagging illness had been cured by a drug prescribed, apparently, by the Fujian temple's medium. The brothers' official titles in the imperial "canon of sacrifices" were lengthened, a second temple built for them in the capital, a special Daoist liturgy created, and, in 1420, a Lingbao scripture produced. It taught the virtues of loyalty to one's superiors, filial piety, charity, and justice, and the emperor had it printed for dissemination on a wide scale in order to repay his debt to the divine brothers.

Another example of the increasing imbrication of popular cults, imperial ideology, and Daoist liturgy occurred at the beginning of the Song dynasty. Between 960 and 994, a commoner by the name of Zhang Shouzhen received a series of revelations on Mount Zhongnan, the site of Tower Abbey. The god, who was an assistant of the Jade Emperor, revealed himself to be the divine protector of the new ruling house and instructed Zhang to find a Daoist master. Having been initiated by a Daoist of Tower Abbey, Zhang received further revelations leading to the establishment of an imperially funded temple in 976, an official title in 981, and, above all, a system of Daoist Offerings that has survived, at least in part, until the present day.

The basic feature of the new system is the grading of Offerings according to the number of "stellar seats" (*xingwei*)—from 24 to 3,600—used to construct the altar. Divided into nine grades (3 x 3), the upper three altars were reserved for the emperor, the middle three for his ministers, and the lower three for gentry and commoners. The upper three altars had, respectively, 3,600, 2,400, and 1,200 stellar seats, corresponding to the Grand Offerings of All Heaven (*Putian*), the Entire Heaven (*Zhoutian*), and Net Heaven (*luotian*). Perfect expression of the hierarchical universalism common to both Daoist and imperial ideology, this system was adopted as the universal norm in the year 1009 by the emperor Zhenzong (r. 998–1023). It was to remain in official use throughout the Yuan (1279–1368) and perhaps beyond.

A 1,200-seat version, based in part on an official edition of Daoist ritual promulgated under Huizong (r. 1101–1126), has been preserved by Lü Taigu in his *Daomen dingzhi* (The Daoist system normalized) of 1201: starting from the highest celestial and stellar divinities, the list descends—by way of the celestial officials linked to the texts of the Three Caverns, the perfect lords and immortals of Daoist history and geography, the vast bureaucracy of the Three Officers, and all the governors of hell—to the humblest gods of the soil and agents of the time cycle. Among the Daoist sites for whose lords a seat is reserved are the Five Sacred Peaks, the various "cave-heaven" paradises, and the twenty-four governances; famous Daoists mentioned include Zhang Daoling, Xu Sun, Lu Xiujing, Du Guangting, various patriarchs of the Shangqing lineage, Tan Zuxiao, Jao Tongtian, Zhongli Quan, and Lü Dongpin.

The last two named are semi-legendary Daoist immortals who came to be revered together as the patrons of an important school of *neidan* (internal elixir alchemy) first heard of in the eleventh century. Dan zixiao (fl. 930) and Jao Tongtian (fl. 994) were the co-founders of the Tianhsin Zhengfa ("orthodox rites of the heart of heaven"), a new form of exorcistic healing based on texts discovered on Mount Hua-kai (Jiangxi province) and attributed to Zhang Daoling himself. The movement spread throughout southern China—the Yao tribes that have since migrated to Thailand still practice these rites today—and by the start of the twelfth century was deemed important enough to merit imperial attention (the oldest extant collection of these rites was presented to the throne by one Yuan Miaozong in 1116).

Du Guangting (850–933) was at once an important Daoist liturgist and one of Daoism's greatest hagiographers. His liturgical compilations draw on both the Lingbao and the Zhengi traditions; his collections of anecdotal literature are a gold mine of information on local cults and popular Daoism. The liturgies may be described as a synthesis of past practice, the stories as a harbinger of future developments: Du's career marks a watershed in the history of Daoism.

Suddenly, the veil is lifted on the world of popular piety—a world of miracles, exorcisms, pilgrimages, and portents—and on the place of Daoism in that world. In his *Daojiao lingyan ji* (Records of Daoist miracles), for example, Du tells a story about Xu Sun's magic bell: when a military governor tried to remove it from the Daoist abbey where it had been ever since the time of Xu Sun, Xu appeared to the governor in a dream and told him his life was in danger. The governor returned the bell and went to burn incense and confess his fault in the abbey, but his sin was too grave to be pardoned and he died in battle soon afterward.

Another tale recounts how a mysterious visitor, later rumored to have been Zhang Daoling himself, visited the Heavenly Master of the eighteenth generation and repaired the sword used by the first Heavenly Master to "punish and control gods and demons." The sword had been in the family, adds Du, for twenty-one generations. Elsewhere in the same book, in introducing the story of a man who was released from hell because he was wearing a register transmitted to him in the year 868 by the nineteenth-generation Heavenly Master, Du notes that, until the thirteenth-generation descendant of Zhang Daoling, the registers transmitted to the faithful had been made of wood, but "because they were being transmitted on such a vast scale, the thirteenth Heavenly Master could not make them in sufficient numbers and so started using paper and silk instead."

Du no doubt owed his knowledge of such events to his own master, Ying Yijie (810–894), who, at the age of eighteen, had gone to Longhu Shan (Dragon-tiger Mountain) in Jiangxi to be initiated by the eighteenth Heavenly Master. Much later accounts claim that Zhang Sheng, the fourth-generation descendant of Zhang Daoling, had been the first to take up residence on Mount Longhu. The first contemporary trace of a Zhang family in southern China dates to 504, when according to a stele, the twelfth-generation descendant lived in an abbey in what is now Jiangsu. In the mid-eighth century Sima Chengzhen mentions a Zhang living on Mount Longhu. The next reliable witness is Du Guangting.

It is therefore impossible to ascertain whether the Zhang family, which apparently lived on this mountain in unbroken succession from at least the mid-eighth century until 1949, was indeed descended from the first Heavenly Master.

What is certain is that, from Du Guangting's time on, the lineage grew steadily more important in Chinese religious life. Already in 1015, the emperor Zhenzong (r. 997–1023) recognized its hereditary rights. By 1097 Mount Longhu had won official recognition as an authorized center for initiation into Daoist practice, along with Mount Mao (Jiangsu) for the Shangqing tradition and Mount Gezao (Jiangxi) for the Lingbao. The thirtieth Heavenly Master (1092–1126) played a prominent role at the court under Huizong, and his reputation for magical powers was already celebrated in a contemporary novel. Full consecration came in the thirty-sixth generation, to Zhang Zongyan (d. 1291): invited to the capital by the emperor Shizu (r. 1260–1295) in 1277, he was commissioned to perform a Grand Offering of the Entire Heaven (2,400 divinities) in the Changchun Gong (Palace of Eternal Spring). Shortly thereafter, he was appointed head of all Daoists in southern China. The emperor Chengzong (r. 1295–1308) decreed in 1295 that Heavenly Master texts for the Offering be used throughout the empire. Finally, under the first Ming emperor, Taizu (r. 1368–1399), the Heavenly Masters were put in charge of all Daoist affairs.

During the Yuan dynasty the control of Daoism in the North was entrusted to the successive leaders of the Quanzhen ("integral perfection") order. One of three major Daoist movements to emerge in the North during the twelfth century, when that part of China was ruled by the foreign Jurchen Jin dynasty (1115–1234), it alone was destined to survive beyond the Yuan. Its founder, Wang Zhe (1112–1170), a native of the same village in Shaanxi as Zhongli Quan, had witnessed, at the age of eighteen, the takeover of his native province by the invading Jurchen. He nonetheless served for a time in the military before deciding to abandon both his career and his family. In 1160, after a period of living in reclusion in Liujiang village, not far from Tower Abbey, two mysterious encounters with Daoist immortals led him to dig a grave, to which he gave the name "tomb of the living dead," and to live in it for three years; having built a thatched hut, he lived next to it for another four. In 1167 he suddenly burned down his hut and left for Shandong to begin proselytizing. According to Wang's hagiographers, the three immortals who appeared to him were Zhongli Quan, Lü Dongpin, and Liu Haichan, all of whom Wang refers to in his writings as his teachers.

Wishing to shock people into enlightenment, which necessarily entailed a complete break of the sort he had made from his own family and career, Wang's methods were apparently uncompromising and even violent. In this manner he selected seven disciples, including one separated couple, to carry on his work. He also established five *sanjiao hui* ("assemblies of the three teachings") before dying while on his way back to his home in the west. His disciples are portrayed by their hagiographers as ascetics and, in some cases, eccentrics. Qiu Changchun (1148–1227) lived for seven years in a cave. Hao Datong (1140–1212) spent six years under a stone bridge neither moving nor speaking and eating only when people offered him something. For nine years Wang Chui (1142–1217) spent his nights in a cave standing on one foot so as not to fall asleep. Wang is also depicted as a wandering exorcist and healer (herbal medicine was one of the arts that Wang Zhe insisted "those who study the Way must master").

The reputations of the Seven Real Persons (*qizhen*), as Wang's disciples came to be known, soon made the movement of Integral Perfection a force to deal with. It attracted lay followers from all levels of society, including the gentry class, to which most of the seven and Wang Zhe had belonged. Their following seems to have been particularly large among women. The emperor Shizong (r. 1161–1190) summoned Wang Chui in 1187, questioned him about the methods for "preserving life and ruling the country," and constructed for him the Xiuzhen Guan (Abbey for the Cultivation of Perfection). In 1197 Wang was involved, together with the Zhengi Daoist Sun Mingdao, in the celebration of a Grand Offering of the Entire Heaven in the Tianchang Guan (Abbey of Celestial Longevity) in the capital. In 1202 the emperor Zhangzong (r. 1190–1208) ordered Wang to perform an Offering in the Palace of Grand Purity in Laozi's birthplace.

But it was Qiu Changchun's three-year westward trek to meet Chinggis Khan in Central Asia that assured the order's future, for when Qiu returned to China in 1223, he did so armed with decrees granting tax and labor exemption to himself and his disciples and control over "all those in the world who leave their families" to him. The result was the rapid growth of the Integral Perfection order and the start of another round of confrontrations with the Buddhists. When Qiu died, the Tianchang Abbey was renamed the Abbey of Eternal Spring (Changchun Guan), in Qiu's honor, and his disciples inherited his position. One of them, Li Zhichang (1193–1273), abbot between 1238 and 1256, precipitated the crisis with the Buddhists by printing and distributing the *Laozi bashii huatu* (Pictures of the eighty-one transformations of Laozi). One of these transformations, of course, was that into the Buddha. The Buddhists protested and also accused the Daoists of appropriating their temples. Debates were held in 1255, 1258 (the burning of the offending books was ordered, but not carried out), and 1281 (Zhang Zongyan also participated in this debate). After the last confrontation, the Daoist canon was ordered destroyed—an order carried out, at least in part, and the Quanzhen order went into a partial eclipse until the end of Shizu's reign. It was replaced at the court by the Heavenly Masters and their ambassadors.

Strictly speaking, Integral Perfection Daoism taught nothing new. It was a reform movement that sought, in the tradition of Daoist universalism, to synthesize the best in the

Three Teachings. Like Chan Buddhism, which Wang Zhe apparently knew fairly well, it preached celibacy and "sitting in meditation" in order to control the "apelike mind and the horselike will"; as in neo-Confucianism, perfect authenticity was prized as the ultimate goal of self-cultivation. But it was eminently Daoist in insisting that both one's "nature" (*xing*) and one's "life force" (*ming*) had to be nurtured, and in having recourse for the latter to the usual panoply of physiological practices. Quanzhen masters were also frequently renowned adepts of the martial arts, and Wang Zhe himself must have practiced internal alchemy inasmuch as his divine teachers were its patrons.

Zhongli Quan and Lü Dongpin, especially the latter, appear frequently to convert and save people in a number of Yuan operas (*zaju*) of clearly Quanzhen inspiration. A temple on the presumed site of Lü Dongpin's house was converted into a Quanzhen abbey toward the end of the Jin dynasty and then, after the abbey had burned down in 1244, rebuilt on a vast scale between 1247 and 1358. The three surviving halls of the resulting Yonglo Gong (Palace of Eternal Joy) are dedicated, respectively, to the Three Pure Ones, Lü Dongpin, and Wang Zhe. The magnificent murals of the latter two halls tell the stories of Lü and Wang and of Wang's conversion by Lü. The murals of the first hall portray many of the same divinities as were listed in Lü Taigo's list of 1201: they are all "going in audience before the Origin" (*chaoyuan*), that is, before the Three Pure Ones. The other great surviving monument of Daoist history, the fabulous complex of abbeys and palaces on Mount Wu-tang (Hubei), built by the Ming emperor Chengzu in honor of Pei-ti (Emperor of the North), divine patron of the exorcistic and martial arts, was also a Quanzhen center. Reopened in 1982, it has since been recognized by the UNESCO World Heritage Fund. The Tower Abbey was first taken over by the Quanzhen order in 1236, when disciples of Qiu Changchun rebuilt it.

**LATER DEVELOPMENTS.** Both the site of Lü Dongpin's house and Mount Wu-tang were important pilgrimage centers from the twelfth and thirteenth centuries on. As such, they reveal an important aspect of Daoism's role in Chinese society in those centuries: Daoists occupied and ran important cult centers and their temples. In particular, the Daoists, together with the Buddhists, inhabited the many sacred mountains of China and took care of the pilgrims who came to them. Several of the more important pilgrimage centers also developed networks of "branch offices"—local centers where the lay-person who lacked the means or the motivation to make a long pilgrimage could nonetheless worship the divinity of his choice. On the Daoist side, the most numerous temples of this kind were those dedicated to Lü Dongpin, the Emperor of the North, and the Emperor of the Eastern Peak. The first two were centers for the practice of divination by selection of slips, which were then interpreted by an attendant. The halls dedicated to Lü Dongpin in most Quanzhen abbeys served simultaneously as temples for the local populace.

The temples of the Eastern Peak (Dongyue Miao), on the contrary, were without exception run by Orthodox Unity Daoists. According to an inscription written by one Zhao Shiyan in 1328 and set up on the grounds of the Temple of the Eastern Peak in Beijing, such temples "first become widespread in the middle of the Song dynasty." By the Yuan dynasty they were to be found in every town of any size, and mediums and their Daoist masters worked in them side by side, the former to contact the souls of the dead and the latter to save them, for the Eastern Peak, the abode of the dead already in Han times, was associated at once with the tribunals of hell and the hope of immortality. Veritable nerve centers of the traditional Chinese religious system, the temples of the Eastern Peak seem to have been singled out for destruction by the Red Guards during the Cultural Revolution (1966–1976).

It is not known when the original Daoist community organized by the Heavenly Masters disappeared. As early as the third century, leaders of the community were complaining that libationers were increasingly self-appointed or at least not appointed by the hierarchy. The office of libationer, moreover, seems very early on to have become a hereditary one. It is nonetheless fairly certain that laypersons continued to practice the initiatory rites of sexual union as late as the mid-Tang, and Heavenly Master "congregations" must therefore have continued to exist. But by the mid-Song, when the Heavenly Masters themselves began once again to play a political role, it was as hierarchs not, as in the time of Zhang Lu, of an organized lay community, but of all Orthodox Unity priests. Over the centuries, laypersons of means continued to make the pilgrimage to Dragon-Tiger Mountain in order to be invested before death with a "register of immortality," but the main function of the Daoist "pope" was the transmission of registers to priests. By the 1920s and 1930s even the number of such registers had dropped off to from one to three hundred a year, and it was estimated that only one percent of Zhengi priests actually applied for such a register.

This situation was in part due to the fact that the foreign Qing dynasty had terminated the special relationship between the ruling house and the Heavenly Masters. During the Ming dynasty, by contrast, emperors were constantly inviting the Heavenly Master to the capital to perform Offerings, the compilation of the *Daozang* (Daoist canon) was entrusted to the Heavenly Masters, and several emperors even arranged high marriages for what had in effect become their spiritual counterpart: the emperor controlled the (Confucian) administration; the Heavenly Master had final authority over all gods and demons. He was, in other words, not only the nominal head of all Daoist priests, but also the overseer of all local cults. Throughout the Ming period, the Heavenly Master continued to be associated with imperial campaigns against heterodox cults. At the same time, local Orthodox Unity priests were "infiltrating" local temples—of the Eastern Peak, of the City God (Chenghuang Miao), of the third-century patriot and general Guan Yü (Guanti Miao)—and performing Offerings for the consecration of temples dedicated to gods who, although not "Daoist," had been officially invested by imperially promulgated titles inscribed in the "canon of sacrifices." The collective ceremonies of initiation of original Daoism seem to have survived only among tribal peoples such as the Yao: there, ordination remains a prerequisite for salvation and is therefore extended to the entire community.

The number of Daoist monks—mostly of the Quanzhen order since the Yuan dynasty—never approached that of lay Daoist priests (or Buddhist monks). The monks nonetheless played an important part in shaping Daoist history from the fifth century on. Not only did their leaders have privileged relations with emperors, at least until 1281, they also regularly exchanged visits and poems with the members of the gentry class from which many of them came. Wang Zhe's first convert and eventual successor, for example, Ma Yü (1123–1183), was known locally as Ma *panzhou,* Ma "half-the-prefecture," because of his extensive land holdings. Also, it was these Daoists who controlled the network of official abbeys first created in the Tang dynasty.

At the beginning of the Qing dynasty, the White Cloud Abbey of Beijing, originally built around the grave of Qiu Changchun became the center of a reinvigorated, imperially recognized Quanzhen lineage. In the 1940s it still had at least nominal control of twenty-three such abbeys throughout the country. Qiu's birthday on the nineteenth day of the first lunar month was one of Beijing's biggest festivals. The only complete copy of the Ming-dynasty Daoist canon to survive to the present is that of the same White Cloud Abbey. It was only natural, therefore, that it was selected by the government in the 1950s as the seat of the National Daoist Association. Among the major abbeys that have been restored since the government began, in the early 1980s, to allow and even encourage the restoration of religious buildings, many are on the 1940s list of twenty-three, and all reopened abbeys send their best novices to Beijing for a six-month training period. Gradually, however Zhengi Daoists have joined the hitherto Quanzhen-dominated national association, and they now perform rituals in their temples as in the past.

## BIBLIOGRAPHY

For good general surveys of early Daoism see *Daoism Handbook*, ed. Livia Kohn (Leiden, 2000): Barbara Hendrischke, "Early Daoist Movements" (chap. 6); Peter Nickerson, "The Southern Celestial Masters" (chap. 10); Livia Kohn, "The Northern Celestial Masters" (chap. 11); Charles Benn, "Daoist Ordination and *Zhai* Rituals" (chap. 12). Excellent introductions to the ideological content of pre-Tang Heavenly Master Daoism may be found in Anna Seidel's "Das neue Testament des Dao: Lao Tzu und die Entstehung der daoistiszhen Religion am Ende der Han-Zeit," *Saeculum* 27 (1978): 147–172, and Rolf A. Stein's "Remarques sur les mouvements du daoïsme politico-religieux au deuxième siècle ap. J.-C.," *T'oung pao* 50 (1963): 1–78. On Daoist rejection of "heterodox cults," see Rolf A. Stein's "Religious Daoism and Popular Religion from the Second to the Seventh Centuries," in *Facets of Daoism,* edited by Holmes Welch and Anna Seidel (New Haven, 1979), pp. 53–81. On Daoist messianism, see Anna Seidel's "The Image of the Perfect Ruler in Early Daoist Messianism: Laozi and Li Hung," *History of Religions* 9 (November 1969 and February 1970): 216–247, and Christine Mollier's *Une apocalypse taoïste du Ve siècle: Le livre des Incantations divines des grottes abyssales* (Paris, 1990). On the early history of zhurch-state relations and the development of Daoist sanction of imperial power, see Anna Seidel's "Imperial Treasures and Daoist Sacraments: Daoist Roots in the Apocrypha," in *Tantric and Daoist Studies in Honour of R. A. Stein,* edited by Michel Strickmann (Brussels, 1983), vol. 2, pp. 291–371, and Richard B. Mather's "Kou Qianzhi and the Daoist Theocracy at the Northern Wei Court, 425–451," in *Facets of Daoism,* pp. 103–122. My *Wushang biyao: Somme daoïste du sixième siècle* (Paris, 1981) describes the ideological content of Daoist universalism under the Northern Zhou dynasty. For the sociological background and early history of Shangqing Daoism, see Michel Strickmann's "The Mao-shan Revelations: Daoism and the Aristocracy," *T'oung pao* 63 (1977): 1–64. Isabelle Robinet's *Méditation daoïste* (Paris, 1979) and *La révélation du Shangqing dans l'histoire du daoïsme,* 2 vols (Paris, 1984), gives thorough surveys of Shangqing practices and their prehistory.

For the Tang dynasty, the best introduction is Timothy Barrett's *Daoism under the T'ang: Religion and Empire During the Golden Age of Chinese History* (London, 1996). Charles David Benn's "Daoism as Ideology in the Reign of Emperor Xuanzung (712–755)" (Ph.D. diss., University of Michigan, 1977) gives a detailed study of the period up to the mid-Tang. On the pivotal figure Du Guangting, Franciscus Verellen's *Du Guangting (850–933): taoïste de cour à la fin de la Chine médiévale* (Paris, 1989) gives an exemplary study of the intertwining of religious and political history. On Huizong, the "emperor as Daoist god," see Michel Strickmann's "The Longest Daoist Scripture," *History of Religions* 17 (February-May 1978): 331–354. *Procédés secrets du Joyau magique. Traité d'alchimie daoïste du onzième siècle,* edited and translated by Farzeen Baldrian-Hussein (Paris, 1984) is a translation and study of the main text on internal alchemy in the Zhongli Quan/Lü Dongpin tradition.

A special issue of *The Journal of Chinese Religions* (no. 29, 2001), edited by Vincent Goossaert and Paul Katz, is entirely devoted to "New Perspectives on Quanzhen Taoism." *The Yongle Palace Murals* (Beijing, 1985) gives beautiful reproductions of the Yonglo murals. An excellent study is provided by Paul R. Katz in *Images of the Immortal: The Cult of Lü Dongbin at the Palace of Eternal Joy* (Honolulu, 1999). David Hawkes's "Quanzhen Plays and Quanzhen Masters," *Bulletin de l'École Francaise d'Extrême-Orient* 69 (1981): 153–170, is a delightful introduction to the subjects named.

On the legislation governing official abbeys, see Werner Eichhorn's *Beitrag zur rechtlizhen Stellung des Buddhismus und Daoismus im Song-Staat: Übersetzung der Sektion "Daoismus und Buddhismus" aus dem Qing-Yuan T'iao-Fa Shih-Lei* (Leiden, 1968) and J. J. M. de Groot's *Sectarianism and Religious Persecution in China,* vol. 7 (Amsterdam, 1903), chap. 3.

Excellent introductions to Daoism from the Song through the Qing may be found in Livia Kohn, ed., *Daoism Handbook* (Leiden, 2000): Lowell Skar, "Ritual Movements, Deity Cults, and the Transformation of Daoism in Song and Yuan Times" (chap. 15); Lowell Skar and Fabrizio Pregadio, "Inner Alchemy (*Neidan*)" (chap. 16); Pierre-Henry de Bruyn "Daoism in the Ming (1368–1644)" (chap. 20); Monica Esposito, "Daoism in the Qing (1644–1911)" (chap. 21). New light on the role of Tantrism in transforming Daoism's relationship with popular religion may be found in Edward L. Davis, *Society and the Supernatural in Song China* (Honolulu, 2001).

On Daoism among the Yao, see Jacques Lemoine's richly illustrated *Yao Ceremonial Paintings* (Atlantic Highlands, N.J., 1982). On Daoism as it functions in modern Chinese society, see my *Daoist Ritual in Chinese Society and History* (New York, 1987) and Kenneth Dean, *Taoist Ritual and Popular Cults of Southeast China* (Princeton, 1993).

***Revised Bibliography***

## DAOISM: DAOIST LITERATURE

Compared to Buddhism, the literature of Daoist traditions remains largely unexplored. Large-scale study in this area was greatly enhanced in 1926 with the appearance of the first widely accessible reprint of the *Daozang*, or Daoist canon, which, at 1120 fascicles, is the largest repository of Daoist literature ever compiled. Research on Daoism prior to that time was, with few exceptions, generally confined to studies of texts such as the *Laozi* and *Zhuangzi* that are widely available in editions outside the canon. For the most part, the West has also had its understanding of the Daoist legacy shaped by what has been summarized from the writings on the subject by Buddhist polemicists and unsympathetic Chinese literati. The one-sided view of Daoist traditions that such limitations promote is easily amended when the resources of the *Daozang* are taken into account, together with subsidiary compilations and pertinent collections of epigraphy and manuscripts. The social and historical context of much of this material has only recently come under intensive scrutiny. Continued research on the Daoist literary heritage is likely to challenge many long-held perceptions about the nature of religious traditions in Chinese society.

**THE DAOZANG.** Before 1926, very few copies of the Daoist canon were available outside of those kept in the temple archives of China. The state traditionally sponsored both the compilation and distribution of the *Daozang*. While it cannot be said that the newly founded Republic of China was a patron of Daoism, the reprinting of the canon between 1923 and 1926 came about only through government subvention. The former minister of education and renowned bibliophile Fu Zengxiang (1872–1950) was instrumental in convincing President Xu Shichang (1855–1939) of the scholarly value of the *Daozang* and to underwrite its publication by the Commercial Press of Shanghai. The copy that was selected for photographic reproduction in the 1920s and that has since been reprinted in at least three modern editions was the wood-block concertina canon housed in the Baiyun Guan (White Cloud Abbey) of Beijing, the central Daoist seminary of the People's Republic of China. It is thought that this copy of the canon was largely derived from the 1445 printing, apart from the lacunae reconstituted in 1845.

**History of compilation.** Among the earliest inventories of Daoist writings are those recorded in the bibliographic monograph of Ban Gu's (32–92) *Han shu* (History of the Han) and Ge Hong's (283–343) *Baopuzi*. It was not until the late fifth century, well after the establishment of the Shangqing and Lingbao scriptural traditions, that a single, comprehensive catalogue of Daoist texts was attempted. Lu Xiujing (406–477), principal codifier of the Lingbao corpus, undertook the task on the order of Song Mingdi (r. 465–472). The *Sandong jingshu mulu* (An index to the scriptural writings of the three caverns), which Lu presented to the emperor in 471, was said to list over twelve hundred *juan* (scrolls or chapters), ranging from scriptures and pharmaceutical works to talismanic diagrams. Nearly three centuries later, Tang Xuanzong (r. 712–756), confident that he was the descendant of Laozi, issued a decree dispatching his envoys throughout the empire in search of all existing Daoist writings. The collection that followed was given the title *Sandong qionggang* (Exquisite compendium of the three caverns) and reportedly included around thirty-seven hundred or fifty-seven hundred *juan*. It was the first canon from which multiple copies were to be transcribed for distribution to Daoist temples. But not long after Xuanzong officially authorized this undertaking in 748, the imperial libraries of the capitals of Chang'an and Luoyang were destroyed during the An Lushan and Shi Siming rebellions, and much of the *Sandong qionggang* was apparently lost.

Subsequent compilations were attempted upon the command of various Song emperors, who similarly viewed their mandate as part of a larger Daoist dispensation. Song Zhenzong (r. 998–1022) assigned his trusted adviser Wang Qinruo (962–1025) the task of preparing a new catalogue of Daoist texts in the imperial archives. By 1016 an assistant draftsman named Zhang Junfang (fl. 1008–1029) was put in charge of a staff of Daoist priests to make copies of a new canon for distribution to major temples. The *Da Song tiangong baozang* (Precious canon of the celestial palace of the great sung; 4,565 *juan*) that resulted was the first definitive edition of what has come simply to be called the *Daozang*.

A century later Song Huizong (r. 1101–1125) initiated an even more ambitious program for the compilation and dissemination of a new Daoist canon. In 1114 he issued an edict ordering all local officials, clergy, and laity to submit whatever Daoist texts they had to the capital of Kaifeng. A number of Daoist priests answered his call to help with the collation of the incoming literature. Their work culminated in the *Zhenghe wanshou Daozang* (Daoist canon of the longevity of the Zhenghe reign), the first canon to be printed. The blocks for nearly fifty-four hundred *juan* were cut sometime around 1118 to 1120. It is not known how many copies of the *Daozang* were subsequently made and there is also some question as to how much was lost upon the Jurchen takeover in 1127. But it appears that at least some blocks survived, for in 1188 it is reported that Jin Shizong (r. 1161–1189) commanded their removal from Kaifeng to the Tianchang Guan (Abbey of Celestial Perpetuity) in the central capital of the Jurchen empire, the predecessor to the Baiyun Guan in Beijing. His grandson and successor, Jin Zhangzong (r. 1190–1208), had the temple enlarged in 1190 and then appointed two imperial academicians to assist the abbot in reediting the canon. With the carving of additional blocks two years later, the *Da Jin xuandu baozang* (Precious canon of the arcane metropolis of the great Chin) totaled over sixty-four hundred *juan.*

In 1215 the capital of the Jurchen fell into the hands of the Mongols and it is not known how much of the enlarged canon of the Jin escaped destruction. But by 1237 work on a new edition was undertaken, sponsored this time by the local administration of Shanxi province. Two Quanzhen masters, Song Defang (1183–1247) and his disciple Qin Zhi'an (1188–1244), oversaw a staff in the hundreds. The *Xuandu baozang* (Precious canon of the arcane metropolis), completed in 1244, was apparently the largest ever, comprising altogether seven thousand *juan.* Over a hundred copies were said to have been made, but in 1281 Khubilai Khan decreed that all texts and printing blocks of the *Daozang* be burnt, save the *Dao de jing.* Fragments of the 1244 canon were nonetheless spared and, together with what remained of the Jurchen and Song canons, came to serve as the foundation of the Ming *Daozang.*

The canon currently in print is based on the compilation completed between 1444 and 1445 and a supplement dating to 1607. Ming Chengzu (r. 1402–1424) initiated the project in 1406 by appointing the forty-third Celestial Master, Zhang Yuchu (1361–1410), as compiler-in-chief. But the final version of the *Da Ming Daozang jing* (Scriptures of the Daoist canon of the great Ming) was actually completed under the guidance of Shao Yizheng, a prominent Daoist master at the court of Ming Yingzong (r. 1436–1449). The fiftieth Celestial Master, Zhang Guoxiang (d. 1611), supervised the preparation of a 240-*juan* supplement to the 5,318 *juan* of this edition. It is known as the *Xu Daozang* (Supplementary Daoist canon) of the Wanli reign (1573–1619), whereas the fifteenth-century core is sometimes referred to as the *Zhengtong Daozang* or Daoist canon of the Zhengtong reign (1436–1449).

**Organizational divisions.** As the title of Lu Xiujing's catalogue of 471 suggests, Daoist writings were traditionally classified according to the "Three Caverns" (*sandong*). This tripart division became a fundamental organizational feature of the *Daozang.* Although there has been a tendency in the past to equate these three compartments of texts with the "Three Receptacles" (*sanzang*) of the Buddhist canon, the closer parallel is actually the Buddhist *triyāna* or *sansheng* ("three vehicles"). Rather than being representative of three genres of literature such as the Sūtra, Vinaya, and Abhidharma of the Three Receptacles, the Three Caverns reflect three distinct revelatory traditions. And like the Three Vehicles, the Three Caverns are viewed as a ranking of textual legacies. The Dongzhen section evolved around the Shangqing (Supreme Clarity) scriptures, the Dongxuan around the Lingbao (Numinous Treasure), and the Dongshen around the San huang (Three Sovereigns). Since this categorization gives primacy to the Shangqing traditions, it is assumed that it was devised well before Lu Xiujing compiled his catalogue, perhaps by the end of the fourth or beginning of the fifth century. There is less certainty about the origins of the Four Supplements that follow the Three Caverns, what are known as the Taixuan, Taiping, Taiqing, and Zhengyi components of the canon. The term *ssu-fu* ("four supplements") does not seem to date before the turn of the sixth century. The first three have commonly been regarded as individual appendices to the Three Caverns, but in fact they appear to have been organized around very specific literary collections. Central to the Tai-xuan division is the *Dao de jing.* Likewise, the *Taiping jing* (Scripture on the grand pacification), the Taiqing (Grand Purity) legacy of alchemical writings, and the Zhengyi (Authentic unity), or Celestial Master heritage lie at the heart of the Taiping, Taiqing, and Zhengyi subdivisions. It may be that these four supplements were inspired by demands to establish a more cohesive body of Daoist literature vis-à-vis the rapidly developing corpus of Chinese Buddhist writings. Although the preeminence of the Shangqing revelations was apparently never in question, it seems that by the sixth century there was more awareness of the diversity of inspiration from which they arose. Liturgical texts of the Tang dynasty, moreover, seem to suggest that the arrangement of the canon corresponds to descending ranks of ordination, from the top level of Dongzhen down to the first step of the Zhengyi initiation.

Whatever the underlying significance of the organization of the *Daozang,* accretions over the centuries have resulted in a less than systematic presentation of texts. Each of the Three Caverns is subdivided into twelve sections: (1) original revelations, (2) divine talismans, (3) exegeses, (4) sacred diagrams, (5) histories and genealogies, (6) codes of conduct, (7) ceremonial protocols, (8) prescriptive rituals, (9) special techniques (i.e., alchemical, geomantic, numerological), (10) hagiography, (11) hymnody, and (12) memorial communications. The distribution of texts is not always in keeping with either the major headings or these subheadings. No categorical distinctions are applied to the Four Supplements and the *Xu Daozang,* the contents of which are as diverse as the Three Caverns.

**Facets of research.** Nearly half of the volumes in the canon either bear dates after 1126 or can be directly linked to new scriptural traditions developing after the Northern Song dynasty. Moreover, the prefaces of at least sixty titles in the *Daozang* indicate that they circulated in printed editions prior to their incorporation into the canon. Prefaces and colophons, however, are not always reliable guides to the history of a text. Fictive lineages are often invoked in order to establish the historical antiquity of newly codified writings. It is not unusual to find, for example, the provenance of a text traced directly to the founder of the Tianshi Dao (Way of the Celestial Masters), Zhang Daoling (fl. 142 CE). An even larger number of texts are simply presented as the word of divine authority. The names of the deities cited often prove critical to the identification of a text vis-à-vis established scriptural traditions. Other internal dating features that help clarify the historical and social origins of a compilation include reign titles, datable place names and official titles, as well as the titles of canonization granted by imperial decree to various patriarchs and apotheosized cultic figures. The language itself, particularly the use of specialized terminology, also helps determine the setting in which a text arose. The *terminus a quo* or *terminus ad quem* of a work can likewise be determined with the help of a number of inventories of Daoist texts.

**Contents.** The range of literature in the canon is as diverse as the beliefs and practices associated with Daoism since the Han dynasty. Much research to date has concentrated on the scientific significance of Daoist alchemical and pharmaceutical works. Aside from the early Shangqing and Lingbao scriptural traditions, little has been reported on the textual legacy of Daoist revelatory and cultic inspiration. The *Daozang*, furthermore, has yet to be fully appreciated as a valuable repository of belles-lettres in its own right. The following survey highlights a few of the texts in the canon with enduring literary and religious interest.

***Revelation and ritual.*** As a work ostensibly transmitted from master to disciple, the *Dao de jing* or *Laozi* has long been regarded as a revelation in itself. The writings that Laozi reportedly delivered to the gatekeeper Yin Xi on his journey west have served as the inspiration for centuries of instruction on the attainment of the Dao. To the Celestial Masters, the *Dao de jing* seems to have functioned foremost as a code of behavior for young initiates. It is thought that the Xiang'er commentary on the *Laozi* (*Xiang'er zhu*) discovered at Dunhuang was compiled by one of the first, if not the first, patriarch of the Celestial Masters. The commentary extrapolates not only rules of conduct but also techniques of meditative practice from the text and is the only substantial writing associated with the early Celestial Masters to survive. The apotheosis of Laozi, that is, Taishang Laojun, or Lord Lao the Most High, who appeared before the founder Zhang Daoling was said to have revealed not scriptures but the sacred registers and talismans of divine guardians. Both were essential to the demonifuge mission of the Tianshi Dao. Divine commanders on high could be summoned only by those privy to their names and capable of infusing talismanic communications with their vitality. Countless texts, including even Ge Hong's *Baopuzi*, purport to preserve the apotropaic talismans of the Celestial Masters. The manipulation of such talismans was and still is thought to keep spectral forces at bay. Throughout the centuries the codifiers of later revelatory and ritual writings have never forgotten the ultimate heritage of the Tianshi Dao as a healing cult. Many anthologies of ritual are based precisely on the understanding that the ultimate mission of their founders was to convey hope in the salvation of humankind from all forms of suffering.

Salvation was also the message behind one of the earliest scriptures recorded in the canon, the *Taiping jing* (Scripture on the grand pacification). An early version of a text by this title was apparently promoted during the Western Han in support of a faction that sought to influence the direction of the ruling house through its expertise in the interpretation of cosmological omens. What circulates as the *Taiping jing* can be traced in part to another faction that arose during the Eastern Han on the Shandong Peninsula. Because of the text's link with Zhang Jue, leader of the Yellow Turban peasant rebellion, and the fall of the Han empire, the *Taiping jing* fell out of favor for several generations. It was not until the sixth century that a new, and much larger, edition of 170 *juan* appeared, portions of which are preserved in the canon as well as in Dunhuang manuscripts. This edition, the provenance of which can be traced to the Shangqing *axis mundi* of Maoshan (in present-day Jiangsu), seems to retain many of the major themes promoted in the Han dynasty works. The text was generally regarded as the omen of a more prosperous era. While there is difficulty in distinguishing the second-century text from later accretions, it appears that one consistent feature was the hint of an apocalypse should the divine teachings recorded within not be put into effect. The sixth-century editors enlarged upon this theme by interpolating references to the promise of deliverance by a messianic figure sacred to Shangqing, Housheng Jun, or the Sage-lord to Come. Overall, however, the *Taiping jing* stresses the importance of creating a utopian society in the present, one in which the political, social, and economic welfare of all could be assured upon the recitation of the scripture and the keeping of behavioral precepts in accordance with the will of the heavens above. This ideal of equity is tempered in part by instructions on techniques for prolonging life, a pastime in which only a select few could indulge.

The common denominator between the practices prescribed for attaining longevity in the *Taiping jing* and in the Shangqing scriptures is a large body of macrobiotic literature that is traditionally associated with the *fangshi* or technocrats of Chinese society. The titles of many of these works are recorded in early hagiographies. Central to these guides on the pursuit of a life everlasting is the ability to gain communion with the gods residing within one's own body as well as with those on high. One of the earliest and more provocative instruction manuals on gaining communication with the corporeal hierarchy is the *Huangting jing (Scripture of the Yellow Court).* The innate ambiguities of this lengthy verse composed in heptasyllabic meter were apparently thought to be at least partially resolved upon repeated recitation. A revised and less arcane version of the *Huangting jing* was reportedly among those texts conveyed to Yang Xi (b. 330), the prime recipient of the Shangqing revelations during the years 364 to 370. The most comprehensive record of Shangqing beliefs and practices was made over a century later by the eminent Daoist master Tao Hongjing (456–536). The *Zhengao* (Declarations of the perfected) that he edited is largely intended to be a verbatim account of the instructions given Yang during the visits of divine transcendents. Central to the expectations of those promoting the new dispensation of Shangqing was the imminent descent of a messiah who could replace the disorder of their age with order. The eschatological scenario for the advent of a savior by the name of Li Hong is set forth in the *Shangqing housheng daojun lieji* (Annals of the Lord of the Tao, the sage-to-come of Shangqing). The vision of Li Hong's epiphany continued to inspire a number of messianic movements as reflected, for example, in the *Dongyuan shenzhou jing* (A scripture of spirit spells from the caverned abyss), a composite work dating from the fifth and sixth centuries that has its analogues in the newly compiled *dhāraṇī* sūtras of that era.

The Shangqing visionaries worked not only toward the restoration of terrestrial order but also toward their own promotion into the ranks of the divine. The methods by which their eschatological hopes could be realized ranged from the rigid control of diet to stringent respiratory exercises and experimentation with pharmaceutical compounds. But the main sustenance for adepts pursuing such a regimen were the vital forces of the sun, moon, and stars. It was thought that the regular and concentrated absorption of these powerful sources of radiance would lead ultimately to one's cosmic transmigration. Feeding on the illumination of astral bodies is among the most fundamental techniques of the Daoist master (central to his private meditative sessions as well as his liturgical performances) and is by and large a technique of visualization, the skill of which is the concern of many manuals predating the Shangqing revelations. Those texts in which the ultimate goal specified is ascent to the celestial realm of Taiqing are commonly regarded as part of a Taiqing scriptural tradition, the origins of which remain unclear. The teachings of these Taiqing manuals were incorporated into both the Shangqing revelations and the slightly later scriptural tradition known as Lingbao. The prolongation of life through the ingestion of astral essences is, for example, a lesson in the *Taishang Lingbao wufu xu* (Prolegomena on the five talismans of the numinous treasure of the most high), a text originally dating to the late third century and recycled by spokesmen for the Lingbao tradition in the late fourth century.

The major recipient of the Lingbao revelations was Ge Chaofu, a nephew of Ge Hong. In the 390s, Ge Chaofu began ascribing the origin of some twenty-seven Lingbao scriptures to his grand-uncle Ge Xuan (164–244). This set of sacred writings actually owes its inspiration to not only the centuries-old arcana of southern Chinese religious practice and the more recent Shangqing innovations, but also to the Mahāyāna Buddhist traditions of the Nanjing area. The message of Lingbao, as epitomized in the *Duren jing* (Scripture on the salvation of mankind), was that all could ultimately be released from the cycle of suffering and ascend to the celestial realm by adhering to the teachings of the Yuanshi Tianzun, or Celestial Worthy of Primordial Commencement. The foremost contribution of the Lingbao tradition was in fact a whole program of liturgical services to be performed on behalf of the living and dead. Equally significant was the articulation of a code of behavior to be followed by the faithful in their struggle to escape the bonds of the mundane realm. As with the Shangqing tradition, a systematic presentation of the Lingbao corpus came some time after the original revelations. What is preserved in the canon from this syncretic development is due to the efforts of Lu Xiujing, the compiler of the first known catalogue of Daoist writings.

Expansion on the Lingbao rituals continued for centuries, as is reflected, for example, in the *Wushang huanglu dazhai licheng yi* (Protocols on the establishment of the great *Zhai* retreats of the Yellow Register), a compilation based on the writings of Lu, as well as two major Tang liturgists, Zhang Wanfu (fl. 711) and Du Guangting (850–933), and the Song Daoist masters Liu Yongguang (1134–1206) and Jiang Shuyu (1156–1217). Du Guangting was by far the most prolific Tang liturgist, for in addition to editing a number of Lingbao codes, he also compiled the protocols for various ordination rituals, including those marking the bestowal of the *Dao de jing* and the divine registers of Shangqing and Zhengyi. He issued, moreover, a series of ritual texts associated with the *Scripture of Spirit Spells*, as well as with the archaic practice of casting propitiatory prayers inscribed on metal or wood into caves and streams. The diversity of Du's contributions reflects in general the trend of his age toward a consolidation and systematization of diverse ritual practices in which the Daoist priesthood was engaged.

The editorial enterprises of the Tang dynasty soon yielded to a new wave of scriptural innovation during the Song dynasty. The creation of more innovative ritual traditions was apparently stimulated in large part by Song Huizong's patronage of Daoist masters. Among the most influential at his court was Lin Lingsu (1076–1120) of Wenzhou (in present-day Zhejiang). Lin convinced the emperor that he was the incarnation of Changsheng Dadi (Great Sovereign of Long Life) and, as such, was responsible for the salvation of all under his domain. To this end, Lin drew on the soteriological features of the Lingbao legacy and the messianic expectations of the Shangqing tradition to devise what he called the Shenxiao (Divine Empyrean) dispensation. The *Gaoshang shenxiao zongshi shoujing shi* (Formulary for the transmission of scriptures according to the patriarchs of the exalted divine empyrean) is a record of the evolution of the Shenxiao scriptures from their origins as cosmic script to their bestowal upon the Grand Sovereign himself. Large ritual compendia were eventually compiled based on this new scriptural heritage, with the *Duren jing* uniformly established as the central focus. Among the largest of such corpora are those associated with the teachings of Ning Benli (1101–1181), also of Wenzhou, namely the *Shangqing Lingbao dafa* (Great rites of the Shangqing Lingbao legacy), compiled by a disciple named Wang Qizhen, and the *Lingbao lingjiao jidu jinshu* (Golden writings on salvation, based on the instructions conveyed by the Lingbao legacy), edited originally by Lin Weifu (1239–1302) of Wenzhou.

Another scriptural tradition codified during Song Huizong's reign was the Tianxin Zhengfa (Authentic Rites of the Celestial Heart), the origins of which were traced to the discovery in 994 of sacred texts at Huagai Shan (in present-day Jiangxi). One of the Daoist masters working on the compilation of a new canon at Kaifeng, Yuan Miaozong (fl. 1086–1116) sought to make amends for a lack of talismanic healing rituals by compiling the *Taishang zhuguo jiumin zongzhen biyao* (Secret essentials of the most high on assembling the perfected for the relief of the state and delivery of the people). At the heart of this corpus are the instructions on the application of the three talismans central to the Tianxin legacy: San'guang (Three Sources of Radiance; i.e., sun, moon, and stars); Zhenwu (Perfected Martial Lord); and Tiangang (Celestial Mainstay; i.e., Ursa Major).

The best testimony to the diversity of healing ritual from the twelfth to the fourteenth centuries is the *Daofa huiyuan* (A corpus of Daoist rites), compiled after 1356. The most voluminous work in the canon, this corpus is devoted largely to what are known as *leifa* ("thunder rites"), based on the practice of quelling demonic forces through the absorption and projection of thunder pneumas. The opening chapters of the work are derived from one of the later Thunder Ritual traditions called Qingwei (Purified Tenuity), codified in part by Zhao Yizhen (d. 1382). Many rituals that evoke the authority of the Zhengyi tradition appear to reflect the influence of the thirty-ninth Celestial Master Zhang Sicheng (d. 1343). Most outstanding of all are the ritual instructions to be enacted on behalf of various astral deities and cultic figures such as the martial lord Guan Yu (d. 219). These therapeutic rites were prescribed for a wide range of ailments, from conjunctivitis to manifestations of possessing spirits. Many attest, moreover, to a long tradition of collaboration between Daoist masters and spirit-mediums.

***Hagiography.*** Not unlike Confucian and Buddhist biographical accounts, Daoist hagiographies were compiled primarily as commemorative works, usually with a didactic message in mind. The lives of transcendents were generally intended to instruct on the paths by which one's divine destiny might be realized, as well as on the rewards inherent in venerating those who gained entry into the celestial ranks. The visionary Yang Xi was reportedly conveyed the full biographies of a number of divine transcendents with whom he was in communication, but only a few survive. Some of his contacts are memorialized in the *Liexian zhuan* (Lives of the immortals), traditionally attributed to Liu Xiang (77–6 BCE) but apparently based on several centuries of oral tradition surrounding various local cults.

More extensive hagiographic accounts were compiled during the Tang dynasty, most notably by Du Guangting. One work of his, the *Yongcheng jixian lu* (A record of the transcendents assembled at Yongcheng), is entirely devoted to the lives of divine women, starting with an account of the cosmic evolution of the primordial goddess who gave birth to the historical Laozi. Du Guangting was above all a good storyteller and, as his *Daojiao lingyan ji* (An account of the divine efficacy of the teachings of the Dao) and *Shenxian ganyu zhuan* (A record of inspirational encounters with divine transcendents) further attest, he was most interested in recording accounts of sacred phenomena. Such works, together with Buddhist miracle tales, contributed significantly to the development of the narrative in Chinese literary history.

By far the most comprehensive hagiographic work in the canon is one compiled by a specialist in Thunder Ritual named Zhao Daoyi (fl. 1297–1307), the *Lishi zhenxian tidao tongjian* (A Comprehensive mirror on successive generations of perfected transcendents and those who embody the Dao). Largely derivative of earlier works, this text preserves much material that has otherwise been lost. Among more specialized works is the *Xuanpin lu* (A record of the ranks of the sublime) edited by a prominent literatus named Zhang Yu (1283–c. 1356). The author, who was himself temporarily in residence at Maoshan, dedicates a large portion of his text to the Shangqing heritage, from Yang Xi to the twenty-fifth patriarch Liu Hunkang (1035–1108). A separate account of the Zhengyi patriarchs, the *Han Tianshi shijia* (A genealogy of the Celestial Masters since the Han), is a composite work, based on editions dating from the fourteenth to the sixteenth century. The imprimatur of the fiftieth Celestial Master, Zhang Guoxiang (d. 1611), is found not only in this text but in the latest hagiography of the canon, the *Soushen ji* (In search of the sacred), edited by Luo Maodeng (fl. 1593–1598). Also a composite work, this text opens with the biographies of Confucius, Śākyamuni, and Taishang Laojun. Most predominate thereafter are the accounts of apotheosized cultic figures from south of the Yangtze. The dates of birth and ascension recorded in many of these entries give some indication as to the annual cycle of festival days authorized by church and state.

Several hagiographic works honor the Quanzhen heritage founded by Wang Zhe (1113–1170). One of the earliest is the *Jinlian zhengzong ji* (An account of the true lineage of the golden lotus), completed in 1241 by Qin Zhi'an, editor of the 1244 canon. This work was apparently lost in the book burning of 1281 and only recovered in the Ming. It was unknown to the compilers of a similar hagiography, the *Jinlian* *zhengzong xianyuan xiangzhuan* (An illustrated biographical account of the transcendent origins of the true lineage of the golden lotus). Liu Zhixuan and Xie Xichan completed this text in 1326, according to what written documents and stone inscriptions remained. They differ with Qin in attributing the origins of Quanzhen teachings to Laozi, but there is unanimity on the following four patriarchs: Donghua Dijun (Sovereign Lord of Eastern Florescence), Zhongli Quan, Lü Yan (b. 798?), and Liu Cao (fl. 1050). Central to both works are the hagiographies of the founder Wang and his seven disciples, known to the tradition as the Seven Perfected Ones (*qi zhen*) of Quanzhen: Ma Yu (1123–1183), Tan Chuduan (1123–1185), Liu Chuxuan (1147–1203), Qiu Chuji (1148–1227), Wang Chuyi (1142–1217), Hao Datong (1140–1212), and the single matriarch, Sun Bu'er (1119–1183).

Among hagiographies for individual Quanzhen patriarchs is an anonymous compilation in tribute to Wang Chuyi, the *Tixuan zhenren xianyi lu* (A record of the marvels manifested by the perfected who embodies sublimity). The nineteen episodes in this text offer a rare view of the therapeutic mission of Quanzhen masters, in the roles of healer, rain-maker, and demon queller. Even more well-known is the patriarch Qiu Chuji, whose journey into Central Asia for an audience with Chinggis Khan is commemorated in the *Changchun zhenren xiyou ji* (The journey to the west of the perfected Changchun). Qiu's disciple Li Zhichang (1193–1256) completed this work in 1228, following Qiu's death at the Tianchang Abbey in Beijing. The transcendent Lü Yan, conventionally credited with Wang Zhe's enlightenment, is the subject of a lengthy chronicle by Miao Shanshi (fl. 1324), the *Chunyang dijun shenhua miaotong ji* (Annals of the wondrous communications and divine transformations of the sovereign lord Chunyang). As with similar narrative sequences, this text appears to have evolved from centuries of storytelling traditions that also found their expression in temple wall paintings.

Most numerous of the hagiographies focused on local cults are those dedicated to Xu Sun (239–292?), whose career as a healer and subduer of malevolent dragons was established from Sichuan east to the central Jiangxi River valleys. The earliest text to survive intact is the *Xiaodao Wu Xu er zhenjun zhuan* (A Hagiography of Wu and Xu, the two perfected lords of the filial way). Xu's association in this account with Wu Meng, the legendary exemplar of filiality, attests to an early ritual tradition that evolved around his cult in Jiangxi, apparently a Tang variation on Lingbao liturgy. The *Yulong ji* (An anthology of jade beneficence), a later work compiled by the well-known specialist in Thunder Rites, Bai Yuchan (fl. 1209–1224), reveals the extent to which Song Huizong patronized this cult as a symbol of unity in the face of the Jurchen invasions. Veneration of Xu Sun eventually led to the development of a nationalistic cult known as the Jingming Dao (Way of Purity and Perspicacity), generally thought to have been founded by Liu Yu (1257–1308), an abbot of the Yulong Guan, an abbey established in Jiangxi at the putative site of Xu's ascension. Liu's disciple Huang Yuanji (1270–1324) edited the *Jingming zhong xiao quanshu* (A comprehensive compilation on the Jingming tradition of loyalty and filiality), the biographies of which exemplify the role of Xu's disciples as guarantors of political stability. The traditional attributes of *zhong* (loyalty) and *xiao* (filiality) are reinterpreted in this context as metaphors for submission to authority and the suppression of rebellion. Shrines to Xu are still maintained in Taiwan today and, even more remarkably, the Yulong Abbey is officially designated as a historical monument worthy of preservation.

A number of other hagiographic accounts testify to the popularity of local cults at various sacred mountain sites, including Lu Shan on the northern border of Jiangxi, once a popular missionary resort, and Huagai Shan, the source of the Tianxin revelations. Most well-known perhaps is the guardian of Wudang Shan (in present-day Hubei), referred to as Xuanwu (Dark Martial Lord) or Zhenwu (Perfected Martial Lord). How early this deity associated with the north was enshrined in China is not known, but well over three hundred shrines are established in his name on Taiwan today. Xuanwu's role as defender of the Song empire against the Western Xia invasions and other threats is commemorated in the *Xuantian shangdi qisheng lu* (An account of the revelations conveyed to the sages by the supreme sovereign of the dark celestial realm). A composite work, it is derived largely from the textual counterpart to the wall paintings of a shrine dedicated to the Martial Lord by Song Renzong in 1057. A later anthology reveals in turn that many literati of the thirteenth and fourteenth centuries promoted Xuanwu as the special guardian of the Mongol empire. Similarly, the *Da Ming Xuantian shangdi ruiying tulu* (An illustrated account of the auspicious responses of the supreme sovereign of the dark celestial realm during the great Ming) is a collection of encomia dating from 1405 to 1418 that honor the deity's role in establishing the mandate of the Ming.

***Topography, epigraphy, and historiography.*** The chorography of sacred space, in the heavens above, on the earth below, and in the subterranean caverns beyond, is the subject of many works in the Daoist canon. Certainly among the most renowned of such texts from antiquity is the *Wuyue zhenxing tu* (Mappings of the true form of the Five Sacred Peaks), talismanic variations of which were introduced into the Lingbao textual corpus. The apotropaic value of these diagrams was recognized by Ge Hong and inspired Daoist liturgists for many generations later. The Five Sacred Peaks also serve as a crucial point of reference in Du Guangting's *Dongtian fudi yuedu mingshan ji* (A record of the celebrated mountains, conduits, sacred peaks, munificent terrains, and caverned heavens). In addition to mapping out the *wuyue* ("five [sacred] peaks," e.g., Tai Shan in the east, Heng Shan in the south, Song Shan in the center, Hua Shan in the west, and Heng Shan in the north) and the interlocking network of ranges, Du identifies ten major and thirty-six supplementary *dongtian* or subterranean chambers, as well as seventy-two sites traversed by various transcendents and the twenty-four original parishes established by Zhang Daoling in western Sichuan.

Larger descriptive topographies date from the Song to Ming. The canon preserves individual records for three of the Five Sacred Peaks. That compiled in commemoration of the Sacred Peak of the East, *Dai shi* (A history of Dai), was presented to Ming Shenzong (r. 1573–1619) on New Year's Day of 1587. In compiling this work the editor, Zha Zhilong (fl. 1554–1586), sought to reinforce the ritual obligations of the court toward Tai Shan, devoting large portions of the text to the history of imperial sacrifices and various temple compounds, as well as the supernatural phenomena witnessed at the site from 78 BCE to 1586.

Earlier and less ambitious accounts are available for the sacred peaks of the west and south. The *Xiyue Huashan zhi* (A treatise on Hua Shan, sacred peak of the West) is attributed to a Wang Chuyi, not to be confused with the Quanzhen patriarch of the same name. This text, derived in part from the *Huashan ji* (A record of Hua Shan) dating to the Tang, may in fact be the work of the author of an 1183 preface, Liu Dayong. Unlike the treatise on Tai Shan, there is little discussion of ritual traditions in propitiation of the spirits embodied in the mountain. Instead, the compiler was far more interested in recounting stories about supramundane forces and in identifying indigenous plants and minerals with magical properties.

The *Nanyue zongsheng ji* (An anthology on the collective highlights of the sacred peak of the south) is wholly devoted to the history of Daoist sanctuaries on Heng Shan. The edition of this text in the *Daozang* is an extract from a fuller account of sacred shrines, including Daoist, Buddhist, and folk, that is printed in the Buddhist canon. Chen Tianfu (fl. 1131–1163), who completed this text in 1163, relies in part on the *Nanyue xiaolu* (A short account of the sacred peak of the south) compiled by Li Chongzhao in 902. Of considerable interest are Chen's own contributions on the history of rituals on behalf of the emperor's longevity and national prosperity. As the inventory of canonizations reveals, Song Huizong was a particularly avid patron of the shrines at Heng Shan.

Five topographies in the canon celebrate mountain ranges in Zhejiang, the most famous of which is Tiantai Shan. Central to the *Tiantaishan zhi* (A treatise on the Tiantai Mountains) is the history of the Tongbo Abbey, located on a peak of that name. It was for centuries the most prominent temple compound in the Tiantai range. Built originally for the Daoist master Sima Chengzhen (647–735), the Tongbo Guan reportedly once housed one of the largest collections of Daoist texts in the country. With the fall of Kaifeng and the reestablishment of the Song mandate at Hangzhou, the temple became an even more important talisman of the state and was evidently at the height of its glory in 1168, following thirty-seven years of construction activity. It later served as a haven for refugees during the fall of the Mongol regime and by 1367 went up in flames.

To the sacred font of the Shangqing revelations is dedicated the largest topography in the canon, the *Maoshan zhi* (A treatise on Maoshan). The forty-fifth Shangqing patriarch, Liu Dabin (fl. 1317–1328), completed this text in 1328, at a time when the site enjoyed a renewal of royal patronage. His account opens with a comprehensive collection of imperial communications concerning Maoshan, dating from 1 BCE to 1319 CE. Other outstanding features include the hagiographies of the three eponymous transcendents surnamed Mao as well as the ranks of Shangqing patriarchs and matriarchs, the history of various shrines and hermitages, an anthology of stone inscriptions dating from 520 to 1314, and a large selection of prose and prosody sustaining the sanctity of the region.

The *Daozang* also preserves a few works solely comprised of texts carved on stone. Most notable are the anthologies of epigraphy prepared on behalf of the Quanzhen heritage. The largest is the *Ganshui xianyuan lu* (An account of the origins of transcendents at Ganshui) compiled by the Quanzhen archivist Li Daoqian. The title refers to the Ganhe Garrison (in present-day Shaanxi), where the founder Wang Zhe reportedly achieved enlightenment in 1159. Most numerous are the tomb inscriptions commemorating worthies ranging from Wang Zhe to a contemporary of the editor. Another anthology, the *Gongguan beizhi* (Epigraphic memorials of palaces and abbeys), is devoted largely to the early history of the Baiyun Guan in Beijing. One inscription marks the conclusion of a massive renovation of the Tianchang Guan, as the earlier abbey was known, in 1179. Also included is the proclamation issued upon the completion of the Jin canon at the Tianchang Guan in 1191.

Zhu Xiangxian (fl. 1279–1308) of Maoshan is the editor of two works commemorating the site where Laozi reputedly left behind the *Dao de jing* in answer to the gatekeeper Yin Xi's pleas for instruction. One is a set of hagiographic inscriptions entitled *Zhongnanshan shuojing tai lidai zhenxian beiji* (An epigraphic record of the successive generations of perfected transcendents at the pavilion for the recitation of scripture on Zhongnan Shan). Zhu composed these accounts and had them inscribed on stone following a pilgrimage in 1279 to the Lou Guan (Tiered Abbey) established in honor of Yin Xi's discipleship. He derived much of his data from an earlier work compiled by Yin Wencao (d. 688), a Daoist master who apparently regarded himself as a descendant of Yin Xi. The second work compiled by Zhu, the *Gu Louguan ziyun yanqing ji* (An anthology from the abundant felicity of purple clouds at the tiered abbey of antiquity), includes inscriptions on the history of the shrine dating from 625 to 1303.

The historical works in the *Daozang* do not match the size and scope of those in the Buddhist canon. There are a large number of brief historical surveys embedded in various texts, composed generally to establish the ultimate antiquity and thus authority of a scriptural tradition. The earliest separately compiled history in the Daoist canon is the *Lidai diwang chongdao ji* (A record of reverence for the Dao on the part of sovereign rulers over successive generations) of Du Guangting. The opening summary of the pre-Tang era is little more than a statistical analysis of the number of temples established and Daoist masters ordained from one period of state patronage to the next. The discussions thereafter focus on the role of Taishang Laojun as the ancestral guardian of the Tang, especially his defense of the empire during the uprising of Huang Chao (d. 884).

The unifying feature of all later histories in the canon continues to be the providential manifestations of Lord Lao. Prototypes of this historiographic approach include the early writings on *huahu* ("converting the barbarians") that were essentially chronicles of Laozi's incarnations as the supreme preceptor of all peoples. To write a history of the faith was, in other words, to write a hagiography of Lord Lao as the messiah. This approach is exemplified in Jia Shanxiang's (fl. 1086) *Youlong zhuan* (Like unto a dragon), the title of which is drawn from Confucius's putative characterization of Laozi as recorded in the *Shi ji* (Records of the historian) of Sima Qian (145–86 BCE). Jia concentrates on Lord Lao's role as instructor to the ruling house and the history of the Taiqing Gong (Palace of Grand Clarity, in present-day Luyi, Henan province), the reputed birthplace of the "historical" Laozi.

Nearly a century later, Xie Shouhao (1134–1212), a prominent Daoist master at the site of the Xu Sun cult in Jiangxi, presented an even more comprehensive chronicle to Song Guangzong (r. 1190–1194). In compiling the *Hunyuan shengji* (A chronicle of the sage from the primordiality of chaos), Xie sought to correct the inconsistencies in Jia's account by drawing on a wider range of readings from the *sanjiao*, or "three teachings" (i.e., Confucianism, Daoism, and Buddhism). Xie's work is an invaluable source of citations from works no longer extant, such as the early chronicle on Lord Lao compiled by Yin Wencao. He is also particularly attentive to the history of the compilation of the canon. Among those who found Xie's work indispensable was the hagiographer Zhao Daoyi.

**LITERARY COLLECTIONS AND DIALOGIC TREATISES.** Among the most informative sources on the beliefs and practices of Daoist masters are their collected writings, editions of which were commonly prepared by devotees. The prime example is of course Tao Hongjing's assiduous collation of Yang Xi's revelatory verse. The writings of Wu Yun (d. 778), an ordained Zhengyi master often summoned by Tang Xuanzong, were brought together more expeditiously. According to a preface by Quan Deyu (759–818), a scribe named Wang Yan rescued what remained of the master's writings and presented them to the imperial archives. The edition in the canon, the *Zongxuan xiansheng wenji* (A literary anthology of Master Zongxuan) is that which a disciple Shao Yixuan conveyed to Quan. Among Wu's most well-known compositions is a sequence of verse entitled *Buxu ci* (Lyrics on pacing the Void) and a lengthy essay arguing that divine transcendence can indeed be learned. The history of a second Tang anthology in the canon, the collected works of the renowned Du Guangting entitled *Guangcheng ji* (An anthology of Guangcheng), is more obscure. It, too, is a valuable resource on the ritual activities of Daoist masters whose reputations made them favorites at court.

By far the most numerous of literary collections in the canon are those compiled after the Tang. A vast corpus, for example, has evolved around the semi-legendary Lü Yan, claimed as the patriarch of both the Quanzhen and Nanzong (Southern Heritage) traditions. A substantial collection of verse conventionally ascribed to him in truth probably dates no earlier than the thirteenth century. One anthology, the *Chunyang zhenren huncheng ji* (An anthology of the perfected on arising from turbulence), was prepared by He Zhiyuan, a disciple of Song Defang. He was among those assigned to work on the Canon of 1244, the opportunity of which no doubt led to this edition. What he claimed to be the product of Lü's divine inspiration appears instead to reflect the literary legacy of Wang Zhe and his disciples.

Over a half-dozen works alone purport to be the teachings and writings of founder Wang. A number of the texts were compiled in direct tribute to Ma Yu's discipleship under Wang. The master's basic pedagogy was apparently to recite a verse that would provoke a response from his devotees. Two works, the *Chongyang jiaohua ji* (An anthology on the proselytism of Chongyang) and the *Chongyang fenli shihua ji* (An anthology of Chongyang on the ten transformations according to the sectioning of a pear), preserve hundreds of these missives between Wang and Ma. The exchange began, according to legend, when Wang locked himself up for one hundred days on the grounds of his hosts Ma and wife Sun Bu'er and communicated with them merely by submitting a gift of food, often a section of pear, accompanied by instruction in verse. There is unfortunately no comparable record of Sun's responses, although late editions of her writings available outside the canon suggest that at least a few considered her to have been equally literate.

Other texts in the canon reveal that Wang was also willing to entertain the questions of his disciples. Records of such question-and-answer sessions, known as *yulu* or dialogic treatises, were as popular with the Quanzhen masters as with their Chan Buddhist counterparts. A somewhat redundant example of this genre, the *Chongyang shou Danyang erhshisi jue* (Twenty-four lessons conveyed by Chongyang to Danyang), is composed of a series of questions and answers attributed to Ma and his master Wang. Among the lessons taught is that the devotee should speak very little, control all emotions, and minimize anxiety and cravings. Further details on Wang's instruction are found in the *Chongyang lijiao shiwu lun* (Fifteen discourses on the teachings set forth by Chongyang). Moderation in all things appears to be the central message of this dialogue. According to the concluding statement ascribed to Wang, departure from the mundane realm was to be accomplished mentally, not physically. The closing simile, obviously borrowed from the Buddhist translator and exegete Kumarajiva, is that one's body is like the root-stock of a lotus mired in mud, whereas one's heart-mind is suspended in space as the lotus blossom itself.

The writings associated with Ma Yu are even more numerous than those of his master. Aside from three works based on exchanges with Wang, there are altogether six separate collections of prose and prosody printed under his name in the canon. One compilation, the *Dongxuan jinyu ji* (An anthology of the gold and jade of Dongxuan), includes a particularly revealing verse that exhorts Buddhist monks and Daoist masters to come together in accord and do away with slander. Another work, the *Jianwu ji* (An anthology on gradual enlightenment), features onomatopoeic verses that were apparently designed to illustrate, as the title implies, that enlightenment is a gradual process. A significant number of Ma's verses are expressly dedicated to female adepts, including his wife Sun. All men and women of the Dao, he urges, would best bring under control their *yima xinyuan*, or "horse of the will and monkey of the mind."

Qiu Chuji, the youngest disciple of Wang and eventually the most renowned, has comparably fewer writings to his name in the canon. The *Changchunzi Panxi ji* (An anthology of Changchunzi from the Pan tributary) preserves compositions dating both from Qiu's seclusion in the upper reaches of the Yellow River valley as well as from his later ritual activities at Qixia (in present-day Shandong). Among his verses are commemorations of various *jiao* fetes over which he had presided, personal communications to Jin Shizong (r. 1161–1189), and instructions on meditative practices. In addition to Li Zhichang's account of Qiu's later years, the *Xuanfeng qinghui lu* (A record of a felicitous convocation on the sublime spirit of the Dao), ascribed to Yelü Chucai (1189–1243), provides a record of the sermons delivered before his patron, Chinggis Khan.

All but a fraction of the collected writings associated with the other select members in Wang's circle are lost. The single anthology of Tan Chuduan's teachings in the canon arose directly from the initiative of the junior patriarch Liu Chuxuan. Of the five anthologies attributed to Liu, only one survives, although a dialogic treatise compiled by his disciples reveals somewhat more about his career. Liu's sayings, many of which were inspired by lines in the *Dao de jing*, were reportedly so popular as to have become part of the local culture of his circuit. The two paragons of filial piety, Wang Chuyi and Hao Datong, are remembered with one anthology each. The *Yunguang ji* (An anthology from Yunguang), named for the cavern in which Wang secluded himself for nine years, is a valuable supplement to the hagiographic *Xianyi lu*. The one edition of Hao's teachings to be preserved attests to his training as a diviner and abiding interest in the *Yijing*.

The influence of the early Quanzhen patriarchs is easily measured by the volume of writings that emerged from later generations. Among those whose teachings expanded upon this legacy are Qiu's successor Yin Zhiping (1169–1251), Liu's disciple Yu Daoxian (1168–1232), and Hao's disciple Wang Zhijin (1178–1263). Later syncretists for whom there is ample record in the canon include Li Daochun (fl. 1290), Miao Shanshi (fl. 1324), Wang Jie (fl. 1310), Chen Zhixu (fl. 1329–1336), Wang Weiyi (fl. 1294–1304), and Zhao Yizhen (d. 1382). Many of these figures drew equally from the Quanzhen and Nanzong traditions. The fullest documentation on the latter is to be found in late encyclopedic anthologies of the *Daozang*.

***Encyclopedic anthologies.*** The earliest comprehensive encyclopedic work in the canon is the *Wushang biyao* (The essentials of unsurpassed arcana). Only two-thirds of the original one hundred *juan* survives of this anonymous compilation. Citations from a wide selection of texts are organized under 288 headings, ranging from cosmology and sacred topography to the protocols for transmitting divine scriptures and instructions on meditative practices. The origins of this text are revealed in a Buddhist, not Daoist, compilation, namely the *Xu gaoseng zhuan* (Supplementary biographies of exalted monks) of Daoxuan (596–667), which states that Zhou Wudi (r. 561–578) ordered its compilation following his pacification of the state of Northern Qi in 577. It is thought that work began on this vast anthology as early as 574, when Wudi issued a decree establishing the Tongdao Guan (Abbey of Communication with the Dao) as a symbol of the anticipated political and ideological reunification of the empire. The text is not only an invaluable resource for citations from the original Shangqing and Lingbao revelations, but also for the later codifications they inspired.

Two smaller compendia were compiled a century later by a relatively unknown recluse named Wang Xuanhe (fl. 683). The larger of the works, the *Sandong zhunang* (Pearl bag of the three caverns) is organized under thirty-four categories dealing with various aspects of conduct befitting an adept and includes extracts from a number of texts on contemplative pursuits that are otherwise lost. The second corpus attributed to Wang is the *Shangqing daolei shixiang* (A categorical survey of the Dao of Shangqing), which specializes in citations dealing with six types of sacred quarters, from private retreats to the cosmic chambers of revealed literature.

A much larger encyclopedic anthology, the *Yunji qiqian* (Seven lots from the book-pack of the clouds), was compiled by Zhang Junfang, inspired apparently by his assignment to oversee the copying of a new canon on the order of Song Zhenzong. Zhang states in his preface that his intention was to prepare a reference work for the emperor's personal use. But since the *Yunji qiqian* was not completed until 1028 or 1029, it was obviously presented to his successor Renzong (r. 1023–1053). The writings Zhang selected for this work date from the earliest revelations to the first decades of the eleventh century. Recorded, for example, in the opening essays on cosmogony and scriptural transmission are unique copies of the prefaces composed for the first catalogues of Shangqing and Lingbao literature. Additional subheadings include sacred topography, behavioral precepts, ritual purification, visualization techniques, and hagiography. Notably absent are any instructions on liturgical procedure, a subject that Zhang clearly considered to be beyond the scope of this corpus.

Two remarkable collections of writings treating "inner alchemy" (*neidan*) appeared during the Southern Song period. The first in print was the *Dao shu* (Pivot of the Dao) compiled by the bibliophile Zeng Cao (fl. 1131–1155). Among the rare texts Zeng records is the *Baiwen pian* (A folio of one-hundred questions), based on a putative exchange between Lü Yan and his mentor, the late Han transcendent Zhongli Quan. The entire last chapter is devoted to the *Lingbao pian* (A folio on Lingbao), a variant edition of the *Lingbao bifa* (Conclusive rites of Lingbao), which was also compiled as a tribute to this legendary discipleship. A related theoretical work on the cultivation of the *jindan* (metallous enchymoma), the *Zhong Lü chuandao ji* (An Anthology on Zhong [li]'s transmission of the Dao to Lü), is found in both the *Dao shu* and a later Song collectaneum of *neidan* literature, the *Xiuzhen shishu* (Ten writings on the cultivation of perfection). This anonymously compiled anthology also includes many texts associated with the Nanzong, or Southern Heritage, the "five patriarchs" (*wuzu*) of which are: Liu Cao (d. ca. 1050), Zhang Boduan (d. 1082), Shi Tai (d. 1158), Xue Zixian (d. 1191), and Chen Nan (d. 1213). The establishment of this patriarchy appears to be a rather late innovation inspired by the legacy of the Seven Perfected of Quanzhen. By the early fourteenth century a number of texts began to assert that Liu conveyed the teachings of the venerable Zhongli Quan and Lü Yan to both Wang Zhe in the north and Zhang Boduan in the south.

Zhang Boduan is popularly regarded as the "founder" of Nanzong. His writings were initially viewed as treatises on *waidan*, "exterior," or laboratory, alchemy. More recent research suggests that they fall, rather, into the mainstream of *neidan* literature. An edition of the major corpus attributed to him, the *Wuzhen pian* (Folios on the apprehension of perfection), is recorded in the *Xiuzhen shishu*, with a preface by Zhang dating to 1075. The same anthology also includes variant editions of similar lyrical sequences ascribed to Shi Tai, Xue Zixian, and Chen Nan. But by far the most dominant in the *Xiuzhen shishu* are the writings of Chen's putative disciple, the renowned Thunder Ritual specialist Bai Yuchan. Nearly half of the text is devoted to a record of his instructions on *jindan* and Thunder Ritual traditions, as well as his liturgical activities in Fujian and his accounts of the Xu Sun cult in central Jiangxi. It may be that the *Xiuzhen shishu* was compiled by devotees of Bai, for the latest work included is a set of texts on *jindan* by Xiao Tingzhi (fl. 1260), a second-generation disciple.

**OTHER SOURCES.** While the *Daozang* is the most comprehensive collection of Daoist literature, it is by no means the only source available. Among the number of publications issued during the Qing dynasty, the next largest corpus is the *Daozang jiyao* (An edition of essentials from Daoist canon). The reedition of this work in 1906 includes 287 titles, compared to nearly fifteen hundred in the canon. Over half of the titles are found in the *Daozang* as well, but this anthology also contains works otherwise unknown, including tracts attributed to Sun Bu'er and Liu Cao, as well as the writings of later syncretists such as Wu Shouyang (d. 1644).

Perhaps one of the most neglected resources for Daoist literature is epigraphy. Aside from the few, mainly Quanzhen, collections in the canon, there is a wide range of stone and bronze inscriptions pertinent to the history of the faith. An anthology of epigraphy compiled by Wang Chang (1725–1806), for example, includes a transcription of the *Taishang Laojun riyong miaojing* (A wondrous scripture of Lord Lao and most high for daily use) carved on stone in 1352 at the Pavilion for the Recitation of Scriptures in Shaanxi. A variant redaction of this text is found in the *Daozang* and, at 141 words, is among the shortest works in the canon. It is essentially a code of conduct based on many traditional Chinese attributes such as filiality. Study of epigraphic documents will soon be greatly facilitated by the imminent publication of a comprehensive anthology of inscriptions bearing on the history of Daoism, a project begun by Chen Yuan and now being completed by Chen Zhichao at the Chinese Academy of Social Sciences in Beijing.

Scriptures and related sacred writings found in various archives constitute another essential source of Daoist literature. The Dunhuang manuscripts preserved in a number of libraries worldwide, for example, include texts that clarify the early history of several scriptural codifications. One such work, of which only a portion survives in the canon, is the *Benji jing* (Scripture on the original juncture). Over seventy fragments of this text are in the British and French archives of Dunhuang manuscripts. One of the compilers is known to have taken part in debates before the court of Tang Gaozu (r. 618–626) on the issue of whether the Buddha was a disciple of the Dao. The text itself, designed apparently in part to support this theory, seems to have taken its inspiration from discussions on the cosmogonic concept of *pūrvakoṭi* (Chin., *benji*) in the *Madhyamāgama* and *Saṃyuktāgama*, Chinese translations of which appeared in the fourth and fifth centuries. Parables in one section of the *Benji jing*, moreover, were evidently drawn from the *Dharmapada*. The text reached the height of its popularity during the reign of Tang Xuanzong, who ordered all Daoist priests not only to copy it out but also to recite and lecture on it during official religious festivals. In short, the lessons within were thought to lead to the salvation of the state as well as of the individual.

Later collections of manuscripts and rare blockprints also have much to reveal about the continuity and change in Daoist traditions. Among published works is the *Zhuang Lin xu Daozang* (Supplementary Daoist canon of the Zhuang and Lin clans) edited by Michael Saso, a collection of Daoist works largely gathered from a Zhengyi fraternity in Xinzhu of north Taiwan. These texts, as well as those recovered by Kristofer Schipper in the Tainan area of south Taiwan, suggest a remarkable continuum of Daoist liturgical practice. A scripture dedicated to Tianfei (i.e., Mazu) in the Schipper Archives of Paris, for example, proves to be a variant of a text in the canon dating to 1409–1412. The manuscript version conveys an image of this well-known Fujianese patroness of seafarers that accommodates a folk vision of her as an *avatāra* of Guanyin. Tianfei's assimilation to this all-compassionate *bodhisattva* is promoted in popular narratives on the life of the goddess compiled during the late Ming dynasty. Just as she continues to inspire poets, novelists, and even scriptwriters in this age, so, too, has much of the Daoist literature both in and outside the canon left its mark on centuries of Chinese belles-lettres. Further study of this literature can only disclose how deeply the Daoist heritage pervades all aspects of Chinese society.

## DAOISM: HISTORY OF STUDY

Although Daoism represents a tradition as ancient and as rich as any other major religion, the serious study of this tradition has been almost entirely a twentieth-century phenomenon and largely a phenomenon of the second half of the twentieth century at that. The reasons for this are not far to seek. From its fourth and last printing in 1445 until its reproduction by photomechanical means in 1926, the Daoist canon (*Daozang*), a compendium of over one thousand different works representing the full scope of the tradition, was a decidedly rare work, the jealously guarded possession of a handful of monasteries. Until the twentieth century, moreover, few outsiders would have been inclined to persist in seeking them out. To the traditional Chinese scholar, raised in the neo-Confucian belief that Buddhism and Daoism alike were little more than gross superstition, there was little reason to take an interest in such literature.

Although certain eighteenth- and nineteenth-century scholars made use of the Daoist canon to obtain good editions of ancient philosophical or historical texts (which, as in the case of the *Mozi*, were often not Daoist works but were included in the canon for reasons unrelated to their contents), it was not until 1911 that a Chinese scholar lingered over the rest of the canon. This scholar was Liu Shipei, a fervent nationalist whose attitude toward tradition had been enlarged by the modern world to embrace a less orthodox range of study.

By the time Liu published the results of his readings, non-Chinese scholars who had inherited the best of the traditional Chinese polymath's zeal for knowledge (without the polymath's blind spot with regard to religion) had begun to show a lively interest in Daoism also. French Sinologists, such as Édouard Chavannes and Paul Pelliot, and Japanese, such as Tsumaki Naoyoshi, came to Daoism out of a general interest in Chinese civilization, but also from societies where the study of religion was an accepted branch of learning. Japan, in particular, had at an early stage accepted much of China's medieval culture, including the Buddhist faith, but had not undergone a neo-Confucian rejection of this legacy to the same degree. Thus, learned Buddhists, such as Tokiwa Daijō, were already confronting the complex issue of the relationship between Chinese Buddhism and Daoism in the 1920s. One of them, Ōfuchi Eshin, had even traveled abroad to investigate the millennium-old manuscripts of Daoist scriptures that had been discovered among other ancient materials at Dunhuang in Northwest China at the turn of the century.

The increased political role of Japan in China during the 1930s also brought many Buddhist scholars to China. Some, such as Fukui Kojun, returned to Japan to pursue research in the Daoist canon, now available in its modern printing in academic libraries, while others, such as Yoshioka Yoshitoyo, stayed longer to gain firsthand experience of Daoist monastic life. Yoshioka's 1941 *Dōkyō no jittai* (The actual state of Daoism), published in Beijing, remains an invaluable source on a mode of religious life now largely vanished. The expulsion of the Japanese from China after 1945 effectively halted all such opportunities for fieldwork and even led to the loss of much material already painstakingly collected. However, as *Dōkyō to Chūgoku shakai* (Daoism and Chinese society), a slim volume published in Tokyo in 1948 by Kubo Noritada, demonstrates, even after their return to Japan these scholars were concerned to relate their historical and bibliographical research to the fuller picture of Chinese society they had witnessed. Their numbers were also sufficient to found in 1950 the Japan Society of Taoistic Research (Nippon Dōkyō Gakkai) and to start, the following year, the publication of a journal, *Tōhō shūkyō*, a serial still published with an annual update on Daoist bibliography.

In contrast, 1950 saw the publication in Paris of the posthumous writings on Daoism of the sole French scholar to have followed up the pioneering work of Chavannes and Pelliot by carrying out research into materials in the Daoist canon. Henri Maspero (1883–1945), like others of his generation, came to the study of Daoism not as a specialist but as a broad-ranging scholar. He had published in the fields of Egyptology and Vietnamese studies and had produced a Sinological masterpiece, a one-volume survey of preimperial China, before his research into the China of the latter Han period and thereafter brought him face to face with the Daoist religion. During the 1930s he applied himself to unraveling the formative stages of the religion, working independently of, but using similar methods to, his Japanese contemporaries (for example, comparing materials in the Daoist canon with the Dunhuang manuscripts and with Buddhist sources). Maspero perished at Buchenwald in 1945 before he had published more than a portion of his findings. In his three-volume collected writings, compiled by Paul Demiéville, his equally erudite literary executor, an entire volume is devoted to Daoism. Maspero's description of Daoism remains a highly rewarding record of the first encounter between a modern European mind and the full complexity of this ancient religion.

Sadly, Maspero had no students. Maspero's great contemporary in the study of Chinese religion, Marcel Granet, more immediately influenced the experts on Chinese religion who rose to prominence in postwar Paris. Yet Granet was not unaware of the importance of Daoism, and the work of such men as Max Kaltenmark, Rolf Alfred Stein, and Michel Soymié helped maintain the primacy of Paris as the center of Daoist studies in the Western world. Nor were these men, for their part, unaware of the achievements of their Japanese colleagues: Soymié established with Yoshioka in 1965 a second Japanese journal devoted to Daoism, the *Dōkyō kenkyū*. By this time a number of studies of Daoism had been published in Japan, and many points of controversy were hotly debated. A new generation of European researchers specifically interested in Daoism emerged, and the new publication soon introduced the findings of Anna Seidel and K. M. Schipper to a Japanese audience.

While the two major streams of Daoist studies were beginning to flow together, research in China remained almost as it had been in France in the 1930s, the domain of one lone scholar. Since the reprinting of the Daoist canon, established specialists in the history of Chinese religion, such as Chen

Yinke and Chen Yuan, had devoted articles to aspects of Daoist history, and one small volume attempting an account of the whole development of Daoism had been published, partly on the basis of early Japanese research. But from 1949 onward the only aspects of Daoist studies to see publication were those connected with the history of peasant uprisings or the history of science. In the former area the textual scholar Wang Ming produced in 1960 an excellent edition of the *Taiping jing*, a major Daoist scripture associated with the Yellow Turban insurgents of the Han dynasty, but subsequent discussion of the text by a number of academics tended not to focus on religious issues.

In 1963 Chen Guofu, a historian of science and the "lone scholar" referred to above, managed to republish an expanded version of an outstanding monograph, originally published in 1949, on the formation of the Daoist canon. Chen had initially undertaken his lengthy and painstaking research during the 1940s, when his interest in the history of Chinese alchemy led him to the question of the dating of Daoist texts on this subject. But especially in the 1963 edition of his *Daozang yuanliu kao*, he also included gleanings on many other topics that had caught his eye in the course of his readings. Other scholars, unable to claim to be furthering the study of science rather than religion, were less fortunate. Man Wentong, who had published some worthwhile research on Daoist texts in the 1940s, saw his work confiscated during the late 1950s; only a few further notes were published posthumously in 1980. The Chinese Cultural Revolution of the 1960s ended for a while the activities of the Zhongguo Daojiao Xiehui (the Chinese Daoist Association), a group formed in 1957 but unable even then to achieve much in either religious or academic terms.

Chen Guofu had begun his alchemical researches while studying in the United States under Tenney L. Davis at the Massachusetts Institute of Technology, and it was almost exclusively this scientific aspect of Daoism that had continued to attract the attention of the English-speaking world—apart, that is, from the perennial fascination with the *Dao de jing*, reinvigorated for academics in the 1970s and 1990s by discoveries of early versions of its text. Thus, when the first international conference on Daoism met in Italy in 1968, two historians of science, Joseph Needham from Great Britain and Nathan Sivin from the United States, joined with experts on religion such as Schipper and Seidel. No Chinese scholar attended, nor did any senior scholar from Japan. This situation was rectified in 1972 at the next conference, which was held in Japan so a number of Japanese scholars could attend, as did Hou Ching-lang, originally from Taiwan but trained in Paris. Hou was by no means the first Chinese to have conducted research into Daoism there. In 1960 Wu Chi-yu had used the Dunhuang manuscripts to compile an edition of an important Daoist scripture, the *Benji jing*. A few other Chinese scholars had by now published on Daoism in Hong Kong, Taiwan, or farther afield—Liu Ts'un-yan in Australia, for instance. But it was not until 1979, at a third conference held in Switzerland, that the situation in Beijing had changed sufficiently for Chen Guofu to participate. Daoist studies were thus finally able to achieve true international status and to win a degree of recognition in Daoism's native land.

The change of climate in the People's Republic of China manifested itself in a number of other ways. The year 1979 also saw the first publication of a new academic periodical, *Shijie zongjiao* (World religion), marking the start of the officially recognized study of religion in post-1949 China. Although it was initially much concerned with the history of atheism, in the following year articles on Daoism were included. The first volume of an outline history of Chinese Daoist thought, *Zhongguo Daojiao sixiang shigang*, and a new textual study by Wang Ming also appeared at this time. By 1980 the Chinese Daoist Association was active once more. In 1981 a dictionary of religion (*Zongjiao cedian*) containing a large number of entries on Daoism, was published. The first dictionary of Daoism as such, the *Daojiao dacidian* by Li Shuhuan, appeared in 1979 in Taiwan, but while Li's status as a Daoist priest contrasts markedly with that of the Marxist compilers of the later volume, inasmuch as neither dictionary incorporated the findings of non-Chinese scholars, both fell well below the standard that could have been achieved through international cooperation.

Although Chinese scholarship on Daoism lagged behind that of France and Japan, the potential for development was great. In the early 1980s Daoist priests appeared once again in China's streets and marketplaces, showing that the living tradition of the religion had not been cut off entirely by the Cultural Revolution and that scholars might still learn from it firsthand. Furthermore, China's bibliographic resources remained (and still remain) the envy of the outside world. One might mention, for example, the epigraphical sources on Song Daoism used by the historian Chen Yuan, besides those related to canonical literature. At this point international work was already under way on a complete bibliographic guide to the canon in its modern reprinted form. Based in Paris under the direction of Schipper, it was sponsored by the European Association for Chinese Studies and involved scholars from European countries and beyond. Even before publication of the guide, the project led to the publication of concordances to important Daoist texts and to an analysis by John Lagerwey of a sixth-century Daoist encyclopedia, published by Lagerwey as the *Wushang piyao* (1981). It also indirectly stimulated a monograph by Piet van der Loon titled *Taoist Works in the Libraries of the Sung Period* (1984).

In Japan, major collaborative ventures were preceded by publications reflecting the work of individual careers. First Yoshioka and then Kubo produced histories of Daoism aimed at general audiences. Ōfuchi Ninji completed a catalog of all the Daoist manuscripts from Dunhuang with a companion volume of photographs of every text. These two works were published as *Tonkō Dōkyō*, respectively subtitled

*Mokuroku-hen* and *Zuroku-hen*, in Tokyo in 1978 and 1979. Collaborative ventures began when a volume on Daoism was required for a series on the rich material of Dunhuang, and no fewer than ten writers (including Schipper) joined under the editorship of Yoshioka. Yoshioka died in 1979, but the volume, *Tonkō to Chūgoku Dōkyō*, eventually appeared in 1983. It includes a sixty-two-page general bibliography of Daoism based on material he had earlier collected. Yoshioka had in a sense initiated cooperative scholarship in Japanese Daoist studies somewhat earlier. A Festschrift in his honor, *Dōkyō kenkyū ronshū* (Collected essays in Daoist studies), drawing on the work of fifty-four Japanese and foreign contributors, was published in Tokyo in 1977.

In 1983 a comprehensive survey of Daoism involving the work of twenty-three scholars was published in Japan under the general title *Dōkyō*. This was the first collaborative attempt at a full description of the religion in any language. The three volumes of this survey, *Dōkyō to wa nani ka?*, *Dōkyō no tenkai*, and *Dōkyō no dempō*, are devoted respectively to a description of Daoism itself, an assessment of its importance in relation to other aspects of Chinese life and thought, and a survey of its spread beyond its Chinese origins. The last volume also contains surveys of research in Japan and elsewhere. The study of Daoism outside mainland China became increasingly prominent, especially as it moved from historical to anthropological research. Historical research has not, however, decreased in importance. Pioneering works such as the *Han'guk Togyosa* of Yi Nŭng-hwa, a study of the history of Daoism published in Seoul, South Korea, in 1959, have successors in the publications of Japanese scholars concerned to reassess the impact of Daoist beliefs on the history of their own culture. Of these, the symposium *Dōkyō to kodai tennōsei*, which appeared in Tokyo in 1978 under the editorship of Fukunaga Mitsuji, deals with an issue of no slight importance to the modern Japanese, namely the possibility of Daoist influence on such a quintessentially Japanese institution as the emperorship.

However, it is in the investigation of Daoism as practiced nowadays outside mainland China that the greatest diversity of scholarly activity became apparent. Kubo, in his research into Daoist beliefs associated with the hour *gengshen*, has covered not only Japan but also Okinawa. Of the many ethnographers and others concerned with recording Daoist practices in Taiwan, one scholar based on that island, Liu Zhiwan, published the first part of his study *Chūgoku Dōkyō no matsuri to shinkō* in Tokyo in 1983. In 1975 the American Michael Saso published in Taipei twenty-five volumes of Daoist texts used under the title *Zhuanglin xu Daozang*. The Daoist practices of the Yao people of northern Thailand were recorded by Japanese scholars and have attracted the attention of French, American, and Dutch scholars. Daoism in Hong Kong, Singapore, and other overseas Chinese communities was investigated to some extent as well.

By the mid-1980s, Daoist studies were thus no longer confined to one or two pioneers working in isolation, and in the late twentieth century and early twenty-first century the trend toward the internationalization of Daoist studies has continued, even though the initial series of international conferences has not been maintained. The steady revival and progress of academic life in the People's Republic of China saw the emergence of strong centers of research outside the Institute for the Study of World Religions in the China Academy of Social Sciences, Beijing, which launched *Shijie zongjiao*. Sichuan University in Chengdu, for example, has since 1986 published a journal, *Zongjiaoxue yanjiu* (Religious studies), which consistently carries articles on Daoism, and also completed publication between 1988 and 1995, under the editorship of Qing Xitai, of the first comprehensive history of Daoism up to the twentieth century, spread over four volumes, a work now available in English translation. The Chinese Daoist Association, meanwhile, published not only its own journal but also a major encyclopedic dictionary in 1994, a year before an even larger work of the same type from the Chinese Academy of Social Sciences, which had already produced a comprehensive guide to the literature in the canon in 1991. In some respects, publication on Daoism in China (notably the series *Zangwai daoshu* and its continuation, supplementing existing canonical collections, and especially the republication of traditional works on self-cultivation) was assisted by the rapid rise of interest in *qigong* in the late 1980s, though government worries about the implications of the craze eventually led to its increasing regulation in the following decade, especially after 1999.

The stream of monographs and research aids produced in Japan has increased to a flood, and more concise encyclopedic dictionaries drawing on a wider range of international scholarship have been published in Japan. The French language has remained important for scholarship in the field, even though scholars who had initially published in French often choose to publish in English or see their work translated. The same holds true for the less conspicuous but not unimportant tradition of Daoist studies in Germany. During the last decade of the twentieth century the study of Daoism in English at last came into its own. The only journal exclusively dedicated to it, *Taoist Resources,* lasted less than a decade (1988–1997) before being absorbed into the *Journal of Chinese Religions*, but this and other established periodicals find much more room for contributions on Daoism. Stephen Bokenkamp's pioneering *Early Daoist Scriptures* initiated the first monographic series in English dedicated to Daoism (in 1997), whereas established social historians like Robert Hymes and Edward L. Davis publish volumes exploring the role of Daoism in local society from the eleventh century onwards.

In part, this willingness of North American university presses to venture into what had been before the 1980s a virtually unknown area was the result of the emergence of a wider reading public in the English-speaking world, a public still primarily interested in the *Dao de jing, feng-shui,* or the martial arts, but also prepared to explore further. To cater to such interests a number of websites emerged, including some of real academic value, such as that maintained by the Italian expert on alchemy, Fabrizio Pregadio, who is also editor of a substantial and groundbreaking encyclopedia of Daoism in English. Livia Kohn, who had from early in her career attempted to provide materials in English to meet the needs of higher education in North America, edited the first major work of reference on Daoism in English, the *Daoism Handbook*, though her student James Miller has achieved an even more remarkable feat by condensing knowledge into a readable introductory volume. Miller's work has earned the approbation of at least one ordained Daoist priest engaged in doctoral research in English. The combination of religious and academic qualifications goes back to Schipper's contacts with Daoist circles in Taiwan, but the increasingly obvious strength of the religion throughout the Chinese world suggests it is a combination that may become more common in the future. Certainly the revival of Daoist practice on a large scale in China itself has enabled scholars such as Kenneth Dean and Lagerwey, partly inspired by the pioneering work of der Loon, to combine textual scholarship and fieldwork to bring new insights into many aspects of Daoist ritual and its relationship to Chinese social life.

Meanwhile, the very vibrancy of the religion in the contemporary world has started to stimulate reflection on the way it was originally represented in Western scholarship as a moribund tradition perpetuated only by ignorant charlatans. In this, the lead has been taken by the Australian scholar Benjamin Penny, who has briefly examined some of the influences working on nineteenth-century accounts of Daoism. In 2003 Elena Valussi challenged the rhetoric of decline in later Daoism through a London doctorate devoted to the emergence in the Qing period of texts promoting the self-cultivation of women. These show an ongoing pattern of adaptation and innovation into the twentieth century not easy to reconcile with the negative assessments of Western missionary observers. The early twenty-first century is at last seeing the recognition of Daoism as a religious tradition of remarkable richness and historic depth that has by no means been extinguished by modernity and that may yet have much to teach. Several of those responsible for demonstrating this, like Anna Seidel (1938–1991), Michel Strickmann (1942–1994), and Isabelle Robinet (1932–2000), did not live to see the full fruits of their efforts.

## BIBLIOGRAPHY

Retrospective surveys with a narrow focus are K. M. Schipper, "The History of Taoist Studies in Europe," in *Europe Studies China*, edited by Ming Wilson and John Cayley (London, 1995), pp. 467–491; and Fukui Fumimasa, "The History of Taoist Studies in Japan and Some Related Issues," *Acta Asiatica* 68 (1995), pp. 1–18. J. J. Clarke, *The Tao of the West: Western Transformations of Taoist Thought* (London, 2000), is an outsider's account useful for its information on the broader context of the acceptance of Daoism as a topic of study. Lai Chi-Tim, "Daoism in China Today, 1980–2002," *China Quarterly* 174 (June 2003), pp. 413–427, is an account of the religion in its homeland. James Miller, *Daoism: A Short Introduction* (Oxford, 2003), is an up-to-date summary. Livia Kohn, ed., *Daoism Handbook* (Leiden, 2000), is a compendious source of information in English. Fabrizio Pregadio's website, available at http://venus.unive.it/pregadio/taoism.html, is a gateway to the mysteries of Daoism.

T. H. BARRETT (1987 AND 2005)

**DAOSHENG** (360?–434), also Zhu Daosheng; Chinese Buddhist monk, student of the *Nirvāṇa Sūtra*, and early proponent of a doctrine of sudden enlightenment. The precise age at which Daosheng entered the religious life is unknown. Accounts of his early career state only that he studied under Zhu Fatai (a disciple, with Dao'an, of Fotudeng) in Jiankang, the southern capital. In 397 he journeyed to Mount Lu and became the disciple of Dao'an's most famous student, Huiyuan. During his first year on Lushan, Daosheng took advantage of the presence of the Kashmiri monk Saṃghadeva to study the Sarvāstivāda Abhidharma literature. Around 406 he left Lushan for the northern capital of Chang'an, where he presumably attended Kumārajīva's translation seminars of the *Vimalakīrti* and *Saddharmapuṇḍarīka Sūtra*s. Later, he wrote commentaries to both of these scriptures.

In 407 Daosheng abruptly left Chang'an and returned to Lushan, bearing with him a copy of Sengzhao's *Boruo wu zhi lun* (*Prajñā* is not knowledge). Liu Yimin's correspondence with Sengzhao regarding this text, included in the *Zhaolun*, resulted from this fortuitous transmission. Shortly after arriving on Mount Lu, Daosheng was off again, this time to Jiankang, where in 418 Faxian translated a recension of the Mahāyāna *Mahāparinirvāṇa Sūtra*. This text, like its Hīnayāna namesake, purported to record the last discourse of the Buddha, a fact that very naturally conferred on it a prestige and authority all its own. Quite unlike the Hīnayāna version, however, the Mahāyāna text preached that *nirvāṇa* was "permanent, joyous, personal, and pure" (Chin., *chang*, *le*, *wo*[!], *jing*), assertions that are substantially at odds with the normative Mahāyāna teaching that the nature of *nirvāṇa*, like that of all *dharma*s, is itself empty (*śūnya*) of all attributes. More curious to Daosheng's ears, however, was the statement in Faxian's translation that the *icchantika*s (Chin., *yichanti*, beings who have cut off their roots of virtue and seek only to gratify their desires) could never attain buddhahood. To Daosheng, such a statement vitiated the central claim of Mahāyāna Buddhism to be a vehicle of salvation for all beings. Disdaining to accept the letter of the text, he insisted on the ultimate buddhahood of the *icchantika*s, and in so doing brought down upon himself the wrath of the monastic community in Jiankang. Daosheng was forced to leave the capital in 428 or 429 when accusations of heresy were formally brought to the attention of the emperor.

Back on Lushan, Daosheng did not have to wait long for vindication. In 430 a new recension of the

*Mahāparinirvāṇa Sūtra*, translated by Dharmakṣema in Liangzhou in 421, reached the southern capital. Eight chapters longer than Faxian's recension, this text contained passages in the sections hitherto unavailable to the Chinese that explicitly guaranteed salvation to the *icchantika*s. When the contents of this text became known in Jiankang, Daosheng was invited to return to the capital. He died on Mount Lu in the year 434.

Daosheng's works, nearly all lost, reflect the broadened textual horizons of the Chinese Buddhist world of the early fifth century. They include essays on the Buddha nature and the *dharmakāya* (the transcendental, absolute body of the Buddha); a treatise on the two truths, presumably a Mādhyamika-oriented work deriving from the influence of Kumārajīva; and commentaries on several sūtras, including the *Vimalakīrti*, the *Saddharmapuṇḍarīka* (Lotus), the *Nirvāṇa* (the principal scriptural warrant for many of his notions), and the *Aṣṭasāhasrikā-prajñāpāramitā.* But what we know of his thought is based principally on secondary sources, the testimony of Sengzhao, for instance, who liberally cites Daosheng's views in his own commentary on the *Vimalakīrti Sūtra.* Of Daosheng's scriptural commentaries only that on the *Lotus* survives.

For Daosheng, the phenomenal world is supported by an absolute, a principle of cosmic and moral order (*li*) that is unitary, indivisible, and immanent in all things. This cosmic order is *dharma.* As the source of things, it is also their *ti*, or substance, and yet it is ultimately without any qualifying attributes whatsoever: it is *kong*, empty, *wu*, without existence, or *ziran*, self-same, what is naturally so. The personification of this principle is, of course, the Buddha, but as the Buddha is in a sense no more than a reification of the *dharma*, the body of the *dharma* (*dharmakāya*), buddhas and ordinary beings share a common substance. The *Nirvāṇa Sūtra* asserts, in its most well-known passage, that all beings possess this buddha nature (*foxing*). If so, argues Daosheng, the religious life does not culminate in the acquisition of some new quality but in an awareness within each of us of an already present enlightenment. Once this awareness dawns, there then arises what the *Nirvāṇa Sūtra* refers to as the true self (*zhen wo*), an unqualified, blissful, and unchanging consciousness. It was in terms of this True Self that Daosheng understood the *Nirvāṇa Sūtra*'s teaching that *nirvāṇa* is permanent, joyous, personal, and pure.

Classical Mahāyāna thought conceives of the religious path as commencing with a mind set on enlightenment (*bodhicitta*) and progressing through a series of ten *bodhisattva* stages (*bhūmis*) in which deluded thought is suppressed and nondual insight (*prajñā*) into reality cultivated. The seventh of these *bhūmis* is usually considered a decisive point in the spiritual life. From that point on, the practitioner is considered no longer subject to spiritual retrogression; his consciousness is wholly oriented toward enlightenment, even if that path involves, as it must, the decision to delay final *nirvāṇa* for the sake of others. But is the experience of enlightenment itself a sudden, radical break in consciousness, or is it of a piece, more rarefied perhaps, with the gradual steps of spiritual progress along the *bodhisattva* path?

A document contemporary with Daosheng, Xie Lingyun's *Bianzong lun* (Discussion of essentials; included in the *Guang hongming ji*, T.D. no. 2103) apprises us that for many Chinese the *bodhisattva* path was seen as a course of gradual progression and graded stages of enlightenment. Against this view, the *Bianzong lun* sets forth what it calls the new doctrine of Daosheng. According to this doctrine, as the Absolute is unitary, indivisible, and without any qualifiers whatsoever, so too must the wisdom that comprehends it be a sudden, intuitive insight (*dunwu*) into the whole of reality. Such an insight can admit to no gradation. Daosheng likens the process of enlightenment to that of a fruit ripening on a tree. Religious practice may inculcate confidence and faith in the *dharma*, but at the moment when one reaches enlightenment there is a qualitative leap or disjunction, just as the fruit suddenly falls away from the tree when it reaches maturity.

Daosheng's teaching of sudden enlightenment was not the first such doctrine in China. Previous thinkers such as Zhi Dun and, allegedly, Dao'an, had spoken of the seventh *bhūmi* as the critical stage at which insight dawns. For them, however, this insight was deepened in later stages. Daosheng rejected this lesser doctrine of sudden enlightenment (*xiao dunwu*), as he did the gradualist notions of his former companion in Chang'an, Huiguan (354–424), who argued that practitioners of different levels of spiritual maturity perceive the truth in different ways and to differing degrees: the truth may be whole, but some are capable of seeing only a portion of it. This subitist versus gradualist controversy was one of the issues subsumed within the discourse of fifth- and sixth-century debates on the *jiaopan*, the divisions of scriptures that attempted to account for the diversity, even incongruity, the Chinese found among the teachings of the Indian sūtra literature. These organizing schemes classified texts both genetically, according to the type of teaching embodied therein, and historically, according to the period in the career of the Buddha in which they were said to have been preached.

In one of the most prominent of these early systems, Huiguan proposed that the Buddha preached at least two types of doctrine, *dunjiao*, or sudden teachings, and *jianjiao*, gradual teachings (a third type, indeterminate, is often attributed to Huiguan and was widely found in *jiaopan* contemporary with his). But Huiguan's emphasis here does not bear directly on the nature of the enlightenment experience itself; as the term *jiao* (teaching) implies, what is at issue is the *method* employed in various texts to bring beings to enlightenment, suggesting that in their quest for a systematization of the Buddhist scriptures, the scholar-monks of Daosheng's time admitted, in best Mahāyāna fashion, a plurality of religious paths without necessarily denying the suddenness of enlightenment itself.

For his part, Daosheng too proposed a classification of the Buddha's teachings according to the capacities of the audience. In the *Miaofa lianhua jing su*, his commentary to the *Lotus Sūtra*, Daosheng acknowledges the need for various devices to provoke faith in *dharma* and posits a fourfold division of the Buddha's teachings: (1) Good and Pure Wheel of the Law; (2) Expedient Teachings; (3) True Teachings; and (4) Teachings without Residue. Whether these refer, as commonly interpreted, to specific texts or, as also maintained (Ōchō, 1952, pp. 232–238), merely to teaching methods, they are indicative of Daosheng's recognition that although the Truth may be indivisible, the means to attract people to it must take heed of their capacity to comprehend what is taught. Clearly, Daosheng never intended to preclude the necessity for religious cultivation by promulgating his doctrine of sudden enlightenment.

Crucial as these issues may have been for the Indian Buddhist tradition, where both subitist and gradualist tendencies are attested, it is important to recognize the extent to which the debate over the topic in China was carried out against a backdrop of indigenous values and perceptions. Despite the provocative fact that Xie Lingyun classed as sudden the doctrines of Confucius, Confucian teachings were perennially associated with a gradual path of moral and intellectual cultivation epitomized in their concept of the ideal person, the *junzi*. By contrast, the very notions most typically associated with the subitist doctrine, the unity and indivisibility of the Truth and the ineffability and spontaneity of the experience of it, are characteristically Daoist. As Demiéville points out (1973, pp. 256–257), Daosheng's most well-known assertions—that works are in vain, that acts engender no retribution, that *karman* is a mere nominal designation, and that buddahood is innate in all beings—handsomely recapitulate the notions of sagehood championed in the immediately preceding centuries by the *xuanxue* thinkers.

In later centuries, subitist and gradualist patterns would manifest themselves again in the controversies of the Southern and Northern Chan teachings (upon which Daosheng's thought has no real bearing whatsoever) and, in another form altogether, in the division of the neo-Confucian teachings into the so-called Cheng-Zhu and Lu-Wang traditions, testifying to the power of these motifs over Chinese intellectual and religious history. It is thus important to see in Daosheng's thought the extent to which Buddhist and indigenous patterns of religious thinking fertilize each other and to recognize in the concerns of the still young Chinese Buddhist church of Daosheng's day the resumption of perennial Chinese themes and conflicts.

**DĀRĀ SHIKŌH, MUḤAMMAD.** (According to some sources, Dara Shukōh.) Sultan Muḥammad Dārā

Shikōh (AH 1024–1069/1615–1659 CE), the eldest son of the Mughal emperor Shāhjahān and Mumtāz Maḥal, was born in the city of Ajmer. Dārā's political career began in 1634, when he was given the first *manṣab* (rank) in command of 1,200 *dhāt* (soldiers) and 6,000 *sawār* (horsemen). By 1657 the number of troops under Dārā's command had reached 100,000. Moreover, later in the same year, due to the illness of his father, Dārā was appointed as regent to look after the affairs of the empire.

Dārā was not a successful warrior, however. His three expeditions against the Persian army, in 1639, 1642, and 1653, ended in humiliation and cost him the chance of capturing Kandahar. His later career, moreover, saw two detrimental defeats in the war of succession at the hands of his brothers, who refused to accept Dārā as the new regent. First he lost against Murād and Aurangzēb in Samūgarh, and then a few months later he suffered his final defeat in 1659 at the hands of Aurangzēb in Deorai. Although Dārā was a brave warrior, his lack of diplomatic and leadership skills lost him his crown, and he was forced to flee to Dadar for refuge. There he was betrayed by his host, Malik Jīwan, and handed over to the new emperor, Aurangzēb. Finally, Dārā was paraded in disgrace through the streets of Delhi and beheaded in Dhū al Ḥijja AH 1069 (August 1659).

Dārā was a patron of arts, architecture, and literature and was himself a skilled calligrapher, artist, poet, writer, and translator. He wrote several works on Sufism and translated a few remarkable Sanskrit works into Persian. Dārā appears to have been interested in the Qādiriyya Ṣūfī *silsila* (literally, "order") from his childhood. He was formally initiated by Mullā Shāh into the Qādiriyya *silsila* sometime in 1639 or 1640. He remained committed to his *silsila* throughout his life, and as a poet he adopted "Qādirī" as his pen name.

It was his interest in Sufism that led Dārā to start writing in 1639 or 1640. His first four works were on Sufism. The first, *Safīnat al-Awliyāʾ* (Ship of the saints), contains more than four hundred short biographies of Ṣūfī saints of various orders. The second, *Sakīnat al–Awliyāʾ* (Tranquility of the saints), encompasses the lives of twenty-eight Qādirī Ṣūfīs, mostly Dārā's contemporaries. The third work, *Risāla-i Ḥaqq numāʾ* (The compass of the truth), is a manual aimed at explaining the theory and practice of Ṣūfī meditation. The fourth work, *Ḥasanāt al-ʿĀrifīn* (Merits of the Gnostics), is a collection of the *shaṭḥiyyāt* (ecstatic utterances) of the Ṣūfī saints from the eleventh century down to Dārā's own time. His Ṣūfī writings show that he was an enthusiastic follower of the doctrine of *waḥdat al-wujūd* (oneness of being) and advocated an inclusive approach towards other religions.

It was Dārā's broad-minded Ṣūfī attitude that brought him to the study of Hinduism. He held a series of dialogues with a Hindu yogi, Bābā Lāl Dās, and discussed with him various concepts of Hinduism, at times comparing them with Islam. This conversation was later compiled as *Sūʾāl-o-jawāb Dārā Shukōh-o-Bābā Lāl Dās* (The dialogue between Dārā Shukōh and Bābā Lāl Dās). As a result of his discussion with Bābā Lāl and other Ṣūfīs he wrote *Majmaʿ al-Baḥrayn* (*The Mingling of the Two Oceans*). This work represents one of the most important attempts to reconcile Islam and Hinduism in the history of Indian thought, and specifically in the field of comparative religion. Yet despite its ecumenical nature, *Majmaʿ* became the most controversial work written by Dārā.

Dārā also translated fifty Upaniṣads—under the title *Sirr-i Akbar* (The greatest veil)—from the original Sanskrit into Persian. Later, Anquetil Duperron, a French scholar, translated the Persian rendering of Dārā into French and Latin and introduced his work to Europe. In his preface to the *Sirr-i Akbar,* Dārā assigned the Upaniṣads the status of *kitāb-i maknūn* (a well-guarded book)—a status previously assigned by Muslim scholars only to the Qurʾān. For Dārā, the Upaniṣads and the Qurʾān represented two facets of the same truth. Dārā's other scholarly efforts in the field of Hinduism include a translation of the *Bhagavadgītā* and his commission of a translation of the *Jōg Bāshist,* also known as *Minḥāj al-Sālikīn* (The path of the wayfarers). In the preface to *Jōg,* he praises the prophet Muḥammad and admires the Hindu avatar Ramchand. This also demonstrates that, for him, both personalities were guides of the same stature. Dārā Shikōh's efforts to forge a new relationship between Hinduism and Islam was the most remarkable ecumenical achievement in the history of Mughal India.

**DARWĪSH.** The Persian word *darwīsh,* from the Pahlavi *driyosh,* is most likely derived from the term *darvīza,* meaning "poverty," "neediness," "begging," and so forth. The word *darwīsh* has entered the other Islamic languages, such as Turkish and Urdu, and is even found in classical Arabic sources. It has become an English word in the form of *dervish.* In all these cases, including the original Persian, it is related primarily to spiritual poverty, equivalent to the possession of "Muhammadan poverty" *(al-faqr al-muḥammadi).* Hence the term *darwīsh* referring to a person who possesses this "poverty" is the same as the Arabic term *faqīr* used in Sufism in many Islamic languages besides Arabic (including Persian itself) for Muhammadan poverty. Within Ṣūfī circles, these words are used interchangeably, along with *mutaṣawwif,* "practitioner" of Sufism.

The term *darwīsh* appears in Persian literature as early as the tenth century and in such early Persian Ṣūfī texts as the works of Khwājah ʿAbd Allāh Anṣārī of Herat, where it carries the basic meaning referred to above but encompasses such variations as "ascetic," "hermit," and "wandering Ṣūfī" *(qalandar).* Later it also became an honorific title bestowed upon certain Ṣūfīs such as Darwīsh Khusraw, the leader of the Nuqṭawiyah school at the time of Shah ʿAbbās I. Throughout the history of Sufism, the state of being a *darwīsh,* or *darwīshī,* has been held in great honor and respect, as seen from the famous *ghazal* of Ḥāfiẓ that begins with the verse

> Rawḍiy-i khuld-i barīn khalwat-i darwīshānast
> Māyiy-i muḥtashimī khidmat-i darwīshanast
>
> The sublime eternal Paradise is the spiritual
> retreat of the dervishes;
>
> The essence of grandeur is the service of the dervishes.

There is, however, a secondary meaning associated with *darwīsh* that carries negative connotations, interpreting simplicity of life, limitation of material needs, reliance upon God for sustenance, and other aspects of Muhammadan poverty or Sufism as laziness, lackadaisicalness, indifference to cleanliness, neglect of duties toward oneself and society, and other injunctions emphasized by the *sharīʿah,* or Islamic law. This negative aspect of the term increased with the decay of certain Ṣūfī orders during the past two or three centuries and also with the attempt by some people to pass themselves off as *darwīsh* without any involvement with Sufism at all. Nonetheless, the association with spiritual poverty, self-discipline, and the basic virtues of humility, charity, and veracity remains the primary meaning of the word.

**DASAM GRANTH.** The *Dasam Granth* (Tenth book) is a collection of writings attributed to Gurū Gobind Singh, the tenth Sikh gurū (1666–1708). It was compiled sometime after his death by Bhāī Manī Singh, one of his devoted followers. The *Dasam Granth* is 1,428 pages long, so it is almost the same size as the *Gurū Granth* (1,430 pages). The *Gurū Granth,* also known as the *Ādi Granth* (First book), is the sacred scripture of the Sikhs, but some parts of the *Dasam Granth* are also used in Sikh prayers. The authorship and authenticity of a large proportion of this work is questioned. Most of the *Dasam Granth* is in the Braj language, but the entire work is printed in the Gurmukhi script.

Gurū Gobind Singh was a superb poet who introduced vigorous meters and rhythms to revitalize his people and created novel images and paradoxes to stretch their imagination. He was also a great patron of the arts and employed numerous poets from different religious backgrounds. Much of the poetry written by Gurū Gobind Singh himself as well as that by his court poets was lost during his evacuation from Anandpur in 1705. Bhāī Manī Singh spent years collecting whatever materials he could salvage, and from these he produced the first recension of the *Dasam Granth.*

The *Dasam Granth* remains controversial among scholars, and it elicits a range of responses from devotees. Such compositions as the *Jaapu, Akāl Ustat, Bicitra Nātak, Caṇḍī*

*Caritra, Caṇḍī di Vār, Śabad Hazāre*, and *Gyān Prabodh* are generally accepted as Gurū Gobind Singh's compositions, and these are revered by the Sikhs. A large proportion of the *Dasam Granth* (about 1,185 pages) is devoted to stories, many of them based on Indian myth, others dealing with amorous intrigues. Most people believe that these sections were written by the poets of the gurū's entourage. They are therefore neglected, but the *Benati Chaupai* from this section is one of the daily Sikh prayers.

The *Dasam Granth* opens with the *Jaapu*. Analogous to Gurū Nānak's *Japu* (the first hymn in the *Gurū Granth*), Gurū Gobind Singh's *Jaapu* carries forward in breathtaking speed Nānak's message of the One reality. Many Sikhs recite the *Jaapu* daily in the morning. It is also one of the hymns recited as part of the Sikh initiation ceremony. Through dynamic metaphors and rhythm, the *Jaapu* exalts the animating and life-generating One that flows through and interconnects the myriad creatures: "salutations to You in every country, in every garb" (*Jaapu* 66). Like Nānak's *Japu*, Gobind Singh's *Jaapu* celebrates the presence of the transcendent within the glorious diversity of the cosmos: "You are in water, You are on land" (*Jaapu* 62); "You are the sustainer of the earth" (*Jaapu* 173).

The *Jaapu* is followed by *Akāl Ustat* (Praise of the timeless one), which occupies twenty-eight pages of the *Dasam Granth*. It proclaims the unity of humanity:

> Hindus and Muslims are one . . . . The Hindu temple and the Muslim mosque are the same. . . . All humanity is one. (*Akal Ustat* 86)

Mahatma Gandhi (1869–1948) popularized these verses in his famous prayer, "Īśvara and Allah are your names, temple and mosque are your homes." Verses from the *Akāl Ustat* are central to the Sikh initiation ceremony. They rhythmically repeat that without love all religious practices are ineffective: "They alone who love, find the Beloved."

The thirty-eight-page *Bicitra Nātak* (Wondrous drama) follows the *Akāl Ustat*. This poetic autobiography is a magical mixture of biographical facts and literary imagination. It is the only autobiographical work by any of the Sikh gurūs.

The three Durgā-Caṇḍī poems come next and retell the story of Durgā's titanic battles against the demons from the *Devīmāhātmya*. With all his artistic zeal, the gurū amplifies the warrior role of the ancient Hindu heroine.

*Khālsā Mahima* (Praise of the Khālsā), which comes later in the *Dasam Granth*, is a favorite hymn amongst the Sikhs. It celebrates the democratic Khālsā community created by Gurū Gobind Singh: "The Khālsā is my special form . . . the Khālsā is my body and breath." Another popular text from the *Dasam Granth* is the defiant *Zafar Nāmā* (Letter of victory), written in Persian, and addressed to the emperor Aurangzeb.

Like his predecessor gurūs, Gobind Singh appropriates love as the highest form of action. His devotional compositions reiterate Sikh ideals and ethics. Their tone is forceful, and their imperatives are clear:

> Recognize the single caste of humanity
> Know that we are all of the same body, the same light.
> (*Akāl Ustat* 85)

The tenth gurū's verse continues to have great resonance for the global society. Difference should not stand in the way of people getting to know one another:

> Different vestures from different countries may make us different. But we have the same eyes, the same ears, the same body, the same voice. (*Akāl Ustat* 86)

NIKKY-GUNINDER KAUR SINGH (2005)

**DAVID [FIRST EDITION],** second king of Israel and Judah (c. 1000–960 BCE), and founder of a dynasty that continued until the end of the Judean monarchy. David was the youngest son of Jesse from Bethlehem in Judah.

**DAVID'S PLACE IN THE HISTORY OF ISRAEL.** David is regarded by both tradition and modern scholarship as the greatest ruler of the combined states of Israel and Judah. He was able to free them from the control of the Philistines and to gain a measure of domination over some of the neighboring states (Edom, Moab, Ammon) and some of the Aramean states of Syria. At the same time he established treaty relations with Tyre and Hamath. He also extended the territories of Judah and Israel to include a number of major Canaanite cities and took Jerusalem by conquest. It became his capital and remained the ruling center of Judah until the end of the monarchy.

There are no references to David in any historical source outside the Bible. One contemporary ruler, Hiram of Tyre, mentioned in *2 Samuel* 5:11, is known from other historical sources, but the correlation of the chronologies of the two kings remains problematic.

The assessment of David's career is based upon sources in *1 Samuel* 16 through *1 Kings* 2. Some of these that mention his military activities reflect annalistic or formal documents. These are now embedded within two literary works often regarded as nearly contemporary with David and an important witness to the events: the story of David's rise to power (*1 Sm.* 16 through *2 Sm.* 2:7, *2 Sm.* 5), and the court history, or succession story (*2 Sm.* 2:8–4:12, 6:16, 6:20–23; *2 Sm.* 9–20; *1 Kgs.* 1–2). It remains less clear how *2 Samuel* 6–8 relates to either of these works or how they all fit into the larger history of the monarchy. The materials in *2 Samuel* 21–24 are supplemental additions that do not belong to the other sources.

There are, however, two serious questions about this literary analysis. First, the identification of a distinct literary work, the story of David's rise to power, may be doubted, since it may be viewed as a continuation of earlier materials in *Samuel* and as having strong ties to the rest of the so-called Deuteronomist's history of the monarchy—in which case it would be a work of the exilic period. Second, the court history was not originally part of this history but constitutes a later addition with quite a different perspective. If these two views can be sustained, then both works are comparatively late, and great caution must be exercised in using them as historical sources for the time of David.

**DAVID IN THE TRADITION OF ISRAEL.** Whatever their historical value might be, the literary works within *1 Samuel* 16 through *1 Kings* 2 establish David's place within the Israelite-Jewish tradition. Two quite different views of David's character and his significance for later Israel are given in these works.

**Rise to power.** David's introduction is directly linked to God's rejection of Saul, so that he immediately appears as the "one after God's own heart" to replace Saul. Shortly after David enters Saul's service as personal armor bearer, musician, and successful military leader, Saul becomes jealous and turns against David. While Saul's son Jonathan, his daughter Michal, his servants, and all the people grow to love David, Saul grows to hate him and makes various attempts on his life so that David flees. David establishes a band of followers in Judah and becomes a vassal of the Philistines. Saul, demented, cruel, and forsaken by God, ultimately dies on the battlefield with his sons. David, after offering a lament for Saul and Jonathan, is made king at Hebron, first by Judah and subsequently by Israel. David then captures Jerusalem and wages successful warfare against the Philistines. All of this comes to David because "God is with him." Throughout the entire account, David is viewed as one who can do no wrong. Heroic and magnanimous, he is the obvious replacement for Saul.

**The dynastic promise.** Once the land is at peace, David is able to bring the Ark to Jerusalem (*2 Sm.* 6) and build himself a palace (*2 Sm.* 5:11). He then proposes a plan to Nathan the prophet to build a temple for the Ark, and this leads to a dynastic promise by God through the prophet (*2 Sm.* 7). Although some have argued that this promise is based upon a special document of the early monarchy, it seems preferable to regard it as the thematic center of the larger Deuteronomic history of the monarchy and its ideology of kingship.

The dynastic promise is the real climax to the account of David's rise to kingship. With David a new era begins in two respects. God promises David an eternal dynasty but assigns the task of building the Temple—a permanent abode—to his son Solomon. God will be "a father" to the king, and he will be God's "son." He may be disciplined for disobedience to God's laws, but the dynasty will remain in perpetuity.

David as the "servant of Yahveh" who is completely obedient to God becomes the model for all future kings, especially those of Judah. Not only is his obedience rewarded with an immediate heir, but it is said to merit the perpetuation of his dynasty even if some future kings are disobedient to God's laws.

This dynastic promise also becomes the basis for the hope of a restoration of the monarchy after the destruction of the state in 587/6 BCE and ultimately leads to messianism—the belief that a son of David will arise and restore the fortunes of Israel and usher in the final reign of God.

**Court history.** The so-called court history, or succession story, variously regarded as a unique piece of early history writing, a historical novel, and a work of royal propaganda, is a literary masterpiece of realistic narrative. Some view it as written in support of Solomon, while others understand it as anti-Solomonic. If this work is an early source used by the historian of *Samuel* and *Kings*, then it is not clear how he could have been reconciled to such a pejorative view of David, since the rest of the history so completely idealizes him.

The court history, in fact, was a later addition to the history that seeks to counter the idealized view of David by suggesting that he gained the throne from a son of Saul under doubtful circumstances and that the divine promise to David was constantly used by David, Solomon, and others to legitimize very questionable behavior. The "sure house" of David is characterized by endless turmoil, and Solomon finally succeeds David after a palace intrigue. David himself commits adultery and murder. One of his sons, Amnon, rapes his sister Tamar and is avenged by his brother Absalom. After an exile Absalom returns to lead a revolt against his father that finally ends in Absalom's death. This is followed by yet another revolt between north and south.

This pejorative view of David's monarchy and the dynastic promise did not suppress the royal ideology or its evolution into messianism. At most it "humanized" David and gave added appeal to the tradition as a whole.

**DAVID IN THE *BOOKS OF CHRONICLES*.** The historian of *1* and *2 Chronicles* sees in David the real founder of the Jewish state, a state dominated by the Temple and an elaborate priestly hierarchy (*1 Chr.* 10–29). The Chronicler's source for David was the history in *Samuel* and *Kings* modified by his perception of the state, which was based upon his own times in the Hellenistic period. He presents David as immediately coming to the throne over all Israel after the death of Saul. There is no account of his struggle with Saul or of his warfare with Saul's son, Ishbosheth. The whole of the court history has been excised as too derogatory. In its place David becomes the real founder of the Temple, laying all the plans, providing for all the workmanship and the materials, and even establishing the whole hierarchy of priestly and Temple officials. Of particular importance for later tradition is the association of David with the Temple music, which did much to identify him as the "sweet singer of Israel." In this history David is completely idealized, and the time of David is an anachronistic legitimation for the ecclesiastical state that developed in the time of the Second Temple.

**DAVID AND THE PSALMS.** David is directly mentioned in only a few psalms (78, 89, and 132), those that make reference to the dynastic promise, all of which are dependent upon *Samuel* and *Kings*. In the Hebrew scriptures the superscriptions, which are all late, and which modern scholarship considers secondary additions, attribute seventy-three psalms to David. This continues the tradition of David's association with the sacred music of the Temple. But in a number of instances the individual laments (e.g., *Ps.* 51) are associated with particular events in David's life. Thus the psalms that were originally anonymous become increasingly associated with the figure of David.

**DAVID IN PROPHECY.** While the royal ideology had at most a minor place in preexilic prophecy, it was only in late prophecy and in exilic and postexilic editing of prophetic books that the dynastic promise to David plays a major role in visions of the future (*Is.* 9:5–6 [Eng. version 6–7], 11:1–10, 61:1–7; *Jer.* 33:14–26; *Ez.* 34:23–24; *Am.* 9:11ff.; *Mi.* 5:1–3 [EV 2–4]; *Zec.* 12:7–9). Hope is expressed for the restoration of the Davidic dynasty and times of prosperity. In their most elaborate form these prophecies predict an "anointed one" (the Messiah) who would manifest all the idealized attributes of royalty, liberate Israel from its enemies, and bring in the reign of Yahveh.

**DAVID IN RABBINIC JUDAISM, CHRISTIANITY, AND ISLAM.** The most important development in the Davidic tradition in postbiblical Judaism was the regarding of David as the author of the Psalter, or at least as author of most of the psalms within it. This meant that David, as the composer of Israel's sacred hymns and prayers, was a model of Jewish piety. In the psalms David speaks not only for himself but for all Israel. His praise represents the spiritual life of the worshiping community, and in his prayers he supplicates God for Israel in all time to come. Furthermore, a number of the psalms have as their theme the glorification of the Law (Torah) and the ardent devotion of the psalmist to the study of the Law day and night (*Ps.* 1, 19, 119). Consequently, David was viewed as a great authority on the Law, and his words and example could often be invoked to settle a point at issue in the discussions of legal matters (*halakhah*) (B. T., *Ber.* 4a; B. T., *Yev.* 78b–79a). Since the Psalter came to be regarded as holy writ, David was also considered a prophet through whom God spoke and gave his revelation to Israel.

Some elements in the Davidic tradition gave the rabbis difficulty, most notably David's sin of adultery with Bathsheba. Some attempted to exonerate him, but those who found him guilty of wrongdoing saw a divine purpose in the events, namely that David was to be an example of contrition and repentance to give hope and encouragement to Israel when it sinned (*Midrash Tehillim* 40.2, 51.1, 51.3). Another problem was the tradition that David was descended from Ruth the Moabite (*Ru.* 4:17), since this would make him ineligible for participation in the congregation of Israel. As a compensation, every attempt was made to enhance David's genealogical line and give him the strongest possible pedigree. The dynastic promise to David represented the future hope of Israel, but many rabbis were concerned that it not be used for political or ideological manipulation by messianic adventurers. At the same time the liturgical tradition continued to embody the hope in a restoration of the kingdom of David in the age to come.

Christianity, as reflected in the New Testament, also recognized David as author of the psalms, as an example of piety, and as a prophet of divine revelation; but the emphasis was clearly on the messianic aspects of the tradition. Since Jesus was identified as the Messiah, he received the title "son of David," although he repudiated the political connotation of such a designation. Matthew and Luke, in their birth stories, connect Jesus with Bethlehem, the city of David, and supply genealogies that trace his lineage back to David. David as prophet also bears witness in the psalms to Jesus as the Messiah (*Acts* 2:25–37).

Islam's tradition about David is slight. The Qurʾān knows of a few episodes in David's life, such as the victory over Goliath, but this and other stories are confused with those of other biblical figures (2:252). The Qurʾān also recognizes that God gave *Psalms* to David as a divine book in much the same way as Moses and Muḥammad received their revelations (17:56).

## BIBLIOGRAPHY

Treatments of the historical periods of David's reign may be found in John Bright's *A History of Israel*, 3d ed. (Philadelphia, 1981); the contribution by J. Alberto Soggin, "The Davidic-Solomonic Kingdom," in *Israelite and Judaean History*, edited by John H. Hayes and J. Maxwell Miller (Philadelphia, 1977); and those by Benjamin Mazar and David N. Freedman in *The World History of the Jewish People*, vol. 4, pt. 1, edited by Abraham Malamat (Jerusalem, 1979), pp. 76–125.

The standard treatment on the story of David's rise to power is Jakob H. Grønbaek's *Die Geschichte vom Aufstieg Davids, 1 SAM. 15–2 SAM. 5: Tradition und Komposition*, "Acta Theologica Danica," vol. 10 (Copenhagen, 1971). The classic work on the so-called succession story is Leonhard Rost's *Die Überlieferung von der Thronnachfolge Davids*, "Beiträge zur Wissenschaft vom Alten und Neuen Testament," vol. 3,

no. 6 (Stuttgart, 1926), translated by Michael D. Rutter and David M. Gunn as *The Succession to the Throne of David* (Sheffield, 1982). Building upon this study was the important essay by Gerhard von Rad, "Der Anfang der Geschichtsschreibung im Alten Israel," *Archiv für Kulturgeschichte* 32 (Weimar, 1944): 1–42, translated by E. W. Trueman Dicken as "The Beginning of Historical Writing in Ancient Israel," in Gerhard von Rad's *The Problem of the Hexateuch and Other Essays* (Edinburgh, 1966), pp. 166–204. See also the studies by Roger N. Whybray, *The Succession Narrative* (London, 1968), and David M. Gunn, *The Story of King David: Genre and Interpretation* (Sheffield, 1982). A more detailed treatment of my own views may be found in chapter 8 of my *In Search of History: Historiography in the Ancient World and the Origins of Biblical History* (New Haven, Conn., 1983).

For a more detailed treatment of the Jewish and Christian traditions with bibliography, see the article "David" in *Theologische Realenzyklopädie*, vol. 8 (New York, 1981).

John Van Seters (1987)

## DAVID [FURTHER CONSIDERATIONS].

The most important recent developments in the study of the biblical king David have to do both with the degree of historicity of the Bible's account and with new textual material. Fueled by a more skeptical approach to biblical historiography and by new interpretations of the archaeological evidence, in recent years some scholars have come to question the historicity of the entire united monarchy of Israel (the biblical reigns of Saul, David, and Solomon). Nonetheless, the fragments of the Tel Dan inscription discovered in 1993 and 1995 seem to contain the first and only early mention so far of David outside the Bible.

The Bible's account of the united monarchy of Israel in *1-2 Samuel* and *1 Kings* (part of the so-called Deuteronomistic history) is no longer accepted by many scholars as accurate documentation about the tenth century BCE, but instead as an idealized portrayal of a past golden age. Some scholars (especially Thomas L. Thompson, Niels Peter Lemche, and Philip Davies) have gone so far as to argue that the united monarchy never really existed but was merely the propagandistic invention of post-exilic or even Hellenistic Jewish writers. According to this, the twin kingdoms of first Israel in the ninth century and later its sister Judah in the seventh century would have arisen independently and would not have been the result of a split of Israel under Solomon's son, Rehoboam, in the last quarter of the tenth century. Other scholars, however, maintain a pre-exilic or exilic date for the main portions of the Deuteronomistic history, but suggest that the Bible has exaggerated the extent and might of the historical David and Solomon's tenth-century kingdom (e.g., Israel Finkelstein, Neil Silberman, Amihai Mazar).

With regard to the archaeology of tenth-century Israel, certain sites with monumental gates and palaces that had been previously connected to the reign of David's son Solomon, are now dated by Finkelstein and others to the following ninth century. For example, Hazor, Megiddo, and Gezer, which are said to be rebuilt by Solomon in *1 Kings* 9:15, have been reinterpreted on the basis of pottery analysis, carbon-14 dating, and other means, as early ninth-century cities. Even if one might disagree with the new dating of these large cities, however, one is still left with the numerous small settlements elsewhere, especially in the south around Jerusalem. These small sites do not at all bear evidence of the significant political reorganization or population and settlement growth that would have taken place with the united monarchy.

As for excavations in Jerusalem itself, the great capital of David and Solomon in the Bible, they have produced an almost total lack of evidence for significant tenth-century occupation. Either subsequent occupation of Jerusalem throughout the centuries destroyed or obscured its monumental buildings, or else Jerusalem was merely a highland village in the tenth century, without the great temple and palace of the Bible's united monarchy. Population estimates for the environs of Jerusalem and points south suggest that only around five thousand people lived in that area, whereas up to forty-five thousand lived in settlements north of Jerusalem. Thus, it is unlikely that Jerusalem in the tenth century was the capital of a large kingdom, or a city of any particular importance whatsoever, let alone the center of an empire stretching from Egypt to the Euphrates, as is described in *1 Kings* 4:21 for Solomon's reign.

Interpretations of the Tel Dan inscription, found at Tel Dan in northern Israel in three fragments in 1993 and 1995, add to the discussion. Perhaps dating to just before 800 BCE, the inscription is written in Aramaic, probably by a king of Aram who celebrates his defeat of a king of Israel and perhaps also of a king of *byt dwd*, "the house (i.e., dynasty) of David." The fragments preserve at most only four words in each of twenty-one lines, and thus it remains difficult to piece together the historical situation that is commemorated. The simplest interpretation is that the inscription reflects the existence at that time in some form of both Israel an early form of Judah, with the latter signified by the name of the dynastic hero, David, from days long past.

However, while the Tel Dan inscription shows that there was a *byt dwd,* "house of David," recognized by Arameans around 800 BCE, it does not prove the historicity of the biblical narratives concerning king David. (Note that it has also been suggested that the phrase *byt dwd* should be restored to line thirty-one of the Moabite inscription from the late ninth-century BCE, but that proposal is problematic and unlikely.)

In sum, the biblical narratives about David are particularly important for what they tell historians about political theology, apologetic writing, and literary devices in biblical historiographic discourse. However, for the purpose of historical reconstruction, the search for the historical kernel of the Davidic traditions may well belong to the realm of modern apologetics and contemporary political theology.

## BIBLIOGRAPHY

On David, see especially S. L. McKenzie, *King David: A Biography* (Oxford, 2000); Baruch Halpern, *David's Secret Demons: Messiah, Murderer, Traitor, King* (Grand Rapids, Mich., 2001); and Amihai Mazar, et al., *David, King of Israel: Alive and Enduring?* (in Hebrew; Jerusalem, 1997).

Essential essays on biblical historiography and the historical reconstruction of the tenth century BCE include Thomas L. Thompson, *Early History of the Israelite People from the Written and Archaeological Sources* (Leiden, 1992) and *The Bible in History: How Writers Create a Past* (London, 1999); Philip Davies' *In Search of Ancient Israel* (Sheffield, U.K., 1992); Niels Peter Lemche, *The Israelites in History and Tradition* (London, 1998); V. Philips Long, *Israel's Past in Present Research: Essays on Ancient Israelite Historiography* (Winona Lake, Ind., 1999); and Mario Liverani, "Nuovi sviluppi nella studio della storia dell'Israele biblico," *Biblica* 80 (1999): 488–505.

Archaeological studies of the tenth century BCE may be found in Israel Finkelstein, *The Archaeology of the Israelite Settlement* (Jerusalem, 1988), and a more popular presentation in Israel Finkelstein and Neil Silberman, *The Bible Unearthed: Archaeology's New Vision of Ancient Israel and the Origin of Its Sacred Texts* (New York, 2001). In opposition to Finkelstein's dating of the "Solomonic" cities, but supporting the idea that the extent of the united monarchy has been exaggerated in the Bible, see Amihai Mazar, "Iron Age Chronology: A Reply to I. Finkelstein," *Levant* 29 (1997): 157–167.

On the Tel Dan inscription see George Athas's *The Tel Dan Inscription: A Reappraisal and a New Interpretation* (Sheffield, U.K., 2003).

TAWNY L. HOLM (2005)

**DAʿWAH.** The Arabic term *daʿwah* (lit., "call, invitation, summoning") is used especially in the sense of the religious outreach or mission to exhort people to embrace Islam as the true religion. The Arabic root *dʿw* occurs frequently in the Qurʾān, where it can also mean calling upon God in prayer (as in *duʿāʾ*). The Qurʾān contains many imperatives to spread Islam, as in *sūrah* 16:125–126:

> Call [*udʿu*] thou to the way of thy Lord with wisdom and good admonition, and dispute with them in the better way. Surely thy Lord knows very well those who have gone astray from his way, and he knows very well those who are guided. And if you chastise, chastise even as you have been chastised; and yet assuredly if you are patient, better it is for those patient. And be patient; yet it is thy patience only with the help of God.

*Daʿwah* can also mean simply an invitation to a mundane affair, such as a meal, or propaganda for a political or sectarian cause. A specialized meaning of *daʿwah* has been the quasi-magical practice of spell and incantation through invocation of the names of God and his good angels and jinn, in pursuit of personal goals such as healing, success in love or war, avoidance of evil, and other things. This occult practice became highly elaborated and included astrology, a magical alphabet, numerology, and alchemy.

During the early centuries of Islamic history, *daʿwah* often had strong political orientations when used to mean a summons to support a claimant to Islamic rule. New movements would spread their ideologies of Islamic statehood through highly organized and disciplined networks of information and indoctrination. The most forceful and long-lived *daʿwah* enterprise was the Shīʿī sect known as the Ismāʿīlīyah, which insisted that the true Muslim community should be ruled by a politico-religious leader descended from the family of Muḥammad through the line of Ismāʿīl Jaʾfar al-Ṣādiq (d. 756 CE), one of the great Shīʿī imams. The Ismāʿīlīyah developed *daʿwah* into a comprehensive political theology aimed at their ultimate dominance of the Muslims. The movement inducted converts into a fanatically devoted community that observed a hierarchy of degrees of membership, marked by initiation into ascending levels of esoteric knowledge. The leaders at each level were called *dāʿīs*, "summoners," who exercised authority by regions in which they preached and taught the doctrines of the movement. The *dāʿīs* were considered by the Ismāʿīlīyah to be the representatives of the imam. In some cases, the head *dāʿī* was the highest religious leader of a country, a sort of Shīʿī "bishop." More often, the *dāʿīs* functioned in an underground manner, spreading their doctrines in territories not under Ismāʿīlī rule. As well as preaching and propaganda, advanced theology and philosophy were major activities of the *dāʿīs*.

In the modern period, *daʿwah* most often refers to Islamic missionary activities, which are increasingly characterized by long-range planning, skillful exploitation of the media, establishment of study centers and mosques, and earnest, urgent preaching and efforts at persuasion.

*Daʿwah* as mission should never be spread by force (*sūrah* 2:256). If the hearers refuse to embrace Islam, then they should be left alone, at least for a time. But a committed Muslim should not give up the task of *daʿwah*. If nothing else succeeds, the silent example of a devout Muslim may be used by God as a means to someone's voluntary conversion.

In the strong Islamic revival the post-colonial period, *daʿwah* has a less specifically political and a more marked spiritual and moral emphasis than in earlier times. The *ummah*, the Muslim community, is believed to transcend national political entities, and the *sharīʿah*, the sacred law, is said to make claims on Muslims even when it is not embodied as the actual legal code (except in certain countries). *Daʿwah*, then, is the cutting edge of Islam and as such is directed at fellow believers as well as at the multitudes outside the *ummah* who nevertheless possess the God-given *fiṭrah* (*sūrah* 30:30), or "inherent character," also to be intentional Muslims and thus vicegerents (*khulafāʾ*; s. g., *kha-līfah*, "caliph") of God on earth (2:30). From North Africa to Indonesia, and beyond, Muslim individuals and organizations are strenuously dedicated to missionary activities, utilizing the media and other advanced means of communication and "market research." *Daʿwah* faculties are prominent in Muslim training schools and universities, and the hope is that the strong obligation to spread Islam will be felt by Muslims at all levels of society. *Daʿwah*, as well as migration, is responsible for the significant recent growth of Muslim populations in Western countries.

**BIBLIOGRAPHY**

Maurice Canard's article "Daʿwa," in *The Encyclopaedia of Islam*, new ed. (Leiden, 1960–), offers a detailed analysis with extensive source citations, although it does not treat modern Islamic mission. A provocative collection of exploratory essays and discussions is *Christian Mission and Islamic Daʿwah: Proceedings of the Chambésy Dialogue Consultation*, edited by Khurshid Ahmad and David Kerr (London and Ann Arbor, Mich., 1982), first published as a special issue of the *International Review of Mission* 65 (October 1976). For an introduction to *daʿwah* as occult spell and incantation, see the article "Daʿwah" in Thomas Patrick Hughes's *A Dictionary of Islam*, 2d ed. (London, 1896). A standard survey of Shīʿī sectarian concepts and practices of *daʿwah* as propaganda is Bernard Lewis's *The Origins of Ismāʿīlism* (1940; reprint, New York, 1975).

FREDERICK MATHEWSON DENNY (1987)

**DAY, DOROTHY** (1897–1980), personalist revolutionary, journalist, and lecturer. Between 1933, when she brought out the first penny-a-copy issue of the *Catholic Worker*, and 1980, when she died, Dorothy Day became, in the opinion of many, America's foremost Roman Catholic voice calling for peace and a profound change in the major institutional forms of the contemporary world. She opposed what she regarded as the enslaving colossus of the modern state and the technological giantism to which it was a partner. Fundamental to her ideas of social reordering was her insistence on the personal transformation of value based on the primary reality of spirit rather than the spirit of acquisitiveness. For her, this meant taking her directions from church tradition, the papal encyclicals, and her literal reading of the Gospels. She used these sources to justify her absolute pacifism and her communitarian ideas on social reconstruction.

For Day, the ultimate and transfiguring value was love, a subject that was the theme of her best writing. The exercise of a sacrificial love was at the heart of her personalist revolt against the enlarging domain over life of institutional forms. The world would be renewed by persons who loved and not by state management. In her own case she chose to wage her revolution by establishing "houses of hospitality" in the destitute areas of lower Manhattan in New York City, by promoting communitarian farms, and by an immense writing and speaking regimen that left few Catholic parishes or schools untouched by her ideas by the time of her death.

She was born the third in a family of five children in Brooklyn on November 8, 1897, the daughter of Grace Satterlee and John Day. An opening in journalism for John Day took the family to San Francisco in 1903, but the earthquake there, three years later, forced a removal to Chicago. In 1915 the family moved to New York where Dorothy, having finished two years at the University of Illinois, began her own life in journalism as a reporter for the Socialist *Call*.

For the next five years she dabbled in radical causes, moving from one cheap flat to another, mostly in the lower New York area. In 1919 she left a hospital nurse's training program to live with a flamboyant journalist, Lionel Moise. The affair ended with her having an abortion, a circumstance that filled her with such grief that she was brought to the brink of suicide. Later, living in a fisherman's shack on Staten Island as the common-law wife of Forster Batterham, she bore a daughter, Tamar Therese. Out of gratitude for her daughter and a mystical rapture she felt in living on such close terms with nature, she turned to God and was subsequently baptized a Catholic. In 1932 she met the French itinerant philosopher, Peter Maurin, and after some months of tutelage she acquired from him the idea of "the correlation of the spiritual with the material." This was the beginning point of her vision of social re-creation.

Her personality was remarkably forceful and engaging, but she could be given to moments of authoritarian harshness. After a series of retreats during World War II, the unremitting struggle of her life was to grow in sanctity. In her later years the impression she gave was of one who had achieved a rare level of holiness. She died on November 29, 1980, and was buried at Jamestown, Long Island, not far from the site of her conversion.

**BIBLIOGRAPHY**

Dorothy Day wrote five books, all of which, from various perspectives, are autobiographical. The best and most comprehensive is *The Long Loneliness* (New York, 1952). A full-length biography is my *Dorothy Day* (New York, 1982), based on personal acquaintance with Day and for which I had access to all of her personal manuscript materials. An excellent edition of Day's writings is Robert Ellsberg's *By Little and Little: The Selected Writings of Dorothy Day* (New York, 1983).

WILLIAM D. MILLER (1987)

**DAYANANDA SARASVATI** (1824–1883), leading Hindu reformer and founder of the Ārya Samāj, known by the westernized form of his religious name, Dayānanda Sarasvatī. What is known of Dayananda's early years comes from two autobiographical statements made after he founded the Ārya Samāj in 1875. Although he refused to reveal his family and personal names or place of birth in order to preserve his freedom as a *saṃnyāsin* ("renunciant"), these statements allow a reconstruction of his life before he became a public figure.

Dayananda claimed to have spent his childhood in a small town—from his description, most likely Tankara—in the princely state of Morvi in northern Kathiawar, now in Gujarat's Rajkot district. His father was a high-caste *brahman* landowner and revenue collector and a devout worshiper of Śiva. Dayananda received Vedic initiation at eight and began to study Sanskrit and the Vedas. Although his father preferred that he become a devotee of Śiva, an experience in the local Śiva temple undermined Dayananda's faith that the temple icon was God, and turned him away from Śaiva ritual practice involving images. The deaths of a sister and a beloved uncle a few years later made him realize the instability of worldly life, and when, around 1845, he learned that his family had secretly arranged his marriage, he fled to become a homeless wanderer.

The young mendicant studied the monistic philosophy of the Upaniṣads with several teachers before being initiated into an order of *saṃnyāsin*s as Dayananda Sarasvati in 1847. He lived as an itinerant yogin for the next thirteen years, but in 1860 he settled in Mathura to study with the Sanskrit grammarian Vrijānanda (1779–1868). Vrijānanda, whom Dayananda accepted as his *guru,* aided Dayananda in perfecting his Sanskrit and also convinced him that the only truthful texts were those composed by the *ṛṣi*s ("seers") before the *Mahābhārata*, since, he taught, all later works contained false sectarian doctrines. Dayananda committed himself to spreading this message when he left his *guru* in 1863, though it took him most of his life to decide which individual texts were true and which were false.

Between 1863 and 1873, Dayananda spent most of his time in small towns along the Ganges River in what is now western Uttar Pradesh meeting representatives of various Hindu communities and debating sectarian *paṇḍits.* These experiences confirmed his early doubts about image worship and led him to reject all of the Hindu sectarian traditions—not only Vaiṣṇavism, to which he had an early aversion, but eventually even worship of the formless Śiva. In place of sectarianism and the related religious and caste restrictions, he argued with growing conviction for a united Hinduism based on the monotheism and morality of the Vedas.

Throughout this period Dayananda continued to dress as a yogin in loincloth and ashes and debated only in Sanskrit; thus his message was restricted mainly to those orthodox upper-caste Hindus who were most solidly opposed to his views. Early in 1873, however, he spent four months in Calcutta as the guest of the Brāhmo Samāj leader Debendranath Tagore, met the great Brāhmo spokesman Keshab Chandra Sen, and discussed religious issues with these and other westernized Hindu intellectuals. Dayananda saw firsthand the influence of the Brāhmo organization, learned the value of educational programs, public lectures, and publications in effecting change, and accepted from Sen some valuable advice to improve his own reception: abandon the loincloth and the elitist Sanskrit in favor of street clothes and Hindi.

Dayananda left Calcutta with an unchanged message but a broader perspective and a new style, lecturing and writing in Hindi and seeking a receptive audience for his message. He found the first such audience in Bombay, where he founded the Ārya Samāj ("society of honorable ones") on April 10, 1875. His major breakthrough, however, came two years later in the Punjab, where a rising class of merchants and professionals was seeking a defense of Hinduism against Christian missionary activity. A chapter of the Ārya Samāj was founded in Lahore in 1877, and this soon became the headquarters for a rapidly expanding movement in the Punjab and western Uttar Pradesh.

Dayananda left control of the Ārya Samāj in the hands of local chapters and spent his last years perfecting his message. He completed the revision of his major doctrinal statement, *Satyārth prakās*, shortly before his death on October 30, 1883. With final conviction, he declared that the Vedic hymns revealed to the *ṛṣi*s were the sole authority for truth, and he reaffirmed his faith in the one eternal God whose revelation thus made salvation possible for all the world.

**SEE ALSO** Ārya Samāj.

**BIBLIOGRAPHY**

Dayananda's longest autobiographical statement appeared in *The Theosophist* in three installments in 1879–1880. This statement has been supplemented by an excerpt from one of his lectures in Poona in 1875 and published with explanatory notes, a doctrinal statement, and a chronology of his life in *Autobiography of Swami Dayanand Saraswati*, edited by K. C. Yadav (New Delhi, 1976). The best scholarly study of Dayananda's life and thought is J. T. F. Jordens's *Dayānanda Sarasvatī, His Life and Ideas* (Delhi, 1978). A more focused analysis of the central element in Dayananda's belief system is provided by Arvind Sharma's "Svami Dayananda Sarasvati and Vedic Authority," in *Religion in Modern India*, edited by Robert D. Baird (New Delhi, 1981), pp. 179–196. The standard account of Dayananda's life by one of his followers is Har Bilas Sarda's *Life of Dayanand Saraswati, World Leader,* 2d ed. (Ajmer, 1968).

THOMAS J. HOPKINS (1987)

## DAY OF ATONEMENT SEE RO'SH HA-SHANAH AND YOM KIPPUR

**DAY OF THE DEAD.** The feast of All Saints Day and the liturgical celebration of All Souls Day have long histories in Western Christendom. The origins of these occasions in the Christian yearly cycle are uncertain, but by the fourteenth century they ranked immediately after Christmas and Holy Week in importance, and their celebration had been fixed on November 1 for All Saints Day and November 2 (or November 3 if November 2 fell on a Sunday) for All Souls Day. Since then these two festivities, most commonly known as the Days of the Dead, have been inextricably interrelated in the liturgy of the Western Church. At the onset of, perhaps even as the result of, the Reformation and the rise of modern science during the Renaissance, there was a significant decline in the ritual and ceremonial underpinnings of Christendom, but in the New World (more precisely in the Catholic New World) the rites, ceremonies, and symbolic meaning of All Saints Day and All Souls Day have been reinvigorated and in many ways have achieved their maximum elaboration.

**Development of the Observances.** All Saints Day commemorates those individuals who in the service of the church have achieved that ambivalent status of "sainthood." Although the transcendentally different natures of the omnipotent-omnipresent almighty God of Christian monotheism and its underlings, the saints, may be clearly understood and explained by theologians, this has not been the case for significant segments of practicing Christians since probably the formative period of Christianity between the first and fourth centuries CE. Indeed there is plenty of historical evidence that for sizable segments of Christendom the proliferation of saints and their relationship to God have come to look suspiciously like polytheism and have led to practices incompatible with monotheism. Moreover there are anthropologists (Ralph Linton, John M. Roberts, L. Keith Brown, Hugo G. Nutini) who maintain that the bulk of Christianity for centuries has been practicing monolatry (or polylatry) and not monotheism—that is, that in behavior (psychologically) and practice (ritually and ceremonially) no transcendental difference emerges between God and the saints, including the many manifestations of the Virgin Mary. This is certainly the case with Mesoamerican Indians in the early twenty-first century. Most contemporary Mexican Indians have not internalized the theological distinction between God and the saints, even if they somewhat vaguely understand it, and in their actual religious behavior and practice God is little more than a primus inter pares, a more powerful deity than the many saints and the various forms of the Virgin Mary. Mexican Indians, and often rural mestizos, often rank the village patron saint higher than God the Father, God the Son, and God the Holy Ghost or they center their Catholicism on the cult of the Virgin of Guadalupe, thus in effect abandoning the central tenet of monotheism.

Lest the reader think that the syncretic nature of Catholicism in this region of the New World is a special case, two examples from other parts of the world may be cited. In their ranking and expressive analysis of the saints as conceived and practiced by Chinese Catholics in Hong Kong, John M. Roberts and John T. Myers found that the array of Catholic supernaturals (God the Father, God the Son, God the Holy Ghost, several dozen saints, and half a dozen manifestations of the Virgin Mary) was similar to the Chinese pantheon of gods. The respondents conceived of these Catholic supernaturals as gods who have definite rankings and spheres of action. In many peasant communities in the West as well—such as southern Italy, Sicily, and southern Spain—the saints are conceived as deities of sorts, with powers in their own right and not infrequently arranged in arrays similar to classical polytheistic pantheons. Whether or not the distinction between God and saints is understood or explicitly made by these subsocieties, the fact remains that in behavior and practice these segments of Christendom are practicing monolātry, not monotheism. Indeed at least in Catholicism it may be difficult to be a theologically pure monotheist.

The feast of All Saints Day is in a sense democratic in that it commemorates all the saints of God, canonized and uncanonized, known and unknown. It is a rite of propitiation and intensification, in which the church celebrates the external glory of God in the company of those who are closest to his perfection. The origins of the feast are lost, but there are indications that as early as the middle of the fourth century a day was set aside to commemorate the martyrs who had died before Christianity became the official religion of the Roman Empire. Specifically May 13 commemorated all the martyrs of Edessa (an important early center of Christianity, now the city of Urfa in southern Turkey), and it appears that this date soon spread to the western empire. By the early seventh century most bishoprics in the West celebrated on this day their own and other martyrs of Christendom. Some scholars doubt that there is a connection between May 13 and November 1, and no one has determined how and under what circumstances a feast of all saints came to be celebrated on the latter date. Scholars also are not agreed as to when the category of "saint" or the status of "sainthood" appears in Christian theology and practice. It is safe to assume, however, that there were no saints as ritual and ceremonial objects of worship until the beginning of the seventh century. It is reasonable to surmise an evolution from martyr to saint, but the social and religious condition of this transformation and amalgamation are not clear. In any case, by the beginning of the ninth century November 1 was widely celebrated as the day of all martyrs and saints in Western Christendom, and in the latter part of the eleventh century, during the papacy of Gregory VII, that date officially became All Saints Day in the modern sense of the feast. Since then All Saints Day has steadily increased in importance as a ritual occasion in the yearly cycle, and in southern Europe, especially Spain, it developed elaborate proportions beginning in the early fourteenth century.

All Souls Day, November 2, is a liturgical celebration of the Western Church commemorating the "faithfully departed"—that is, those who have died within the fold of the church. It is observed as a day for honoring and rejoicing with those who are in heaven, offering prayers for those who are in purgatory so that they may soon enter the kingdom of heaven, and in general supplicating with the dead to watch over the living and thanking them for past intercessions. All Souls Day is a yearly rite of propitiation and thanksgiving and, in the popular conscience, a veritable cult of the dead. Indeed it is a form of ancestor worship somewhat reminiscent of the Roman gods of the household, the *lares* and *penates* (the feast of Parentalia), from which it probably developed. Among the many organizational, ritual, ceremonial, and symbolic examples of syncretism as Christianity developed out of the confluence of Hebrew monotheism and Roman polytheism, All Souls Day is one of the clearest.

Until well into the Middle Ages the church was reluctant to establish a specific liturgical day for propitiating and thanking the dead. The reason for this reluctance was the desire to dissociate the church from the persistent and tenacious pre-Christian rites and ceremonies of the cult of the dead and ancestor worship, widespread among all branches of Indo-European polytheism, which from the beginning the church regarded as "superstitious" and theologically impure. The efforts of the early church fathers (Augustine, Jerome, Athanasius, Boniface, and Chrysostom) to render what they regarded as superstitious and heretic remains of the polytheistic past (many aspects of witchcraft and sorcery, rites and ceremonies associated with particular festivities and the cult of the gods, the cult of the dead itself, and so on) indicate that a significant amalgam of beliefs and practices of the old and new religions already existed. By the beginning of the eighth century, at least in the circum-Mediterranean area, many aspects of Christianity had been significantly syncretized. Despite these efforts and the efforts of subsequent theologians, as Christianity spread to more marginal areas of Europe, syncretism placed a permanent mark on several practices of the Christian faith. More than the other two great branches of monotheism (Judaism and Islam), Christianity has been unable to divest itself completely of polytheistic beliefs and practices out of which it arose. Christian theologians have always insisted on an ideologically pure monotheism, and ever since the church became an imperial force in the middle of the fourth century, it has successfully obliterated deviations that smacked of polytheism, pantheism, monolatry, and other deviant supernatural conceptions. Nevertheless the syncretic aspects of Christianity have manifested themselves in many contexts and segments of Christian worship, and theologians, sometimes to their embarrassment, have had to accommodate rituals, beliefs, and behaviors with a distinct polytheistic, pantheistic, or monolatrous character within a strict monotheistic ideology. The often marked dichotomy between theology and practice appears to be a constant from Christianity's folk beginnings to its imperial maturity during the first half of the sixteenth century.

Although prayers to the dead were encouraged from earliest times, the church, for the reasons given above, was slow in giving liturgical recognition to the rites and ceremonies concerning the dead that probably had been going on for centuries in many parts of Christendom. However, Pentecost Monday was dedicated to the worship of the dead in Spain by the middle of the seventh century. For reasons unknown, November 2 was set aside for commemoration of All Souls Day, a practice that was well established in the Cluniac monasteries in northern France by the middle of the twelfth century—that is, not long after November 1 had officially become All Saints Day. Unlike All Saints Day, however, All Souls Day never acquired official liturgical status—further evidence that the church was unwilling to formally sanction a celebration so pregnant with pagan elements and unchristian evocations. All Souls Day came to have liturgical status only by custom. Nonetheless by the second half of the fifteenth century All Saints Day and All Souls Day were liturgical feasts celebrated as a unit and ranked among the four most important occasions in the yearly ritual cycle of Western Christendom.

What the church was up against throughout the Dark and Middle Ages is well known; the situation has been replicated several times during the past five hundred years in the context of the expansion of western European peoples throughout the world. With specific reference to All Souls Day, many beliefs and practices of pagan origins or corruptions of Orthodox Christian beliefs concerning the dead were associated with this celebration and ancillary concerns. Throughout Western Christendom, these beliefs and practices survived until well into the sixteenth century. With the onset of secularization in Western society, they were displaced to marginal areas and to the lower levels of the social order, but they are still found in circum-Mediterranean areas and in other parts of Europe.

**BELIEFS AND PRACTICES.** Among the best-known beliefs and practices that were associated with the All Souls Day complex and relevant to the cult of the dead, the following may be mentioned. During the vigil of November 2 the souls of the dead came back in spirit to bless the household where they had died. On November 2 the souls in purgatory came back in the form of phantoms, witches, and toads, lizards, and other repellent animals in order to scare or harm persons who wronged or injured them during their lives. Food offerings were made to the dead in the cemeteries, ritually disposed of by those concerned after the souls had symbolically tasted the food. Special food offerings, consisting of a dish or drink that he or she had particularly liked, were made to prominent departed members of the household. Garments that had been worn by particularly good or pious members of the household were displayed on the family altar so that the souls would rejoice upon contemplating such a display of affection and become effective protectors of their living kin. The way to the house was marked by recognized signposts of flowers and other decorations so that the returning souls could more easily find their earthly homes. This veritable cult of the dead during the Dark and Middle Ages had probably changed little since Roman times.

All Saints Day, on the other hand, was rather heavily influenced by northern Indo-European polytheism and by the liturgical feasts of the Byzantine (Orthodox, Armenian) and Coptic churches, which in turn were doubly influenced by other Near Eastern polytheistic systems. Both the Germanic and Celtic traditions, particularly the latter, celebrated in the late autumn a complex of rites and activities associated with the end of harvest and the impending arrival of winter and intended to honor the gods of agriculture and natural elements. During the process of conversion to Christianity, the church condemned this complex as dealing with the devil and dabbling in witchcraft and sorcery. In the British Isles this was the celebration of Samhain, which has survived among English- and Gaelic-speaking peoples and is variously known as Hallow E'en, Allhallows, Hallowmas, and most commonly Halloween. Probably by the middle of the fifteenth century Halloween had coalesced as a syncretic component of English, Irish, Scottish, and Welsh Catholicism. By that time the high point of the celebration was the vigil of All Saints Day, and since then Halloween has been intimately associated with this liturgical feast as well as All Souls Day. The Protestant Reformation kept the celebration of All Saints Day, but for several reasons (most significantly the denial of the belief in purgatory) it abolished the feast of All Souls Day. With the increasing secularization of northern European societies, the Halloween–All Saints Day complex was transformed into what it is in the early twenty-first century, a secular feast. In many parts of northern Europe, however, the church was never able to stamp out completely many beliefs and practices associated with regional complexes that were instrumental in shaping the combined liturgical celebration of All Saints Day and All Souls Day. Thus even in the early twenty-first century, from Ireland to Russia, the ethnographer or folklorist finds survivals of these beliefs and practices (related mainly to food, drink, and special rites performed in the household or cemetery) among peasant and rural folk.

The syncretic background of All Saints Day in the Byzantine Church is not well known and still less that of the Coptic Church. However, the contemporary celebration of All Saints Day and All Souls Day in the East indicates that syncretism there was perhaps more influenced by pagan elements than in the West. The celebrations of the Greek and Armenian Churches appear to be more diversified and exhibit more traits of early Christian origin that is the case in the Western Churches. The Eastern Churches celebrate All Souls Day on several different dates: the Greek Church on the Saturday before Sexagesima Sunday (the second Sunday before Lent); the Armenian Church on Easter Sunday (as in Spain in the seventh century). The most interesting celebration of All Souls Day is in the Syrian-Antiochene Church. On the Friday before Septuagesima (the third Sunday before Lent), dead priests are honored; on Friday before Sexagesima, all the blessed souls in heaven and purgatory are worshipped; and on Friday before Quinquagesima (the first Sunday before Lent), all those who have died away from home and parents and friends are remembered. An even more elaborate division of labor in the celebration of All Souls Day is present in rural Tlaxcala, Mexico. Perhaps there is a connection with the Syrian-Antiochene rites, or it may be simply a continuation of pre-Hispanic practices.

It is probably in southern Italy and Spain that the celebration of the combined feasts of All Saints Day and All Souls Day acquired its most complex and elaborate form. In Spain this may be attributable to the Christian reconquest of Spain from the Moors in particular and Muslims inputs in general, but the evidence is not conclusive. It is certain, however, that the Dominican order was instrumental in enhancing the importance of All Saints Day–All Souls Day during the fifteenth century. For example, the Dominicans initiated the custom of having a priest celebrate three masses for the eternal glory and rest of the faithfully departed on All Souls Day. This action gained quick acceptance throughout Spain, and All Souls Day became ritually more important than All Saints Day. (This apparently never happened in any other country of western Europe.) By the middle of the fifteenth century the combined celebration of All Saints Day and All Souls Day in Spain was commonly referred to as Todos Santos. This combined liturgical celebration had become increasingly important and ranked just below Christmas and Holy Week in the yearly ritual cycle of Spanish Catholicism, popularly if not theologically. It was in this form that Todos Santos was introduced into the New World by the mendicant friars in the first half of the sixteenth century, and All Souls Day has remained the most ritually significant of the two days.

In Mexico the Day of the Dead is also known as Todos Santos and, after Christmas and Holy Week (Easter), is the most important celebration in the annual religious cycle. In several respects it is more elaborate than in Spain due to its syncretic component, which reinforced the Spanish Day of the Dead with similar beliefs and practices of Pre-Hispanic polytheism. The celebration of Todos Santos has three main components: the offerings to the dead on the household altar, the decoration of the graves in the cemetery, and the celebration of the different kinds of dead from Palm Sunday to Easter Sunday. All three of these components, but particularly the last, are heavily laden with pre-Hispanic elements. Moreover the sociological significance of the Todos Santos greatly departs from its Spanish antecedents. November 1 and 2, the central core of the celebration, are homecoming for Mexican folk people (rural Indian and mestizo communities); those who have migrated to the city return to visit their kin and together remember the dead, and if they do not return for three consecutive years, they are no longer regarded as members of the community. Throughout the Todos Santos cycle (from a week before to a week after November 1) people are on their best behavior, exchange offerings, and make special efforts to intensify kinship, ritual kinship (*compadrazgo*), and friendship relationships. This, in other words, is a "sacralized" period or a kind of *treuga Dei* (truth of God) in the community's annual cycle.

**DAZHBOG** was the pre-Christian sun god of the East and South Slavs. The name *Dazhbog* (Old Russian, *Dazh'bog*) is first mentioned in the Kievan pantheon, listed in the Russian *Primary Chronicle* (c. 1111 CE). His connection with the sun is clearly stated in the *Malalas Chronicle* of 1114: "Tsar Sun is the son of Svarog, and his name is Dazhbog." (Svarog, the creator of the sun, is identified in Greek translation with the smith Hephaistos. Like his Lithuanian counterpart, the heavenly smith Kalvelis, whose achievement is described in the *Volynian Chronicle* of 1252, Svarog probably hammered the sun into shape and placed it in the sky. For the chroniclers, he was identical with Helios.) The importance of this god is attested in the thirteenth-century Old Russian epic *Slovo o polku Igoreve*, where the phrase "grandchildren of Dazhbog" is used to refer to the Russian people.

Dazhbog seems to have been one of the various manifestations of the Indo-European god of the "shining sky" or "heavenly light." In the Kievan pantheon his name appears next to that of Khors, another sun deity (cf. Persian *khursīd*, "sun"), and he was identified with the Greek god Apollo by early Russian translators. Dazhbog is possibly an analogue of the northwestern Slavic deity Svarozhich (Svarožiči, Zuariscici; "son of Svarog"), who was worshiped in the temple at Radigast (Rethra), near Feldberg, in present-day northern Germany. There, as noted in 1014 by Thietmar, bishop of Merseburg, were a number of carved idols dressed in armor and helmets, each dedicated to some aspect of the god. The most important one was that of Svarozhich.

In Roman Jakobson's view, Dazhbog, like the Vedic Bhaga, is "the giver of wealth," and the name of Dazhbog's immediate neighbor in the Kievan pantheon, Stribog, means literally—like that of Bhaga's partner Amsa—"the apportioner of wealth" (see Jakobson, 1972). The name *Dazhbog* is a compound of *dazh'* (the imperative form of *dati*, "to give") and *bog* ("god"). Both Slavs and Iranians eliminated the Proto-Indo-European name for the "god of heavenly light," **dieus*, and assigned the general meaning of "god" to a term that originally signified both wealth and its giver, *bog*. The origin of the name *Dazhbog* may go back to the period of close Slavic-Iranian contacts, not later than the Scythian-Sarmatian period.

In Serbian folk beliefs, Dabog (i.e., Dazhbog) is an adversary of the Christian God: "Dabog is tsar on earth, and the Lord God is in heaven." Dabog is also known as "the silver tsar"; in mining areas as Dajboi, a demon; and as Daba or Dabo, the devil.

## DE SEE DAO AND DE

## DEA DIA.

The worship of the Roman goddess Dea Dia was in the hands of a priesthood of twelve, the *fratres arvales* (Arval brethren), and she possessed a shrine in a grove outside Rome at the fifth (or sixth, depending on the period) milestone on the Via Campana, in the modern suburb of La Magliana. The deity, her cult, and her priesthood supposedly date back to very early in Roman history, but they underwent a major renovation by Augustus (r. 27 BCE–14 CE). From the previous period, we only know of the existence of the *arvales* and of a public sacrifice, mentioned by Varro (*De lingua latina* 5, 74). The site itself bears testimony of cultic occupation since at least the third century BCE. But it is impossible to be sure whether these items belonged to Dea Dia or to Fors Fortuna, who possessed a temple on the same spot.

After Augustus's reform the priesthood consisted of twelve members chosen by cooptation from the most distinguished families. The reigning emperor was always a member. The reorganization was one element in Augustus's policy of directing enthusiasm for his person and policies into traditional religious channels. Under the empire the Arval brethren offered sacrifices not only to Dea Dia but to a wide variety of divinities to secure the health and prosperity of the emperor and his family. Along with sometimes lengthy descriptions of the rituals celebrated in the grove of Dea Dia, and of other sacrifices of the brotherhood in Rome, the records of the Arval brethren were inscribed on marble, and numerous fragments have been preserved. These records, extending from 21 BCE to 241 CE, are a major source for traditional Roman religion in the imperial age. The cult and its priesthood are documented as late as 304 CE.

Dea Dia, who was the owner of the *lucus fratrum arvalium* and the main addressee of the cult celebrated by the Arval brethren, is only known by the proceedings of this brotherhood. Thus, there has been much speculation about her identity. During the nineteenth century, when scholars tended to assimilate gods, Wilhelm Henzen (1874, p. ix) saw her as a goddess similar to Ceres, if not Ceres herself. In the *Römische Mythologie* (1831) of Ludwig Preller and Heinrich Jordan, Dea Dia was supposed to embody certain aspects of the numen otherwise venerated under the names of Ceres, Tellus, and perhaps Ops or Acca Larentia (see also Fowler, 1911, p. 435; Wissowa, 1912, p. 195). One also finds assimilations to Diana, Hebe, and the Mother of the Gods. In short, Dea Dia was supposed to be an indigitation (the assimilation of minor deities to one major god or goddess) of Ceres or another goddess linked to agriculture.

In a similar vein, Ida Paladino has tried to present Dea Dia as a minor *paredros* of Fors Fortuna. Paladino thinks that, with the Lares, also present in the *lucus* of the Arvals, and Diana (whose name relies on the same etymon), Fors Fortuna shared a marginal position, as well as a link to Servius Tullius and the plebs. When Augustus reformed this cult, he preferred, according to Paladino, the less plebeian goddess Dea Dia. According to an isolated inscription from Amiternum (CIL I, 2d ed., 1846), Dea Dia herself could be of Sabine origin.

As Henri Le Bonniec (1958, p. 202) has shown, Dea Dia cannot possibly be taken as another form of Ceres because the ritual of the Arval brethren, which is the best known in ancient Rome, forbids this assimilation. Moreover, the Arval proceedings never mention Ceres (the hypothesis of Kurt Latte that her "real" name was secret and taboo is not convincing). And generally speaking, the trend of indigitation, as surmised by Greek and Roman antiquarians and grammarians, has been denied pertinence in religious history (Le Bonniec, 1958, p. 203). Accordingly Ileana Chirassi-Colombo and Robert Schilling have reconsidered the problem. Both start with the name of the goddess, from *dius* (luminous) and *diuum* (sky), and consider her as the goddess of the sky (Chirassi, 1968) or of the beneficial light necessary to agriculture (Schilling, 1969; Franz Altheim [1931] links her, unconvincingly, to the moon). Chirassi considers this Dia as an archaic paredros of Jupiter, or Dius, with whom she is supposed to have formed a couple representing the sky and the earth.

Referring to the cultic evidence, Schilling shows that the name Dea Dia is an emphatic doublet, meaning literally, "the celestial goddess." According to the Arval proceedings, Dea Dia performed her divine function between the periods of sowing and harvesting and was thus the good light of heaven that brought the crops from germination to maturation. This is evident in both the date and the ritual of her festival. Her feast was always held in May, about a month before the beginning of the harvest in central Italy. Its exact date was announced in January, on the 7th or the 11th. The ritual at her festival employed, among other offerings (a lamb, meatballs, sweet wine, and pastries), green ears from the current crop, together with dried ears of grain from the previous year's crop. The other gods and goddesses mentioned in her *lucus* are to be considered her assistants or her guests; the precise link to her neighbor Fors Fortuna is not known. The temple and the grove of Dea Dia could have been built at La Magliana only after Augustus's reform, which could have so monumentalized an aristocratic ritual.

JOHN SCHEID (2005)

**DEAD SEA SCROLLS.** The manuscripts unearthed between 1947 and 1956 in the Judean desert, in caves along the coast of the Dead Sea, have come to be known collectively as the Dead Sea Scrolls. The main body of materials comes from Qumran, near the northern end of the Dead Sea, 8.5 miles (13.7 km) south of Jericho. Other texts, including the Masada scrolls and the Bar Kokhba texts, are occasionally also referred to as Dead Sea Scrolls, but this article will pertain only to the Qumran scrolls themselves. These scrolls constituted the library of a sect of Jews in the Greco-Roman period that has been identified by most scholars as the Essenes.

**DISCOVERY.** In the second half of the nineteenth century, Hebrew manuscripts discovered in the *genizah* ("storehouse") of the Ben Ezra synagogue in Cairo began circulating in Europe. Much of this collection, known as the Cairo Genizah, was acquired for the University of Cambridge by Solomon Schechter in 1896. Among these texts was a strange composition, known as the *Zadokite Fragments* or the *Damascus Document,* that outlined the life and teachings of a Jewish sect. Eventually, this same text was found at Qumran.

There, in 1947, a young bedouin entered what is now designated Cave I and found a group of pottery jars containing leather scrolls wrapped in linen cloths. These scrolls, the first finds, were sold to Athanasius Samuel, the Syrian metropolitan of Jerusalem, and to Eliezer Sukenik, a professor representing the Hebrew University of Jerusalem. The scrolls in the possession of the Syrian metropolitan were purchased in 1954 by Yigael Yadin, Sukenik's son, on behalf of the Hebrew University.

Scientific exploration of the cave in 1949 by G. Lankester Harding and Roland de Vaux uncovered additional fragments and many broken jars. From 1951 on, a steady stream of manuscripts has been provided by bedouin and archaeologists. Some of these manuscripts are held in the Archaeological (Rockefeller) Museum in East Jerusalem. Many are displayed in the beautiful Shrine of the Book, a part of the Israel Museum built especially for the display and preservation of the scrolls.

**DATING.** From the beginning, the dating of the scrolls was a matter of controversy. Some saw the new texts as documents of the medieval Jewish sect of the Karaites. Others believed they dated from the Roman period, and some even thought they were of Christian origin.

Of primary importance for dating the scrolls was the excavation of the building complex immediately below the caves on the plateau. In the view of most scholars, those who lived in the complex copied many of the scrolls and were part of the sect described in some of the texts. Numismatic evidence has shown that the complex flourished from circa 135 BCE to 68 CE, interrupted only by the earthquake of 31 BCE.

Similar conclusions resulted from carbon dating of the cloth wrappings in which the scrolls were found. Study of the paleography (the form of the Hebrew letters) in which the texts are written has also supported a similar dating. It is certain, then, that the scrolls once constituted the library of a sect that occupied the Qumran area from after the Maccabean Revolt of 166–164 BCE until the great revolt against Rome of 66–74 CE.

**THE SCROLLS.** The many scrolls that were found in the Qumran caves can be divided into three main categories: biblical manuscripts, apocryphal compositions, and sectarian documents.

Fragments of every book of the Hebrew scriptures have been unearthed at Qumran, with the sole exception of the *Book of Esther.* Among the more important biblical scrolls are the two *Isaiah* scrolls (one is complete) and the fragments of *Leviticus* and *Samuel* (dated to the third century BCE). William Albright and Frank Moore Cross have detected three recensional traditions among the scrolls at Qumran: (1) a Palestinian, from which the Samaritan Pentateuch is ultimately descended, (2) an Alexandrian, upon which the Septuagint (the Greek translation of the Bible) is based, and (3) a Babylonian, which serves as the basis of the Masoretic (received and authoritative) text fixed by rabbis in the late first century BCE.

The apocryphal and pseudepigraphical writings were known until recently only in Greek and Latin translation. The Cairo Genizah yielded Hebrew and Aramaic fragments of medieval recensions. Among the important fragments found at Qumran are *Ben Sira*, *Jubilees*, Aramaic fragments of the *Enoch* books, the *Testament of Levi*, and additions to *Daniel*.

By far the most interesting materials are the writings of the sect that inhabited Qumran. The *pesharim* are the sect's biblical commentaries, which seek to show how the present premessianic age is the fulfillment of the words of the prophets. Prominent among these texts are the *pesharim* to *Habakkuk*, *Nahum*, and *Psalms*, and the *florilegia*, which are chains of verses and comments. The commentaries allow us a glimpse of the sect's self-image and allude to actual historical figures who lived at the time during which Qumran was occupied.

The *Damascus Document* describes the history of the sect and its attitudes toward its enemies. It also contains a series of legal tracts dealing with various topics of Jewish law, including the Sabbath, courts and testimony, relations with non-Jews, oaths and vows, and so forth.

Admission into the sect, the conduct of daily affairs, and the penalties for violating the sect's laws are the subjects of the *Manual of Discipline*. This text makes clear the role of ritual purity and impurity in defining membership in the sect as well as detailing the annual mustering ceremony of covenant renewal. Appended to it are the *Rule of the Community*, which describes the community in the End of Days, and the *Rule of Benedictions*, which contains praises of the sect's leaders.

The *Thanksgiving Scroll* contains a series of poems describing the "anthropology" and theology of the sect. Many scholars see its author as the "teacher of righteousness" (or "correct teacher") who led the sect in its early years.

The *Scroll of the War of the Sons of Light against the Sons of Darkness* describes the eschatological war. The sect and the angels fight against the nations and the evildoers of Israel for forty years, thereby ushering in the End of Days. This scroll is notable for its information on the art of warfare in the Greco-Roman period.

Unique is the *Temple Scroll*, which is an idealized description of the Jerusalem Temple, its cult, and other aspects of Jewish law. This text is the subject of debate as to whether it is actually a sectarian scroll or simply part of the sect's library.

**THE SECT AND ITS BELIEFS.** The Qumran sect saw itself as the sole possessor of the correct interpretation of the Bible, the exegesis of which was the key to the discovery of God's word in the present premessianic age. Like other apocalyptic movements of the day, the sect believed that the messianic era was about to dawn. Only those who had lived according to sectarian ways and had been predestined to share in the End of Days would fight the final battle against the forces of evil. In order to prepare for the coming age, the sect lived a life of purity and holiness at its center on the shore of the Dead Sea.

According to the sect's own description of its history, it had come into existence when its earliest members, apparently Zadokite priests, decided to separate themselves from the corrupt Judaism of Jerusalem and left to set up a refuge at Qumran. The sect was organized along rigid lines. There was an elaborate initiation procedure, lasting several years, during which members were progressively received at the ritually pure banquets of the sect. All legal decisions of the sect were made by the sectarian assembly, and its own system of courts dealt with violations and punishments of the sectarian interpretation of Jewish law. New laws were derived by ongoing inspired biblical exegesis.

Annual covenant renewal ceremonies took place in which the members of the sect were called to assemble in order of their status. Similar mustering was part of the sect's preparations for the eschatological battle. The Qumran sect believed that in the End of Days, two messiahs would appear, a Davidic messiah who was to be the temporal authority, and a priestly messiah of Aaron, who was to take charge of the restored sacrificial cult. They were both to preside over a great messianic banquet. Meals of the sect were periodically eaten in ritual purity in imitation of this final banquet.

The sect maintained a strictly solar calendar rather than the solar-lunar calendar utilized by the rest of the Jewish community. The sect was further distinguished by its principle of communal use of property. Although private ownership was maintained, members of the sect could freely use each other's possessions. The scrolls themselves refute the widespread view that the sectarians of Qumran were celibate.

**IDENTIFICATION OF THE SECT.** Dominant scholarly opinion has identified the Dead Sea sect as the Essenes described in the writings of Philo Judaeus and Josephus Flavius of the first century CE. Indeed, there are many similarities between this group and the sect described by the scrolls.

In many details, however, the Dead Sea Scrolls do not agree with these accounts of the Essenes. Josephus himself calls the Essenes a "philosophy" and makes clear that it was composed of various groups. If, indeed, the Dead Sea community was an Essene sect, perhaps it represented an offshoot of the Essenes who themselves differ in many ways from those described by Philo and Josephus. A further difficulty stems from the fact that the word *essene* never appears in the scrolls and that it is of unknown meaning and etymology.

Scholars have noted as well the points of similarity between the Qumran writings and aspects of the Pharisaic tradition. Louis Ginzberg has called the authors of these texts "an unknown Jewish sect." Indeed, many groups and sects dotted the spiritual and political landscape of Judaea in the Greco-Roman period, and the Dead Sea sect, previously unknown from any other sources, may have been one of these groups.

**QUMRAN AND THE HISTORY OF RELIGIONS.** The Dead Sea Scrolls have illuminated the background of the emergence of rabbinic Judaism and of Christianity. In the years leading up to the great revolt of 66–74, Judaism was moving toward a consensus that would carry it through the Middle Ages. As Talmudic Judaism emerged from the ashes of the destruction, other groups, like the Dead Sea sect, fell by the wayside. Nonetheless, the scrolls allow us an important glimpse into the nature of Jewish law, theology, and eschatology as understood by one of these sects.

The scrolls show us that Jews in the Second Temple period were engaged in a vibrant religious life based on study of the scriptures, interpretation of Jewish law, practice of ritual purity, and messianic aspirations. Some Jewish practices known from later texts, such as phylacteries, thrice-daily prayer, and blessings before and after meals, were regularly practiced. Rituals were seen as a preparation for the soon-to-dawn End of Days that would usher in a life of purity and perfection.

The scrolls, therefore, have shown us that Jewish life and law were already considerably developed in this period. Although we cannot see a linear development between the Judaism of the scrolls and that of the later rabbis, since the rabbis were heirs to the tradition of the Pharisees, we can still derive great advantage from the scrolls in our understanding of the early history of Jewish law. Here, for the first time, we have a fully developed system of postbiblical law and ritual.

The Dead Sea sect, and, for that matter, all the known Jewish sects from the Second Temple period, were strict adherents to Jewish law as they interpreted it. At the same time, with their emphasis on the apocalyptic visions of the prophets, the sects provide us an understanding of the emerging Christian claims of messiahship for Jesus. Only against the background of the Dead Sea Scrolls can the worldview of early Christianity be understood.

The contribution of the biblical scrolls to our understanding of the history of the biblical text and versions is profound. We now know of the fluid state of the Hebrew scriptures in the last years of the Second Temple. With the help of the biblical scrolls from Masada and the Bar Kokhba caves, we can now understand the role of local texts, the sources of the different ancient translations of the Bible, and the process of standardization of the scriptures that resulted in the Masoretic text.

In the years spanned by the Dead Sea Scrolls, the text of the Hebrew scriptures was coming into its final form, the background of the New Testament was in evidence, and the great traditions that would constitute rabbinic Judaism were taking shape. The scrolls have opened a small window on these developments the analysis of which will reshape our knowledge of this crucial, formative period in the history of Western religion.

### BIBLIOGRAPHY

An excellent introduction is Yigael Yadin's *The Message of the Scrolls* (New York, 1957). The archaeological aspect is discussed thoroughly in Roland de Vaux's Schweich Lectures of 1959, *Archaeology and the Dead Sea Scrolls* (London, 1973). Important scholarly studies are Frank Moore Cross's *The Ancient Library of Qumran and Modern Biblical Studies*, rev. ed. (Garden City, N.Y., 1961), and Géza Vermès's *The Dead Sea Scrolls: Qumran in Perspective* (Philadelphia, 1981). The theology of the Qumran sect is studied in Helmer Ringgren's *The Faith of Qumran*, translated by Emilie T. Sander (Philadelphia, 1963). On the relationship to Christianity, see Mathew Black's *The Scrolls and Christian Origins* (London, 1961) and William S. LaSor's *The Dead Sea Scrolls and the New Testament* (Grand Rapids, Mich., 1972). Two studies of the importance of the scrolls for the history of Jewish law are my books *The Halakhah at Qumran* (Leiden, 1975) and *Sectarian Law in the Dead Sea Scrolls* (Chico, Calif., 1983).

***Revised Bibliography***

**DEATH** is a fact of life. This statement is at once banal and profound. It is banal insofar as it is common knowledge that all human life is limited in duration; it is profound, however, insofar as serious reflection on the end of life challenges the limits of human language, conceptual thought, symbols, and imagination. In an important sense, the meaning of life is dependent in part on one's understanding of death. That death is a fact of life is also paradoxical, for it suggests a coincidence of opposites—death-in-life and life-in-death. How people have imagined death-in-life and life-in-death has shaped their experience of biological death both individually and collectively. Death is paradoxical, as well, in that although every death is an individual experience—only individuals die, even when they die together in large numbers—death is also a profoundly social experience.

Death as a biological fact or as a physiological state is uniform across time and space. However, this universal sameness in biological terms should not lull one into the error of assuming that the human sense or experience of death has been—or is also—uniform across space and time. When contemplating death today, people must avoid the anachronism of projecting their contemporary understanding and experience of death back onto others in the past. Similarly, they must also avoid the cultural imperialism of assuming that their understanding and experiences are normative and that those of other cultures should be measured in their terms. This entry on death is concerned with the diverse ways in which death has been imagined and the many different ways it has been experienced in different cultures and different ages. To say this is to recognize that although death is "a given" in one sense, it is culturally and historically constructed in various ways.

The study of beliefs and ritual practices surrounding death has been pursued using a number of different methodological approaches, including ethnographic, sociological, psychological, historical, morphological, and structural to name a few. The best comparative studies of death in the history of religions build upon the large number of available detailed ethnographic descriptions of specific communal beliefs and ritual practices, but move beyond these in a number of ways. Comparative studies in the history of religions are interdisciplinary in nature, integrating the findings of different disciplines in an effort to understand the complex existential meanings of religious beliefs and practices. The classic ethnographic monograph tended to present a historically "flat" and socially undifferentiated picture of the conception of death and the performance of mourning and funerary rites in a given culture. Unfortunately, such "snapshot" studies of different cultures implied that religious beliefs were static over time and uniformly held by all members of a given culture or religious tradition. More recently, the subfield of historical anthropology has reintroduced history into the mix and produced numerous sensitive studies of change in beliefs and practices. Scholars have also paid more attention to the effects of cultural contact, colonialism, and issues of gender, resulting in more complex representations.

In this essay, no attempt will be made to present an exhaustive survey of beliefs and ritual practices related to death. Rather than providing ethnographic detail and careful historical analysis, the entry focuses on selected themes and issues that emerge from a broad survey of cultures and religions, and in so doing offers some general reflections concerning the human imagining and experience of death. In passing, it also touches upon methodological issues involved in the comparative, cross-cultural, and historical study of beliefs and ritual practices surrounding death.

**THE CONCERN WITH DEATH.** Death has been a central concern of religious persons across space and time. The brute fact of death raises pressing questions: Why do people and other living things have to die? What happens to a person after death? Do the dead have a continued existence of some sort? Are they happy? Where do the dead go? Can the dead return to the world of the living? Can the dead communicate with the living? Is death permanent, or is it a temporary or transitional state? These and many other questions have long spurred speculation concerning death and the possibility of an afterlife.

Recognizing that death raised questions for people, numerous nineteenth- and early twentieth-century scholars were led to speculate on the relationship of human ponderings on death to the origins of religion. These theories of the origins of religion were often written in the Enlightenment genre, represented by Rousseau's essay *Discourse on the Origin of Social Inequality.* Such works of imaginative reconstruction are based on pure speculation, not historical evidence. These reconstructions also are based on the ill-advised belief that modern psychological assumptions are universally applicable. Finally, such accounts are based on logical inferences (often faulty) that are presumed to have been drawn by the earliest human beings. The British anthropologist E. E. Evans-Pritchard dismissively labeled this sort of "*a priori* speculation, sprinkled with illustrations" the "if I were a horse" fallacy and unworthy of the name historical reconstruction (1965, p. 24). While there is little or no historical evidence to support these imaginative flights, it is salutary to note the broad influence they once had.

Today scholars strive to understand how different conceptualizations of death, the afterlife, and the body, as well as different ritual practices, affect the individual and collective experience of death. The cultural historical constructions of death, the body, the afterlife, and so on also directly affect one's religious valuations of life in this world. In thanatology (the study of death), among other things, it is important to consider the religious anthropology (i.e., the specific understanding of human nature and divine nature and the relationship between them), the understanding of the body, and the operative cosmology of a given culture or religious community. Moreover, one must take into account a given culture's epistemology of death and the afterlife (i.e., how people claim to know things about death and the afterlife). After all, most people would deny that their concepts about death are based on mere speculation. Cultures have established means of obtaining evidence on matters related to death and the afterlife. This evidence is commonly found in the content of dreams, reports from shamans concerning their ecstatic flights through the multiple realms of the universe, or individual accounts of visionary experiences or events witnessed in trance states. Alternatively, the "proof" may be found in the authoritative proclamations of myths or sacred texts.

Death may be accepted as a fact of life by many persons today, but historians of religions have clearly demonstrated that humans have rarely imagined death to have been a natural and inevitable condition from the beginning of time. Throughout the world, a myriad number of myths tell how death came into the world and how humans came to be mortal beings. Death is often claimed to be the result of an accident of some sort or an unfortunate mistake or choice made by a god or an ancestor. It may be the result of an act of forgetfulness, trickery, or theft, or it may have resulted from the breaking of a taboo or perhaps the commission of some major or minor transgression. The *Genesis* account of the fall, with the consequential changes in the human ontological condition and in the world itself, is only one such myth. It is important to recognize that this myth, like other such stories, continues to exercise power over the collective imagination and lives of millions of people. In yet other religions, the length of human life is imagined to be different in different cosmic ages, with the length usually decreasing as the devolutionary process continues.

**OVERCOMING DEATH.** If death was not always a fact of life, then the possibility suggests itself that death might be overcome in some way. The study of death in the history of religions is, in part, the history of how different cultures and religious communities have sought to deny the finality of the seemingly "given" nature of death. Many religious beliefs and practices aim to overcome death in some way or to restore humans and the world to conditions prior to the introduction of death. Eschatologies, for example, imagine the end of the world as it now exists, including the end of death. Similarly, the so-called cargo cults that emerged in the face of radical cultural disruption and rampant disease in situations of cultural contact are expressions of a desperate anticipation of the destruction of this world and the inauguration of a renewed world.

More generally, scholars have long noted that initiatory rites involve symbols and scenarios of death and rebirth. The performance of an initiatory rite rehearses death followed by a scenario of rebirth of some kind. This death may be imagined in biological terms, or it may be the death (end) of a specific status or ontological condition. In many religions, religious healers gain their powers precisely by having overcome death through an initiatory trial of some sort. Such initiatory trials are often unsought, but they need not be. Many examples of what one might call "dying onto the world" are found in the history of religions, including the elaboration of religious vocations defined over against mundane life in the world. These include, to name only two of the most common types, the renunciation of the world by monks and nuns and individuals going into the mountains, desert, or the bush in order to practice some form of asceticism and to seek visions. In many religions, lay persons or ordinary men and women can also ritually gain a foretaste of death and the afterlife. Altered states of consciousness of various sorts provide access to knowledge of the afterlife in many religions. For Pentacostal Christians, for instance, the psychosomatic experience of the descent of the Holy Ghost—the loss of consciousness, speaking in tongues, the radiant sense of divine infusion—is a form of dying onto life as, while at the same time a foretaste of what the Second Coming will bring.

Religious seekers have also proactively pursued various means of achieving immortality, sometimes in human-embodied form and other times by seeking to overcome the human body. The ancient Egyptians exemplify those who imagined the afterlife to be similar to life in this world, with the body surviving death. Thus, the corpse was carefully embalmed in order to preserve its form, while items the deceased would need in the afterlife were also buried with the body.

Practitioners in alchemical traditions around the world have searched for the elixir of immortality. Alchemists provided recipes and proffered various techniques to transform the mortal body into an immortal one. Some religions speak of a spiritual body existing after death. In such traditions, the decomposition or immolation of the physical body is often seen as a form of release into a spiritual existence. Such a belief informs the Ainu bear festival in Northern Japan in which a deity *(kamui)* visits the world of the living in the form of a bear cub. The cub is nursed and raised by the Ainu; it is also entertained before it is ritually killed, thereby releasing the deity from its temporary physical form and sending it back to the spirit world (Kimura, 1999).

Other traditions, such as yoga in its many forms, have sought to overcome the embodied nature of human existence (i.e., to overcome the body itself, which is identified as the locus of mortality) in order to achieve an immaterial and timeless state of pure consciousness. In Indian religious traditions, biological death is believed to lead to rebirth in another physical form, whereas *moksa,* release from the karmic cycle of birth-death-rebirth, puts an end to death. Death, then, has been imagined in many different ways, some positing another form of embodied existence and others a disembodied state. Only a few religions, such as the ancient religion represented in the *Enuma Elish,* viewed death as a real end, with no form of existence following it.

**THEORIES OF DEATH AND THE ORIGINS OF RELIGION.** As noted above, the recognition of the central importance of death in the conceptual worlds of human beings throughout time has occasionally led Western scholars to make some overblown claims concerning death and the origins of culture or civilization. Before returning to a brief consideration of some of the issues related to death that remain central to the study of the history of religions today, it is necessary to review in a cursory manner a few of the most famous—and wrongheaded—grand theories of the origins of religion that were based in part on the scholars' imagined human response to death in the misty past.

**Edward B. Tylor.** The famous nineteenth-century armchair anthropologist Edward B. Tylor no doubt went too far in claiming that death was the reason religion existed. In his highly influential two-volume work *Primitive Culture* (1871), Tylor argued that the concept of the soul or an animating spirit arose when primitive peoples reflected on death, trance states, visions, and dreams. He asserted that the belief in the existence of the soul was the logical deduction that primitives drew from putting together two separate experiences. First, according to Tylor, the primitives' awareness of the sudden transformation of a vibrant human body into a corpse at the moment of death must have suggested to them that the animating source of life was not to be found in the physical body. At the moment of death, the material body remained, but it was cold, immobile, and lifeless. In dreams and visions, however, people often saw and conversed with dead persons, who thus seemed to continue to "exist" in some form even after their bodily demise. Putting two and two together, this led to the logical deduction that an animating spirit or soul must exist that was invisible, immaterial, and detachable from the physical body.

Tylor believed that this type of primitive reasoning was the basis of the most primitive cultural stage of development, which he labeled "animism." Animism is the belief that both animate and inanimate things, natural phenomena, and the universe itself possess a vital animating power or soul. Like many nineteenth-century theorists, Tylor assumed that all cultures passed through evolutionary stages. The precise enumeration of these stages varied from scholar to scholar, but in general they follow the pattern of evolution from a belief in magic to religion and, ultimately, to the triumph of reason and science. At each stage, it was believed that belief in the earlier form of magic or religion would decline. Moreover, contemporary peoples living in technologically primitive cultures were held to be living fossils, as it were. As such, the study of "primitives" seemed to hold the promise of providing scholars in various disciplines the opportunity to view what the life of their own ancestors must have been like millennia earlier.

**Ghosts and ancestral spirits.** Herbert Spencer, one of the founders of modern sociology, offered a similar theory in *The Principles of Sociology* (1885). However, he maintained that the origins of religion were to be found in the belief in ghosts rather than the soul. Significantly, visions of the dead—as well as encounters with them in dreams—again played a central role in Spencer's theory. Because the dead were believed to still be present somehow in the world, Spencer claimed that they came to be propitiated and offered food, drink, and so on by their living relatives and friends. Moreover, the most important and powerful members of society were believed to retain their position and power even after death. Thus, they were treated with special respect and decorum, as they had been while alive. Over time, these ancestors evolved into deities. Thus, according to Spencer, primitive ancestor worship was the basis of all religions. Unfortunately, there is no hard historical evidence for this assertion or for the other universal claims he proffered.

**Sigmund Freud.** For his part, Sigmund Freud made a stunning series of claims about death, sex, and religion in both his psychological writings and in his works of cultural historical interpretation. The latter include *Totem and Taboo* (1918), *Civilization and Its Discontents* (1930), *The Future of an Illusion* (1928), and *Moses and Monotheism* (1939). Freud offered a psychological explanation of the paradoxical coincidence of opposites of death-in-life and life-in-death. He argued that *eros* and *thanatos*, the drives to reproduce oneself and to annihilate oneself, were both primordial in human nature and deeply intertwined at the unconscious level. Indeed, he claimed that a universal psychological connection existed between sexual activity and death. He found evidence for this assertion not only in the lives of his neurotic patients and ethnographic descriptions of primitive rites, but in such things as a colloquial phrase for male ejaculation, which translates as "the little death." Freud was not an anthropologist, though he used the work of anthropologists, sociologists, and ethnographers in his works of cultural interpretation. Nor was he really interested in cultural diversity. Rather, his interest, like so many others of his age, was only in different psychological-*cum*-cultural stages of development.

Few anthropologists or historians of religions today would accept Freud's universal claims or offer competing universal claims of their own for that matter. For instance, rather than make a universal assertion about the significance of "the little death," they would note that the male anxiety implicit in this phrase flows from the widely-held (but not universal) archaic belief that the vital fluids and life energy in one's body are finite in quantity and that they are not replenished. For those holding this understanding of the male body, any expenditure of seminal fluids is assumed to deplete the man's life force. Ironically then, the act that leads to the creation of new life ultimately contributes to the male's own physical decline and death.

Menstruation and lactation, to name two prominent female physiological functions, are also highly-charged symbols in many cultures and religions, but Freud paid considerably less attention to them. Had he, he would have found that they, too, are often associated with death-in-life and life-in-death. Freud was equally unaware of the significant impact the differences in the religious anthropologies of diverse people or their different understandings of the human body could have on their experience of sexual activity and death, among other things. Indeed, Freud dismissed native explanations of such things outright, claiming that conscious explanations never got to the real unconscious causal sources of human psychology and behavior.

In *Totem and Taboo*, Freud again associated death with the origin of religion, society, and civilization. Building upon the now long-discredited hypothesis that the earliest human beings lived in hordes each ruled by a dominant male and the mistaken concept of totemism, Freud produced a gothic tale (or, perhaps, a modern psychological myth) of primordial patricide. In Freud's telling, a single dominant male claimed exclusive sexual rights to all of the women in the horde. The sons produced by this supreme male must have looked up to their father and aspired to be like him, even as they hated and envied him. They no doubt became increasingly frustrated, Freud suggested, as they reached sexual maturity, but were still denied a sexual outlet within the horde. Then, one day the sons collectively hatched a plan to kill their father in order to gain sexual access to the women. After the dastardly deed had been done, "cannibal savages as they were," the sons instinctually devoured their victim in order to incorporate his power. Then, according to Freud, something momentous happened.

The sons' love and admiration of the father, which had been repressed in order to commit the murder, resurfaced as pangs of guilt and psychological ambivalence. These quickly overwhelmed them. On the one hand, they were grieved by their father's death and horrified by their role in it, but on the other they experienced a sense of satisfaction in having replaced the father. Yet Freud claims that in death the father became even stronger than he had been in life through the workings of psychological repression and substitution. In the wake of the murder, the sons forbid themselves sexual access to the local women (this is the origin of the incest taboo and exogenous marriage rules) and forbid the slaying of the father. The latter taboo was expressed through the deflected form of the totem animal or plant, the surrogate for the father, which was normally taboo but which was eaten in a collective ritual meal. In this way, Freud connected the origins of the totemic festival with the primitives' ambivalent psychological response to the death or murder of the father.

The psychological ambivalence felt towards the dead father was, Freud claims, the origin not only of the universal incest taboo and various taboos surrounding death, but also of the totemic meal, social organization, moral restrictions, and even religion itself. Significantly, Freud's narrative and analysis was concerned not only with instincts, but with the ways instincts and primitive desires are affected and controlled by the psychodynamics of family and social organization. For the primitive, the totemic object or animal is a surrogate for the murdered father, while in a more developed stage of culture the figure of God clearly serves this purpose.

Applying the biological theory of Ernst Haeckel that ontogeny recapitulates phylogeny to psychology (i.e., the stages of biological development of an individual from conception through maturity replicate in abbreviated form the evolution of the species), Freud argued that the study of the mental life of children, as well as dreams and neuroses, could shed light on the primitive stage of human development. He believed that the earliest object of sexual desire for every infant boy is incestuous and forbidden—his mother. Like the grown-up sons in the primal horde, an infant son is jealous of the father's sexual possession of the mother and desires to eliminate him as a rival. Freud posited that the Oedipal complex, as he labeled it, was a universal psychological complex, but one which healthy children in civilized societies could now overcome through submitting to social controls and, thereby, learning to control their instincts and deferring the immediate gratification of their desires.

For Freud, religion was the crucial link between the individual and society. Religious myths and rituals were the collective expressions of the same unconscious desires and psychological processes that produce dreams and neuroses in individuals. Freud famously claimed that religion was a collective neurosis that would eventually be outgrown, although not in the near future. Unlike Spencer and Tylor, though, Freud did not consider primitives to be rational beings; rather, he compared them to neurotics and children. Yet, just as most healthy boys work their way through the psychological conflicts of the Oedipal stage, he believed that cultures, too, evolved psychologically, with reason gradually replacing fantasy.

**Modern studies of death.** Today few people ascribe to the psychological assumptions underlying these and other theories that connect death to the origin of religion. The search for origins of this sort has been abandoned. Still, scholars have been struck by the patterned ways in which death has been associated with life in many cultures. For instance, scholars have long noted the striking association of death with fertility and/or the regeneration of life in religions around the world. In *Versuch über Grabersymbolik der Alten* (1859), J. J. Bachofen noted the prominence of symbols of fertility (e.g., eggs) and women on the tombs of ancient Greece and Rome, which he interpreted as indicating a belief in life coming out of death. For his part, Sir George Frazer made the image of the dying-and-rising god a central theme of his influential comparative study, *The Golden Bough,* which went through multiple editions during the early twentieth century. Other scholars, such as the classicist Jane Harrison, carried the study of the ancient mystery cults further, demonstrating in *Themis* (1911) how the social order was related to the natural order through these religious rites.

In 1906, Robert Hertz, a student of Emile Durkheim, published a seminal essay on the collective representation of death in *Année Sociologique* in which he analyzed double or secondary burial practices in Southeast Asia (Hertz, 1960). In the cultures he studied, the first burial period was temporary and dedicated to mourning. After the flesh of the corpse had rotted away, the dry skeletal remains were disinterred and then reburied elsewhere. With this secondary burial, the deceased was integrated into the society of the dead, while the mourners were reintegrated into the society of the living. Hertz also pointed to structural and symbolic parallels between funerary rites and initiation rites and marriages, an insight that numerous other scholars subsequently followed up and detailed in many other societies. More recently, Maurice Bloch and Jonathon Parry have revived interest in the symbolic association of death and fertility in a culturally wide-ranging collection of essays entitled *Death and the Regeneration of Life* (1982).

One final scholar deserves special mention. In a series of important publications, Philippe Ariès presented an unprecedented survey of the changing attitudes toward and representations of death in Europe over a thousand years from the eleventh through the twentieth centuries. Ariès used an interdisciplinary approach in his quest to trace these changes, working with literary, liturgical, testamentary, epigraphic, and iconographic sources of evidence. Specialists may quibble over specific details and dispute some of Ariès' interpretations, but his work has demonstrated beyond a doubt that the experience of death is subject to change over time within the same culture. On the other hand, scholars have also disclosed the remarkable continuity of some funerary practices over several millennia. Margaret Alexiou's study, *The Ritual Lament in Greek Tradition* (1974), and more recent anthropological field work (e.g., Danforth, 1982), has demonstrated that the performance of funerary laments and the practice of secondary or double burial continues down to the present in some rural areas, in spite of the dominant presence of Greek Orthodox Christianity.

To his credit, Ariès did not attempt to offer a grand overarching psychological or sociological theory about death. Rather, he sought to organize in a significant way the huge amount of historical evidence he had surveyed and then to trace the changes that occurred over broad sweeps of time. In his magnum opus, *Homme devant la mort* (1977; English translation, *The Hour of Our Death*, 1981), Ariès suggested that the history of the Western representations and experiences of death could be organized around variations on four psychological themes: the growing awareness of the individual; the defense of society against untamed nature; belief in an afterlife; and belief in the existence of evil.

**DEATH IN COMPARATIVE PERSPECTIVE.** Death has rarely been taken as an end as such, a real terminal point. Rather, for most humans throughout time, physiological death has signaled a transitional moment and state, not an absolute end. At death, life as previously lived in this world ends for the deceased, but the memory and imagination of the living open up paths to the past and the future and to other worlds and other modes of existence. A survey of the history of religions clearly shows a widespread affirmation that death creates the potential for new beginnings, for a new stage of the cycle of birth-death-rebirth, or for transitioning to different ends. The transformative possibilities signaled by death are numerous and extremely variable. However these possibilities are imagined, though, humans have rarely been content to "let nature take its course," as it were. Upon closer inspection, even those religious groups that apparently let nature take its course following a death (e.g., when the Parsi Zoroastrians of India exposed the corpse on top of a tower to be consumed by carrion birds, or the Lakota Sioux exposed the corpse on a bier to the elements), will be found to have performed ritualized acts intended to symbolically integrate the deceased into a cosmological world of meaning.

Death almost inevitably moves the living to perform ritual work of some sort in an effort to control what happens posthumously both in the world of the living and in that of the dead. The transformations made possible by death are not automatic, nor are they necessarily without danger. By and large, people have assumed that the desired transitions and transformations after death can be accomplished safely only through proper ritual acts. The performance of such rituals may require specific changes in dress, bodily decoration, voice (e.g., in ritual mourning), diet, daily activities, and so on among the living.

**Liminality.** Death creates a liminal time and space for the living and for the deceased. For a given period of time, those closely related to the deceased often have specific ritual obligations placed upon them, as well as a number of prohibitions (e.g., they cannot comb or wash their hair, wear colorful clothing, participate in certain activities, eat certain foods, go to certain places). The deceased is often imagined as being in a liminal condition as well, betwixt-and-between the world of the living and the world of the dead. In these cases, the funerary and mourning rites are designed to assist the deceased in his or her journey to the otherworld or to effect the transformation into an ancestor, spirit being, and so on. These rites are often viewed as aiding the dead, but at other times they are also clearly designed to keep the dead from returning to the world of the living or otherwise causing havoc. The liminal status of the newly dead or the dead for whom funerary rites were not performed is often imagined to be potentially dangerous. Such liminal beings haunt the world of the living and may cause illness, death, or other calamities; they may also possess individuals or cause them to go mad. Thus, many posthumous rituals are prophylactic in nature and designed to protect the living from the dead.

The liminal status of the corpse almost always requires that it be prepared or handled in specific ritualized ways. In some societies, the deceased is buried or cremated with objects he or she will need in the other world; in other societies, the dead may be buried in a fetal position, perhaps indicating a belief in rebirth. The care taken with the remains of the dead throughout human history has provided archaeologists with some of their most important evidence about the religious beliefs and practices of diverse peoples.

In many societies, death does not terminate all relationships between the deceased and living relatives. Throughout East Asia, for instance, ancestral cults involve regular ritual interactions often for up to thirty or more years, including prayers, offerings of food, drink, and incense, memorial services, and even dances to entertain the dead during the festival of the dead. In Japan, the corpse is cremated and the ashes buried in a cemetery. The deceased is given a posthumous name, which is inscribed by a Buddhist priest on a wooden tablet that is installed in a domestic Buddhist or Shinto ancestral shrine. After the requisite period of memorial rites has passed, the ancestral tablet is itself burned in a symbolic second cremation. Thereafter, the individual identity of the deceased ends and he or she is incorporated into the anonymous class of ancestors.

**Communicating with the dead.** Many religions also have ritual techniques for communicating with the dead. In traditional societies, a shaman or medium often serves as a conduit of communication with the dead. The deceased may possess a ritual functionary in order to communicate his or her needs or desires, or the ritual specialist may travel through ecstatic flight to the land of the dead to speak with the dead. In other religions, dreams or visions induced by hallucinogens may provide a means of interacting with the ordinary dead. Many societies have regular festivals to which the dead are invited, such as Obon in Japan or the Days of the Dead in Mexico.

In many mourning rites, mourners converse with the deceased by speaking, singing, or otherwise performing both voices in the dialogue. The desire to maintain some contact with deceased loved ones is widespread, although such contact is carefully controlled and of limited duration. In some societies one finds that—more than death itself—it is the fear of being forgotten after death that is paramount. One thinks of the ancient Greeks and the cult of heroes in which posthumous fame was more valued than life itself.

Many religions encourage visits to the gravesites of the deceased, where tears are shed, prayers are said, offerings of flowers, food, and incense are made, and communion with the deceased occurs. In many societies, songs associated with the dead are sung to recall the deceased, including an enumeration of the places he or she used to visit or the lands the deceased may have hunted or tilled. The deceased is often ritually mourned or keened at the gravesite, although in societies that practice double or secondary burial, these songs or mourning rites are sometimes offered at the now-empty initial burial site. In some societies, physical objects, songs, or specific places associated with the dead function as souvenirs or memento mori, recalling the deceased to mind. In ancient Japan, people employed objects (e.g., a comb, an item of clothing) called *katami* (to see the form/shape [of the deceased]) to conjure up an image of the dead (Ebersole, 1989). In the Victorian period, people often carried lockets containing a snippet of hair from a deceased or absent loved one. Victorian women also made elaborate hair weavings or flowers, birds, and other decorative forms—by using the hair of dead family members—for similar purposes. With the emergence of photography, photos of the deceased, including those of dead infants and children carefully posed to appear to be sleeping, became extremely popular. Today many persons find these objects macabre and disturbing, witnessing to a major shift in cultural sensibility surrounding death.

Many religions provide rituals to be performed for the benefit of the dead, as noted earlier. The practice of endowing Christian masses to be performed or the reading of Buddhist sutras for a deceased individual are examples. Sometimes individuals made arrangements for such rites to be performed on their behalf after their death, a clear indication of the belief in the continued existence of the self and personal identity. In other cases, it is the surviving family members who are expected to perform memorial or ancestral rites or to have them performed by religious functionaries. The Hindu *pinda* rite of offerings of food and drink to one's deceased parents is a prime example of a daily domestic practice.

**Preparation for facing death, pacification, and the grieving process.** Many religions also developed rites designed to help those facing imminent death to accept this fate. The Catholic rite of last unction is but one example. Such rites are based on the widespread belief that one's state of mind and mental focus at the time of death are critical in determining one's posthumous condition. Those who die in an emotionally agitated state, whether it be of fear, anger, jealousy, or lust, will not find peace in the afterlife and, thus, become potentially dangerous. Many different ritual practices seek to overcome the arbitrary nature of death precisely by controlling the timing and/or manner of death, but also one's mental response to it. By overcoming the survival instinct, one overcomes the fear of death and even death itself. The so-called self-mummified buddhas of Japan are the desiccated remains of Shugendō priests, now enshrined as objects of worship, who took a vow to have themselves buried alive in the mountains. Thousands of people gathered to witness the event, while the priest, breathing through a hollow bamboo tube, continually beat a drum and recited the *nembutsu,* or the ritual invocation of the Bodhisattva Amida (Amitābha), until death, or release, came (Hori, 1962).

Many religions feature rituals of pacification of the dead, designed to assist the deceased to accept his or her new status and surroundings. A certain ambivalence is evident in many of these rites. On the one hand, surviving loved ones wish for a continued relationship with the deceased; on the other hand, there is some fear or anxiety expressed over the possible return of the dead. The living seek to tightly control their interactions with the dead through ritual means. Although the dead are invoked to be present, the rites also usually include formal send-offs to return the deceased to the land of the dead.

Some scholars have long argued that mourning, funerary, and memorial rites are really for the living and answer to their psychological or social needs. Durkheim, for example, claimed they responded to the need for renewed social solidarity; more recently, psychologists and others insist on the need for individuals to work through the grieving process. (The findings of the history of religions, though, might well lead one to question whether there is a single universal grieving process.) Obviously, religious rituals serve multiple purposes, and need not be mutually exclusive. A brief consideration of the different scholarly interpretations of Japanese Buddhist rites of pacification for aborted fetuses (*mizuko kuyō*) will demonstrate this. These rites were newly created in late twentieth-century Japan, where abortion was a common form of birth control. Some have argued that *mizuko kuyō* rites answer the psychological needs of the parent(s), who experience pangs of guilt after the decision to abort (cf. La Fleur, 1992). Others, such as Helen Hardacre (1997), have argued that entrepreneurial Buddhist priests created the need for such rites through skillful marketing techniques. Significantly, advertisements represented aborted fetuses as haunting spirits in need of pacification rites.

**The corpse.** Whenever death occurs, a corpse is created—an object at once like a living body and radically different from it. Yet, one finds numerous reports of anomalous cases that deny this truism a universal status—the Taoist immortal who leaves the physical world, leaving behind only sandals, mysteriously empty tombs or graves, and so on. No matter what the details are, such reports imply that the "death" involved was not an ordinary biological death. In some cases, death is denied by claims that an individual has gone away or into hiding (e.g., the Shīʿah Hidden Imam in Iran), perhaps to return triumphantly at a later time. In ancient Japan, the emperor or empress did not die; rather, as a "living deity," he or she had returned to the High Heavens and there become secluded behind the bank of clouds. In many cases, death restores a person to true form, as in the case of a deity who had temporarily taken on material or human form. In yet other cases, at death the individual is reportedly changed instantly into another now permanent or eternal form—a star in the heavens, a rock formation, a spring—leaving no corpse

When a corpse is present, however, it is usually considered to be polluted, leading to numerous avoidance procedures. In many societies, only designated individuals may touch and prepare the corpse. In India, these ritual functionaries are outcastes; in other societies, they may be close relatives, who take on a polluted state for the duration of the funerary and mourning rites. In modern technologically developed societies, these roles have been assumed by medical professionals and professional morticians.

In a striking number of cultures, though, it is predominately women who perform these ritual duties. Bloch and Parry have provocatively argued that the prominence of women in funerary rites is not, as Frazer and many others believed, so much a part of the symbolic regeneration of life as it is a symbolic elaboration of female sexuality and fertility precisely in order to oppose it to "real" vitality. That is, female sexuality and biological reproduction are equated with death-in-life, which must be overcome. Among other religions Bloch and Parry cite, they suggest that Christianity epitomizes this pattern. They contrast the role the woman Eve played in the Fall in the Garden of Eden—which led to human sexuality, biological procreation, and death—to that of the Virgin Mary. The asexual conception of Jesus and his subsequent death and resurrection restore the possibility of access to the life eternal of Paradise. The meaning and valuation of physiological death, fertility, and regeneration can be totally transformed by shifts in symbolic and ritual representations, which recontexualize these (Bloch and Parry, 1982).

Whatever the merit of Bloch and Parry's overall thesis, it is clear that the meanings of concepts such as death, fertility, sexuality, and rebirth are not singular, nor are they culturally determined for all time or for all persons within a culture. The meanings for such fundamental categories can be renegotiated over time within the same religious tradition, as Ariès and others have shown. At an individual or subgroup level, they may also be affected by one's class, gender, or occupation among other things. A few admittedly extreme examples allow a more general point about these factors to be made. Take, for instance, Egyptian pharaohs. They no doubt anticipated death and rebirth differently than did their slaves, especially insofar as the afterworld was believed to replicate the social, political, and economic structures found in this world. Similarly, the ruling Mayan and Aztec elites must have understood and experienced the ritual sacrifice of the many human captives offered as tribute differently than did many of the conquered people, who were regularly forced to provide the persons for these bloody sacrifices. Unfortunately, most of the records and representations of these sacrificial deaths come from the elite sectors of the societies. Such evidence must be used carefully, always bearing in mind that the voices of the powerless and the disenfranchised were rarely recorded.

**Sacrificial rites.** Modern scholars have with little difficulty reconstructed the symbolic logic informing the ritual taking of human life in Mesoamerican empires. There once again myths and rituals proffer the paradoxical claim that life comes out of death. In order to renew the cosmos and to guarantee fertility and regeneration, blood must be shed at a specific time, at a specific place, and in a specific choreographed manner. This might be in the form of ritual bleedings from the penis of the Mayan king or through human sacrifice at the Aztec New Year and other appropriate moments of transformative potential (cf., Carrasco, 1999).

Such rituals clearly represented the religio-political ideology of the power elites. It should not be uncritically assumed, however, that such ritual performances accurately represented the shared cultural understanding of all people in the empire. At the same time, neither should it be uncritically assumed that the rites were nothing more than a vehicle for ideological obfuscation on the part of the ruling elites. To be sure, in significant ways, human sacrifice was a forced performance, but cases exist in which persons voluntarily went to their own deaths, and as such require an understanding the power such symbolic activities—designed to effect the magic of transforming death into life or even immortality—can have over individuals and groups. At a minimum, the question here is one of what constitutes a meaningful voluntary death for specific groups.

The history and complex multiple and competing meanings of the Hindu ritual practice of sati—the self-immolation of a widow on her husband's funerary pyre—may serve as an exemplar of voluntary ritual death. Sati has long captured people's imagination, but only recently have scholars begun to explore its history and the complex, ongoing, and contested representations of its meaning. For instance, Catherine Weinberger-Thomas (Chicago, 1999) sensitively explored how British merchants and later colonial authorities used the ritual as a rationale for taking control of India; how Western scholars have depicted it and why; how fundamentalist Hindu religious and political groups have embraced it; the complex issues of gender; and the at times intense social and familial pressures a widow faces. She also seeks to understand why some young women chose to follow their husbands in death. She discloses the power of the belief that the widow's self-immolation makes two human bodies into one indivisible body, which is ritually transformed into a sacrificial oblation and rice ball—a *pinda.* The funeral pyre becomes the mirror image of the marriage bed in which male and female powers were first conjoined, although now this union of opposites is forever. This ritual suicide is also the inverse of the primordial self sacrifice of Purusha, as detailed in *Ṛgveda* X: 40. In the latter, the primordial divine sacrifice leads to the creation of the material world, the caste system, and so on; with the ritual sacrifice of sati, all of these are overcome and the couple escapes the cycle of birth-death-rebirth.

**Continued presence of death in life.** It is a commonplace to say that religions create worlds of meaning. But they also create meaningful deaths. Death is never far from human experience, no matter how people may try to banish it from sight and mind. It permeates daily life just as it structures the rhythms of collective life. Graveyards, ossuaries, tombs, memorials, and museums bring the presence of death and the dead into human consciousness and landscape. Monumental architectural buildings and structures seek to guarantee and to control the memory of the dead by future generations. The mall of Washington, D.C., for instance, is a public space filled with memorials to the dead designed to evoke a sacred sense of the past and a collective American identity. Today in secular scientific cultures, human genes and DNA have become yet another way of re-imagining the continued presence of the dead in the living.

Religious calendars are punctuated with festivals and observances related to the dead, but so are secular calendars. The citizens of modern nation-states celebrate memorial days of various sorts for their war dead, the victims of genocide, presidents, and kings, but they also celebrate birthdays and beginnings. Even when the dead are feared or are considered polluting and, thus, are segregated and separated spatially from the living, they hover nearby. Ritual avoidances of specific places, foods, words, names, and so on also bring the dead—even in their physical absence—into the consciousness of the living. The dead live in memory, in dreams, and in physical tokens. In other cases, the dead are physically near to hand—buried under the cathedral floor, enshrined in part or in whole as holy relics in temples and sanctuaries, or interred under the entranceway to a house. The dead may even be literally incorporated into the living through some form of endocannibalism (e.g., Amazonian natives drinking the cremation ashes of a villager). Scholars have noted the striking similarity to the symbolism (or the reality of the miracle of transubstantiation) of the Christian Eucharist—"This is my body; this is my blood."

Death is everpresent, as well, in the privileged myths and stories told again and again in song and poetry, in the arts (painting, sculpture, weaving, mosaics, pottery, etc.), in dance and dramatic performances, in children's play ("Ring around a rosey/ pocketful of posies/ ashes, ashes, all fall down."), and today on television, in the movies, and in video games. Bringing the ubiquity and the absolute redundancy of death before the mind's eye of the living has often served didactic purposes, moving persons to act in spiritually and morally proper and ascribed ways. The Buddhist ritual contemplation of putrefying corpses, the ritual visualization of the inevitable future of all human bodies, visiting collective ossuaries, and so on have been used to move people to renounce the material body and the world. Graphic pictures of hells and the land of the dead in many religions have similarly served to keep death in the minds of people, just as images of heaven and the afterlife have proffered hope to many.

The ubiquitous presence of death, however, can also make it banal and rob it of any sense of sacrality or meaning. People can become inured to death by the numbing effect of the sheer numbers of the dead in times of plague, war, and, to use a modern term, natural disaster. Death's seemingly relentless redundancy can lead persons to perform horribly immoral acts as death's banality threatens the foundations of society. Akira Kurosawa's film *Rashomon,* set in Kyoto in an age of terrible civil war and a time of rampaging plague, is an unforgettable portrait of death's power to destroy law and order and to create utter chaos. Sheer desperation, coupled with the drive to survive, can lead humans to depravity as the moral order of the universe collapses. In the European Holocaust, the carrying out of the Nazi policy of extermination of the Jews, gypsies, and others was possible in part because in the camps killing became so banal.

There is also the "death without weeping"—the resignation at times of the poorest of the poor to the necessity of death for some if others are to live. The myriad images of a happier life in the future that many religions have proffered must not blind one to the desperate, horrible, and yet rational decision that innumerable mothers have made throughout history to stop feeding one child so that others might live (cf., Scheper-Hughes, 1992). Similarly, in much of the world today and in all countries before the advances of modern medicine, giving birth was an extremely dangerous act. All too often, bringing life into the world meant the death of the mother.

Yet, in the history of religions, few societies have collectively embraced an existential fatalism, which assumes that death is meaningless. Rather, plagues, wars, and natural disasters have often been taken to be cosmological signs of some sort. They have generated eschatological visions on a cosmic scale of the end of the world as we know it and the beginning of a new world. Or they have stimulated calendrical speculation on a cosmic scale, with the positing of ages through which the universe must pass. Examples are legion, ranging from ancient Indian speculation on devolutionary cosmic ages (*yugas*) and Buddhist writings on the present time as the Age of Declining Dharma to the elaborate intermeshing calendars of the Aztecs and the Mayans, which inexorably move through their cycles of change and ends and beginnings. In almost all cases, as has been seen in the case with the death of an individual, the end is imagined as a beginning. The end of a cosmic age is a moment of transition and transformation, one marked by death, destruction, and danger. Yet the religious imagination of humans turns this dark time—this descent into chaos—into a prelude to a renewed time and a return to order. Often this denouement is rehearsed in ritual performance and mythic narration.

**The need to explain death.** Death is both uniform and arbitrary. It is uniform in so far as all persons, regardless of social status, position, and wealth are subject to dying. Death is arbitrary, though, in terms of when it strikes, how it strikes, and often who it strikes. In this sense, death is enigmatic, mysterious, and unnerving. Although death is inevitable, specific deaths need to be explained. In many societies, the corpse or skeletal remains were examined for evidentiary purposes, or other ritual means, such as divination, were employed to determine who or what had caused a death. Today in scientifically developed countries, a special medical practitioner will perform an autopsy for these purposes.

In the past and in many traditional cultures today, ritual autopsies of a different sort were and are performed. In rural Greece, for instance, as in centuries past, old women and female relatives will fondle and closely examine exhumed skeletal bones for signs of the moral condition of the deceased and, thus, his or her posthumous fate (cf. Danforth, 1982). In other societies, the condition of a corpse after death is taken to be a sign of his or her spiritual status. In Buddhist and Christian lore, for example, the corpses of saints do not decay, nor do they emit disgusting odors. Rather, they release aromatic smells. Such extraordinary corpses are, of course, the source of relics in the cults of religions around the world. Such body relics are the repository of healing and saving powers; they are also yet another expression of the belief in life-from-death.

If the timing of death often seems arbitrary, societies and religious communities seek to regularize it temporally by punctuating religious and political calendars with days memorializing the dead. Whether it be the Shīʿah Muslims' annual memorialization and re-enactment of the martyrdom of al Husain, Christians' annual ritual remembrances of the crucifixion of Jesus and his resurrection, the celebration throughout East Asia of the festival of the dead, a ritual time when the spirits of the dead are invited to return to the world of the living and are entertained there, or modern national memorial days for the war dead, calendars are filled with days dedicated to the collective recollection of the dead. Through such collective reflections on death, communal values are reaffirmed. In an important sense, life cannot have meaning until death does.

While death is universal, it is imagined, encountered, and responded to in a myriad number of different ways across space and time. Death in the history of religions is the history of the ever-changing imagination and revaluation of death, as well as of the stylized responses to it. Philippe Aries' magisterial thousand-year history of death in Europe is one notable attempt to interpret and understand the existential meaning of the shifting representations of death over time. Aries' work reminds one that the manner in which death and the afterlife (or, the different possible consequences of death) are imagined and represented informs the lived experience of death both by the dying person and the survivors. Aries describes "the tame death" in medieval Europe when a dying individual accepted his or her coming death and met it at home. Surrounded by loved ones, the dying person said her or his last goodbyes and prepared to face death calmly, for one's state of mind at the time of death helped to determine one's fate.

Many religions have taught ways of preparing for death and facing this inevitability calmly. Holy men of the Agora sect in India meditate on death in the cremation grounds, spread the ashes of the dead over their own bodies, use human skulls as begging bowls, and pursue other practices in order to live with death continually (cf. Parry, 1994). Some Japanese samurai also practiced daily meditation in which they envisioned their deaths in battle. By practicing dying in this way, they sought to prepare themselves to face death unflinchingly (Reynolds and Waugh, 1977). In a myriad number of different ways, humans have sought to control death, even if it could not be conquered. The query "Death where is thy sting?" is an expression of the achievement of this control over death (*1 Corinthians* 15:55).

One way to gain control over death is to control the timing of one's death or to overcome the arbitrary timing of death by foretelling it. The ability to predict one's own death or to will it to happen at a certain time and place are widely recognized as a sign or a power of a holy person. The Japanese Buddhist poet-monk Saigyō (1118–1190) wrote a well-known poem (no. 77) included in his collection, *Sankashū* (*Nihon koten bungaku taikei,* Vol. 29, p. 32), that reads:

> negawaku wa Let me die, I pray, hana no shita nite
> under the cherry blossoms haru shinan of spring. sono
> kisaragi no around the full moon mochizuki no koro of
> the month of Kisaragi.

Kisaragi is the classical Japanese name for the second lunar month. Gotama the Buddha passed away on the fifteenth of this month, so Saigyō's wish was to emulate the Buddha even in death. When Saigyō died on the sixteenth of Kisaragi, many people took this as an auspicious sign. Saigyō's posthumous fame rested in part on this "proof" of his extraordinary spiritual nature. Similar miraculous powers of forecasting one's own death are found in religions around the world.

**Conclusion.** These general comments on death in the history of religions have done little more than present a brief introduction to the subject. In many ways, conceptions of death are subject to change over time, just as they vary dramatically in different religions. The imagining of death is not an empty exercise; it shapes the individual and communal experience of death and life. That death is a fact of life remains one of the most intractable mysteries that human beings must confront. Human beings past and present have always sought to find meaning in death and, thereby, in life.

The history of this search for meaning in the history of religions is both poignant and ennobling.

## DECONSTRUCTION.

The word *deconstruction* was coined by French philosopher Jacques Derrida (1930–2004), with whom the movement of that same name is identified. Derrida rejects the classical anthropological model of language, according to which the speaking subject gives verbal expression to inner thoughts that are subsequently written down. In such a model, writing is a sign of speaking; speaking is a sign of thinking; and thinking is a sign of being. Instead, Derrida follows the *structuralist* thesis of Swiss linguist Ferdinand de Saussure (1857–1913), which posits that language is to be understood scientifically as a purely formal system of signs *(langue)* internally related to one another (like a dictionary in which one word is defined by other words) and underlying the utterances of speaking subjects *(parole),* thus eliminating both the subjective-psychological and objective-metaphysical factors. In Saussure's model, *signifiers* are arbitrary (the word *king* has no natural likeness to a real king) and differential (they differ by the "space" between, say, *king* and *ring*). The *signified* is the effect produced by the rule-governed use of signifiers. Derrida's thought is *post-structuralist;* it criticizes Saussure for privileging speech over writing, in violation of the arbitrariness of the linguistic sign, and for treating linguistic strings as closed systems of fixed structures. Metaphors and wordplay illustrate the uncontainable capacity of linguistic chains to network out indefinitely in new directions, pushing endlessly against the limits imposed by the rules. Derrida encapsulated his adaptation of Saussure in the neologism *différance,* French philosophy's most famous misspelling. The idea is to keep networks open-ended, to resist their tendencies to closure, in order to allow new and unforeseen effects.

Deconstruction is not a settled body of substantive theses or positions but a style of thinking that applies in any field of inquiry, theoretical or practical, by virtue of which any present set of beliefs or practices is held to be indefinitely revisable (deconstructible) in the light of something unrevisable (undeconstructible). Inasmuch as the undeconstructible is never actually present or realized, the undeconstructible is also said to be "the impossible." According to Derrida, the least bad definition of deconstruction is the "experience of the impossible." "Least bad" because, in deconstruction, which is resolutely anti-essentialist (nominalistic), words have only a relatively stable unity of meaning, shifting histories of use, and no fixed or defined borders. Derrida uses the word *experience* in the sense not of empirical data gathering but of running up against something unexpected, even traumatic. "The impossible" does not mean a simple logical contradiction, such as (*p & ~p*), but something that shatters the horizon of expectation, that is not accountable (or possible) under prevailing presuppositions.

The same sense is conveyed when Derrida describes deconstruction as the "invention of the other." *Invention* has the more literal sense of "coming upon" and even of "in-coming" (Latin, *in-veniens*), running up against something that comes in upon or comes over us, overwhelming our powers of anticipation. By the "other," Derrida means not the relatively other—that is, new evidence confirming an existing horizon—but the "wholly other" *(tout autre),* a phrase he borrows from the Jewish ethicist Emmanuel Levinas, meaning something unforeseeable, unrepresentable, for which we have no concept. A deconstructive analysis thus prepares the way for or explores "the possibility of the impossible." Jean-François Lyotard makes a comparable distinction between making a new move in an old game (the possible or relatively other) and inventing a new game altogether (the impossible or wholly other). That, in turn, invites comparison with Thomas Kuhn's distinction between *normal science,* which makes new discoveries within an existing paradigm, and *revolutionary science,* when an anomaly forces a fundamental reconfiguration of the current schema, resulting in a "paradigm shift."

Derrida has recourse to a family of *venir* ("to come") words picked up in English in both Latinate *(invention)* and Anglo-Saxon forms *(coming).* Deconstruction is turned to the "in-coming," the invention, or the advent, of the "event," which is a unique and "singular" happening, not an instance or example of a universal (Derrida's idea of "singularity" is derived from Søren Kierkegaard, Martin Heidegger, and Levinas). The event defies convention, where everything is regularized and routinized. Deconstructive thinking is guided by the invocation "come" *(viens),* which Derrida has not hesitated to call a certain "prayer," by which he means a deep desire or love of the event to come, which is not without anxiety since the future is also an absolute risk. The motif of the "come" clearly has messianic overtones that Derrida acknowledged in later, more autobiographical, essays like "Circumfession," where he reflects on his birth as a Jew and on his early life in a Jewish family in French Algeria. The motifs of love and desire have overtones of Augustine's *cor inquietum,* of what Derrida calls the "prayers and tears of Augustine," which also surface in these same essays about his life in the Franco-Christian colony that is the historic land of Augustine.

The word *deconstruction,* which has the predominantly negative sense of disassembling something, is clearly not the best word for this deeply affirmative mode of thinking. Coined by Derrida as a translation of Heidegger's *Destruktion,* and used by him to characterize his own work, it owes its currency just as much to commentators who seized upon it. Heidegger himself was likely referring to Martin Luther's use of *destructio,* which itself goes back to *1 Corinthians* 1:19. Just as for Luther, destroying the wisdom of the wise meant nothing destructive, but rather the recovery of the original sense of scripture by breaking through the crust of Scholastic theology. And just as Heidegger did not mean anything negative but rather the recovery of the unthought sense of "being" that was hidden in the history of metaphysics, so Derrida does not mean anything negative, but rather the releasing of the possibility of the impossible, or the coming of the event, that threatens to be closed off by conventional interpretation and practices. While the word has entered the general vocabulary (e.g., "deconstructing Woody Allen") with the negative sense of knocking down and exposing faults, to deconstruct something in Derrida's sense is not to ruin it but to give it a history, to open it up to a future. Something that is insulated from deconstruction is not protected but petrified, having hardened over into a dogma, like a law that could never be reformed or repealed. The word enjoyed, or suffered from, a *succès de scandale,* particularly in American literary theory circles in the 1970s, where it seemed to invite a kind of interpretive anarchy that licensed any interpretation, however bizarre. When Derrida protested against such interpretations, critics thought him involved in the self-contradiction of insisting that his own texts should be interpreted carefully, thus refuting his own theory that anything goes.

In fact, careful reading is what deconstruction is all about. A philosophical theory with wider implications, deconstruction first gained ascendancy in the 1960s and 1970s as a literary theory. A deconstructive reading settles deeply into the grain of a text, sensitizing itself to its tropes and metaphors, its choice of words, the chains in which those words are caught up, and the complex and even anonymous operations of the linguistic system in which the author is working, in order to show that the text contains an unmasterable complexity—*dissemination*—that cannot be contained by the author's own intentions or conscious logic. Thus, Derrida's well-known critique of "logo-centrism." Derrida's frequent use of puns and wordplay is not a substitute for an argument but an exemplification of a theory about wordplay, which illustrates the unmasterable, unintended dimension of language, the semantic, graphic, and phonic chains that no intentional agent can contain. James Joyce, an early hero of Derrida's, embodies this point about language almost perfectly. This disseminative effect is not something that a clever writer or reader is doing to the text, exerting a kind of violence or mastery over it, but an auto-deconstructive operation going on within the linguistic network itself.

That this is not interpretive anarchy but responsible work, Derrida thinks, is clear to anyone who reads carefully. Anyone who reads Greek philosophy carefully knows that there is all the difference between "Plato," a shorthand for a cluster of condensed philosophical theses, summarized and passed along in prepackaged histories of philosophy, and a close, careful reading of or immersion into Plato's writings, which reveals multiple voices, dramatic devices, conflicting and suggestive counter-motifs, and loose threads—in short, a "text," a highly woven and interwoven complex, not a neatly argued "book" under the absolute conscious control of an "author." We might add that anyone who has studied the Jewish or Christian scriptures carefully will understand that these are "texts" in just this sense; that is, a complex weave (or "palimpsest") of many voices, competing theological and political agendas, redactive layerings, anonymous interventions, lost stories, liturgies, and multiple extra-textual references or reinscriptions of earlier texts, texts without fixed "margins." In the same way, conservative critics charge deconstruction with being out to destroy "tradition," but Derrida would respond that he only wants to show its immense complexity and competing voices; there is no such thing as "tradition" in the singular but rather an interweaving of many traditions and counter-traditions, of dominant and recessive voices, and even of chance mutations in manuscripts. Close readings of the past—the uncovering of forgotten women, for example—opens up hitherto closed possibilities for the future. Deconstruction is very conservative, Derrida once quipped, because the only way to love and be loyal to the past is to deconstruct it.

Although Derrida's avant-garde style of writing, especially early on, lent superficial credibility to the misinterpretation of deconstruction as a form of relativism or even nihilism, no one today can mistake the sustained seriousness of the later writings, whose ethical, political, and even religious character is beyond doubt. Reading his account of the "gift without return" or "forgiving the unforgivable," more informed critics today will accuse him of a Kantian rigorism or unrealistic ethical purism, an accusation that he also rejects. From the early 1980s on, Derrida has written not only about the gift and forgiveness, but about justice and the law, hospitality, friendship, democracy, capital punishment, and international human rights. In 2003 he published *Voyous,* a book about the denunciation of "rogue states" by the Western democracies.

Religious thinkers are fascinated by a distinction Derrida introduced in the 1990s between the concrete "messianisms"—the three great monotheistic religions of the book, as well as the philosophical eschatologies of G. W. F. Hegel, Karl Marx, and Heidegger—and the pure "messianic" or "messianicity." The *pure messianic* means the formal structure of desire, expectancy, or openness, the pure structure of the "to come" *(à venir)*—like the hospitality to come, the justice to come, and, most famously, the "democracy to come"—that is concretized in the historical messianisms. In virtue of the pure messianic, one can speak of a "religion without religion," a religious desire without confessional dogma or institutional ties. The "democracy to come" is not a Kantian regulative ideal, which brings a concept to ideal completion beyond its empirical limits, because, for Derrida, *democracy* is not a concept or an essence on which we are making asymptotic progress, but a moment in the open-endedness of history that makes possible an event, whose coming cannot be foreseen and whose name is not known, and where nothing guarantees that it will not bring forth a monster instead of a messiah. "Secular" political theory, and philosophy generally, is always transcribing an "unavowed theologeme," like the messianic promise, thus skewing any rigorous distinction between the religious and secular, faith and reason, religion and the nonreligious, prayer and social hope, theism and atheism.

This is not to say that religious thinkers were not interested in deconstruction from the start. The early essay "Differance" (1967) started a discussion with negative theology that dominated the dialogue between deconstruction and theology until the late 1990s. As Derrida says, he loves the syntax, semantics, and the tropes of negative theology, which is a self-effacing discourse, a discourse that attempts to erase its own traces. Beyond matters of style, the critique of the metaphysics of presence in deconstruction (what is present is deconstructible; the undeconstructible is never present) bears a substantive analogy to the critique of idols in apophatic theology (if you comprehend it, it is not God; if it is God, you cannot comprehend it). Nonetheless, while negative theology clearly uses deconstructive techniques, deconstruction is not negative theology, because it has no commitment to a *hyperousios,* to a Godhead beyond God or a God beyond being. The exchange between Derrida and Jean-Luc Marion is the most important in this regard.

In the 1980s, deconstruction was appropriated by the theology of the "death of God," most notably in Mark C. Taylor's *Erring: A Postmodern A/theology* (1984). Taylor argued that the first wave of death-of-God thinking in the nineteenth century left the old God standing under the new name of *Humanity.* Deconstruction is the true hermeneutics of the death of God because it has displaced any absolute center, human or divine, with the free play of signifiers. God has descended into the world without remainder, even as scripture has descended into *écriture* without remainder, a reading that reflected the Nietzschean understanding of Derrida then dominant in American departments of literature. Since then a different appreciation of the religious dimension of deconstruction has emerged in thinkers such as John Caputo, Kevin Hart, and Hent de Vries, for whom deconstruction is the hermeneutics not of the death but of the desire for God.

## DEFILEMENT See PURIFICATION; TABOO

## DE GROOD, J. J. M. See GROOT, J. J. M. DE

## DEIFICATION.

The Latin term *deificatio* does not appear until late in the Roman era, and then first in Christian literature, particularly in the controversies involving the Nestorians, who blamed the orthodox for "deifying" the body of Christ. In current usage, the English term *deification* is equivalent to *apotheosis.* In light of history, however, *apotheosis* might be reserved to refer to the consecration of heroes, of political personages, of Hellenistic sovereigns and, notably, of Roman emperors. In this article the subject will be the deification of individuals or of things generally through means that correspond to certain general tendencies of Greco-Roman paganism.

**Pythagoreanism and Cathartic Deification.** Since death makes the radical difference between men and gods, the problem of deification is indeed that of immortalization. In the Classical epoch, the Greeks attributed the power of immortalizing (*athanatizein*) to the Getae and to the Thracians through a kind of shamanism that may have involved Zalmoxis. No evidence exists of the ritual patterns of these practices, but they must have been based on a doctrine of the soul and on the existence of spiritual elites. Zalmoxis was regarded as a *daimōn* and as a disciple of Pythagoras. The connection is significant, since belief in metempsychosis is sometimes attributed to the Thracians.

The belief in metempsychosis is tied to the first explicit formulation of a deification of persons through asceticism and the satisfaction of penalties consequent upon the pleasures of previous lives. It is found in the writings of the Pythagorean philosopher Empedocles (frag. 145–146): a soul is a kind of "demon" that is bound to the cycle of reincarnation in expiation for its faults. At the end of purifying reincarnations, after having been "prophets, cantors, physicians . . . ," these fallen and ransomed "demons" are "reborn as gods": they become the "table companions of the immortals." The last two verses of the Pythagorean *Golden Verses* (70f.) offer hope of a state like that of an immortal god for the sage "who, having left his body behind, goes forward into the free ether." Hierocles would explain this deifying liberation of the soul as the "highest aim of the hieratic and sacred craft," that is, of philosophy. Deification, then, consists of restoring the personal *daimōn* to its authentic status as an immortal god. It is the goal of a spiritual asceticism confirmed by various means of testing.

The same teaching is implicit in Plato, notably in the *Phaedo* (69c, 114c), where the philosopher is talking not expressly about a deification, but rather about a sojourn among the gods. It is also seemingly implicit in the inscriptions engraved upon the noted golden tablets of Thurii (fourth to third century BCE) and of Rome (second century CE). These assure the deceased that he will be a god by virtue of his heavenly ancestry, his divine race, and the sentence that he has served. Caecilia Secundina "became divine according to the law," that is, by the law that governs reincarnations (*Orphicorum fragmenta* 32g.4). The deceased in one of these tablets states expressly that he has escaped at last the "circle of sorrows," an image that elsewhere is applied to the cycle of rebirths. Whether these tablets bear inscribed fragments of an Orphic "book of the dead," of a *missa pro defunctis*, or of a Pythagorean *hieros logos* ("sacred teaching"), their formulary promises a posthumous deification.

The same point of view is declared on the new tablet of Hipponium: the soul of the deceased woman will take "the sacred path along which the other initiates and Bacchants walk unto glory." The reference is to Orphic Bacchants. It is significant that Orphic vegetarianism expresses the desire to live not as men but as gods. This asceticism had the aim of purifying man from his Titanic components by liberating the Bacchus within him. A liberation of this sort coincides, as it does in Empedocles and Plato, with the escape from the "circle of genesis." The Orphic-Pythagorean deification thus presupposes a persevering action directed toward oneself, a cathartic and mystic tension. When Hippolytus (*Philosophumena* 6.9.25) attributes to Pythagoras the statement that souls "become immortal, once they are detached from their bodies," this does not mean that physical death liberates them automatically, but that immortality is the reward for continual effort at personal purification. This conviction is based upon a dualist anthropology.

**THE MYSTERIES AND INITIATORY DEIFICATION.** Orphic-Pythagorean ideas were disseminated with variations (especially involving metempsychosis) by advocates of Platonism and Neoplatonism. Ever since the Classical epoch, the Orphic mystics, as well as various wandering charlatans, had promised, through the use of specialized formulas, not a religious purification, but only an ethical purification in the spirit of the philosophers. Later, during the Hellenistic age, the multiplication and success of mystery religions popularized a new form of deification.

These cults—centered on deities who were regarded as having lived and suffered among men—put into question the radical distinction between cursed mortals and blessed immortals. Insofar as they made their initiates relive in a liturgical way the trials of the gods who had died and revived (Osiris) or were reborn (Attis), the mystery religions connected their devotees with an adventure that ended with victory over death. Indeed, the initiation that, at first, was regarded as giving the candidates some assurance of a kind of privileged status in the beyond (Eleusis) tended also to safeguard them against bad luck, and even to deify them by a form of ritual identification with Dionysos, Attis, or Osiris. The Dionysian mysteries made a Bacchus of the initiate; the consecration of the initiate by means of the winnowing basket and the phallus regenerated him by immunizing him against death and infernal demons. Dionysos was held to have returned from the nether regions along with his mother Semele, and to have been "reborn." His myth provided a model for the rebirth of any initiate, to whom the same immortality was promised (Turcan, 1966, pp. 396ff., 436ff., 466ff.). This regeneration required the (figurative) death of the initiate, who was subjected to a rite of katabasis. The initiate was seen as undergoing the same trials of initiation that had turned Dionysos into a true Bacchus (ibid., pp. 406ff.). The Neoplatonists compared the restoration of the soul (purified and reintegrated in God) to the awakening of Dionysos Liknites (ibid., p. 401). The initiation of the cult of Isis offers many comparisons. The neophyte had to die to his previous life, and the ritual involved a descent into hell, with some kind of mystical or hallucinatory journey through the cosmos. Yet as recompense the initiate was defied, adorned *"ad instar Solis"* ("as a likeness of the Sun," that is, Osiris-Helios), and held up to the faithful as an idol. The benevolence of Isis, who judged someone to be worthy, made the neophyte into a new Osiris. The funeral rites of mummification in ancient Egypt had the same purpose. Yet in figuratively anticipating the initiate's death, the mysteries of Isis during the Roman epoch in some way democratized apotheosis, in that in its beginnings only pharaohs were the beneficiaries.

The mysteries of Cybele likewise promised a regeneration to their adherents and an elevation (*epanodos*) toward the gods. Just as in the initiation of the cult of Isis, the initiate is thought of as dying like Attis, in order to share in the love of Cybele in a blessed *hieros gamos.* The Galli, by castrating themselves, identified with Attis. To avoid this personal bodily sacrifice, use was made of the *taurobolium*, the ritual sacrifice of a bull. The function and meaning of the *taurobolium* are debated (R. Duthoy, *The Taurobolium: Its Evolution and Terminology*, Leiden, 1969). Yet the fact remains that the beneficiary of the *taurobolium* was factitiously identified with the victim by drenching himself in the victim's blood, thereby becoming an Attis that those present could worship. Just like the initiate of Isis, the initiate of Attis was "reborn" through the *taurobolium: in aeternum renatus.* Whatever the rites or mysteries, the resting with a divine nature was thought of as a regeneration (Nilsson, 1974, p. 653). This feature is also seen in Hermetic deification.

**HERMETISM AND GNOSTIC DEIFICATION.** Comparing astrology with an initiation, Vettius Valens (second century CE) identifies contemplation of the stars with a kind of mystical union with God: the knowledge of the heavens "divinizes" the man who possesses it, as if the subject came to merge with the object. This is even more true of the knowledge of God when, in the imperial epoch, philosophy becomes theosophy. In the *Corpus Hermeticum*, this idea recurs frequently, "for this is the blessed end of those who have the knowledge: they become God" (*Corpus Hermeticum* 1.26). The good choice—that of divine things—"deifies man" (ibid., 4.7). We are "divinized" by the birth into spiritual life that constitutes gnosis. *Asclepius* 41 gives thanks to the supreme God, that he has deigned to "consecrate for eternity," that is, to deify men in the flesh. This affirmation seems to conflict with that in *Corpus Hermeticum* 10.6, where it is denied that the soul can be divinized while in a body.

Indeed, Hermetic gnosis supposes a complete regeneration. It is the new man enlightened and reborn in God who becomes a god by dying to physical life and by becoming alien to the world even in this life. Regeneration consists of the substitution of ten good "powers" (including "the knowledge of God") for twelve evil "powers" attributable to the zodiac. The disciple then identifies himself with the cosmic eternity, Aion, and he is then divinized. This is the very recommendation that Nous makes to Hermes: "Become Aion, and you will understand God" (ibid., 11.20). Here again it is a matter of restoring the soul to its original state: "You are born a god and a child of the One," declares Hermes to Tat (ibid., 13.14).

Similarly, the Gnostic systems derived from Christian inspiration, whatever the variations in their myths and their soteriology, envision only the final restoration of the spirit to its original divine state. Finally, the idea that by knowing oneself one learns to know God and to be known by him so as to be "deified," or "generated into immortality," is expressed by orthodox Christians (Hippolytus, *Philosophumena* 10.34). In contrast with Hermes Trismegistos, Hippolytus promises the Christian a body that will be as immortal and incorruptible as the soul itself. But, like the Hermetist, the Christian must also die to the old man and to the profane life.

**MAGICAL AND THEURGIC DEIFICATION.** Certain procedures of deification are comparable to Hermetic gnosis, at least insofar as they are presented as "formulas for immortality" that feature magical concepts. This is true in the case of the so-called Mithraic liturgy (end of the third century CE), where the name of Mithra appears as only one of those associated at that time with the sun. The ritual involves prayers and a journey of the spirit that in some way anticipates the posthumous ascension of the soul unto Helios and the heavenly Aion, both invoked for the occasion. As in Hermetism, the *apathanatismos* asserts that a subject is regenerated by the very object of his theosophical quest, but this is conditional to the exact application of a formula. Other magical texts insist upon the importance of knowledge revealed by the god or gods: "We thank you for . . . having divinized us through the knowledge of your being," states one papyrus. Following the death of the magus, Aion carries away his breath (*pneuma*) by way of rescuing it from Hades, "as befits a god." The neophyte is "reborn" and freed from fate, as was the initiate of Isis. Neoplatonic theurgy would give its approval to pagan magic, and Psellus could believe that it was capable of making gods of men.

The magus could also deify animals by ritually mummifying them in accordance with traditional Egyptian practices. Further, he could deify idols through telestic action and theurgy. In this sense, *Asclepius* 23 affirms that man is the creator of gods. It was precisely for this reason that Christians reproached pagans: the very idea that men could make gods! The most frequently denounced example of idolatrous fiction is that of Serapis who, according to Origen (*Against Celsus* 5.38), owed his existence "to the profane mysteries and to the practices of sorcerers invoking demons." Indeed, telestic action consists of causing divine influence to enter into idols, to "animate" them or to illuminate them through the magical process known as *phōtagōgia*. This consecration of statues employing magical formulas played a great role in late paganism.

**FUNERARY AND ICONOGRAPHIC DEIFICATION.** The adornment of tombs displays the concern for deifying individuals by analogy or through iconography. This tendency was first evident in Rome among the class of freedmen who sought thus to insure themselves some kind of moral promotion. Their cippi or stelae represent, from the first century CE, Herakles, Hermes, Dionysos, and Artemis portrayed after the image of the deceased man or woman. The epitaphs, the architecture of the tombs, and the literary tradition confirm the intention to identify the dead with gods, goddesses, and heroes. When the use of sarcophagi began to prevail at the time of the Antonines, sepulchral imagery manifested even more clearly the same concerns that are evident among higher social circles; emperors and empresses provided the example. This style of funerary deification consisted either of featuring the deceased's medallion portrait (*imago elipeata*) as being carried by the gods (Tritons, Centaurs, Victories, Erotes) or of giving the sculpted god, goddess, or hero the same features as the dead man or woman, who could then be seen as Dionysos, Ariadne, Mars, Hercules, Endymion, or Selene. Imagery of predatory animals (eagles, griffins) or gods (Dioscuri, Pluto) also implies a deification by analogy. Finally, sarcophagi with figures of the Muses, or with scenes of teaching, of battle, or of hunting, heroize the deceased through association with the depicted qualities of gallantry or erudition.

Thus, in the Hellenistic and Roman world, philosophy, theosophy, magic, mystery religions, and the cult of the dead all aspired to the same goal (one that on principle was excluded in Classical Greek religion): for the individual person to become or become again a god.

***Translated from French by Paul C. Duggan***

**DEISM.** The term *deism* was originally equivalent to *theism*, differing only in etymology: *theism* based on the Greek word for god (*theos*), and *deism* on the Latin (*deus*). In the seventeenth and eighteenth centuries, however, *deism* came to signify one or another form of rationalistic theological unorthodoxy. Often used pejoratively, it was also sometimes worn as a badge of honor. The first known use of the term occurs in the *Instruction chrétienne* (1564) of the Calvinist theologian Pierre Viret: "I have heard he is of that band who call themselves 'Deists,' a wholly new word which they would oppose to 'Atheist.'"

In its principal meaning, *deism* signifies the belief in a single God and in a religious practice founded solely on natural reason rather than on supernatural revelation. Thus Viret characterizes deists as "those who profess belief in God as creator of heaven and earth, but reject Jesus Christ and his doctrines." John Dryden's preface to his poem *Religio Laici* (1682) defines deism as "the opinion of those that acknowledge one God, without the reception of any revealed religion." The currency of the term in the eighteenth century was undoubtedly enhanced by the article on Viret in Pierre Bayle's *Dictionnaire historique et critique* (1697).

Like most epithets of controversy, *deism* was used in a number of senses other than its principal one. It was often used as a vague term of abuse with no determinate meaning at all. Among the chief subordinate or deviant senses of the term are (1) belief in a supreme being lacking in all attributes of personality (such as intellect and will); (2) belief in a God, but denial of any divine providential care for the world; (3) belief in a God, but denial of any future life; (4) belief in a God, but rejection of all other articles of religious faith (so defined by Samuel Johnson in his *Dictionary*, 1755).

Some Deists completely rejected all revealed and ecclesiastical religion, adopted anticlerical attitudes, challenged the scriptural canon, questioned the credibility of miracle narratives, or even rejected the New Testament as fabrication and imposture. Thus Edward Stillingfleet, bishop of Worcester, described the addressee of his polemical *Letter to a Deist* (1677) as "a particular person who owned the Being and Providence of God, but expressed mean esteem of the Scriptures and the Christian Religion." Yet a number of influential seventeenth- and eighteenth-century British thinkers described themselves as "Christian Deists" on the grounds that they accepted both the Christian religion based on supernatural revelation and a Deistic religion based solely on natural reason, consistent with Christianity but independent of any revealed authority.

Thus, even the principal sense of *deism*, which refers to belief in God without belief in supernatural revelation, is inherently imprecise. No sharp dividing line can be drawn between Christian or revelationist Deists and Deists who recognized no revelation. The former often accepted Christian revelation precisely because it accords with natural or rational religion and sometimes advocated allegorical readings of scripture in order to secure this agreement, while the latter often disavowed any "mean esteem" of Christian scriptures and expressed admiration for the inspiring way in which the truths of natural religion were presented in them. Further, there is no sharp line separating Christian Deists and orthodox Christian theologians (such as Thomas Aquinas or Duns Scotus) who maintain that some parts of Christian doctrine can be known by natural reason.

Deism was most prominent in England, the only place where it approached the status of a movement. Among its best-known representatives were Lord Herbert of Cherbury (1583–1648), author of *De veritate* (1624); his disciple Charles Blount (1654–1693); John Toland (1670–1722), author of *Christianity not Mysterious* (1696); Anthony Collins (1676–1729); and Matthew Tindal (1657–1733), author of *Christianity as Old as the Creation* (1730), often described as "the Deist's Bible." The powerful influence of English Deism is attested by the sizable number of attacks on it by the orthodox, including not only Stillingfleet, but also Richard Bentley, Charles Leslie, Samuel Clarke, and (most famously) Joseph Butler in his *Analogy of Religion* (1736). Deism also met with vicious persecution in England, where blasphemy was punishable by forfeiture of civil rights, fines, and even imprisonment. At least two prominent Deists were imprisoned for expressing their blasphemous opinions: Thomas Woolston (1670–1733) was sent to prison in 1729 and died there; Peter Annet was fined, pilloried, and imprisoned to hard labor in 1764 at age seventy.

Deism is generally associated with British religious thought. However, a number of major continental religious thinkers of the late sixteenth, seventeenth, and eighteenth centuries clearly qualify as Deists under the principal meaning of the term. They include Giordano Bruno (1548–1600) and Lucilio Vanini (1584–1619), both burned as heretics for rejecting ecclesiastical authority and scriptural revelation; Barukh Spinoza (1632–1677); François-Marie Arouet (Voltaire; 1694–1778); Jean-Jacques Rousseau (1712–1778); Hermann Samuel Reimarus (1694–1768); Gotthold Ephraim Lessing (1729–1781); Moses Mendelssohn (1729–1786); and Immanuel Kant (1724–1804). (Both Voltaire and Kant, however, repudiated the label "Deist" and always described themselves as "Theists.") There were outspoken Deists among the founding fathers of the United States of America, notably Benjamin Franklin (1706–1790), Thomas Paine (1737–1809), and Thomas Jefferson (1743–1826).

Deism appears to be exclusively a seventeenth- and eighteenth-century phenomenon, but this is partly an illusion. There are special reasons why the term *deism* attained currency then but did not survive longer. The rise of modern science did not immediately initiate warfare of science with religion, but it did initiate warfare within religion, between the orthodox who held fast to tradition, authority, and the supernatural, and the freethinkers, who sought a religion that harmonized with nature and reason. A term was needed by the orthodox to distinguish the freethinkers from themselves, and by the religious freethinkers to distinguish themselves from mere atheists. *Deism* served both needs. The term has fallen into disuse in the past two centuries, however, perhaps chiefly because in nineteenth- and twentieth-century philosophical and religious thought the distinctions between reason and tradition, nature and supernature, have lost the sharpness they had for thinkers of the seventeenth and eighteenth centuries. Greater tolerance of diversity of opinion within Christian society has also lessened the need for an epithet whose principal function was to scourge independent thinkers. Deism itself has also become a less popular position, owing to the increasing tendency of rationalists to become simple unbelievers rather than to settle for compromises and half-measures. Yet deism—in fact, if not in name—still survives in all religious communities and individuals whose convictions arise from autonomous thinking rather than from the submission of reason to ecclesiastical or scriptural authorities.

## BIBLIOGRAPHY

An excellent nineteenth-century account of British Deism is to be found in Leslie Stephen's *History of English Thought in the Eighteenth Century*, vol. 1 (1876; reprint, New York, 1963). A detailed account of Deistic thinkers is presented by J. M. Robertson in *A History of Freethought, Ancient and Modern*, vol. 2, *To the Period of the French Revolution*, 4th ed. (London, 1936). For the social background of Deism, see W. K. Jordan's *Development of Religious Toleration in England*, 4 vols. (1932–1940; reprint, Gloucester, Mass., 1965). Two very good studies of aspects of Deism are Norman L. Torrey's *Voltaire and the English Deists* (1930; reprint, Hamden, Conn., 1967) and Ernest C. Mossner's *Bishop Butler and the Age of Reason* (New York, 1936). Perhaps the two most classic works on religion by thinkers identified above as Deists are Barukh Spinoza's *Tractatus theologico-politicus* (1670), translated by R. H. M. Elwes in *Chief Works*, vol. 1 (1883; reprint, New York, 1955), and Immanuel Kant's *Religion within the Limits of Reason Alone* (1793), translated by Theodore M. Greene and Hoyt H. Hudson (LaSalle, Ill., 1960).

ALLEN W. WOOD (1987)

**DEITY.** As a symbol, deity represents the human struggle at its highest; it represents humanity's effort to discover its identity in confrontation with the limits of its universe. Deity is the symbol of what transcends the human being and the symbol of what lies hidden most deeply within. While other creatures merely accept their environments as a given, human beings exist as such only when they realize both their solidarity with the universe and their distinction from it. In the journey toward self-identity humanity encounters deity. In a cross-cultural context, deity symbolizes the transcendence of all the limitations of human consciousness and the movement of the human spirit toward self-identity through its encounter with the ultimate. Deity symbolizes humanity's knowledge that it is not alone nor the ultimate master of its fate. And yet this knowledge, dim though it may be, associates humanity with this same deity. Deity both transcends and envelops humanity; it is inseparable from humanity's awareness of its own identity and yet is always elusive, hidden, and for some, seemingly nonexistent.

**THE POLYSEMY OF THE WORD.** *Deity* is a word with a diversity of meanings. It is an ambiguous and often polemical word. The different interpretations that it has been given show that it is also a relative word.

**Ambiguity.** The word *deity* is ambiguous. It is not a proper name. It is not even a common name, since its possible referents are hardly homogeneous. It is the product of many and heterogeneous abstractions. Most names referring to divine beings or the divine were originally common names singled out in a peculiar way. What was general became specific, concrete, and, like a single being, evocative of emotion. Thus *Allāh* probably comes from *al-illah*, that is, "the God." *Ñinyi* or *Nnui*, the name for God among the Bamum of Cameroon, means "he who is everywhere"—and thus is at once concrete and elusive. *Yahveh* means "he who is" (or "he who shall be"), which becomes being par excellence for Christian Scholasticism. *Śiva* means "auspicious, benign, kind"—what for the Śaivas represents the highest symbol of the deity stripped of any attribute.

In short, there are gods called Allāh, Nnui, Yahveh, Śiva; but there is no god called Deity. One worships Viṣṇu, or even the Buddha, but one does not worship deity as such. One may worship only a particular deity. We often speak of "major" and "minor" deities in religious traditions. The word *deity*, in short, has a higher degree of abstractness than does the word *God.*

In Western antiquity, in the Middle Ages, and up to the present, *deity* in its adjectival or pronominal form is a word applied to creatures and used without theological misgivings. Works and persons are called "divine" and "deities" because they share in deity in a way in which they would not be said to share in God. Spiritual writers or popular heroes are called "divines" in many languages. The word simply denotes a character of (divine) excellence, which can be shared by many creatures.

The word *god* was also originally a common name, but soon became the proper name of the one God of the theists (and also of the atheists, for many atheists are merely antitheists; both live within the mythic horizon of the one personal God, accepting or rejecting it). By extension scholars speak of the African gods, discuss the nature of a supreme god, and the like.

At any rate, *deity* is not identical with *god.* One does not believe in deity in the individualized sense in which one may believe in God. Yet one may accept that there is something referred to by the word *deity.* The referent will always retain a certain mystery and show certain features of freedom, infinity, immanence, transcendence, or the like. For others, this mysterious entity becomes the highest example of superstition, primitivism, unevolved consciousness, and a pretense for exploiting others under the menace of an awesome and imaginary power. The ambiguity of the word is great.

**Polemical usage.** At the same time *deity* is also a polemical word. It has sometimes stood against some conceptions of God without rejecting the divine altogether. The philosophical Deism of the last centuries in Europe, which developed a concept of the divine more congenial to the natural sciences emerging at the time than to the idea of a personal god, could serve as an example. The deity of the Deists was to substitute for and correct the *theos* of the theists without discarding the belief in the existence of some supreme being or first cause. Yet this polemic was not new to the eighteenth century. The prolific Greek writer-priest at Delphi, Plutarch of Chaeronea (c. 46–c. 119 CE), our first source for the word *theotēs*, uses it in his polemic against the mythological interpretations of historical heroes as they appeared in the work of Euhemerus of Messina (fl. 300 BCE). In the New Testament this word, in the only passage in which it appears (*Col.* 2:9), is translated by the old Latin *deitas*, whereas the Vulgate uses the more current *divinitas*—a word unknown before Cicero (106–43 BCE). In the *Letter to the Romans* 1:20 we find the word *theiotes* derived from the adjective *theios* and also translated as *divinitas* in the Vulgate.

Deity is not only polemical in regard to a personal conception of God. It is polemical also as a symbol of the political use of the divine. We should not forget the wars of religion, the attempted legitimation of power and use of violence in the name of God, gods, and divinity, nor the justification of so many ideologies by slogans such as "In God we trust" or "*Gott mit uns.*" Deity has been all too often the cause of strife and war, sometimes under the guise of peace.

**Relativity.** From the perspective of a sociology of knowledge, the modern use of the word *deity* could be interpreted as the Western effort to open up a broader horizon than that of a monotheistic God but without breaking continuity with tradition. *God* was a common name. It became a proper name: the Abrahamic God. And it was then that this *God* came to designate the one God, which Muslims or Christians wanted to propagate around the world. All others were "mere" gods or, at most, inappropriate names for the true God. It is interesting to see how Western scholarship today tries to disentangle itself from its monolithic and colonial mentality. Is the word *deity* the last bulwark of this attitude?

We may draw two opposing conclusions from the paradoxical fact that this word denotes both the most communicable and the most exclusive aspects of the "divine" reality: everything that is shares a divine character, and nothing—no thing—that is can be said to embody or exhaust the divine, not even the totality of those things that are. In sum: the word says everything, every thing, and nothing, no thing. One legitimate conclusion from this ambiguity may be that one should avoid the word altogether or speak of deities in the plural as special superhuman (divine) entities.

There is another possible conclusion, however. Precisely because of its polysemic nature, this word may become a fundamental category for the study and understanding of religion. The subject matter of religion would then be related to deity, and not just to God or to gods. Polysemy does not need to mean confusion. It means a richness of meanings, a variety of senses. *Deity* could then become a true word, that is, a symbol not yet eroded by habit, rather than a univocal concept.

I should now try to describe the field of the symbol "deity" and study its structure. Regarding its field I shall analyze the means of approach to this symbol in its broadest aspect. Then, I shall examine the structure of deity by analyzing the different avenues, contexts, and perspectives under which deity has been studied. I shall then mention the structure of human consciousness when referring to deity. I shall further briefly compare deity with other equally broad categories in order to get a more accurate picture, and finally I shall try to summarize my findings.

**AN APPROACH TO DEITY.** This article does not deal primarily with the concept of God as it is generally understood in the Western world, and therefore it is not necessary to discuss, for instance, atheism or the nature of God. Further, this essay's cross-cultural perspective requires that the viewpoints of other cultures be integrated with our own instead of simply reported. Still we are engaged in what is predominantly a Western activity: taking a perspective from one tradition (as betrayed by the very use of the word *deity*) and expanding it in order to achieve a more universal viewpoint.

**Linguistic background.** Johann Gottlieb Fichte (1762–1814) provides us with a caution: "Deity appears only in the highest performance of thinking." We must keep in mind at the very outset that discourse about deity is unique, because the locus of deity is beyond both the things of the senses and the things of the intellect. Yet the way to deity belongs to the dynamism of our intellect. This is expressed in the first sentence of the *Brahma Sūtra:* "Athāto brahmajijñāsā" ("Now therefore the desire to know *brahman*"). The text refers to the "desiderative knowledge" or the "knowing desire" (*jijñāsā*), which arises out of an existential situation (*atha*). It liberates us from the weight of selfishness (*ahaṃkāra*), permitting us to soar in the search for deity. The process follows both an existential and an intellectual path, with no separation between pure and practical reason. Deity is as much at the beginning as at the end of the human quest—and also in between. The search requires purity of mind, strength of will, and a change of life.

While speaking of deity we have already had occasion to refer to God, and we now introduce *brahman.* Do all these words designate the same "thing"? Or have they at least the same meaning?

*Brahman* is certainly not the one true and living God of the Abrahamic traditions. Nor can it be said that Shang-ti or *kami* are the same as *brahman.* And yet they are not totally unrelated. Can we affirm that all those names refer to deity as a broad category? Is *deity* perhaps the common name for God, the godhead, the divine, *brahman*, *mana*, and so forth?

To begin with, it must be stressed that *brahman* and God, for instance, are not the same. The one is passive and does not need to care, it is at the bottom of everything and is the very condition of possibility for all that there is. The other is active and provident; it is above everything, personal, the creator of all that is. But they are not so different as to make the translation of the one by the other totally inaccurate. The Christian Scholastics, while affirming the ineffability of divine names, did not deny that some names are more applicable than others. We shall call *brahman* and God homeomorphic equivalents, because they perform corresponding yet different functions in their respective systems.

It is tempting to use the word *deity* as an abstract noun for all such homeomorphic equivalents. *Deity* would then refer to God, *kami*, *brahman*, Zeus, Rudra, Tien, the Dao, El, Baal, Urðr, Re, Kālī, and so on. This enterprise is relatively simple as long as we remain within more or less homologous cultures, making it easier to find common properties like infinity, omniscience, goodness, immutability, omnipotence, simplicity, unity, and so on. But when we attempt to include such properties as futurity, nothingness, or illusion, we find that these attributes are not at all common and are incompatible with the previous ones. In point of fact there is no common structure other than the purely formal one of being a vague something different from and perhaps superior to human beings, and sometimes only apparently so. Deity would then be a purely formal concept with no significant content whatsoever.

We may note the tendency, especially common to the West, to universalize what is familiar, as in the following sentences: "The Christian God is an absolute value for all; modern technology is fit for the entire world; the natural sciences are universally valid; truth is universal." We shall have to avoid such pretension if we are to take other cultures as seriously as we take Western cultures. The word *deity* cannot encompass all that other traditions have said about what in one group of cultures can be rendered by *deity.* Were we to use the term *brahman* or *kami* instead of *deity*, our meaning would change. The context being different, the results would also be different. Thus we must be careful in making extrapolations and avoid generalizations that are not warranted by the self-understanding of the different cultures of the world.

With these preliminary warnings in mind, we may now examine the distinction between God and deity. This distinction was known to medieval Christianity and was given clear expression by Meister Eckhart in his distinction between the godhead and God. The godhead, or deity, is as far from God as heaven is from earth. Deity is here the inner and passive aspect of the divine mystery and is related to the *deus absconditus* that was much commented upon during the patristic period. God, on the other hand, would be the outer and active aspect of the same mystery. Be this as it may, however, we will use the word *deity*, in distinction to *godhead*, to mean not just God's essence (as in Thomas Aquinas) or the "God beyond God" or the ground of God (as in Eckhart), but simply that divine dimension elusively present everywhere, which only our highest thinking performance can glimpse and which is the goal of our existential human quest.

*Deity*, then, not only may denote God or gods as substantial beings but also may be used as a generic name connoting all those forces, energies, entities, ideas, powers, and the like that come from "above" or "beyond" the human realm. In this sense *deity* represents the element of reality that belongs neither to the material world nor to the merely human realm but is above or beyond the sensible and intellectual order. *Deity* may thus stand for one of the three dimensions of reality that practically all human traditions reveal. First, there is the realm of heaven: the gods, the superhuman powers, the supraintelligible. Then there is the realm of the human: consciousness, ethics, life, mind, the intelligible, and so forth. And finally, the realm of the earth: the cosmic, the material, the spatiotemporal reality, the sensible, and so on.

We cannot proceed further in the study of the human approach to deity until we examine the nature of the "thing" we are trying to investigate. It is irrelevant now whether the world of deity is the paradigm of the human world, in which case the latter would be only a shadow of the real, or whether on the other hand the divine universe is only a projection of the unfulfilled desires of humans. The fact remains that the human experience crystallized in language witnesses to the existence of such a divine world, be it populated by *daimones* or by *theoi*, by *deva*s, *elohim*, spirits of all types, the one God, or by nobody. Have we a common name to designate that universe? Can we say that this is the world of deity? For this we need a historical interlude.

**Historical background.** How have human beings come to the notion of deity? For some scholars this notion has been the result of an inference of some type of causal thinking. Deity is then a supreme being or beings, of a celestial or other type. The human question about the origin of life, the world, and the like triggers the search for a cause that then will be "located" in whatever place appears to be more appropriate for the dwelling of a supreme being or beings, whether in the heavens or in the earth. Others would see the origin of deity not so much in the intellectual quest as in the existential anxiety of the human being facing the elemental mysteries of life and nature. Still others have seen the search for deity as based neither on causal thinking, nor on anxious feeling, but on simple awareness.

For others deity is the disclosure of a supreme being through its own initiative, which explains why man has come to the idea of deity. If such a supreme being exists, even if its "revelation" is progressive and related to the intellectual development of the peoples concerned, it is always from that power that the first step comes.

Contemporary discussions are the aftermath of that great controversy of past decades about the origin of the idea of God, a controversy that resulted from the conflict of the emerging theory of evolution with traditional beliefs in God. Wilhelm Schmidt (1868–1954), rejecting the evolutionary scheme, searched for traces of a primitive revelation of a "primordial monotheism" among primitive peoples. Schmidt was elaborating the insights of Andrew Lang (1844–1912), who had argued for the existence of a belief in supreme beings among archaic peoples, in opposition to the then pervasive theory of primitive animism, represented by E. B. Tylor (1832–1917). Finally, atheistic movements—scientific, dialectical, or historical—will make of deity a superfluous hypothesis, an artificial tool for the subjection of humans, an undue extrapolation of our present ignorance, a mere illusion to console us in the midst of our impotencies.

It seems fair to say that the most universal, primordial human experience is neither monotheistic, nonatheistic, nor polytheistic but rather a deep-rooted belief in a divine world, a world populated by different kinds of superhuman beings or forces. Whether those beings are one or many, whether they represent a polytheistic hierarchy or an *Urmonotheismus*, is not the most important point. What is most important is that these beliefs express a human experience that says that man is not alone in the universe and that the sensible world is not all there is to reality. This is made clear not only by innumerable oral traditions and written texts in nearly every culture but also by the existence of a veritable jungle of names for the divine. All human languages have an enormous treasure of words denoting the super- or extrahuman realm. It belongs to a second moment of human reflection to try to put order into that world, to assign to it its degree of reality, to decide what kind of hierarchy reigns there, and to elucidate the relationship of that world with the human world and the rest of the universe. One does not prove the existence of deity in a primordial civilization. The gods are simply there.

## THE STRUCTURE OF DEITY.

Historical investigation is only a part of the question about deity. How people have come to this idea is less important than the structure of the idea itself. This structure is not an "objective" datum, however. It is in part a function of human interest. We have here an example of how any human enterprise is motivated and conditioned by human interests and prevailing myth. Because deity has no detectable referent outside human consciousness, its structure depends in part on one's opinions about it and on those of any human consciousness for which the notion makes sense. In other words, what deity *is* is inseparable from what people have believed it to be.

We must try then to make sense of the ideas and experiences humankind has had on the subject. For this we must attempt to understand the context in which the problem has been put. This leads us to distinguish between the methods that can be employed to elucidate the question and the horizons within which the problem of deity is set. The main methods are theological, anthropological, and philosophical. These methods are all interrelated, and distinguishing them is really a question of emphasis. The possible horizons of the problem consist of the presuppositions that we make about what we are looking for when we set about asking about deity and its origins. Horizons are a function of our universe and of the myths we live by. I shall distinguish three such horizons. Combining these with the methods just mentioned would give nine different sets of notions about deity. Brevity requires, however, that I do not develop these nine representations of the divine. I will describe only the three fundamental horizons that predetermine the question of deity.

**Horizons.** In order to understand what kind of deity we are talking about, it is essential to reflect on the horizon of the question. Is the deity to be conceived as absolute consciousness? As a supreme being? As the perfect, ideal individual? Or as the creator of the world? In short, where do we situate the divine? Where is the locus of deity? The horizons are, of course, dependent on the culture of any given time or place. Viewed structurally, however, the function of deity always seems to provide an ultimate point of reference. We may situate this point outside the universe or at its center, in the depths of man (in his mind or heart), or simply nowhere. Cosmology, anthropology, and ontology offer us the three main horizons.

***Metacosmological.*** The human being in ancient times lived facing the world. The main concern was the universe as a human habitat. Humanity's vision is directed toward things in heaven and on earth. The horizon of deity is precisely this universe, but not just as one thing among others.

The locus is metacosmological. Deity is here related to the world. Certainly, it may be identified as immanent to the world, or more probably transcendent to it, but deity is the deity of the world, and the world is the deity's world. What type of function or functions deity is supposed to perform and what kind of relation it has with the world are left to the different cosmologies and traditions. In any case, deity is a kind of pole to the world, a prime mover that sets the world into motion, sustains it, directs it, and even creates it. A temporal metaphor can be used to say the same thing. In this case, the deity is represented as the beginning, present before the big bang, or at the end of the evolution of the physical universe, as the omega point. Or the deity may be both alpha and omega, at the beginning and at the end of the universe. The most common name for this deity is "God," whether this be Varuṇa, "supreme lord, ruling the spheres" (*Ṛgveda* 1.25.20), or Yahveh who "made heaven and earth" (*Gn.* 1:1). This God is "that from which truly all beings are born, by which when born they live, and into which they all return" (*Taittirīya Upaniṣad* 3.1). This God is the *pantokratōr* of many traditions, Eastern and Western. Even the *deus otiosus* belongs to this group. Deity is here a metacosmological category. Its most salient feature is its infinity. The world we experience is contingent, and all things are transient, finite. Only the deity is infinite.

***Meta-anthropological.*** At a certain moment in history the main interest of humanity was no longer nature or the world outside, above and mysterious, but humanity itself. Humanity's visions were directed toward the inner recesses of the human spirit: the feelings, the mind. The locus of deity is here the human realm, but not just a human field made wider. It has to be deeper as well. The locus is meta-anthropological.

Here deity is seen as the symbol for the perfection of the human being. The notion of deity does not come so much as the fruit of reflection on the cosmos or as an experience of its numinous character as it does from anthropological self-awareness. Deity is the fullness of the human heart, the real destiny of man, the leader of the people, the beloved of the mystics, the lord of history, the full realization of what we really are. This deity does not need to be anthropomorphic, although it may present some such traits. Deity is here *ātman-brahman*, the fully divinized man, the Christ, the *puruṣa*, or even the symbol of justice, peace, and a happy society. Here deity may be considered immanent or transcendent, identified with or distinguishable from man, but its functions are related to the human being. It is a living, loving, or menacing deity, inspiring, caring, punishing, rewarding, and forgiving. In this deity all pilgrimage ends, all longing disappears, all thoughts recoil, and all sin is blotted out. The deity is a meta-anthropological category.

The vexed problem of divine personality belongs here, as do psychological analyses of human belief in deity. The most salient feature of this horizon, however, is the attribute of freedom. The deity is here freedom itself, liberating man from his often painful limitations. Modern theologies of liberation belong here, as does the notion of a god acting in history.

***Meta-ontological.*** We are told that the culmination of man's development is self-awareness. The power of reflection makes *Homo sapiens* the superior being that he believes himself to be. The locus of the deity here cannot be just a superman or a ground of the world. It has to be a superbeing. The locus is meta-ontological.

Humanity is proud of the human power of abstraction. Deity is here not only beyond the physical world but also outside any natural realm, including that of the human world, the intellect, the desires, and the will. Deity is totally above and beyond nature, including human nature. The transcendence or otherness of deity is here so absolute that it transcends itself, and thus it can no longer be called transcendence. Deity does not exist; it is meta-ontological, beyond being. It is not even nonbeing. The apophatism is absolute. The deity neither is nor exists, nor is it thinkable or speakable. Silence is the only proper attitude toward it, not because we are incapable of speaking about it, but because silence is what befits it. This silence neither hides nor reveals. It is silence because it says nothing, there being nothing to say. Possible names for this deity are *śūnyatā*, Neither Being nor Nonbeing, Huperon, and so on. Deity is here a meta-ontological reality. Seen from below, as it were, it belongs to the unthinkable. Seen from within, it belongs to the unthought. To think about it would be idolatry.

Here we encounter the problem of the nothingness of deity, the radical apophatism developed in many traditions. The most salient feature here is immanence and transcendence, the two belonging together. Deity is the immanence and transcendence inserted in the heart of every being.

We should hasten to add that these three horizons are not mutually exclusive. Many a thinker in many a tradition has tried to elaborate a conception of deity embracing all three. Within Hinduism, for instance, *nirguṇa brahman* would correspond to the third type, *saguṇa brahman* to the first, and *īśvara* might be the personal deity of the devotee. Similarly, the Christian Scholastic tradition would like to combine God, the prime mover (the first type), with the personal God of the believers (the second type), and that of the mystics (the third type). How far all three can be reduced to an intelligible unity is a philosophical and theological problem that different traditions try to solve in different ways.

The morphological traits of deity may be summarized according to these three horizons, suggesting a threefold structure for deity. The ultimate experience of the meta-ontological deity is the character of the "I." Deity is the ultimate "I," the final subject of activity. "Who am I?" The "I" who can respond to this question without further questioning is the ultimate "I," the deity.

The meta-anthropological deity represents the experience of the "thou." In the human urge toward the deity this latter appears as the ultimate "thou" with whom dialogue and human relations can be established.

The deity as the ultimate cause and prime mover of the world is the "he, she, or it" that only an inference discloses. One speaks of this deity always in the third person.

**Methods.** We may now turn to the different methods used in the attempt to understand deity. Whatever deity may be, it is neither a sensible nor an intelligible thing. The deity is neither a visible thing nor a mere thought. Modern hermeneutics speaks of "pre-understanding" as a necessary condition of understanding, of a "hermeneutical circle" that is needed in all interpretation. Within the realm of sensible or intelligible objects we may be able to ascertain what pre-understanding is. We acquire an idea of the whole, which we may modify while investigating the parts. It is on the basis of this pre-understanding that a given method is applied to understanding an object. But how can this be done in the case of deity? If every method implies a proleptic jump into the alleged object, a coming back to our starting point, and a methodical process afterward, it is difficult to see how such a method can be applied in our attempt to understand deity. We do not know in which direction we should make the first jump nor with what instruments to approach it—unless we start from the received tradition or with an authentic mystical experience. This amounts to saying that we renounce finding a method of searching for deity and replace it by methods of research, interpreting the opinions of people about it. We know, further, that if we start with some "instruments," the results will greatly depend on the nature of those instruments. We can then neither jump (if we do not know the direction) nor come back (if the subject matter is beyond the senses and the intellect). In a word, the method for seeking the deity is sui generis—if indeed there is a method at all.

How do we come to a pre-understanding of deity? We may receive it from tradition. In the case of a direct mystical experience there is not a pre-understanding but an immediate insight that the mystic afterward explicates in terms of the culture in which he or she lives, and so ultimately it comes to the same thing. The mystic needs a post-understanding, as it were, in terms of his or her time and culture, which amounts to an initial pre-understanding for all the others. The pre-understanding of deity is, therefore, a traditional datum. Now, there are three main attitudes toward this datum. If one accepts it as a starting point and proceeds to a critical effort at understanding it, this is the *theological method.* The theologian tries to clarify something from within. If one tries to bracket one's personal beliefs and attempts to decipher the immense variety of opinions throughout the ages regarding the idea of deity, this is the *phenomenological method.* The datum is then the sediment of the history of human consciousness. Finally, if one reflects on one's own experience, enriched as much as possible by the thoughts of others, this is the *philosophical method.*

These methods are not mutually exclusive, and all three play a role in the human quest for deity. All are required and they imply each other. We distinguish between them for heuristic reasons only. Each one presents divisions and subdivisions. Sociology, psychology, anthropology, and so forth are among the important disciplines within these three approaches, each with its own particular methods.

We refer to methods in the plural, for there is not one single theological, phenomenological, or philosophical method. Each of these approaches presents a variety of methods. What we describe here is only a general pattern of methods, which acquire a proper physiognomy when applied to particular cases.

***Theological.*** The theological method begins with an accepted datum: there exists a world of the gods, the world of deity. We will therefore have to clarify and eventually justify the raison d'être of such a world, but we do not necessarily have to prove its existence. In short, the origin of the idea of deity is the deity itself—whatever this deity may be. This forms the core of the so-called ontological argument and of any religious enterprise that wants to clarify the nature of deity. Deity could not be known if it did not exist. The theological problem here consists of determining what kind of existence this is. When Thomas Aquinas, for instance, ends each one of his five proofs for the existence of God by saying "and that is what all call God," he shows his theological method of clarifying the existence of something that we already call God. The deity was already there, certainly, as an idea, but also as a reality that hardly anyone doubted, although its rationality had to be demonstrated and its existence verified as real and not merely apparent. Theological proofs thus presuppose faith and only prove that such faith is rational. They are a form of *fides quaerens intellectum* ("faith seeking understanding").

We have already indicated that each combination of method and horizon yields a distinct picture of deity. In fact, theological methods have been mainly combined with the cosmological and the ontological horizons. They have been less conversant with the anthropological one, and this explains the uneasiness in theological circles when dealing with the emerging sciences of man, like psychology and sociology. The theological dialogues with Freud, Jung, and Weber are typical examples. There are serious studies on the psychology and sociology of religion, but little attention has been given to the psychology and sociology of deity from a theological perspective. Hans Urs von Balthasar's work on a theology of aesthetics is a notable exception.

***Phenomenological.*** The phenomenological method could also be described as morphological, or even historical, since it is used in the new science of religions, often called the history of religions. On the whole there is a consensus regarding the phenomenological method, as the study of people's beliefs drawn from their own self-understanding, as reflected in the critical consciousness of the scholar. Here is the place for a typology of the conceptions of deity. This method is important today, in a world in which people of different religions mingle in the concerns of daily life, that is, in the stresses of technological civilization.

Use of the phenomenological method uncovers an immense variety of types of deity. We find the so-called animistic conception of deity as an all-pervading and living force animating everything that there is. We find so-called polytheism, the presence of many "gods" as supernatural entities with different powers and functions. We find so-called deism as the belief in a supreme being, probably a creator, who is afterward passive in relation to his creation, a notion that excludes any kind of specially revealed god. We find monotheism of the type of the Abrahamic religions, religions of a living, provident, and creator god. We find the various theisms that modify the exclusiveness of the monotheistic model, and pantheism, the identification of the deity with the universe. We also find all sorts of atheisms, as reactions to theism and especially to monotheism. And of course we find a number of distinctions and qualifications of these broad notions that are intended to respond to the demands of reason or answer difficulties raised by particular or collective experiences.

These types, and the changes that they have undergone through the ages, have been the subject of many useful and comprehensive studies by well-known scholars like Mircea Eliade, Gerardus van der Leeuw, Geo Widengren, Kurt Goldammer, W. Bede Kristensen, and Friedrich Heiler. With the possible exception of Widengren, none of these authors uses the notion of God as a major religious category. Even Widengren, who emphatically wants to distinguish religion from magic, while affirming that "faith in God constitutes the intimate essence of religion," has a very large idea of what God means. All the others recognize that there is a particular sphere that is at the center of religious life.

**Philosophical.** The philosophical method proceeds differently, although, in ways, not totally disconnected from those of the previous ones. Pascal's famous *mémorial*, which was found stitched in his coat after his death, "The God of Abraham, the God of Isaac, the God of Jacob, not of philosophers and scholars," has since served in the West to emphasize this difference. Without entering into the discussion of whether the "living God" is the *actus purus* or whether one can fall in love with the prime mover, the quintessence of the philosophical method consists in the willingness to question everything. The philosophical method is that of the radical question, be it the question of salvation, *mokṣa*, happiness, or whatever form in which it may be conceived. It is within this framework that the question of deity appears. Here in a cloud either of knowledge or of unknowing, in a science of good and evil, lies the philosophical locus of deity. This locus is the ultimate question, even if there is no final answer.

When this ultimate locus is considered to be being, the question of deity turns out to be what Heidegger calls an "onto-theology," a reflection on the being of beings. Here, the philosophical method meets the historical controversy. Is deity the highest being or is it being as such? In the latter case it cannot be a supreme being. The ontological difference is not the theological one. The history of religions puts the same question by simply asking how the supreme being is related to the entire reality. This polarity between being and supreme being permeates most of the conceptions about deity. We could phrase it as the polarity between the deity of the intellectuals (being) and the deity of the people (supreme being). A more academic way of saying it is this: deity may appear as a result of a thinking reflection (discovering being) or an existential attitude (requiring a supreme being). For the former, deity is the subsisting being, source of being, the foundation, the being "being" in all beings. For the latter, deity is the supreme being, the lord, the divine person, the ultimate in the pyramid of reality. The former conception will have to clarify the relation between deity as a ground of being and an undetermined and general *ens commune*. The latter will have to define the relation between deity as *esse subsistens* and the rest of beings that the deity creates, rules, and directs.

Is deity being (*Sein*, *sat*, *esse*) or the supreme being (*höchstes Seiendes*, *paramatman*, *ens realissimum*)? One can think about the first, but one cannot worship it. One can adore the second and trust in it, but this God cannot be reasoned about; it is corroded by thinking.

If the philosophical locus of the deity is the ultimate question, we may find as many conceptions of deity as there are ultimate questions. Thus the many and varied answers. The diversity of religions can also be explained from this perspective. Religions give different answers to ultimate questions, and the questions themselves are different. But philosophical reflection may ask still further: what is it that prompts man to ask the ultimate question, whatever this question may be? Why is man an asking being, ever thirsty for questions?

In a word, the issue of the deity has to do with the peculiarity of man as a questioning animal. "God acts without a why and does not know any why," says Meister Eckhart. What prompts man to question is ultimately the consciousness of not being realized, of not knowing, of being finite. This consciousness can be expressed as the anthropological discovery that man is imperfect, still in the making; the cosmological observation that the universe is moving, that is, also still becoming; or the ontological thought of nothingness lurking over being. In sum, the problem of becoming emerges here as the theological problem par excellence. If becoming is possible, it is because being is still "being." What covers this gap between being and becoming (encompassing or not encompassing the two) is the locus of the deity: it keeps open the flow of being.

**THE TEXTURE OF HUMAN CONSCIOUSNESS OF DEITY.** The different perspectives on the human approach to deity that we have found end in a healthy pluralism: reality is itself pluralistic. We cannot, of course, encompass this plurality in a unified scheme of intelligibility on a universal scale. Yet if we keep in mind our particular situation in time and place and its various viewpoints and prejudices, we may venture some further valid considerations.

Our point of departure is the lost innocence of our present situation. Whatever deity may be, whatever peoples of other epochs have felt, thought, or believed about deity, even if they have told us that it was the deity itself who spoke to them, it remains always the conviction of contemporary man that all relation to deity takes place in and through human consciousness. This in no way weakens the reality or the objectivity of deity. It only affirms that human consciousness is always a fellow traveler in this journey. If we want to reach a consensus regarding the many opinions on the nature of deity, we shall have to fall back upon the texture of our consciousness, even while accepting that deity may be much more than an act or content of consciousness and that this consciousness may vary with time and place and even be shaped by the power of deity.

In view of the many opinions about deity we have to rely upon the one factor that is common to them all, namely the human consciousness that uses the word *deity* or its homeomorphic equivalents. Deity has this one constitutive feature: it is disclosed to us in an act of consciousness, an act of consciousness that, in spite of having a transcendent intentionality, has no verifiable referent outside of consciousness. The reference of the word *deity*, in fact, is neither visible nor intelligible, and yet every culture in the world witnesses to the fact that men constantly speak about a "something" that transcends all other parameters. We have then to rely on the cultural documents of the past and the present that witness to this *tertium* we call *deity*.

We rely on the fact that people have meant something when using this word or its equivalents. The analysis of deity is based therefore not on the empirical presence of the object nor on the immediate evidence of thought but on tradition in its precise and etymological meaning, that is, on some cultural good that is being transmitted to us. One exception seems to be the case of mystics, who say that they have directly experienced this extra-empirical and supra-intellectual reality. Yet the moment that the mystics speak they have to fall back upon their consciousness. The thought and speech of the divine belong to that unique field of human consciousness whose contents are disclosed in the very experience that has them and nowhere else. This explains the elusive character of the divine and also accounts for the fact that the question is more important than the answer.

Deity is visible only in its alleged manifestations—and there is no way to make visible the manifesting power beyond what is manifested. Nicholas of Cusa says pointedly that God is the invisibility of the visible world, just as the world is the appearance of the invisible God.

Nor is deity intelligible. It would cease to be divine if we could grasp its meaning as something belonging to the human or worldly sphere. The divine is not subject to observation, nor can there be a science of the divine. Thus Meister Eckhart says that we must transcend not only the things of the imagination but even those of the understanding.

Long before Śaṅkara, the Indian world made crucial the distinction between appearance and reality and recognized that the latter transcends both the senses and the mind. The short *Kena Upsaniṣad* is perhaps one of the best scriptural texts to underline the transcendence and immanence of the deity:

> That which cannot be expressed by words but by which the word is expressed . . . That which cannot be thought by the mind, but that by which, they say, the mind is thought . . . That which cannot be seen by the eye, but that by which the eyes have sight. . . . It is not understood by those who understand; it is understood by those who do not understand. (1.5ff, 2.3)

In sum, of the divine there is only *logos* ("word"): *theologia.* But it is a *logos* irreducible to *nous;* that is, it is a word only revealed in the experience itself. This does not allow us to conclude that the divine is just a subjective state of experience. All things are related to states of experience, but of all others we have a communicable referent; we can get at the *res nominis*, that is, at the thing named. This is not the case with the divine. The *res nominis* is in the *ratio nominis*, that is, in the meaning of the name itself. And this is what has made theological and religious disputes so uncompromisingly serious. The names of God are all we have. Considering names as mere labels of things (as in nominalism) is the proper procedure of modern science, but this method is not adequate if applied to deity. Without the names we have no way of reaching the referent.

The names of deity are also different from abstract names like justice and beauty. We may infer the meaning of justice by observing a certain pattern of behavior among people and acquire some sense of beauty by contrasting some of our experiences with similar ones of other people. Both human behavior and sensible objects fall in the category of commonly shared experiences. In other words, the referent in all these cases is verifiable outside of consciousness although not independent of it. This is not the case with deity. We cannot verify it as an object outside the field of our own consciousness, nor can we compare our states of consciousness as we can in the case of other abstract concepts. In this latter case we can point to the things or acts reflecting, revealing, or somehow defining the meaning we give to such words. In the case of deity we can certainly infer the idea people have of it from what they say and do, but there is one difference: a dimension of transcendence, of ineffability, inadequacy, ultimacy, or uniqueness, which necessarily leaves a gap between the manifested and its source. This is the reason why some traditions have postulated a special "seventh" sense related to the divine, which is neither reducible to the five senses nor to the "sixth" sense of the intellect.

Now, to affirm that all the names of deity mean ultimately the same thing assumes at the start that "our" name is the real one. We make of our conception of it, expressed in the name we give it, the pattern for all other conceptions. The name we give it would then name the "thing" that is supposed to have other names as well. This is not the case. Not everybody is looking for the same thing, either the ultimate cause, the ground of being, or absolute nothingness, if any of these is what we mean by deity. Much less are the worshipers of Kālī ready to give up their practice and worship Allāh, or true Christians ready to deny Christ and adore Caesar. Deity is not a Kantian "thing in itself." Words matter. The conception we have of deity is certainly not identical with its reality. But it is our way of access to it, which we cannot deny without betraying ourselves. Martyrdom for the sake of a name is a human fact not reducible to sheer fanaticism.

The name we give it, or the name anyone else gives it, does not exhaust the nature of deity. Strictly speaking we do not name it. We only refer to him, her, or it. Or we simply believe, call, pray, shout, dance, or whatever. Deity is not an object of naming but of invocation. Deity is what we appeal to, implore, and worship precisely because it is beyond our apprehending faculties.

In the Greek tradition *theos* is a predicative name. Things are divine, and a particular entity is godly. *Theos* is an attribute. God is not a concept but a name. But when the name loses its power no amount of conceptualization can give it back.

There has been a shift in the idea of deity from the predicate to the subject. This is a great revolution. In the West this could be said to represent the genius of the Abrahamic traditions. While many traditions say that light, love, or goodness is God, that is, divine ("Truth is God" was a slogan of Mohandas Gandhi), the New Testament reverses the sentence and affirms that God is light, love, or goodness. Something similar could be said of the great Upanisadic revolution: in the Upaniṣads we witness the passage of the god of the third person (the Vedic gods) to the god of the first person (*aham brahman*, "I am *brahman*") by means of the second person (*tat tvam asi*, "that thou art"). The revelation of the "I" dawns in the very realization of the aspirant to liberation; the "I" is not a third person (he, she, it, or even they). The language of the deity cannot be the third person. The deity has to be the first person. It is only the real "I" when it says "I," or rather when "I" says "I," and more exactly when I say "I." This is what is called realization—the realization of the I (by the I). Only the I can say "I."

At any rate the divine is so linked to our state of consciousness that there is no way of deciding what ontic status it has outside the ontological statement. Or, rather, the deity has no ontic status. An ontological statement has an accepted currency only with people who share in the same myth, one in which a particular form of the divine is taken for granted.

The claim to universality is the temptation of any complex and sophisticated culture. This aspiration to universality is built into human nature. But we often fail to recognize that we cannot make a claim for universality in our own terms, which are far from being universal.

Meaningful talk about the divine is thus restricted to those belonging to the same mythical sphere. Others will hear but not really understand. Each culture or subculture has a myth in which their particular form of the divine is possible and talked about. In this sense it cannot be generalized. It is restricted to those of the same faith, to the initiated. Properly speaking, we do not know what we are talking about when we refer to the divine. We are already taking it for granted, which is the function of any myth, that is, to offer the unquestioned horizon of intelligibility where our words are meaningful.

And yet the world of deity is an ever-recurrent world in the history of mankind. What do all these traditions refer to? If asked, believers might answer that the divine is not just a purely subjective state of consciousness; most will assert that they refer to the highest realm of reality, a realm so high that it is beyond the reach of human powers. And yet they continue to speak of it. It belongs to their myth. The myth is the locus of belief. It is only when pressed by those outside their group that they concede that there is no possibility of showing any referent in the world of common human experience. At most they may point to an homeomorphic experience if they have found a language of communication.

What is, then, the content of such an experience of deity? We have said that the content of the experience is inseparable from the experience itself, so that it cannot be "shown" outside the experience: the divine is neither sensible nor intelligible. Is there something else? Common sense and historical evidence say that of course there is something else, since everybody seems to speak about the divine in one form or another. The critical mind will say that it makes no sense to speak about something that we cannot think. That is why many a philosopher feels more comfortable calling the content of that experience nothingness. All theology ends by being apophatic.

From these considerations we may infer that there is something in human consciousness that points to something beyond, and yet we are unable to "locate" it outside that consciousness. God has been described as a "transcending center of intention" (John E. Smith). No wonder that many thinkers in both the East and West then identify deity with consciousness in its highest form. Others defend a sort of transcendental dynamism of human consciousness toward a superior and perfect form of consciousness, which they then call divine. Still others affirm that it is only a pathological growth of our own consciousness, triggered perhaps by fear of the unknown or fostered by religious priestcraft for the sake of power. Finally, while recognizing both the divine immanence of human consciousness and the human intentionality toward a divine transcendent consciousness, some do not dare to consider deity as the all-encompassing reality but only as a dimension of it. Reality is primary to consciousness.

Consciousness is always consciousness *of*, of reality, of being, even of itself. This last is the *noēsis noēseōs* of Aristotle, the absolute reflection of Hegel, and the *svayamprakāśa* ("self-illumination") of Vedānta. Now pure consciousness cannot be of anything, not even of itself. This is what lets Vedānta say that *brahman* is not even conscious of being *brahman.* It is Īśvara, the Lord, who is the full consciousness of *brahman.* Something similar could be said of the Father, the *plenitudo fontalis* of the Christian Trinity.

**THE DEITY BETWEEN GOD AND THE SACRED.** Having tried to present the problematic of deity in its broadest aspect, we may ask whether speaking of "the divine" is not preferable to speaking of "deity." It may better describe what we are looking for, namely a super- or metacategory that can serve to express the religious phenomenon in its universality. In fact, *deity*, because its grammatical form is substantive, suggests a certain kind of substantialization that is inappropriate for many religious traditions, which we could call the *nāstikā*s or *anātmavādin*s (such as the Buddhists who say that there is no God because there is no substance). Thus, in spite of some modern efforts at adaptation, the Buddhist world, for one, feels uncomfortable with the word *deity*—although not, of course, with deities.

There is another category of similar generality that has often been presented as the center of the religious traditions of humankind. Every religion, we are told, deals with the sacred. It was Nathan Söderblom who, in 1913, described the notion of holiness as even more essential than the notion of God. For Söderblom, there is no real religion without a distinction between the holy and the profane. Mircea Eliade is today the most important spokesman for the centrality of the sacred as the religious phenomenon par excellence. But, we may ask, if the sacred is the central category of religion, what is the place and role of deity?

There is a danger in wanting to reduce the immense jungle of man's religious experience, as crystallized in the different religions of the world, to a single category or even to a single set of categories. Even if this were possible, its only purpose would be to give a panoramic and coherent picture of the whole. But what cannot be universalized is precisely the perspective of the observer. Let us assume that the sacred is a convincing category for understanding and describing religious phenomena. It would still be true that it is only a suitable category for us—that is, a very special class of readers in time and space. If our parameters of understanding change, then the perspective must also vary. In short, we cannot universalize our perspective, and a "global perspective" is obviously a contradiction in terms. There is thus room for more than one attempt to focus the religious experience of man. Let me try then to point out the locus of deity in the panorama of human religious experience and distinguish it from the sacred.

One feature seems to permeate all the varied meanings of deity: personality. Deity does not need to be a substance nor a person in the modern sense of the word. But on the other hand, *deity* does not denote merely a character of things, as does the word *sacred.* Deity is a source of action, an active element, a spontaneous factor: it is free. Its actions cannot be anticipated; it has initiative. We cannot deal with deity as with an object that we can imprison in the web of our thoughts. Deity has a mysterious quality of being able to act and not just react, to take the lead, even if in a purely passive way.

We should distinguish between personality and person on the one hand and person and substance on the other. We may recall that the concept of person in the West was developed not as a meditation on man but as a theological problem. To speak of the personality of deity is no more an anthropomorphism than is speaking of God as a supreme being, which some would call an anthropomorphism simply because man is also a being. Here the polemical aspect of the notion of deity comes to the fore. Almost everyone will admit that there is a third dimension in reality, since man and the world, as they are experienced by us, do not exhaust that other pole that is neither man nor the world as we experience them now. But not everyone is prepared to admit that this third pole has personality, that is, that it is endowed with freedom, is a source of action, has an identity, and is relationship.

In this sense, the concept of deity is not just the idea that there is a third pole in reality. Nor is it identical with the concept of God. It stands between the sacred and God. It shares with the former its immanence and with the latter its personality (in the sense we have indicated). But while the concept of God seems to imply a certain substance, the idea of deity does not need to present this characteristic. It says only that this third dimension is not a mere mental hypothesis, a piece of mental equipment necessary for making sense of reality or merely something to fill in the gaps in our understanding. The notion of deity affirms boldly that this other dimension is real, that is, active, free, efficacious, and powerful on its own account. But it does not make it independent of the two other poles and thus not even independent of our conceptions of it. In a word, deity connotes the highest form of life.

**CONCLUSION.** This cross-cultural approach to the mystery of deity has one liberating consequence. It liberates us from the many aporias that, for centuries, have tortured the human mind as it attempts to consider God as the supreme being. Among these are the questions: is it personal or impersonal? If almighty, how can it condone evil? If infinite, what is the place of finite beings? If absolutely free, why can it not make two and two equal five? If omniscient, what about human freedom? Subtle theological and philosophical answers have been put forward. But the answers could be made simpler by cutting the Gordian knot of a universal theory about God and rediscovering the divine as a true dimension of reality.

Whether the word *deity* means a plurality of divine beings, absolute consciousness, perfect happiness, the supreme being, a divine character of beings, or being as such, thought about deity has no referent. At the same time it seems to be one of the most unvarying and powerful factors in human life throughout ages and across cultures. Words referring to deity or its homeomorphic equivalents are unique. Philosophy avers that the intentionality of human consciousness, while pointing outside itself, cannot show in the realm of the sensible or the intelligible the referent of this intentional act. In a word, there is no object that is deity. Either human consciousness transcends itself, or thought about deity is an illusion, albeit a transcendental illusion of historical reality.

We should return now to one of our earlier queries. Is the word *deity* broad enough to include all the types of the mystery we have tried to describe? We know that its original field is the cosmological, but we have also noted that we distinguish it from the name *God* precisely to allow it other horizons.

The word *deity* may partially fulfill this role on one essential condition: that it strip itself of all connotations coming from a single group of civilizations. This amounts to saying that it cannot have any specific content, because any attribute, be it being, nonbeing, goodness, creatorship, fatherhood, or whatever, is meaningful only within a given cultural universe (or a group of them). Deity becomes then an empty symbol to which different cultures attribute different concrete qualifications, positive or negative. *Deity* would then say something only when translated into a particular language.

I am still critical of such an option, however, and would like to propose a compromise that may appear obvious once explained. Were this article to be translated into Chinese, Arabic, or Swahili, what word would we use to convey this idea of deity? Either we would coin a new name or use an old one with the connotations of the particular language. So we can say that for the English language *deity* may be a convenient name to use to transcend the provincial limits of certain groups of cultures such as the one that thinks, for instance, that Buddhism was not a religion and Confucianism only a philosophy because they do not accept the Abrahamic idea of God. But we should not elevate the word *deity* as the name for that metacategory. It is only a pointer toward the last horizon of human consciousness and the utmost limit of human powers of thinking, imagining, and being. Now, an abstract name like *the Ultimate* or a metaphor like *horizon* are equally dependent on particular cultural systems or ways of thinking. Perhaps the word *mystery* is more adequate, in spite of its Hellenic flavor. Or should we say *brahman, kami, numen...?*

At any rate we should insist that this does not mean that all those quests search for the same thing but in different places. The quest is different in each case, and so are the ways or methods involved. We leave open the question (ultimately as a pseudo-question) whether we use different methods because we look for different things or whether we find different answers because we use different methods. Both possibilities are intrinsically related, and their relation does not lie on the level of the *logos* but on the level of the *mythos*, as we have suggested. All our ways and means, all our quests and perspectives already belong not only to the searching but also to what is sought. Deity is not independent of our own search for it. If we radically destroy all the ways to the peak, the entire mountain will collapse. The slopes of the mountain also make the mountain.

Scholars may debate whether humankind is or is not monotheistic, whether a personal god is a universal truth or there actually is a creator, whether the so-called atheists are right in denouncing anthropomorphisms and dogmatisms of all sorts, whether there is a divine origin of this universe or a glorious or catastrophical Parousia. One thing seems to emerge as a cultural universal and a historical invariant: besides the world and man there is a third pole, a hidden dimension, another element that has received and is still receiving the most varied names, each name being a witness of its power and of the impotence of human beings to reduce everything to a common denominator.

The human being both individually and as a species is not alone. Man is not alone not only because he has an earth under his feet but also because he has a heaven above his head. There is something else, something more than what meets the eye or comes into the range of the mental. There is something more, a plus that humans cannot adequately name but that haunts them nevertheless. This plus is freedom and infinity. Deity stands for all that is unfinished (infinite) and thus allows for fulfillment in one sense or another. Man needs—and discovers—an opening, a way out of the strictures of the exclusively empirical or ideological affairs of daily life. The idea of deity can provide such an opening, provided that it can be kept free of any particular content. It would then become a symbol for the emerging myth of a human race that can no longer afford to transform cultural discrepancies into a cosmic tragedy.

**DELITZSCH, FRIEDRICH** (1850–1922), German Assyriologist. Friedrich Conrad Gerhard Delitzsch was the son of the Old Testament scholar Franz Delitzsch (1813–1890). Both were men of extremely high linguistic ability, but in other respects they formed a striking contrast. The father was pious and conservative in theology, and although he was interested in Christian missions to the Jews, he was warmly appreciative of Judaism; the son became iconoclastic and contemptuous toward traditional doctrine and hostile to the entire dependence of Christianity upon Judaism.

The leading figure in the Assyriology of his time, Friedrich Delitzsch placed grammar and lexicography of the languages of ancient Mesopotamia on a sound and exact basis. In the area of biblical scholarship, his *Die Lese- und Schreibfehler im Alten Testament* (1920) provided an exhaustive classification of ways in which copying errors, such as writing one consonant in place of another, may have affected the text of the Hebrew Bible. His main influence on religious studies came with the "Babel-Bible" controversy. Advances in Assyriology had already made a difference to scholarship but had hardly affected the general public. Delitzsch's two lectures "Babel und Bibel" were delivered, in 1902, before the German Oriental Society and were attended by Kaiser Wilhelm II, who took an active interest in these matters. In the past, the Bible had been considered the oldest book: it was believed to reach back to the beginnings of the world. Now Assyriology presented new knowledge, knowledge that went back to an epoch much earlier than that of which the Bible had known. The similarity between the Babylonian and the biblical worlds was enormous. But this meant that the Old Testament material was not unique and could not count as pure revelation. The Babylonian material confirmed the antiquity of the biblical material but put in question its finality. In fact the Old Testament rose little above the religious and ethical level of Mesopotamian civilization.

By relativizing the authority of many elements within the Bible, the new discoveries made room for a conception of religion that was more in accord with "reason." Delitzsch insisted on the spiritual and universal nature of God as discerned, he thought, by the German Reformation. In this light, what Delitzsch considered the limited, parochial, and sometimes immoral world of the Old Testament could not continue to have authority. These ideas met with a storm of opposition. In his later work *Die grosse Täuschung* (The great deception; 1921), Delitzsch continued in the same vein but became more extreme. The Old Testament was a collection of fragments which had some literary and cultural value but had no relevance for Christianity. Christianity had as close a relation to paganism, Delitzsch claimed, as it had to Judaism, and he emphasized to an almost hysterical degree the "defects," "inaccuracies," and "immoralities" of the Old Testament.

Delitzsch was facing real problems in the existence of common ground between the Bible and its antecedent religious environment and of religious differences between some strata of the Bible and others. But the controversial stand he took was rooted more in modern ideological conflicts than in a dispassionate study of the ancient religions. His use of ancient evidence was often exaggerated and distorted, as when he argued that Jesus, being a Galilean, was not of Jewish blood and when he asserted that Jesus' teaching was "anti-Jewish." Similarly, Delitzsch's conception of Christianity draws from only a very narrow strand in the Christian tradition. As history of religion, his assessment of the data was intemperate, and his outbursts had the effect of retarding rather than advancing the cool assessment of the problems that Assyriological discovery had created for the relationship between Bible and religion.

**BIBLIOGRAPHY**

Delitzsch's controversial lectures were published in German as two books under the same title, *Babel und Bibel* (Leipzig, 1902–1903); the English edition, *Babel and Bible* (Chicago, 1903), contains not only the lectures but a selection from the comments they engendered, including those of Kaiser Wilhelm II and of Adolf von Harnack, along with replies by Delitzsch. *Die grosse Täuschung* (Stuttgart, 1921) appears never to have been published in English.

JAMES BARR (1987)
*Revised Bibliography*

**DELORIA, ELLA CARA** (1889–1971). Ella Cara Deloria was born January 31, 1889, on the Yankton Sioux Indian Reservation in southeastern South Dakota. She was the daughter of the Reverend Philip Deloria, an Episcopal priest, and Mary Sully Bordeaux. Her parents were enrolled members of the Yankton Sioux tribe, and both were descended from Dakota (Sioux) and Euro-American ancestors. The year after Ella's birth, her father was given charge of St. Elizabeth's Mission in north-central South Dakota, on the Standing Rock Reservation. Because his parishioners and the children attending the mission school were primarily Hunkpapa and Blackfoot Tetons (Lakotas), the Deloria family adopted the *ḻ* dialect of the Tetons in place of the *d* dialect of the Yanktons. Therefore, Deloria, although a Yankton, grew up speaking the Lakota dialect of the Sioux language.

Deloria's primary schooling was at St. Elizabeth's until 1902, when she attended All Saints, an Episcopal boarding school in Sioux Falls, South Dakota. In 1910 she entered Oberlin College, then transferred to Columbia Teachers College in 1913, where, two years later, she earned her bachelor of science degree. During her senior year at Columbia Teachers she met Franz Boas, professor of anthropology at Columbia University, who introduced her to the formal study of American Indian languages and cultures, thereby setting in motion the course of much of the rest of her life.

For the next thirteen years Deloria was involved in Indian education. She taught at All Saints from 1915 to 1919, worked for the YMCA supervising health education in Indian schools from 1919 to 1923, then taught dance and physical education at Haskell Indian school in Lawrence, Kansas. In 1927 Boas, finally learning Deloria's whereabouts, visited her to propose that she resume the Lakota language studies that she had begun with him in New York. She readily agreed. He proposed that she record "all the details of everyday life as well as of religious attitudes and habits of thought of the people" (Boas quoted in Deloria, 1988, pp. 235–236). From 1928 until 1938, with support from Columbia University, Deloria studied the language, recorded stories and ethnographic material from Lakota elders throughout South Dakota, and translated historical texts written by tribal members. From 1939 until 1948 she continued to work as time allowed on the materials she had collected.

Deloria's collaboration with Boas himself culminated in a grammar of Lakota (Boas and Deloria, 1941). However, most of her studies were carried out under the supervision of Ruth Benedict, a cultural anthropologist who was Boas's assistant and colleague. After Boas's death in 1942, Deloria continued to collaborate with Benedict until the latter's death in 1948.

One of the first projects Deloria undertook for Boas was the translation of a native language text on the Sun Dance, the most important traditional Lakota religious ceremony. A long and detailed account, it had been written in the early 1900s by George Sword, a religious leader among the Oglala Lakotas on the Pine Ridge Reservation in southwestern South Dakota. Deloria read the text aloud to an Oglala elder and with his guidance edited and retranscribed it. The text, printed in both Lakota and English, was her first professional publication (Deloria, 1929).

As a member of a prominent Episcopal family, Deloria had little familiarity with traditional Lakota religion, but she became very interested in it. She recorded a large number of myths and sacred stories, many of which have been published in Lakota and English (Deloria, 1932; Rice, 1992, 1993, 1994). While recording autobiographical texts from elders she learned a good deal about the individual's role in religious ceremonies, visions and other supernatural experiences, and conflicts between traditional religion and Christianity. Benedict pressed her to interview medicine men and record their visions, but this forced Deloria into a personal dilemma. Her father was a prominent missionary, and her younger brother, Vine V. Deloria, had followed in his footsteps and begun his career as a missionary at Pine Ridge. Showing undue interest in traditional religion jeopardized the family's reputation, and, in any case, traditional religious leaders were not comfortable sharing their sacred knowledge with a devout Christian, who might ridicule them. Deloria focused instead on the forms of ceremonies, starting with the Sun Dance. She hypothesized that all the Sioux groups shared common ceremonies but that each performed them in different ways. She worked for years on a study that would document the variations from group to group, but failed to complete it.

Deloria's *Speaking of Indians* (1944) was intended to introduce American Indians to a broad popular audience. In it, with great insight and empathy, she succinctly summarized her understanding of traditional religion. She considered the Lakotas before they had learned of Christian teachings to be naturally religious, "always subconsciously aware of the Supernatural Power. Before it they felt helpless and humble" (Deloria, 1944, p. 51). She exemplified this with an account of the Sun Dance, making the esoteric ritual comprehensible to the general public.

The concern with communicating to the public motivated Deloria to write an ethnographic novel, *Waterlily,* that told the story of three generations of women before the reservation period. It masterfully summarizes the important themes of her study of Lakota culture and is the only written source that explores the religious life of Lakota women. When she completed the book in 1948 she could not find a publisher; it was published posthumously (Deloria, 1988) and rapidly became the most widely read of her works.

After Benedict's death in 1948 Deloria struggled to continue her work and received a number of grants for studies of religion and social life. From 1955 to 1958 she returned to St. Elizabeth's Mission to run the school she had attended as a girl. A grant for work on a Lakota dictionary provided her a position at the University of South Dakota from 1962 to 1966. After retiring, she continued to live in Vermillion, South Dakota, until her death on February 12, 1971.

Deloria was the most prolific native scholar of the Lakotas, and the results of her work (much of which is still unpublished, archived in the American Philosophical Society Library, Philadelphia, and the Dakota Indian Foundation, Chamberlain, South Dakota) are an essential source for the study of Lakota religion.

RAYMOND J. DEMALLIE (2005)

**DELPHI.** The Delphic oracle was the most important oracle of ancient Greece. Archaeological excavations at Delphi have shown that the temple of Apollo, which was the center of the oracular activities, was not built before 750 BCE. It was a time of extensive Greek colonization, and one in which the oracle, for obscure reasons, managed to play an important role. This activity may well have been the decisive factor in establishing Delphi almost immediately as an authoritative oracle, and Homer's *Iliad,* most commonly dated to the eighth century BCE, already mentions the wealth of its votive offerings. Its geographical location, far from powerful Greek city-states, undoubtedly helped its rise to fame; for none of the consulting states had to fear that its rich presents would foster the development of a rival state. On the other hand, Delphi was not so remotely situated as the oracle of Dodona (in northwestern Greece), its older rival. The Delphic oracle's fame was highest in the Archaic period, when even kings from Lydia and Cyrene came for consultation.

Earlier studies went so far as to stress the role of Delphi in supporting new moral and religious values such as requiring purification following a murder, but the evidence for such Delphic initiatives is actually very slight. It is indeed hard to see why Delphi, unlike all other oracles, should try to influence its clients beyond their immediate needs. The famous sayings "Nothing in excess" and "Know thyself," which in the sixth century were fitted into the wall of the Delphic temple, reflect existing ideas rather than new ones. Both sayings exhort man to remain within his human limits—a common idea in Archaic Greek literature. It seems therefore more likely that the oracle, through its central position in Greek society, functioned as a sounding board that could amplify current religious conceptions and preoccupations.

The ritual of consulting the oracle was relatively simple. After making various sacrifices, consultants of the oracle had to enter the temple of Apollo where they presented their questions, orally or written on a tablet, to the priestess of Apollo, the Pythia. She was an older woman, whose age made it socially acceptable for her to mix in the company of men such as priests and ambassadors. At the same time, she was dressed as a girl; the conception of the Pythia as the bride of Apollo was at least hinted at in Delphic mythology. The priestess made her utterances seated on a tripod and holding a spray of laurel, but unfortunately we are not informed about the exact process whereby she arrived at her oracles. Later reports, both ancient and modern, mention prophetic vapors emerging from a chasm below the priestess, but this has been disproved by modern archaeological findings. Such reports were evidently rationalizing explanations of the Pythia's skill in giving oracles. Her voice was supposed to change when she responded to the inquiries, which seems to indicate an altered state of consciousness. At the "séance," special "prophets" were present who translated the Pythia's utterances into acceptable prose or hexameters. It is not known to what extent the consultants could influence the outcome of the oracle, but it seems clear that the opinion of powerful clients was regularly taken into consideration. The grateful consultants dedicated votive offerings to the god, and in the highly competitive Greek society the exhibition of these offerings encouraged a kind of potlatch in dedications: at the end of the fifth century, there were nearly thirty special buildings in which Greek cities displayed their dedications.

Many of the inquiries and the oracle's corresponding answers have been preserved, although a number of these answers are demonstrably forgeries—products of hindsight. Greek cities as well as individuals sought the oracle's advice on a wide range of religious, political, and private matters. The evidence shows that in general the oracle helped to decide between various alternatives rather than to predict the future; recourse to the oracle must often have been a convenient way of avoiding the risk of being blamed for the wrong decision.

Delphi's prestige remained high until the fourth century BCE, when it was looted and, perhaps more fatal, when Alexander the Great moved the center of the Greek world to the East. The rulers of the warring factions after Alexander's death (c. 323 BCE) had no time for embassies to Delphi. Although on a much lower level, the oracle continued functioning in Roman times when the prolific author Plutarch (c. 45–120 CE) was one of its priests; his two treatises *The Oracles at Delphi No Longer Given in Verse* and *The Obsolescence of Oracles* are a mine of information on Delphi's rich mythology and ritual. In the fourth century CE, Delphi still attracted the attention of Roman emperors, but the prohibition of all pagan cults in 392 by the Christian emperor Theodosius I also meant the end of this age-old institution.

**SEE ALSO** Oracles.

### BIBLIOGRAPHY

The best survey of the history of the oracle, together with a collection of all the extant oracles, is H. W. Parke and D. E. W. Wormell's *The Delphic Oracle*, 2 vols. (Oxford, 1956). The oracles are translated and discussed, if in a sometimes too skeptical way, by Joseph Fontenrose in *The Delphic Oracle* (Berkeley, 1978). For recent, revisionary studies of the oracle see L. Maurizio, "Anthropology and Spirit Possession: A Reconsideration of the Pythia's Role at Delphi," *Journal of Hellenic Studies* 115 (1995): 69–86 and "Delphic Oracles as Oral Performances: Authenticity and Historical Evidence", *Classical Antiquity* 16 (1997): 308–34. R. C. T. Parker's "Greek States and Greek Oracles," in R. Buxton, (ed.), *Oxford Readings in Greek Religion* (Oxford, 2000), pp. 76–108 analyses the questions Greek states posed and the answers they received.

JAN N. BREMMER (1987 AND 2005)

## DELUGE, THE SEE FLOOD, THE

## DE MARTINO, ERNESTO.

An ethnologist and historian of religions, Ernesto de Martino (1908–1965) was born on December 1, 1908, in Naples, Italy, where he studied under Adolfo Omodeo, graduating with a degree in philosophy in 1932. His degree thesis, subsequently published, dealt with the historical and philological problem of the Eleusinian *Gephyrismi* (ritual injuries addressed to the goddess) and provides an important methodological introduction to the concept of religion. Clearly influenced by reading *Das Heilige* by Rudolf Otto, de Martino preferred to emphasize the choleric nature of the believer, overturning the German scholar's thesis and making it capable of being applied to relations with gods in polytheistic religions and spirits in animist religions. Attracted by the ideological stance of the regime, for several years de Martino worked on an essay interpreting Fascism as a historically convenient form of civil religion. However, the attempt was insubstantial and the work, still unpublished, was gradually rejected by the author. At this time, which we now call the "Neapolitan" period, lasting until 1935, de Martino fell under the spell of the personality and work of an archaeologist who was particularly open-minded concerning the ancient history of religions and who was disliked by both the regime and its intellectual opponents: Vittorio Macchioro, known for his Orphic interpretation of the frescoes in the Villa of Mysteries in Pompeii and advocate of a theory of religion understood essentially as experience.

De Martino moved to Bari, where he became a history and philosophy teacher at a *regio liceo.* He almost immediately had the opportunity to become part of the philosopher Benedetto Croce's circle and to move in an anti-regime environment. He slowly distanced himself from Fascism completely, so that in 1941 he was one of the founders of the Liberal Socialist Party. Meanwhile, he had singled out religious ethnology as his main subject of study and edited the essays that made up his first book (*Naturalismo e storicismo nell'etnologia,* printed in the 1940s by Laterza) and formed the basis of the research that would in time develop into his most famous work, *Il mondo magico.* In the first book, which is primarily methodological, de Martino set out an idealistic theory of ethnology, perhaps in a negative rather than positive sense, refuting those theories that appeared least appropriate to the understanding of magical religious phenomena, such as the prelogical thought of Lucien Lévy-Bruhl and the *Urreligion* of Father Wilhelm Schmidt. If the criticism of the Viennese school (highly regarded in Italy) seems somewhat expected today and in line with that already put forward by Raffaele Pettazzoni, the dispute with Lévy-Bruhl would develop fruitfully, in that de Martino ended up making use of his insight regarding "magic participation," not just in sociological but in ontological terms.

After September 8, 1943, he was at Cotignola (near Ravenna) with the partisan adherents of the Partito d'Azione (Party of Action), and it was during the course of that year, the low point of European civilization, that the central theory upon which *Il mondo magico* was based took shape. Extensive study of parapsychology and psychopathology led him to reconsider radically the problem of magic in primitive societies, hitherto neglected or avoided by ethnologists; in particular, paragnomic powers were interpreted by de Martino as useful and vital tools in a culture in which the individual is unable to separate himself from the world around him and continually risks vanishing. In this dramatic scene, which is centered upon the crisis of "presence" (perhaps a translation of Heidegger's *Dasein*), the sorcerer or shaman is someone who knows how to lose the presence voluntarily and regain it by ritual action, playing the part of actor and director in a collective drama, which allows the group to recover the energy that has been lost. Edited after the end of the war, the book was published in 1948, provoking discussion rather than agreement, but nonetheless marking the author as one of the leading postwar Italian intellectuals.

In 1947, meanwhile, de Martino moved to Rome. He did not manage to find a permanent university post (he only became a qualified university teacher in 1952), and he had to make do with high school teaching, something he found rather unsatisfying. To supplement the paltry salary and especially to maintain a leading position in the political and cultural life of the capital, he worked directly with the Rome office of the Einaudi publishing house, where liberal socialist and communist intellectuals were brought together and where he would establish—along with Cesare Pavese (1908–1950)—a collection of ethnological and religious studies that were to go down in history as "La Collana Viola": this series would also contain irrational religious and ethnological classics (by Kerényi, Eliade, Jensen, Frobenius, and others), giving great offense to the supporters of Croce and the communists and rightly gaining de Martino a formidable intellectual reputation. All this took place at the very moment when, like many other politically committed scholars of his generation, he was beginning an intense, fervent period of militancy: for a time he joined the Socialist Party and traveled to Bari and Lecce, first in his role as commissar of the provincial federation and then as an inspector, experiencing at first hand the great land struggle of those years in the countryside of the South, or as he said in a much discussed essay of 1949, "the explosion of the lower-class people's world into history." Two literary works, along with his direct political experience, impelled him to see the south of Italy as an area in need of urgent study, to be wrested from the domain of folklore: *Quaderni del carcere* by Antonio Gramsci (1891–1937) and *Cristo si è fermato a Eboli* by Carlo Levi (1902–1975). In the former he found a conceptual framework that allowed him to set Marxism in a historical context, placing it within the structure of Italian cultural life, and of seeing religious belief and practice in southern Italy as the historical result of the interaction, not entirely contradictory, between the ruling and lower classes, between the Catholic Church and a core of pre-Christian traditions. In the work of Levi, on the other hand, he found a map of the spread of magic in the former Kingdom of Naples, an invaluable guide, enabling him to select places and subjects to study, according to a different perspective to meridionalist writing, which was more interested in aspects of material poverty than in forms of cultural poverty. This was a gap that would be closed to some extent with the work de Martino would carry out during the 1950s, specifically looking to set out a "religious history of the South."

Driven by the urgency of this project, which was also political, de Martino undertook a lengthy and substantial series of ethnological excursions into the world of magic described by Levi, seemingly not limited by time but restricted in terms of location, centered around the *sassi* (*terminus technicus*) of Matera and delimited by the Naples of Croce. These expeditions were groundbreaking for several reasons: first, he was in charge of a team of trained professionals and experts in related disciplines (such as social work, psychiatry, parapsychology, ethnomusicology, sociology, and photography), but most of all because he was concerned about setting out the problem of the relationship between the subject and object of research. The most extensive of these field studies gave rise to and produced the greatest contributions to the religious history of the South that de Martino himself had begun to carry out: the 1952 expedition, organized to acquire information concerning Lucanian ceremonial magic, gave rise to the first part of *Sud e magia* (1959); the expeditions of 1953 to 1956, recording the funeral laments of Lucania, formed the basis of the ethnographic chapters of *Morte e pianto rituale nel mondo antico* (the largest and most detailed of de Martino's books, published in 1958 and winning the prestigious Premio Viareggio literary prize); while the 1959 expedition to Galatina, in Puglia, which was interested in gathering such information as still existed on the ancient "tarantula" rituals, formed the harsh starting point of *Terra del rimorso* (1961), the third and unfortunately final stage of this lay pilgrimage to places where mere existence itself is something of an endeavor. From these three works, the cultural institutions surveyed and studied, corroborated by historiographical case study, were given a sense of worth that previous folkloric research had neglected or even sometimes crushed.

The rapid transformation of the south of Italy as a result of the so-called economic miracle and the gradual withdrawal of de Martino from active politics (partly as a result of disillusion with the unself-critical position adopted by the Italian Communist Party after the events of 1956) are the most obvious reasons that led to the end of the meridionalist period begun in 1949. In 1958 the writer finally gained a university chair in Cagliari, and the following year he began to hold a course on the history of religions. At first he seemed to be concerned with collecting and revising the more theoretical essays that he had been writing in the meantime (in 1962 *Furore simbolo valore* was published), but contrary to what some thought he had not in fact ceased his research and was in fact already working on a magnum opus concerning cultural apocalypses, which was to represent a compendium of his philosophy. This work would remain largely unfinished, but from the preliminary notes (published posthumously in 1977 by Clara Gallini as *La fine del mondo*), he was already embarked upon an intensive program to reestablish human sciences on the basis of an extremely detailed and careful indisciplinary study: the madness of the end of the world, the drama of the Christian apocalypse, the eschatological elements of Third World religions, the collapse of the bourgeoisie prophesied by Marxism, the "loss of the center" in the artistic expression of the twentieth century, are all themes that are analyzed throughout the respective texts (psychiatric, religious and historical, ethnological, philosophical, and literary) and return once again to that distinct contemporary sense of "ending," which the author interprets, at times ecumenically, as the "ontic" risk of losing forever the world as a cultural homeland. One of the means of salvation is ethnographic humanism, and it was this message, albeit not yet in complete detail, that the author found the time to convey. He was taken ill with a lung tumor and died in a Roman hospital on May 6, 1965.

### BIBLIOGRAPHY

To date (2003) there is still no systematic and comprehensive biography of de Martino. Scholars should refer to: Giuseppe Galasso, "Ernesto de Martino," in *Croce, Gramsci e altri storici* (Milan, 1969); and Mario Gandini, "Ernesto de Martino. Nota bio-bibliografica," in *Uomo e Cultura* 10 (1972). There are useful items also in: Andrea Binazzi, "Ernesto de Martino," in *Belfagor* 196 (1969); Clara Gallini, in his introduction to *La fine del mondo* (Turin, 1977); and Ricardo Di Donato, ed., *La contraddizione felice? Ernesto de Martino e gli altri* (Pisa, 1990). Further information can be found in his correspondence with Cesare Pavese in *La collana viola*, edited by Pietro Angelini (Turin, 1991) with Pietro Secchia in *Compagni e amici*, edited by Ricardo Di Donato (Florence,1993) and Renato Boccassino in *Una vicinanza discreta*, edited by Francesco Pompeo, (Rome, 1996). See also the profile by Vittorio Lanternari in the *Dizionario biografico degli italiani,* vol. 38 (Rome, 1990) and by the same author, *La mia alleanza con E. de Martino* (Naples, 1997).

A catalog of the works of de Martino, which is almost complete, has been edited by Mario Gandini and Silvio Previtera for l'Associazione Internazionale E. de Martino (Rome, 1995). In addition to the works referred to in the article, the following should be noted: "Angoscia territoriale e riscatto culturale nel mito Achilpa delle origini," in *Studie Materiali di Storia delle Religioni* 23 (1951–1952); "Fenomenologia religiosa e storicismo assoluto," in *Studi e Materiali di Storia delle Religioni* 24–25 (1954); "Storicismo e irrazionalismo nella storia delle religioni," in *Studi e Materiali di Storia delle Religioni* 28 (1957); and *Magia e civiltà* (Milan, 1962). In 1995 the publisher Argo (Lecce) began a collection of the unpublished works of de Martino, and a large number of unpublished works can also be found in the author's personal archive, maintained by Vittoria De Palma and deposited with the aforementioned Associazione Internazionale E. de Martino.

The vast majority of critical work on de Martino is posthumous. Here we will only mention those works that form an essential starting point: Benedetto Croce, "Intorno al 'magismo' come età storica," in *Filosofia e storiografia* (Bari, 1949); Enzo Paci, *Il nulla e il problema dell'uomo* (Turin, 1950); Renato Solmi, "E. De Martino e il problema delle categorie," *Il Mulino* 7 (1952); Cesare Cases, in his introduction to the edition of *Mondo magico* (Turin, 1973); Pietro Clemente, "Morte e pianto rituale. Riflessioni su un lavoro di E. De Martino," *Annali della Facoltà di lettere e filosofia dell'Università di Siena* 4 (1983); Pier Giorgio Solinas, "Idealismo, marxismo, strutturalismo," in *L'antropologia italiana. Un secolo di storia,* edited by A. R. Leone (Bari, 1985); Placido and Maria Cherchi, *Ernesto de Martino. Dalla crisi della presenza alla comunità* (Naples, 1987); Carlo Ginzburg, "Momigliano e De Martino," in *Rivista storica italiana* 100 (1988); Ricardo Di Donato, "Preistoria di Ernesto De Martino," *Studi storici* 1 (1989); Giuseppe Giarrizzo, "Note su Ernesto de Martino," *Archivio storico di cultura* 8 (1995); *Ernesto de Martino nella cultura europea,* edited by Clara Gallini and Marcello Massenzio (Naples, 1997); Silvia Mancini, Postscript to the French edition of *Mondo magico* (Paris, 1999); and Gennaro Sasso, *Ernesto de Martino fra religione e filosofia* (Naples, 2001). Numerous journals, such as *Studi e Materiali di Storia delle Religioni* 51 (1985) and *La ricerca folklorica* 13 (1986), have devoted whole issues to de Martino.

**PIETRO ANGELINI (2005)**

**DEMETER AND PERSEPHONE.** In the Homeric epics, no link is established between the two goddesses Demeter and Persephone, to whom later sources attribute a close mythical and ritual relationship, insofar as they are mother and daughter. In the *Iliad* (14.326), Demeter is presented as the bride of Zeus; elsewhere in the same poem (2.696) and in the *Odyssey* (5.125–129), her specific function as goddess of the harvest is also mentioned. Although Demeter appears to play a marginal role in the Homeric religious panorama, she is a figure of extreme antiquity, perhaps related to the Sitopotinja (mistress of the wheat) mentioned in the Linear B texts of Mycenae (twelfth century BCE), and she performs a fundamental role in the polytheistic Greek system. In Hesiod's *Theogony,* Demeter is one of the many brides of Zeus, and in the *Erga* (vv. 465ff.), the poet presents Demeter Chthonia, partnered with Zeus Chthonios, as the sovereign dispenser of the fruits of the land.

In both of Homer's epics, Persephone, daughter of Zeus (*Odyssey* 11.217), is referred to as queen of the underworld and bride of Hades. The fact that no link between the two goddesses is mentioned does not imply that such a link was unknown at the time of composition. Nor does it follow that one may identify in Persephone the figure of a pre-Hellenic underworld goddess, different from the Kore (maiden) of the wheat and daughter of Demeter, as proposed by some scholars and comprehensively argued by Gunther Zuntz (1971). The first reference to their relationship and to the dramatic circumstances that led to Persephone becoming the bride of Hades is found in Hesiod (*Theogony*, 912–914). The narration of the event meanwhile, which represents one of the longest-lived and most geographically widespread mythical traditions in Greek history, is the subject of the *Hymn to Demeter* in the pseudo-Homeric collection, datable to around 600 BCE. This text, although literary and nonliturgical in nature, represents a sort of manifesto of the mythical-ritual context of Eleusis, because it links Persephone's abduction to Demeter's founding of the mysteries. Demeter's refusal to accept the loss of her daughter leads Zeus to allow them to periodically meet on Olympus, despite the fact that Persephone has since become queen of the underworld. The successful resolution of the problem involves the human world, to which Demeter grants not only agrarian fertility, which had ceased as a consequence of her mourning, but also a new ritual dimension within which initiates may experience direct and intimate contact with the two goddesses and obtain, with their goodwill, the guarantee of happiness after death. The mythical and cultic role of Demeter and Persephone in Greek religion is not limited to the Eleusinian mysteries, even though these are essential to defining their identity and prerogatives. Their role is actually extremely wide-ranging and diversified, and they are found both in the typical formula of the mother and daughter pair and as distinct figures with respective cults.

**DEMETER CULTS.** A wealth of sources testifies to the cult of Demeter throughout the area to which Hellenism spread, from the islands of the Aegean and Asia Minor to Magna Graecia. Sicily was particularly devoted to the worship of Demeter. A characteristic aspect of Demeter cults was the central importance of the abduction and search for Kore; in many parts of Greece and the colonies, and in particular in Sicily, the foundation of the cult and the structure of its places of worship are often linked to the mythical theme of the goddess visiting human hosts. Therefore the divine experience has an etiological function toward the numerous local cults, influencing both the arrangement of the sacred area (temple, enclosure, grove, or even vast sanctuary) and the ritual practice, which assumed a great variety of forms, at times connected to the Eleusinian model, at others Thesmophorion. There is thus created a sort of map of the Demeter cult that reflects the movements of the divine figures in the cosmos, with the earth as their meeting point. The sacred site and the ritual praxis celebrated there are in turn configured as a tangible sign of the divine passage along two vectors: vertical, through the underworld, the surface of the earth, and Olympus; and horizontal, representing Demeter's wandering in search of her daughter. This mythical theme in fact provides a wealth of material for the various cults, constituting the common thread that links the many pieces of the vast mosaic of Demetrian sites.

Among the sources that testify to the functional relationship between myth and sacred place, the *Periegesis* by Pausanias in particular offers extensive material for the reconstruction of a basic Demetrian cartography, whereas the remaining documentation—literary, epigraphic, and archaeological—helps fill in the details. Among the numerous cults connected with the theme of Demeter's wanderings, the most significant are those of Megara and Pheneos. In the first location, Pausanias mentions the rock called "Anaclethris because Demeter (if the story be credible) here too called her daughter back when she was wandering in search of her. Even in our day the Megarian women hold a performance that is a mimic representation of the legend" (*Periegesis*, 1, 43, 2). Every year at Pheneos a festival with evident aspects of the mysteries was celebrated in a construction known as the Petroma, formed by two large stones with a circular opening, "with a mask inside of Demetra Cidaria. This mask is put on by the priest at the Greater Rites who for some reason or other beats with rods the Folk Underground. The Pheneatians have a story that even before Naon arrived the wanderings of Demeter brought her to their city also. To those Pheneatians who received her with hospitality into their homes the goddess gave all sorts of pulse save the bean only" (*Periegesis* 8, 15, 1–4). Insofar as the divine mask—many examples of which have been found in the Demeter sanctuaries—is worn by the celebrant, this leads one to suppose that the latter aims to impersonate Demeter herself. The beating of the rods on the ground would thus seem to be aimed at "recall" and may be considered similar to the ritual performed at the Anaclethris rock in Megara in memory of the despairing wail of the mother looking for her abducted daughter.

Reports of Diodorus Siculus illustrate a different but parallel mythical tradition by placing the divine event in a Sicilian setting. It is difficult to establish the antiquity of this version, whereby the island is the place of the abduction, of Demeter's search, and also of the maiden's return, although this version was already formed by the high Hellenistic period. Nevertheless the spread of the Demetrian cult, starting from the most ancient colonial foundations (eighth to seventh centuries BCE) in Sicily, leads one to believe that the process of "transferring" the cult and its adaptations to local conditions induced the corresponding mythical narration to become rooted in the territory, along with the cultic structures. Diodorus situates the Sicilian version of the abduction in the Heroic Age and attributes the foundation of the magnificent festival of Syracuse to Herakles (*Bibliotheke*, 4.23). He goes on to provide an extended narration of the myth that, while reflecting the existing pan-Hellenic pattern, is characterized by its entirely Sicilian setting, which unfolds on the road linking Enna, where the abduction of the divine maiden took place, and Syracuse. Here the king of the underworld "ripped open the earth, plunged with the abducted maiden into Hades and made a spring flow forth, where the Syracusans every year celebrate a famous festival" (*Bibliotheke*, 5.3–4).

Having completed the union between mythical event and ritual practice, the historian offers a detailed description of two festive cycles, with sacrifices and grandiose ceremonies dedicated respectively to Persephone at the time of the ripening of the wheat (May–June) and to Demeter at the time of sowing of the seed. The first festival is called the *katagoge* of Kore, a name intended as the "recall" of the divine maiden rather than as her "descent" (into the underworld). The result is that in the Sicilian context the positive outcome of the story, with Persephone's periodic return to her mother, was the premise and foundation for a special cultic practice.

The second festival, dedicated to Demeter, concerns the theme of the goddess's laughter, which marks the end of her grief, and which is usually provoked—according to the various traditions—by *aischrologia* or by more or less explicitly obscene behavior. These attitudes are transferred from the mythical level, on which a female figure with various names (Iambe, Baubo, or a nameless old woman) intervenes, to a ritual level representing one of the most typical and recurrent elements of the Demeter cults, from the Eleusinian mysteries to the Thesmophoria. The seasonal collocation of the Syracusan festival at the time of the sowing or of the first germination of the wheat (October–November) confirms its connection with agriculture and the analogy with Thesmophorion practice, despite the duration of the rite (ten days) and its public aspects. Many archaeological finds from the city and surrounding territory confirm, in the wealth of votive materials portraying the two goddesses and their worshipers, just how pervasive and deep-rooted Demetrian and Persephonean religiosity was.

Whereas Demeter cults distinguished all of Sicily, some of the main centers were in Agrigento, which Pindar celebrates as the "dwelling place of Persephone" (*Pythics*, 12, 1–5); Gela, the site of a characteristic Thesmophorion (Bitalemi); and Enna, where Cicero—who witnessed the tradition whereby "the island of Sicily is entirely consecrated to Ceres and to Libera"—recognized the presence of the "more ancient Ceres," venerated in a famous sanctuary (*In Verrem Actio* 2, 2, 4, 48, 106–108). Archaeological research has brought to light in these and many other Sicilian locations sacred areas and votive hoards of such richness as to completely confirm the opinion, again reported by Cicero, of the ancient inhabitants of the island, who claimed that "these two goddesses were born in those places and the cultivation of cereals was introduced for the first time in that land."

The service of Demeter, without being an exclusive prerogative of women, was nevertheless usually performed by priestesses. In the priestly hierarchy of Eleusis, an essential role was played by the *hiereiai* ("priestesses") and by the *hierophantis* ("she who reveals the sacred things"), who acted as the female counterpart of the highest-level priest, the hierophant who revealed the sacred symbols of the mysteries. The other esoteric Demeter cults, particularly the Thesmophoria, are entirely characterized by female aspects, with only a few exceptions, in which men's involvement was limited to certain phases of the rite. This exclusive female Demetrian rituality is not configured as being in opposition to the male sphere but rather in a dialectic relationship and complementary to it. In almost all cases the cults in question have an evident political dimension in the sense that, inserted in the official calendar of the city, they are connected to the promotion of the well-being and prosperity of the entire community. Whereas generally excluded from the judicial-administrative activities of the Greek city, women nevertheless played a crucial role on the sacred level, which represented an essential and irreplaceable element of city life, for it was on this level that the city depended for its legitimacy and for the strength that ensured its survival and continuity.

The Thesmophoria are the oldest and most pan-Hellenic in diffusion of the female esoteric Demeter cults. The name *Thesmophora* was given to the goddess as an expression of her role as giver of civilizing laws (*thesmoi*), in particular of the rules of marriage. Agriculture and marriage, as well as chthonic and human fertility, are Demeter's functional prerogatives and the cornerstones of human identity. Humans, in the Greek ideological panorama, are defined as different from the gods due to their double roles as eaters of bread and generators of children, insofar as they are mortal but producers of culture. The Thesmophoria, which was reserved for married women with full rights of citizenship, took place once a year, although on different dates in the festive calendars of the various Greek cities. The festival is also connected to the abduction of Persephone; sources relate that on the days of the festival the *thesmophoriazousai* (the women who celebrated the Thesmophoria) ritually evoked Demeter's grief, the search for Persephone, and Persephone's retrieval. The festival involved both of the goddesses; in many cases a male figure, Eubuleus or Zeus Eubuleus; and a triad that included a married couple, probably identifiable as Persephone and an underworld Zeus, who corresponded to Hades/Pluto. Extensive archaeological evidence confirms the pervasive nature of this cult, with numerous finds dating from the archaic age up to late Hellenism spread throughout the Hellenized Mediterranean world, with particular concentrations in the Aegean Islands, in Magna Graecia, and in Sicily. The recurrent image of the female figure in votive deposits (the worshiper or goddess herself) with various attributes (a piglet, a cist, a dish of fruit, a torch) vividly express its central element, with its double reference to agrarian and female fertility. The presence of various figures of *kourotrophos*, a divine or human nursing mother, in the Thesmophorion places of worship strengthens the female connotations of the mythical-ritual scenario gravitating around the two goddesses.

Numerous other exclusively female rituals gravitate around Demeter, often together with her daughter and in relationship with the mythical theme of the abduction. In Athens there was the Stenia, a nocturnal festival in which women kept a vigil, perhaps awaiting the return of the two goddesses, and the Scire, connected also with Athena, Poseidon, and Erecteus. Sources of the imperial age attest the presence of mysteries of one or the other goddess in numerous centers, above all in the Peloponnese and in Asia Minor, and in cities in which the cult of Demeter had a long and consolidated tradition, such as Smyrna, Ephesus, and Pergamus.

**PERSEPHONE CULTS.** Some cults were dedicated solely to Persephone without Demeter, albeit often coupled with her underworld husband Hades, whereas others included her mother but merely in a sporadic or marginal role. Among these, particularly significant is the Magna Graecian cult in Locri, whose flourishing is shown by a few literary sources and by extensive archaeological evidence. Whereas its period of greatest splendor was between the end of the sixth century and the mid-fifth century BCE, this cult also spread outside the Locri Persephoneion to Medma and other towns of Magna Graecia and to Francavilla in Sicily. It was characterized by the enthusiastic participation of the local people and by a rich mythical background with a corresponding ritual praxis, whose reconstruction depends entirely on the exegesis of the complex iconography. The votive *pinakes* (tablets) that have been found in large numbers in the *favissae* (underground chambers for sacred deposits) of the sanctuary present numerous scenes in which the divine and mythical levels intertwine deeply with human life and ritual. The scenes are dominated by the majestic figures of Persephone and Hades on their thrones, often accompanied by other divine figures (Dionysos, Hermes, Ares) and above all human images, such as maidens with various attributes (ball, cockerel) and women engaged in picking fruit, in ritual procession, and in scenes of sacrifice or nuptial significance. A particularly interesting depiction is that of a female figure (goddess or woman?) sitting at a table upon which is placed a basket that she holds open to reveal a boy inside. Another scene that stands out for the frequency and variety of figurative motifs is that of a chariot drawn by winged horses carrying a maiden, who is led, often by force, by an abductor, who is sometimes a youth and sometimes an older man. The two levels of the divine and human are inextricably intertwined, because the scenario of the mythical marriage is superimposed by the reference to the common female experience of marriage perceived as a maiden's separation from her family and her assumption of the new role of adult woman, wife, and mother.

Lastly, the varied ancient religious literature attributed to the mythical Thracian poet Orpheus displayed a great interest in the myths and rituals gravitating around the mother and daughter pair. Although the thesis of an influence of Orphic doctrines in Eleusis has been convincingly confuted by Fritz Graf (1974), numerous testimonies reveal the existence of particular mythical versions of the abduction, which the Orphic *Argonautika* link explicitly to the Thesmophoria. In some formulas relative to the otherworldly journey of the soul contained in the well-known gold leaves from Thurii (fourth–third centuries BCE) that seem to reflect an eschatology of Orphic inspiration, Persephone is invoked as "pure Queen of them below" (in Kern, 1922, fr. 32 c-f), and Demeter is also mentioned.

## BIBLIOGRAPHY

Publication of the complete edition of the Locri *pinakes*, after extensive analyses of the iconography and underlying religious concepts, was successfully started with publication of the first four volumes, various authors, in *Atti e Memorie della Società della Magna Grecia*, ser. 4, 1, 1–4 (Rome, 1999). For a picture of the historico-cultural situation in Locri, a useful source is *Atti del sedicesimo Convegno di studi sulla Magna Grecia Taranto, 3–8 ottobre 1976*, vols. 1–2 (Naples, 1977). The problem of Persephone's identity as been analyzed by Gunther Zuntz, *Persephone: Three Essays on Religion and Thought in Magna Graecia* (Oxford, U.K., 1971).

Claude Bérard's *Anodoi: Essai sur l'imagerie des passages chthoniens* (Rome, 1974) analyzes extensive iconographic material relative to myths of crossing cosmic levels in which various divine figures are involved, including Persephone. The agricultural connections of the various forms of the Demeter cult in Attica are highlighted by Allaire Chandor Brumfield, *The Attic Festivals of Demeter and Their Relation to the Agricultural Year* (New York, 1981). Walter Burkert's excellent manual on Greek religion, *Die Griechische Religion der archaischen und Klassischen Epoche* (Stuttgart, Germany, 1977), translated by John Raffan as *Greek Religion: Archaic and Classical* (Cambridge, Mass., 1985), provides indispensable data for collocating the cult in the wider context of Greek religious history. The typology of the nursing deities is examined by Theodora Hadzisteliou Price in *Kourotrophos: Cults and Representations of the Greek Nursing Deities* (Leiden, Netherlands, 1978). An exhaustive overview of the Sicilian and Italian centers of the cult, with comprehensive archaeological documentation, is provided by Valentina Hinz, *Der Kult von Demeter und Kore auf Sizilien und in der Magna Graecia* (Wiesbaden, Germany, 1998). See also Otto Kern, *Orphicorum Fragmenta* (Berlin, 1922), and Alberto Bernabé and Ana Isabel Jiménez San Cristóbal, *Instrucciones para el más allá: Las laminillas órficas de oro* (Madrid, 2001). The relation between Eleusis and Orphism has been discussed in detail by Fritz Graf, *Eleusis und die orphische Dichtung Athens in Vorhellenistischer Zeit* (Berlin and New York, 1974).

A useful commentary with a wide range of parallel documentation accompanies the translation by N. J. Richardson of *The Homeric Hymn to Demeter* (Oxford, 1974). Giulia Sfameni Gasparro's *Misteri e culti mistici di Demetra* (Rome, 1986) offers a picture of the Demeter cults as intended to set up an intense relationship between the faithful and the goddess through the ritual reevocation of the mythical event, often in an esoteric context.

On the methods of access to the priesthood by Greek women, see Judy Ann Turner, "*Hiereiai*: Acquisition of Feminine Priesthoods in Ancient Greece," Ph.D. diss. (University of California, Santa Barbara, 1983). For the complex religious and social dimension of feminine priesthood in the ancient world, see Sfameni Gasparro, "Ruolo cultuale della donna in Grecia e a Roma: Per una tipologia storico-religiosa," in *Donna e culture: Studi e documenti nel III anniversario della "Mulieris Dignitatem,"* edited by Umberto Mattioli (Bologna, Italy, 1991), pp. 57–121.

GIULIA SFAMENI GASPARRO (2005)

**DEMIÉVILLE, PAUL** (1894–1979), French Sinologist and Buddhologist. Demiéville was born in Lausanne, Switzerland, and completed undergraduate studies at Bern in 1911. He subsequently studied in Munich, London, Edinburgh, and Paris, finishing work for a doctorate in music at the University of Paris in 1914. He began his study of Chinese the following year at King's College in London, but he returned to Paris to study first at the École Nationale des Langues Orientales and then at the Collège de France, where he worked with Édouard Chavannes. Demiéville graduated from the École des Langues Orientales in 1918, having mastered not only Chinese but Japanese and Sanskrit as well. In 1920 he moved to Hanoi, and from 1924 to 1926 he taught Sanskrit and Western philosophy at the University of Amoy. From 1926 to 1930 he lived in Japan, where he edited the first four volumes (1929–1931) of the encyclopedic dictionary of Buddhism *Hôbôgirin*, compiled under the direction of Sylvain Lévi and Takakusu Junjiro. (The dictionary resumed publication in the 1960s.)

In 1931, Demiéville returned to France to become professor of Chinese at the École Nationale des Langues Orientales, a post he held until 1945, at which time he became director of studies at the École Pratique des Hautes Études, teaching courses in Buddhist philology. In 1946 he succeeded Henri Maspero to the chair of Chinese language and civilization at the Collège de France, the position he held until his retirement in 1964.

Demiéville was a corresponding member of the British Academy, the Association for Asian Studies, and the School of Oriental and African Studies in London and was an honorary member of Tōyō Bunko and of the Académie du Japon. He was awarded honorary doctorates by the universities of Louvain and Rome, and he was elected a member of the Académie des Inscriptions et Belles-Lettres in 1951. He served as codirector of the journal *T'oung pao* (Leiden) from 1945 to 1976.

Demiéville was a prolific writer, publishing 179 studies (books and articles) and 104 book reviews. His works are characterized by philological precision and a thorough examination of the sources. They are models of scholarship. He wrote on Chinese language, art, literature, archaeology, history, philosophy, and religion. But he is best known for his work on Buddhism in China, the school of Chan (Zen) in the Tang dynasty in particular, and for his work on the Buddhist materials found at Tun-huang.

### BIBLIOGRAPHY

Book-length studies by Demiéville include the following: *Les versions chinoises du Milindapañha* (Hanoi, 1924); *Le Concile de Lhasa: Une controverse sur le Quiétisme entre bouddhistes de l'Inde et de la Chine au huitième siècle de l'ère chrétienne* (Paris, 1952); and *Entretiens de Lin-tsi*, translated and edited by Demiéville (Paris, 1972). Demiéville was the author of numerous articles, the most important of which are reprinted in two volumes: *Choix d'études sinologiques* (Leiden, 1973) and *Choix d'études bouddhiques* (Leiden, 1973). Both of these volumes contain extensive bibliographies, which are updated in Yves Hervouet's obituary for Demiéville, published in *T'oung pao* 65 (1979): 1–12.

**DEMIURGE.** The Greek term *dēmiourgos* (together with its variants) is derived from the words *dēmos* ("people") and *ergon* ("work") and thus has the basic meaning of "one who works for the people," an artisan or a professional. This etymological base subsequently developed in two directions. On the one hand, *dēmiourgos* came to refer to a magistrate; on the other, it became a name for the original creator of the world, in the specific sense of an ordainer or arranger, someone who as an artist fashions the world out of preexisting matter in accord with a preexisting model. It is this second meaning that is of primary concern here.

The term *dēmiourgos* occurs only twice in Homer, each time in the *Odyssey.* At 17.383 it refers to a professional man such as a soothsayer, physician, carpenter, or inspired poet. At 19.135 it refers to a herald, "one who performs a public function" (*kērukon hoi dēmioergoi easin*). Here the development of the later meaning, that of "magistrate," is already perceptible. Sophocles uses the term in its original sense when he calls Hades "the savage artisan of Hector's girdle" (*Ajax* 1035). Similarly, Aristophanes links the *dēmiourgoi* ("artisans") with other categories of workers (*Peace* 297) and uses the term *dēmiourgikos* ("in the style of an artisan, a specialized worker") to refer to Hermes, the versatile god of inventions (*Peace* 429). At one place *dēmiourgos* possibly takes on the specialized sense of "potter" (*Knights* 650), which suggests the future evolution of the word in the sense of "(cosmic) molder." The same term is used in its original meaning by Herodotos (7.31), whereas Thucydides uses it in the sense of "magistrate" (5.47.9; cf. 1.56). The pre-Socratic philosophers use the term *dēmiourgiai* in its original meaning (see, for instance, Philolaos, frag. 11t), whereas in the doxography of these philosophers, the term may refer to a molder or a former, in the sense of a cosmogonic agent (as in Empedocles).

Plato uses the term *dēmiourgos* to refer both to an artisan and to an original arranger of the world. Meaning "artisan" or "craftsman," the term occurs in *Laches* 185e and 195b and in *Charmides* 162e, 164a–b, 171c, 173c, 174e, and 175a. The last two cases include the sense of something that affects or causes; compare *Sophist* 219c, *Philebus* 55d, and *Laws* 829d, where the suggestion is of performers of noble deeds. See also *Gorgias* 452a, 453a–e, and 454a, where rhetoric and arithmetic "produce" persuasion, as do the arts in general. Compare, however, the term used as "creator of phantoms," that is, the opposite of a real creator, in *Republic* 599a–d and 601b, and see also *Republic* 340e, 346c, 597d; *Apology* 22d and 23e; *Alcibiades 1* 131a and 140b–c; *Gorgias* 447d and 455b; and *Euthydemus* 280c. Note particularly *Republic* 389d, which quotes Homer's *Odyssey* 17.383. In the context of the theory of the three categories of citizens in the *polis*, see *Republic* 415a; *Phaedrus* 248e; and *Sophist* 219c (cf. *Statesman* 280c). See also *Critias* 110c and 112b and *Laws* 746c and 921b.

Closely associated with the meaning "artisan" is the meaning "professional man" or "specialist," which appears in Homer. In this sense the term occurs in *Laches* 195d and *Charmides* 164b (cf. *Philebus* 55d and *Sophist* 229d); *Protagoras* 312b and 322b (*dēmiourgikē technē*, "the professional art" or "skill in handiwork," the gift of Prometheus to mankind, as opposed to the more spiritual or ethical *politikē technē*, the "political art," which is the gift of Zeus); *Cratylus* 389a, where the legislator is the most rare among the "specialists" or "experts" (cf. 428e and *Laws* 921d, respectively, referring to specialists in the arts of instruction and of war); *Euthydemus* 301c and *Phaedo* 86c, where it is a question of artists (cf. also the *Symposium* 186d, among others; *Republic* 401c; and *Sophist* 236a, where it refers to the sculptors of statues); and *Hippias Maior* 290b, where Phidias is mentioned as "a good craftsman knowing the beautiful" (here we are close to the meaning of a molder of the universe inspired by an invisible model). Finally, see *Republic* 596b, where a craftsman "fixes his eyes on the idea or form."

*Dēmiourgos* in the sense of a divine artisan or creator of the world is found in the *Timaeus*, *Statesman*, *Philebus*, *Republic*, *Sophist*, and *Laws*. It is the *Timaeus*, however, that provides us with the most complete description of the Demiurge. In fact, in the *Timaeus* nearly every occurrence of the noun *dēmiourgos* and the verb *dēmiourgeō* refers to the divine molder of the universe. The only exception to this is 24a, where the reference is to an ordinary artisan. The *Timaeus* presents the role of the Demiurge as essential to both the world and man, since it is responsible for their correspondence as microcosm and macrocosm. Although this theme of the microcosm and macrocosm has led some scholars to posit the survival of (reconstructed) ancient Indo-Iranian speculations on an alleged myth of a primordial man (*makranthrōpos*) in the *Timaeus*, a myth that would express a kind of pantheistic unity of God and world, such a survival is unlikely. In fact, in Plato's *Timaeus* the role of the Demiurge is incompatible with an essentially monistic conception of the world as a gigantic organism. Rather, this text is informed by Plato's fundamental dualism, a dualism that describes an ontological reality while at the same time providing a principle of philosophical hermeneutics.

Plato distinguishes two realms. On the one hand there is the ideal world, the world of the Ideas, the models of all reality. Opposite this stands the sensible world, which comes into being through the activity of the Demiurge, who projects the efficacy of the ideal models that he contemplates into the receptive *chōra* ("receptacle"). Clearly the Demiurge is here to be distinguished both from the Ideas, including the supreme idea, the idea of the Good, and from the soul of the world, the soul that the Demiurge introduces into the "body" of the world in order to animate it.

Plato refers to the Demiurge as a cause or principle (*aitia*) of the world, a term that he also applies to the world of Ideas in its relation to the sensible world. Even the *chōra* itself, the receptacle that preexists the molding activity of the Demiurge, is called an *aitia*, although due to its inferior ontological status it is sometimes referred to inaccurately in translation as "prime matter," in relation to the Demiurge and the world of Ideas.

The molding and animating activity of the Demiurge is an ordering activity that opposes the primordial chaotic disorder of the elements, progressively reducing their disorderly movement. The world is said to be generated by the Demiurge, who is also termed its "maker and father" (*poiētēs kai patēr*, *Timaeus* 28; cf. 41 and "maker and father," *dēmiourgos kai patēr*, at *Statesman* 273; at *Republic* 597d the painter is not *dēmiourgos kai poiētēs*). The Demiurge is also described as "the most perfect of causes," while the world is described as "the most beautiful of generated beings" (*Timaeus* 29). The model that inspires the maker is eternal, always the same, uniform and ungenerated. The Demiurge itself is said to be difficult to know; knowledge of it is impossible to divulge (*Timaeus* 28). Nevertheless, despite these difficulties, the role of the Demiurge does not seem to be in doubt. The beauty of the world sustains the belief that the activity of the Demiurge is beneficent, inspired by an eternal model. As we shall see, this belief stands in marked contrast to the ignorance and the *modus operandi* attributed to the demiurge in Gnostic systems. Plato's Demiurge, being good and without envy (*phthonos*), excludes as much as possible every imperfection from the world.

The role of the Demiurge in fashioning the world is primarily one of providing order. He takes the visible, preexistent mass that moves without measure and order (*kinoumenon plēmmelōs kai ataktōs*) and orders it, placing intellect within the soul of the world and the soul within the world's body, so that the world as a whole might be truly a living being, having a soul and an intellect, and born through the providence of God (29–30). The fashioning of man is somewhat more complex. The Demiurge provides man only with the higher, immortal part of his soul. The soul's inferior, mortal part, as well as the human body, are the creation of the inferior gods. Once brought into being, the Demiurge locates the souls among the stars and notifies them of the "laws of fate" (*nomous tous heimarmenous*). All souls begin as equals, each enjoying the same original conditions. Their individual destinies are to be determined by either their observance or neglect of piety and righteousness. The just soul is destined to return to its star, while the others are subjected to the law of metensomatosis, according to which a first reincarnation would be in the form of a woman, to be followed by rebirth in the form of an animal, if the soul should persist in its evil (here Plato is heir to the Orphics). Only submission to reason can insure the soul's return to its star. Plato adds that the Demiurge "dictated to them all these laws in order to be in the subsequent times innocent of the evil (*kakia*) of each of them," which can mean either that the Demiurge is innocent of moral evil or, more probably, that it is not responsible for evil souls. It is only after the establishment of this original justice by the Demiurge that the lower gods create for every individual the remaining part of the soul and the body.

Plato discusses the Demiurge in other dialogues as well, although these discussions are not always consistent with the doctrine presented in the *Timaeus* concerning the creation of man. Further discussions may be found at *Statesman* 270, 273 and 308; *Philebus* 27 (cf. 26 and 39); *Republic* 507, 530 (cf. 596 and *Sophist* 234a–b); and *Laws* 902.

The development that leads from the Demiurge of Plato to the demiurge of the Gnostics is a long one. As a transitional figure we may mention the Middle Platonist Numenius, who to an extent foreshadowed the pessimistic outlook of the later gnostics. The demiurge of Numenius, which he called the Second God, was an ambivalent figure torn between the possibilities of contemplating the ideal world or, alternatively, directing his attention downward toward the sensible world. A quite different development of the Platonic Demiurge is found in Philo of Alexandria. Philo employs the narrative of the *Timaeus* when he introduces the notion that in creating man God had not worked alone but had been assisted by other heavenly agents. This introduction of demiurgic intermediaries was intended to keep God separate from human evil.

Coming to the Gnostics, we encounter the notion of an inferior demiurge, a notion more or less common to the various gnostic schools, sects, and religions, with their anticosmic attitudes, and in clear-cut opposition to the far more positive Platonic notion. This opposition was noticed by the founder of Neoplatonism, Plotinus (third century CE), who wrote a treatise "against those who say that the Demiurge of the world is bad and that the world is bad," namely the Gnostics (*Enneads* 2.9). It is true that the Gnostic demiurge continues to function as the fashioner of the world and as an intermediary presence. But there is an immense difference: the Gnostic demiurge itself belongs to this inferior world, the world of ignorance that holds the spiritual soul in bondage. It is accordingly inferior to the human soul, which, when enlightened by *gnōsis*, realizes its consubstantiality with the divine *pneuma*, or spirit. The inferiority of the demiurge is sometimes reflected in its name, as when it is called Saklas ("foolish one").

More precise characterization of the demiurge varies considerably according to the different Gnostic schools and sects. On the one hand, there is the monstrous, almost demonic figure of the lion-headed demiurge Ialdabaoth found in the Gnostic *Apocryphon of John* and the ignorant, "psychic" (i.e., nonspiritual) Ialdabaoth of the Valentinians. The latter was assigned a role in the preliminary education of man and was destined to be taken up at the end of time into the heavenly realm known as Ogdoad. Significantly, this latter realm was not included in the higher, divine realm of the *plērōma*. On the other hand, among some followers of Basilides one finds the demiurge Sabaoth, who was conceived of as just and who cooperated with the pneumatic or spiritual beings, though he always remained unassimilable to them and was presented as the son of the evil, dethroned Ialdabaoth.

Common to all these Gnostic demiurges, however, whether in the Valentinian or Sethian currents, is a complete lack of spiritual or pneumatic nature: they are essentially inferior. In addition, they are often described in terms originally applied to the creator god of the Hebrew scriptures, a god debased in the Gnostic ideology. This explains the popularity of Hebrew or pseudo-Hebrew names for the demiurge, such as Ialdabaoth.

The demiurge is also found in other Gnostic groups and religions. We may mention the ambivalent demiurge of the Mandaeans, Ptahil, and the demiurge of the Manichaeans, the Spiritus Vivens ("living spirit"), who was an evocation of the Father of Light and was believed to have fashioned the world from the dark, demonic substance of slaughtered demons.

# DEMONS

*This entry consists of the following articles:*

AN OVERVIEW
PSYCHOLOGICAL PERSPECTIVES

## DEMONS: AN OVERVIEW

Except in some monotheistic religions, all demons are not assumed to be evil. Many kinds of spiritual beings who are not obviously gods may be described as demons. Demons are far more powerful than humans, though their powers are limited and they are longer-lived, though not necessarily immortal. Demons often seem to be the anthropomorphic conceptualization of discrete, invisible natural forces that are perceptible mainly through their effects, such as wind or specific diseases. In prescientific cosmologies, air, wind, and the "breath" (*spiritus)* of life are usually conceived as invisible or even immaterial. As spirits, demons are normally invisible, becoming perceptible either through their effects on humans, or through language or signs. When becoming visible, demons may exhibit their own inherent shapes or assume familiar or monstrous forms.

Demonic spirits may protect or inhabit places, bodies of water, or vegetation. Demons may also inhabit or be guardians of an underworld, and may torment human souls there. At times ghosts have demonic characteristics. They may be the ancestors of the culture that describes them, or recently deceased family members who, it is feared, could return to claim surviving relatives or neighbors.

In some religions (particularly Judaism, Christianity and Islam), demons may be identified with or compared to angels or devils. However, in English and other modern languages, the three terms, all derived from ancient Greek, have differing implications. *Daimon,* and its derivatives *daimonios, daimonion* (*daemon, daemonium* in Latin), denote a suprahuman spiritual being that interacts directly with humans. The *daimon*'s character may be good, evil, or changeable, but late Judaism and Christianity eventually define demons as profoundly, irredeemably evil.

*Angel (aggelos* or *angelos;* Latin *angelus)* denotes a messenger, and was originally applicable to human as well as suprahuman envoys. In Judaism and Christianity, the *angel* is a spirit messenger sent to humans by the god, but the term could include other functions, such as rewarding or punishing humans.

The noun *devil (diabolos;* Latin *diabolus)* derives from a verb meaning "to throw across" and by extension to attack, accuse, or slander. The devil is the sworn enemy of the god, and attempts to harm, subvert, or seduce the god's worshippers. The devil is inferior in power and wisdom to the god; in the three principal monotheistic religions, he is a renegade creature of the god. Devil and demon can thus be synonymous common nouns, particularly in Christianity, which defines *the* Devil as leading an army of subordinate demons. (In fully dualistic religions deriving from the ancient Iranian prophet Zarathushtra [c. 600 BCE], the evil opponent of the god is not his inferior but his inverted twin, fully as divine and powerful.)

Aside from ruling certain phenomena for all or many members of a society, demons may dedicate continuous attention to a single individual. A spiritual guardian protects the interests of his devotee. Conversely, a demon can afflict or even "possess" humans, entering their bodies and creating disease or an alien, transgressive personality.

Demons' invisibility implies that they either have bodies of finer matter than that composing the visible world, or else lack bodies altogether. Yet demons are in many cultures thought to behave like ordinary embodied humans: they may have sexual relations among themselves or with humans, and procreate demonic or semi-demonic children who are superhumanly powerful, charismatic, or evil.

**TRIBAL CULTURES.** The belief in invisible beings who control or strongly affect the conditions of human life is universal. It appears to be an essential trait of humanity to think of its own interactions with the physical world in anthropomorphic terms, considering forces and even objects as if they had personalities and desires. From the point of view of cultures possessing writing, demonic modes of thinking resemble the literary and ethical device of allegory, wherein psychological and physical phenomena are described as well-defined "people." According to the critic Angus Fletcher, demons "share [a] major characteristic of allegorical agents, the fact that they compartmentalize function," explaining limited aspects of the world: "Constriction of meaning, when it is the limit put upon a personified force or power, causes that personification to act somewhat mechanistically" (Fletcher, 1964, 40, 55). This relative predictability expresses a desire to tame or domesticate the world: "Coming from the term that means 'to divide,'; *daemon* implies an endless series of divisions of all important aspects of the world into separate elements for study and control" (Fletcher, 1964, 59). The need to understand the conditions of life leads to a belief that good—and especially, bad—fortunes are due to the agency of spirits. Demons give shape to inchoate fears of sudden vulnerability, dependence or victimization, triggered by solitary wastelands, darkness, or sexual anxieties. Attempts to control or placate these invisible forces take the form of exorcism, trickery (e.g., substituting effigies for potential human victims), or worship.

**HINDUISM.** In Hinduism the question of gods and demons reflects a complex, multimillennial history of religious and cultural beliefs. In the Vedas and epics, suprahuman beings are mentioned whose exact nature, and their differences from everyday humans, are often unclear. *Rakshasa*s, *pisaca*s, and *vetala*s are demon-like beings that haunt graveyards, threaten the living, and feed on human flesh; some are ghosts, others are suprahuman. *Pitr*s are ancestral spirits. In Hinduism reincarnation eliminates the absolute ontological barrier between humans and suprahumans that modern western cultures take for granted. The term *deva* refers to godlike beings, but even they are subject to reincarnation; moreover, humans may be reincarnated as *deva*s. *Deva*s are in conflict with *asura*s or "not-gods" (cf. Greek Titans). Yet *asura*s are neither radically evil nor the dedicated opponents of a single supreme deity, unlike demons of Judaism and, especially, Christianity. Nor is the enmity of the *deva*s and *asura*s a historic constant; it appears that *asura* corresponds to "god" in some Vedic texts. When its meaning evolved to approximate "demon," the word *sura* was coined as its antonym. Though occasionally opposed to divinities and humans, Hindu "demons" are not inimical to them inherently or by definition.

In Iranian religion, which apparently descended from the same "parent" religion as Hinduism, a similar conflict existed between beings called *daeva*s and *ahura*s. "In Iran, the ahuras defeated the daevas, the leader of the ahuras became the high God, Ahura Mazda, the god of light, and the Iranian daevas, consigned to the ranks of evil spirits, became minions of Ahriman, the lord of darkness. In India, the devas defeated the asuras" (Russell, 1977, p. 58). In both cases, "One group of deities was vanquished by another and relegated to the status of generally evil spirits" (Russell, 1977, p. 58). In Iranian religions, however (Zoroastrianism, Zervanism, Mazdaism), the "demonization" of the defeated gods created a dualistic system, a dichotomy between the forces of good and evil more absolute than in Christianity, Islam, or Judaism (Russell, 1977, 104ff.).

**BUDDHISM.** Many of the suprahuman beings important to Buddhist ontology were inherited from Hinduism. The *asura* is a jealous or hostile god/demon, while the *preta* is a ghost condemned to constant hunger; they are two of the unhappy destinies to which persons who have lived badly can be reborn in the world of sense experience. The *asura*s have been ejected from a divine realm of contentment ruled by its King, Indra. Māra, whose name means "death," promotes illusory thinking and vice, and behaves as a sort of Devil-figure in Buddhism. He tempted the Buddha with doubt as the latter was approaching enlightenment, even sending his own daughters and other minions to frighten and seduce him. Evil, however, is not personified by Māraas it is by Iranian evil gods or by the Judeo-Christian Devil, since evil, defined as suffering, is inevitable and necessary in the Buddhist world view. Mārais not responsible for cosmic evil as Satan is.

**GREECE AND ROME.** *Theos* (god) and *daimon* are near-synonyms in Homer (c. 800 BCE); *daimon* denotes more the power or agency of a god, rather than personality (cf. Latin *numen*). From Hesiod (c. 700 BCE) on, demons were considered inferior to the gods. Socrates' (d. 399 BCE) *daimon* was a kind of tutelary instinct, not necessarily external to him.

In the *Symposium,* Plato (d. 347 BCE) held that the gods, who have no direct contact with humans, use *daimon*s as their messengers (*aggeloi*). Greek gods had no fixed good or evil character; nor did demons until the late Hellenistic period, when they were generally considered evil. Other spirits, not always explicitly called *daimon*s, might have either fixed or changeable character. *Keres* were fate-like powers of evil and death for individuals; *heroes* were spirits of the dead; *Lamia, Empusa, Gello, and Mormo* were names for a female spirit that killed infants and (in some cases) coupled with sleeping men. The *Erinyes* and the *alastor* were spiritual avengers of the dead. Other figures, more important to mythology than to ordinary experience, were probably demons at their origin: the *Harpies* may have been wind-demons, and the *Gorgons* underworld- or sea-demons.

Roman spirits (*lares, manes, penates* and *genii*) were not unambiguously godlike or demonic or ghostly. The *Lamia,* however, had the same characteristics as her Greek namesake, while the *stryx,* a nocturnal demon who appeared as a screech-owl or a human shapeshifting witch, also assaulted sleeping babies (or according to some authors, suckled them with her own milk). Roman religion adopted the Etruscan death-demon *Charun,* making him the ferrier of souls to the underworld.

In Hellenistic demonology the Jew Philo of Alexandria (d. 40 CE) distinguished between angels and demons as good and evil spirits, although he classified some Gentile gods as angelic, against traditional Jewish "demonization" of them (see below). The Septuagint, a Greek translation of the Hebrew Bible begun in the third century, also made the angel/demon distinction. The Middle Platonist Plutarch (d. c. 120 CE) distinguished demons from gods and agreed that demons were entirely evil. In his *Platonic Theology,* Proclus (d. 485 CE) rationalized the system of gods, goddesses, heroes, and demons in Hellenistic religion, building on the Neoplatonism of Plotinus (d. 270 CE). But Proclus's concept of the Good as the highest principle, transcending all being, minimizes the distinctions between gods and demons, making Neoplatonic theology seem a de facto demonology. Accordingly, when Marsilio Ficino (d. 1499), Giovanni Pico della Mirandola (d. 1494), and other European philosophers of the fifteenth through seventeenth centuries revived Neoplatonic and Hermetic theology, guardians of Christian orthodoxy often suspected them of demon-worship.

**JUDAISM.** There are few recognizable demons in pre-exilic texts of the Hebrew Bible. Several beings mentioned there resemble spirits, and seem traceable to evil spirits of the Mesopotamians, Canaanites, and other neighbors, who believed that demons frequented remote and dangerous places. Desert demons were assimilated to or described as wild animals (*Isa.* 13:21; 34:14). Hebrew words for these spirits were rendered as *daimon* and *daimonion* by the translators of the Septuagint.

Lilith appears in the Hebrew Bible only once, as a nocturnal demon (*Isa.* 34:14); her name probably derives from Akkadian demonology. In middle Babylonian times, words related to Hebrew *līlīt* designate sterile, sexually frustrated, or uninitiated female demons, or a succubus demon (*Lilitu).* Later, Rabbinic commentators describe Lilith as the rebellious first wife of Adam, who, vainly claiming parity with him, left him and bore endless broods of demons. Lilith threatens newborn Jewish children with crib death, and must be warded off by an inscription invoking three angels God originally sent to subdue her. Saint Jerome (d. 420 CE) translated *līlīt* in Isaiah 34 as *Lamia;* his commentary identified the two infanticidal demons, maintaining that other Hebrew sources identify Lilith as an Erinys, or Fury.

Yahweh himself sometimes sent entities defined as or resembling evil spirits to punish erring Israelites or destroy their enemies (*1 Sam.* 16:14; *Judg.* 9:22–23; *1 Kings* 22:19ff.; *Exod.* 12:23; *Sirach* 39:28f.). But these agents had no more specificity or character than is implied by the tasks they performed for Yahweh; they were his "projections," and he could even accompany them (as in *Exod.* 12).

The role of Satan as chief of the demons evolved gradually. In pre-exilic texts, Hebrew *satan* was a common noun, designating any opponent or adversary. During the exile, the Israelites became acquainted with dualistic theologies deriving from the teachings of Zarathushtra, wherein divine rivals of equal power compete for human allegiance. Post-exilic texts (*1 Chron.* 21:1; *Job* 1:11; 2:5) describe a unique demonic adversary or *satan* of Israel or individual humans. This personage has an ambivalent relation to Yahweh, relieving him of responsibility for evil, but furthering, rather than opposing, his designs. The Septuagint translated this usage of *satan* as *diabolos.*

Post-exilic texts dismissed the gods and tutelary spirits worshipped by rival civilizations as empty idols. The Septuagint rendered the Hebrew terms for such foreign deities (especially *shedim)* as *daimon* even when translating pre-exilic texts (*Deut.* 32:17; *Ps.* 95:5, 105:37; *Isa.* 65:11).

The Jewish apocrypha and pseudepigrapha accelerated the dualistic process that turned all demons into the enemies of God. Notable is the demon Asmodeus of *Tobit* 3:8 and 17, who killed the first seven husbands of Sarah, and whose name may reflect a Persian phrase, *aeshma daeva,* or "demon of wrath." He was defeated by Raphael, an angel of the Lord.

Ancient tradition related that, on the Day of Atonement, the scapegoat, laden with the sins of the Israelites, was sent into the desert wastes "for Azazel" (*Lev.* 16:8–28). In *1 Enoch* and other pseudepigrapha, Azazel became a recognizable Devil-figure: ringleader of demons, enemy of God, and tempter of humans. According to these texts demons were originally holy angels, or "Watchers" (*egregori)* who rebelled because of their lust for human women (see below). Aside from Azazel, other texts named the demons' leader as Belial, Mastema, Satanael, Sammael, Semyaza, and *Satan.*

Pseudepigraphic and Talmudic sources identify some demons as the souls of deceased evil giants, who were born when the Watchers, also called *bene ha-elohim* or "sons of God," mated with the "daughters of men" (*1 Enoch* 6:2, etc.; cf. *Gen.* 6:1–4; *Deut.* 1:28; *Num.* 13:22, 33). The title "sons of God" reflects an older, semipolytheistic view of Yahweh as the sovereign of a heavenly court (cf. *Job* 1; *Ps.* 82). The dead-giant demons were numerous; one text counts 409,000 giants drowned by Noah's Flood (*3 Maccabees* 2:4; *Wisdom* 14:5–6; *1 Enoch* 15:8–16:1; *Jubilees* 10:1–3; *Testament of Solomon* 17:1; *3 Apocalypse of Baruch* 4:10). Demons are more frequently discussed in the Babylonian Talmud and the Midrashim than in the Jerusalem Talmud. Demons are important to Qabbalah, which drew on Christian and Muslim demonologies, including folklore, pursuing a systematic understanding of the subject. Although long-lived, demons are mortal, and may have been saved from extinction by Noah's Ark. The *Zohar* and later works of Qabbalah describe demons having natural bodies of fire and air and an inherent (rather than fictive or virtual) gender. Mating between male demons and women, and between female demons and men, is common, and produces demonic or hybrid children. Demons may depend on human semen even to reproduce their own species. Demons are organized into hosts, and control or meddle in most areas of human life; they must be carefully avoided or approached through incantations or by learning and using their individual seals.

**CHRISTIANITY.** As with Judaism, the Christian scriptural canon was formed gradually, creating an eclectic and evolving body of doctrine about spiritual beings. Like the contemporary Jewish apocrypha, new Testament demonology elaborated on canonical Hebrew texts. It also shows resemblances to various strains of Hellenistic religion and philosophy. Christian innovations took place mainly on two fronts, exorcism and the role of Satan. The Gospels describe demons or evil spirits (*daimon, daimonion, pneuma akatharton, pneuma poneron*) who possess or afflict humans, but fear and obey Jesus. Demons proclaim Jesus's power before witnesses by obeying his adjurations (*Matt.* 8:32; *Mark* 5:13; *Luke* 8:33), and through explicit verbal declarations (*Luke* 4:41; *Mark* 1:23–25, 34; *Matt.* 8:29; cf. *Mark* 5:7). By affirming his power, both miraculous healing and demonic utterances prove Jesus's divinity (cf. *Matt.* 8:16–17). Saint Paul (d. 65/67 CE) refers infrequently to demons (*1 Cor.* 10:20–21 [cf. *Deut.* 32:17]; 1 Timothy 4:1); other New Testament books concentrate on Satan and (in *Revelation*) the host of fallen angels.

Jesus and the Gospel writers present Satan as Jesus's declared personal adversary (*Mark* 3:23; *Luke* 11:18–21), paralleling the representation of Satan as Yahweh's adversary in Jewish apocrypha and further confirming Jesus's divinity. The rivalry between Jesus and Satan is developed in Saint Paul's *Epistles* and the *Book of Revelation*; the latter provides dramatically explicit visualizations of the divine Christ and the demonic hordes arrayed against him. *Luke, John, Paul,* and *Revelation* (e.g. chapter 12) consolidate the portrait of Satan as the leader of numerous evil angels who fell from Heaven because of their rebellion—not against Yahweh but against Christ (*Luke* 10:18; *Eph.* 2:1–2; 6:11–13; *2 Cor.* 6:14–16; *Col.* 2:15). "By the end of the New Testament period, Christian tradition made no distinction between fallen angels and demons" (Russell, 1977, p. 236).

Subsequent Christian literature internalized and spiritualized the danger of demonic persecution. Christian writers continued to see demons as responsible for human physical and psychological suffering, but also developed the notion of *temptation:* Satan tempts every Christian to oppose God through sin, just as he tempted Jesus in the desert (*Mark* 1:12–13; *Matt.* 4:1–11; *Luke* 4:1–13). All temptation, from Adam and Eve onward, was eventually credited to Satan. For most of the Middle Ages, demons were assumed to be ubiquitous and constantly tempting Christians and others. Such temptation usually happened privately and invisibly, though demons could act visibly and even publicly. The early monastic desert fathers regularly encountered demons who tempted them extravagantly, an experience detailed in Athanasius's (d. 373 CE) *Life of Saint Anthony* and elsewhere. The *incubus* demon was a sexual predator who polluted or violated sleeping women. The magician Merlin was supposedly born to a nun thus impregnated, while Saint Bernard of Clairvaux (d. 1153) allegedly defeated another incubus who tormented a pious laywoman. The popular legend of Theophilus (ninth to thirteenth centuries) described a priest who, disappointed in his career, contracted his soul to the Devil but was eventually rescued by the Virgin Mary.

After 1100, Western Christian interest in demons increased dramatically. The Fourth Lateran Council of 1215 declared that "the Devil and the other demons" (*diabolus et alii daemones)* were created good but became evil through free choice. The Book of Job, whose sophisticated theodicy explicitly portrayed "the satan's" responsibility for human suffering, became highly influential for both writers and visual artists. The apocryphal Book of Tobit, novelistically recounting the archangel Raphael's defeat of Sarah and Tobias's demonic persecutor Asmodeus, also evoked interest. Peter Lombard (d. 1160), Saint Thomas Aquinas (d. 1274), Saint Bonaventure (d. 1274), and many other theologians devoted systematic attention to good and—especially—evil angels, inventing *angelology* and *demonology* as a scientific subdiscipline of Christian theology. Treatises discussed the moral qualities of angels but also their history, social organization, psychology, physiology, and sexuality. Demonic corporeality became a major concern: since demons were thought sometimes to interact visibly and tangibly with humans, the question arose whether they had bodies, and if so, of what sort. Aquinas's solution prevailed: demons are pure spirit without matter, but can fabricate virtual bodies; thus they can afflict humans both internally (by possession and other invisible means) and in external reality (through apparition "in person"). Visual representations of demons became progressively more horrific after 1200, emphasizing a grotesque hybrid corporeality that seemed increasingly "real" rather than a visual allegory of spiritual perversity. This process was particularly notable in depictions of the Last Judgment and Hell, which were practically ubiquitous by the late Middle Ages. In these pictures, the interaction of spirits—human souls and demons—was portrayed as physical, corporeal violence.

Detailed literary and visual representations of the biblical demonic world relate to a growing interest in narratives about more recent human encounters and interactions with demons. About 1225, Caesarius of Heisterbach collected several dozen such tales in his *Dialogue on Miracles;* other collections of miracles and saints' biographies did likewise. In this period, exorcism, which had become formalized over the centuries, inspired intense interest in necromancy. This form of "black magic" arose in what Richard Kieckhefer (1989) has called the "clerical underworld" (pp. 153ff) of relatively learned professional exorcists. Originally defined as persons who commanded the souls of the dead (as in *Odyssey,* book 11 and the biblical story of Saul and the "Witch" of Endor [*1 Sam.* 28]) necromancers were redefined by Christian authorities as necessarily—and often willingly—contacting demons. While proponents defined necromancy as effected in the name of God, ecclesiastical consensus countered that it necessarily involved unholy alliances with demons.

"Demonization" of individuals and social groups, based on the notion of the demon as *satan* or *diabolos*—adversary—became a major vehicle of political and religious persecution during the Christian Middle Ages. Jews, heretics, "infidels," political enemies and vulnerable targets of opportunity (e.g., the Templars) were defined as unremittingly evil, and as literally in league with the Devil; their destruction was incumbent on the pious or orthodox. Between the twelfth and the fifteenth centuries, Catholic enforcers of orthodoxy, becoming sensitized to the spread of necromancy, also encountered widespread and alarming heresies among the laity (e.g., Catharism, Waldensianism, Hussitism). They thus began attempting to verify rumors, dating to the eleventh century, that even unlettered heretics had regular demonic encounters. Stereotypical "confessions" of such experiences, extracted under torture from real or suspected heretics, were cited to explain the origin and appeal of heretical doctrines. Confessions further stimulated officials' curiosity by portraying demons with vivid and shocking immediacy, creating a vicious cycle of inquiry and confirmation.

By the 1430s both ecclesiastical and secular judges were pursuing a new variety of super-heretic, the Witch, created by this process. Unlike previous heretics, witches were not considered merely deluded about doctrine. The Witch voluntarily sought to encounter Satan and his demons "in person," attending vast but secret mass meetings (the Sabbat or "Witches' Dance") where humans worshiped Satan as their god and had orgiastic sex with demons. Official theories about witches grew exponentially more sensational and complicated, making witchcraft responsible for society's most intractable problems—crop failure, disease, infertility, infant, adult, and animal mortality, religious and political turmoil.

In fact, the Witch was a phantom of the inquisitorial imagination, evoked by a coercive dialogue between tortured defendants and demon-obsessed prosecutors and judges, but the witch stereotype resisted facts, proof, and compassion until after 1700, killing some 50,000 to 60,000 defendants in western Christendom. Thanks to this "witch craze," narratives of human-demon interaction are an important preoccupation of western culture and a major subgenre of its literature. From Christopher Marlowe's *Dr. Faustus* (1590s), John Milton's *Paradise Lost* (1674), and Johann Wolfang von Goethe's *Faust* (1790), to Aldous Huxley's *Devils of Loudun* (1952), Arthur Miller's *Crucible* (1953) and Ira Levin's *Rosemary's Baby* (1967), the Devil and the demonization of his accused allies have retained their fascination.

Nor is the phenomenon of demonization limited to Christianity—or to religion. The perception of an imperfect natural or social order leads in extreme cases to a kind of collective paranoia: disasters are blamed on powerful saboteurs, who mask their immense malignant power beneath a pretense of marginality or benignity. Like demons, they are imagined as powerful, omnipresent, and immune to conventional methods of discovery or ordinary human justice. Extraordinary, extralegal measures are required to unmask and neutralize the threat, or legality itself must be redefined. The *Protocols of the Elders of Zion,* the Holocaust, and aspects of more recent genocides (e.g., Rwanda, Kosovo) bear witness to the powerful appeal of this myth. Evidence of its appeal also appears in the "show trials" and gulags of Stalinism (1930s), Mao Zedong's Cultural Revolution (1960s), Pol Pot's Cambodia (1970s), and the House Un-American Activities Committee under Joseph McCarthy (1950s). When "things go wrong," and no external enemy is clearly to blame, the evil will be sought inside the afflicted social body. Manifest powerlessness or a clear record of benignity offer no protection from persecution: as was often proclaimed in early modern Europe, the devil's subtlest trick is to convince us that he doesn't exist. Demonization occurs interculturally as well: a society's internal cohesion is enhanced by a dualistic world-view that identifies foreign antagonists as completely evil. It is more important that the antagonist be completely wrong and evil than for "us" to be completely right and good.

**ISLAM.** The most widespread figures in Islamic demonology are the *ḍjinn* or jinns. They are ontologically intermediate, somewhat like the Greek *daimonia* and the Judeo-Christian angels and devils. According to the Qurʾān (LV, 14), their bodies were created of smokeless flame, while human bodies came from clay and angelic bodies from light. Jinns are of both sexes. Given their ethereal composition, jinns are normally imperceptible to humans, but may become perceptible in a variety of guises, including giants, dwarves, or animals. In pre-Islamic Arabia, jinns were desert beings like nymphs and satyrs, and hostile to humans; they were gradually "spiritualized." By Muḥammad's time, Arabs of Mecca were sacrificing to them and seeking their favor (Qurʾān VI, 128; LXXII, 6).

Jinns have a social organization and family life, and interact variously with humans, including through romantic love and intermarriage. They can be contacted through various forms of magic, and may respond favorably, but can also be easily offended and will react accordingly. At times they behave playfully, teasing and tricking humans. Jinns are prominent in folklore, popular magic, and literature, from the *Thousand and One Nights* onward. The notion of the jinn has been transmitted from Arabia to non-Arabic centers of Islamic culture, where it blends variously with local traditions about spirits.

Subclasses of the jinn are the *Gḥūl,* the *siʾlat,* and the *ʿifrīt.* For ancient Arabs, the *Gḥūl* (etymon of English *ghoul*) was a shape-shifting being who lived in desert wastes and led travelers astray. The *Gḥūl* may be male or female; according to differing traditions, the *siʾlat* may be either a female *Gḥūl* or a kind of witch among the ghouls; some writers maintain that men can sire children on a *siʾlat* but not on a *Gḥūl.* In popular usage *Gḥūl* may designate a human or demonic cannibal; this usage has inspired English and French concepts of ogres and vampires (*ghoul, goule*). The *ʿifrīt* is a powerful, cunning, frightening jinn, and may also be thought identical to a *marid;* alternatively, one may be more powerful than the other.

The *sḥaytān* for pre-Islamic Arabs was a jinn, a kind of "genie" or "genius" or guardian spirit who was sometimes good, sometimes evil; as tutelary spirit it was also called the *karin.* It was responsible for inspiration of all sorts, and human progress in general, but particularly for poetic inspiration. The *sḥaytān* could also be a rebellious jinn, thus an "evil spirit" or "demon."

In Islamic usage, the singular *al-Sḥaytān* is a personal name paralleling Jewish and Christian references to Satan. This figure is also named Iblīs (possibly a contraction of *diabolos).* His epithets include *ʿAduww Allāh* (Enemy of God) and *al-ʿAduww* (The Enemy). The Islamic Satan resembles the Christian and late Jewish figure, as portrayed in the two Testaments and in apocrypha such as the *Life of Adam and Eve.* Areas of uncertainty or disagreement about Iblīs/*al-Sḥaytān* remain in Muslim commentary, especially regarding whether he is an angel (*malʾak*) or a jinn. Angels are considered ontologically sinless by some, and have other characteristics incompatible with Iblīs's fundamental rebelliousness and even his physical makeup as presented in the Qurʾān. Also unclear is the exact nature of his sin, particularly the relation between his pride and his disobedience.

**DOUBT, SKEPTICISM, UNBELIEF.** Since demonic beings are by definition invisible most or all of the time, belief in their responsibility for human welfare or suffering—and belief in their very existence—varies considerably over time.

Until recently, the narrative of progress by which western societies define themselves inspired confident assertions that these societies were "outgrowing" or had already abandoned the belief in demonic reality. However, developments since the 1980s belie such a facile scenario. In the United States, polls register a majority of persons claiming to believe in spirit phenomena. The literal, personal existence of the Devil has been strongly affirmed by charismatic and fundamentalist Protestants and by Catholics alike. Meanwhile, exorcism, which the Second Vatican Council of the 1960s had de-emphasized, has become a divisive issue, even in the Pope's own diocese of Rome. In the United States and elsewhere, the same period has witnessed panics over alleged Satanic cults and "satanic ritual child abuse," along with enthusiastic New Age variants of angelolatry, benign or "white" witchcraft and magic, and the space-age demonology of "alien abduction syndrome" and "multiple personality syndrome." These movements variously express a lost sense of religious connection or "spirituality"—a term that defies precise definition and often seems not to require belief in actual spirits.

On the other hand, the assumption that, before the advent of scientific thinking in the seventeenth century, all Christians and Jews, or the overwhelming majority of them, believed in the literal existence of demons and angels, is equally erroneous. Skepticism about spirit did not arise suddenly in the 1600s; Aquinas himself had recognized the need to rebut it. Skepticism provoked the earliest treatises by militant witch-hunting demonologists (1460s), and remained a constant anxiety of Christian demonology even after 1700, when widespread witch-hunting had ceased.

The Sadducees, a Jewish sect in the time of Jesus, refused to believe in spirit (*Mark* 12:18; *Acts* 23:8). As detailed above, the oldest books of the Hebrew Bible make no mention of angels and demons as beings distinct from and subordinate to Yahweh, or to an individual named "Satan." The Jewish philosopher Moses Maimonides (d. 1204) opposed the belief in demons. Among Muslims, the question of the real existence of *jinn* was problematic. Ibn Sina (Avicenna, d. 1037) denied their existence, and Ibn Khaldūn (d. 1406) opined that only God knew the truth, while other philosophers variously evaded the question. Scholars also debated the nature or the real existence of the *gḥūl,* which does not appear in the Qurʾān. It is uncertain to what extent the Buddha believed in the empirical reality of demons.

Epicurean and other ancient materialistic philosophies, which asserted the perishability of the human soul, remained familiar—mostly through hostile paraphrases—throughout the "Age of Faith," or Christian Middle Ages. Thomas Aquinas observed that some contemporary Aristotelian philosophers denied the reality of angels and devils; on one occasion he attributed the attitude to Aristotle himself. Accusations of philosophical skepticism were periodically leveled at innovative thinkers during the thirteenth and following centuries, at times with apparent justification. The philosopher Pietro Pomponazzi argued exhaustively between 1516 and 1520 that Aristotle's philosophy lent no support to the reality of angels, demons, magic, or human immortality, while the Fifth Lateran Council of 1513 dogmatically reaffirmed human immortality as an article of faith. From Aquinas until nearly 1800, Christian apologists regularly invoked the phenomena of witchcraft and exorcism as proof that angels, demons, and the immortal soul were not imaginary.

Between about 1550 and 1700, epidemics of demonic possession among Western Christians, often linked to accusations of witchcraft, provided compellingly theatrical arguments for demons' reality, but also provoked widespread skepticism. As demonic witchcraft was progressively discredited, interest shifted to ghosts (in the eighteenth century) and spiritualism (in the nineteenth) among those interested in defending the reality of spirit and human immortality. Yet purported demonstrations continued to produce skepticism and ridicule.

The enduring controversies over the reality of demons and spirits provide ample evidence that the drive to understand cosmic forces in human terms is not restricted to "primitive," "medieval," or "unscientific" societies.

## BIBLIOGRAPHY

Still useful is the entry "Demons and Spirits" in *The Encyclopedia of Religion and Ethics,* edited by James Hastings, vol. 4 (Edinburgh, 1911), a series of twenty articles concerning as many cultures. Although they concentrate on the figure of the Devil in Christian religion, the books by Jeffrey Burton Russell (below) contain frequent and useful discussions of demonology in several cultures from the ancient Near East to modern times. Karel van der Toorn, Bob Becking, and Pieter W. van der Horst, *Dictionary of Deities and Demons in the Bible: (DDD),* 2d ed. (Leiden, 1999) has in-depth articles regarding not only the Hebrew and Christian Bible but also its ancient sources and analogous demonological lore elsewhere.

### Tribal Cultures

Collins, John J. *Primitive Religion.* Totowa, N.J., 1978. Chap. 8, "Supernatural Beings and Myths," pp. 190–227, includes cross-cultural examples and bibliography.

**Doubt, Skepticism, Unbelief**

Popkin, Richard H. *The History of Skepticism: From Savonarola to Bayle.* New York, 2003. The standard text in this field; the third rev. ed. of a book first published in 1960.

Stein, Gordon, ed. *The Encyclopedia of Unbelief.* 2 vols. Buffalo, N.Y., 1985. See especially "Devil, Unbelief in the Concept of" (George V. Tomashevich); "Evil, Problem of" (Peter H. Hare); "Immortality, Unbelief in" (Leon J. Putnam); "Skepticism" (Richard H. Popkin*)*. Though it purports to describe phenomena of unbelief, this work often dedicates most of its attention to belief. There are no entries for unbelief in spirits, demons, or angels.

Stephens, Walter. *Demon Lovers: Witchcraft, Sex, and the Crisis of Belief.* Chicago, 2002. Argues that early modern European demonic witchcraft was an invention of literate Christian elites, and that it constituted "resistance to skepticism," reinforcing their own faltering belief in the reality of spirits, sacraments and divine benevolence by providing supposed evidence of human-demon encounters.

WALTER STEPHENS (2005)

## DEMONS: PSYCHOLOGICAL PERSPECTIVES

The experience of the demon as a supernatural being that can affect human life for good or for bad is found all over the world. Modern depth psychology provides us with a fuller understanding of the nature of this phenomenon. Even in modern civilization where there is no longer the belief in demons, demons continue to play an important role. The existence of demons is a fact. The question of central importance is "How does consciousness interpret this fact?"

The interpretation depends upon the development of consciousness and the awareness of the multiple forces that determine human personality and experience. A more advanced stage of consciousness can look back at the preceding stage and describe it. For the present stage of consciousness, however, there exists no outside objective and critical standpoint from which to observe it. C. G. Jung has distinguished five different stages in the development of consciousness (also referred to as stages of the relation between object and subject). I would like to discuss the attitude toward the existence of demons at each of these five stages with reference first to cultures in which the stage of consciousness dominates and then to cultures of modern Western civilization.

Examples of each of these five stages can be found in human psychology side by side with the more advanced stages. There is no civilization in which consciousness belongs only and exclusively to one stage alone, because different psychological faculties will be developed to a different degree at any one time. Even though the main function may become advanced and rational, the inferior function remains archaic and closely aligned with the unconscious psyche.

**THE MYTH OF THE COSMIC MAN: ARCHAIC MENTALITY.** The unconscious psyche is the original mind of man, his primeval mentality, with which he still functions through his instincts. All persons function in this archaic way when unconscious; that is, to be unconscious in psychological terms is to be governed simply by the unconscious forces of instinct. Humankind has survived for hundreds of thousands of years supported by this primordial mentality, living in a state of identify with the environment called by Lucien Lévy-Bruhl "the participation mystique." The fact that humankind survived the Stone Age points to the value of this instinctive behavior.

The consciousness of these early stages of humankind and of today's hunters and gatherers resembles that of early childhood. At this stage man lives undifferentiated from his surroundings. This does not mean that he cannot differentiate between himself and the objects around him, but rather that for him these objects are alive: they have soul and behave like animated beings. In the words of Jung, the individual lives as though he were immersed "in a stream of events in which outer and inner worlds are not differentiated, or are differentiated very indistinctly."

For archaic man, the whole world reflects his psyche, or his psyche is just as much outside as inside, because as long as a psychic content is unconscious, it will appear in both realms. This stage of consciousness is mirrored in the myth of the cosmic man, a giant who pervades the entire universe; examples are the Indian Puruṣa or the Scandinavian Ymir. The psyche of archaic man is everywhere. All of the objects in the universe of archaic man lead their own purposeful lives, influencing or even dominating him. He feels inferior to these powers of nature and worships or propitiates them. Religion and magic are at his disposal in order to deal with these powers. Because his own ego is ill defined, it is easily transformed into an animal or possessed by one of the surrounding powers, by a spirit or a demon, or transformed into an animal. Possession belongs to this mentality, and one can be exorcised as easily as possessed.

By worshiping these powers, human beings acknowledge their reality and importance, and they are kept in the awareness of the entire community. Only when something escapes our attention and is thus neglected are we in danger of being possessed by it.

Possession—when our actions are determined by some psychic (or spiritual) force that overwhelms the ego—is by no means a phenomenon restricted to primitive societies, nor is it limited to those in our present civilization whom we call possessed. On the contrary, it is a universal experience. Whenever an unconscious power takes over the ego, possession occurs. Archaic man is threatened by all the demons and spirits around him, but at the same time he is wrapped also in the protection of the symbolic mother; that is, he is protected by powers that look out for him and provide him with sustenance so that he does not have to worry about himself. For example, when the Kusase people hear a certain tree in the village ask for a new dress and for new offerings, they are not surprised since this happens from time to time. In the context of their world, this is a common event and demands no explanation.

The idea of an all-pervading power in nature (*mana*, *manitou*, *orenda*, *wakanda*) forms part of this animistic view of existence. And magic is the primitive technology that seeks to manage this power. But the religious attitude is already prominent at this stage in the person of the shaman, rainmaker, or weathermaker, who is a specialist in dealing with spiritual powers. Furthermore, the power becomes embodied in certain sacred persons such as the chief, warrior, or blacksmith, as well as in sacred objects such as swords, stones, and medicine.

In modern Western civilization this archaic attitude still survives. Not only fairy tales and legends but also the words of poets reflect this attitude. And whenever an emotion lays hold of us, we fall back into such archaic behavior; for example, we kick the corner that "hit us," or we swear at the car that refuses to budge. We treat things as if they had a will of their own. This indicates that we believe that things share our human nature: the lime tree in the famous folk song bears all the feelings of love and the sorrow of farewell that men and women experience beneath its branches. We find ourselves feeling attached to objects as well as to persons, and when either fails to act according to our expectations, we experience strong emotion, because we identify with them to a certain extent.

If we look closely at our fears, we may detect the old demons and spirits in modern disguise: irrational fear of cancer or of atomic energy, idiosyncrasy, fear of war and power. We do not trust our modern consciousness to be able to handle these mighty things; there might be a demon in them that would make a fool of us. And we still worship the body of Christ in the host or the represented person in icons. In Switzerland, mountain climbing was avoided for a long time because of the belief in a divine numen living on top of the mountain. Old names point to this fact, such as the Vrenelisgärtli of Glärnisch, or "garden of Venus." Many names of parcels of land or of rivers also refer to the ancient spirits of nature that formerly lived in these places. Most vegetation rites in May and on midsummer's night recall the spirits of grain. Many Europeans still put a fir tree with colored ribbons on a newly built house in order to appease the spirits who will enter and dwell there. In Greek religion, the spirits of nature are personified as nymphs, dryads, and satyrs as well as in the form of the god Pan and numerous other local deities. Many of the sanctuaries of the Virgin Mary found in the woods, in a grotto, or by a well have inherited the site from pagan spirits. In the beginning of the common era, Christian churches were built on the site of earlier temples, sometimes with the stones of the earlier temples, because the power of the numen was already present there. Modern exorcists continue to banish ghosts in places that have been haunted for ages.

**THE SACRIFICE OF THE COSMIC MAN: PROJECTION.** In the myth of the cosmic man, the giant is sacrificed by the gods or by the wise men of old. This sacrifice symbolizes the cultural moment when the archaic mentality is sacrificed in favor of a different level of consciousness. This moment seems to correspond to the great Neolithic revolution of humankind, the transition from a life of hunting and gathering foods (living off the gifts of nature, the symbolic mother) to the life in which both plants and animals were domesticated. In agriculture and the herding of animals, humankind assumed some responsibility for husbanding natural resources and providing a steady food supply the human being. At this point he becomes separate from its environment; for the first time there occurs a split between human as subject and nature as object. Differentiation from the environment is one of the most difficult tasks for humankind. Psychic development (individuation) depends upon the ongoing continuation of this process. However, the individual is constantly threatened by demons, threatened, that is, by forces that are unconscious. The mythical combat between the hero and the dragon mirrors this dangerous situation.

Therefore it is consciousness that, in effect, creates the cosmos, for in the differentiation of consciousness the world comes into being as a realm separate from man. From this stage onward we can properly speak of a projection whenever there is any doubt as to whether or not a phenomenon does, in fact, belong to the outer world in which we seem to experience it. For example, when a schizophrenic of our civilization hears the voice of the devil, it is correct to interpret the voice as a projection of something that exists within him rather than something existing in the world.

Usually a demon is understood to be a supernatural being of a nature intermediate between that of gods and men. In the writings of Homer, the word for "demon," *daimōn*, can still refer to a god or, in a rather vague sense, to a divine efficacy. In a famous passage of Plato's *Symposium*, Diotima describes Eros as a "great spirit [*daimōn*], and like all spirits a being intermediate between the divine and the mortal" (202e). Psychologically speaking, this corresponds to the complex of the collective unconscious as defined by Jung. The complex, which is a necessary and normal component of the psyche, is intermediate between the ego and the archetype, having both a personal and an impersonal aspect. Whereas the archetypes are inborn dispositions, the complex comes into being through experiences in the individual life.

At this stage of consciousness, for example, the warrior is no longer believed to be generally demonic, but rather he becomes the berserker who fights with a mad frenzy only when he is possessed by the god Odin. Mediumship and possession attributed to specific gods or spirits are regular phenomena at this stage of consciousness. At this level, every disease is explained as the result of a spirit or demon. They are primitive forms of what we call mental disorders or *Geisteskrankheit* ("spirit-illness"). In psychological terms, a complex, also called a partial personality, takes over the ego.

The shaman is the master of spirits, the one who has overcome his own states of possession. Demons are far from being only noxious. In spirit-mediumship the spirits mediate the power of divination, providing information about the future and about matters removed from ordinary perception. They mediate between the spirit world and men and convey to their society the beneficial power of the gods. Everyone may have his own guiding spirit that controls to some effect his behavior. Mediumship may be experienced as a vocation whereby a spirit chooses a specific person as its vehicle. Our word *inspiration* means that a spirit is whispering wisdom into the ear of the inspired. When the world as a whole is no longer believed to be alive, it remains, nevertheless, filled with spirits and demons. One must be careful lest one be tripped up by a demon unnoticed. Spirit possession can even be contagious, especially during adolescence.

Spirits, particularly those of dead ancestors, may have control over the fertility of the earth, because they are believed to live in the earth under the ground or above the rain clouds. Passing by a cemetery one must take care not to be bewitched by a lurking ghost, the spirit of an ancestor that might cause illness or even death. (Psychologically, this appears to be the same fear that one experiences today when passing by a graveyard late at night.) Furthermore, a young girl has to be careful when she walks by a pond lest one of the unborn souls lurking there might jump into her womb and make her pregnant. The ghosts of the dead are especially hungry and desirous of blood or meat, food that must be provided through sacrifices. The great power of a mighty man continues to hold sway even after his death. In the vicinity of the grave of a *shaykh* there is a palm tree and a conical stone; barren women may silently step over the stone seven times and eat dates from the tree in order to become pregnant.

A regressive appearance of demons and spirits occurs when the high gods become remote. This often happens when a new civilization overlays an older one, whether by historical change or by conquest. The conquerors impose their social and administrative systems upon the conquered people, but they are themselves unconsciously infected by the spiritual culture of the latter. Some conquering tribes believe that the vanquished tribe survives in spirit form. In the new religious system the high gods become demons and spirits. As high gods they had received a cult and were represented in the collective consciousness, but in the new system they sink into relative unconsciousness. The Greek magical papyri are full of ancient high gods and goddesses, among them both Hekate and Hermes. Hellenistic syncretism absorbed many gods of the Mediterranean culture. In early Christianity the pagan gods became demons or spirits. The medieval iconography of the Devil, for example, depicts the Greek god Pan, who in ancient times was first a spirit of nature and the god of shepherds and finally became god of the universe. (In Greek *pan* means "all.") Plutarch relates the story of the death of the great Pan, according to which some sailors learn of the event and bring the tale to an island, whereupon a great lamentation ensues. This story marks the end of the archaic worship of nature, an end that resulted from the rise of Christianity. Our modern dilemma deriving from the pollution of nature demonstrates the practical value in the worship of ancient nature spirits, which served to render the superhuman quality of nature conscious to humankind, forming a consciousness that has been lost up to our present time. Today, natural science is searching again for the mysteries of nature, albeit with a rationalistic attitude.

**MORAL DIFFERENTIATION: BELIEF IN A WORLD OF GOOD AND EVIL DEMONS.** In the ancient story of Jacob's fight with the angel at the Jabbok River (*Gn.* 32:24) Yahveh is a deadly but not evil power. In the tale of Job from a later period, Satan ("the adversary") is one of the sons of God and represents the partial separation of an inner opposition generated by God himself. Similar is the history of the *deva/daēva* common to both prehistoric India and Iran. Originally the term was a neutral one referring to the celestial, daytime sky. After further development in India the term *deva* came to signify the high gods. In Iran, however, *daēva* acquired the meaning of "demon" in the evil sense.

Moral differentiation splits the world further into the opposites of night and day, earth and sky, left and right, good and evil. The collective consciousness is always in danger of identifying with one of a pair of opposites, abandoning the second to the demonic powers of the unconscious. Such an attitude gave rise, for example, to the Black Mass. Neglected aspects of the psyche are not simply repressed and forgotten, they become more and more powerful in the unconscious psyche and more disturbing to the conscious personality. A worldview that fails to acknowledge and experience the original unity of the opposites is in danger of an invasion from the neglected or rejected side. Psychologically, every optimistic or exclusively good attitude calls forth a reaction from its opposite. The more one-sided the conscious attitude, the larger grows the demonic counterworld.

**THE ENLIGHTENMENT: DENIAL OF THE EXISTENCE OF DEMONS.** Modern literature on demons is written for the most part from the standpoint of rationalism and attempts to explain demons as superstitious phenomena of a primitive mentality. The psychoanalytic approach developed by Sigmund Freud toward religious phenomena in general shares this attitude. It is a necessary transitional stage in the development of consciousness for man to ask "Who creates the demons?" and to answer "It is I!" In fact, man cannot help assuming responsibility for the products of his own imagination. They have arisen in him, and therefore he is their creator. Thus man identifies with his consciousness and explains all unconscious phenomena as derivative of that consciousness.

But in our time we can observe a certain counterreaction to this one-sided view in the form of irrational reactions: the new religions; the parapsychology enthusiasts; drug-based religion and fascination with science fiction among the youth; the "worship" of the natural wisdom of animals by some modern scientists; and the popularity of modern myths such as J. R. R. Tolkien's *Lord of the Rings*.

**OBJECTIVITY OF THE PSYCHE: *UNUS MUNDUS*.** Modern analytical psychology attributes to demons a reality of their own, recognizing the important role they play in the psychology of man. Because the *Auseinandersetzung* (Ger., "coming to terms") with the world of demons and spirits in the individuation process is so important, Jung specified a method called active imagination in which the figures of the unconscious are regarded as autonomous living entities of the psyche. Using this method it is possible to approach the archaic mentality from a position of conscious responsibility, acknowledging the unconscious and its personifications (demons, spirits, ghosts, fairies, angels, and so on) and seeking to find the appropriate way to respond to them. For these personifications may become conscious to the ego, but they are not created by it. The ego is obligated to take the unconscious realities into consideration. (This process recalls the Latin *relegere*, "*to gather up again.*") Spirits and demons must be allowed to arise as inner figures so that the ego can come to terms with them.

Sometimes one central spirit becomes the leading principle. This figure is called the archetype of the Anthropos, or the Self in human form (the unconscious principle of personality). Often the Anthropos is experienced as an inner guide, as, for example, Poimandres ("shepherd of men"), Agathos Daimōn ("good spirit"), and Hermes-Thoth in antiquity; Mercurius in alchemy; and Khidr in Islam. The *daimōn* of Socrates was a figure or a voice of a similar kind who forbade him certain things. A later variation is the guardian spirit who mediated between the spirit world and man, bringing dreams and foretelling the future.

The contemporary notion of spirits affects our understanding of mental illness as well as the psychic side of physical illness. Lauri Honko has studied the belief in so-called sickness projectiles, and he demonstrates the appearance of this belief in numerous cultures. For example, the German expression for lumbago is *Hexenschuss*, which means literally "the witch's shot."

The projection plays an important role in the transference of complexes from one person to another. Unconscious complexes are always projected onto other persons whom they may harm. Emotions are energy-laden phenomena that also affect other people. Typically, the gods of love (Eros, Cupid, Amor, Kāma) are armed with a bow and arrow, indicating that projections are sent by the divine principle or demon. But Job's plague, too, was caused by the arrows of Yahveh (*Job* 6:4), and the Vedic god Rudra sends death and illness with his arrows (*Ṛgveda* 7.46). A demon can be either a pathological complex or a new, creative impulse; both issue forth in connection with an archetype and embody a value that can destroy or save the individual person.

Further, the reality that analytical psychology attributes to demons provides insight into the parapsychological meaning of ghosts. The autonomy of the complex, together with the concept of synchronicity (the meaningful coincidence of events), provides tools with which we can understand, though not explain, the psychology of apparitions. French and English literature on this topic is extensive and points to a common belief in locally bound spirits, the *genius loci*, often depicted as a snake. In Roman families the genius was also a spirit of fertility. Modern parapsychology takes into account the psychological conditions that give rise to the appearance of apparitions. Beyond any doubt there are some people who are simply more aware of or sensitive to such phenomena; they are often said to possess second sight. Nevertheless, such occurrences are not uncommon for the less sensitive.

There is little doubt of the existence of the phenomena that have been called demons, angels, spirits, ghosts, and so on. But since these are experiences of a psychic nature, they can never be known except by means of such inner images.

## BIBLIOGRAPHY

The most important work for this topic from the standpoint of analytical psychology is Marie-Louise von Franz's *Projection and Re-Collection in Jungian Psychology* (La Salle, Ill., 1980). Recent encyclopedic works mostly treat the topic historically and geographically. I mention here only the more recent and extensive ones. Lutz Röhrich gives a concise survey of demons in legends and fairy tales, including a psychological section, under "Dämon," in *Enzyklopädie des Märchens*, vol. 3 (Berlin, 1979). Material from the standpoint of the history of Christianity is collected in Otto Böcher's article "Dämonen," in *Theologische Realenzyklopädie*, vol. 8 (Berlin, 1981); articles include extensive bibliographies, with mention of Judaism. Even more comprehensive is the article "Geister (Dämonen)," with extensive bibliography, by Carsten Colpe and others in *Reallexikon für Antike und Christentum*, vol. 9 (Stuttgart, 1976). The standard reference for the Bible and Judaism is Werner Foerster's article "Demon," in the *Theological Dictionary of the New Testament* (1935),

translated by Geoffrey W. Bromiley (Grand Rapids, Mich., 1964), which also gives the meaning of the term in folklore. Andres's article "Daimōn," in *Pauly's Real-encyclopädie der classischen Altertumwissenschaft*, supp. 3 (Stuttgart, 1918), is still useful for Greek material. The Church Fathers' standpoint is found in G. W. H. Lampe's *A Patristic Greek Lexicon* (Oxford, 1978), pp. 327–331. The *New Catholic Encyclopedia* (New York, 1967) gives a very short survey, as does Bernhard Kötting's article "Dämon," in *Lexikon für Theologie und Kirche*, vol. 3 (Freiburg, 1959). The articles under "Démon," in the *Dictionnaire de spiritualité, ascétique et mystique: Doctrine et histoire*, vol. 3 (Paris, 1957), give very interesting material not found elsewhere.

The classical survey of ancient authors is Julius Tambornino's *De antiquorum daemonismo*, "Religionsgeschichtliche Versuche und Vorarbeiten," vol. 7 (Giessen, 1909). Another classical work is *The Devils and Evil Spirits of Babylonia*, 2 vols., translated by Reginald C. Thompson, which consists of Babylonian and Assyrian incantations against the demons, ghouls, vampires, hobgoblins, ghosts, and kindred evil spirits that attack humankind (London, 1903–1904). The entry in the *Encyclopaedia of Religion and Ethics*, edited by James Hastings, vol. 4 (Edinburgh, 1911), summarizes the material in an extensive and comprehensive way; the introductory article by Louis H. Gray is the most useful.

No important recent works dealing with the subject in a scientific way exist. An outdated, although still useful, book is *Demonology and Devil-Lore*, 3d ed., rev. & enl., 2 vols. (London, 1889), by Moncure D. Conway. Ilmari Manninen's *Die daemonistischen Krankheiten im finnischen Volksaberglauben* (Helsinki, 1922) and Lauri Honko's *Krankheitsprojektile: Untersuchung über eine urtümliche Krankheitserklärung* (Helsinki, 1959) are high-quality standard collections of material related to this topic.

The iconography of demons and spirits is very enlightening, but unfortunately Herbert Schade's article "Dämonen," in *Lexikon der Christlichen Ikonographie*, vol. 1 (Freiburg, 1968), is too short. One needs to refer to Enrico Castelli's *Il demoniaco nell' arte: Il significato filosofico del demoniaco nell' arte* (Milan, 1952), Heinz Mode's *Fabulous Beasts and Demons* (London, 1975), or Jurgis Baltrusaitis's *Réveils et prodiges: Le gothique fantastique* (Paris, 1960). A classical work with pictures is Edward Langton's *Essentials of Demonology: A Study of Jewish and Christian Doctrine, Its Origin and Development* (London, 1949).

Important for our topic is the profound work of Dieter Harmening, *Superstitio: Ueberlieferungs- und theoriegeschichtliche Untersuchungen zur Kirchlich- theologischen Aberglaubensliteratur des Mittelalters* (Berlin, 1979), as well as Wilhelm Dupré's *Religion in Primitive Cultures: A Study in Ethnophilosophy*, "*Religion and Reason,*" vol. 9 (Paris, 1975). An exhaustive collection of material and history of ideas can be found in Karl R. H. Frick's *Die Erleuchteten* (Graz, 1973), *Licht und Finsternis* (Graz, 1975), and *Das Reich Satans* (Graz, 1982).

## DENOMINATIONALISM.

Denominationalism is one of the least understood aspects of Protestantism. In both popular usage and dictionary definition, *denominationalism* is commonly equated with *sectarianism.* This is a strange reversal in meaning, for in origin and intention the concept of denominationalism was the opposite of sectarianism.

The fact that few Protestants take offense when their church is called a denomination is evidence of a lingering awareness that the term has a positive connotation quite different from the negative implication of *sectarianism.* A sect by definition is exclusive. It claims the authority of Christ for itself alone, whereas the word *denomination* was adopted as a neutral and nonjudgmental term that implied that the group referred to was but one member, denominated by a particular name, of a larger group to which other Protestant denominations belonged. It was an inclusive term conveying the notion of mutual respect and recognition. Albert Barnes, minister of the First Presbyterian Church of Philadelphia (1830–1867), summarized the meaning of denominationalism when he said that the spirit it fostered

> is opposed to all bigotry and uncharitableness; to all attempts to "unchurch" others; to teaching that they worship in conventicles, that they are dissenters, or that they are left to the uncovenanted mercies of God. . . . The Church of Christ is not under the Episcopal form, or the Baptist, the Methodist, the Presbyterian, or the Congregational form exclusively; all are, to all intents and purposes, to be recognized as parts of the one holy catholic Church.

Denominationalism, in origin, was related to religious toleration and religious freedom. The latter were political and constitutional responses to religious diversity and were designed to enable a religiously diverse people to live together in peace. Denominationalism, on the other hand, was a response to problems created by the division of adherents of a single religious tradition into separate and competing ecclesiastical bodies. They shared a common faith but were divided by issues of church government and worship. Denominationalism took toleration and, later, religious freedom for granted, accepted arguments put forward in their defense, and then moved beyond the goal of peace among competing groups to a quest for unity in the midst of the acknowledged differences of those who shared a common faith. To this end, both an ideology and a system of relationships were devised that would permit members of the several Protestant denominations to acknowledge the unity that transcended their divisions and thus encourage them to maintain friendly coexistence and to engage in concerted action to promote shared concerns and forward common ends. It is interesting that a similar ideology and rationale for mutual respect and cooperative activity, utilizing the equally neutral term *sector* for *denomination*, was adopted by Jacob Neusner, noted professor of Judaic studies at Brown University, to explicate the unity that exists within a divided Judaism. (See his *Sectors of American Judaism*, 1975, pp. 259–277.)

*Denomination* as a nonjudgmental term in Protestantism was brought into vogue in the eighteenth century by leaders of the Evangelical Revival in Great Britain and of the parallel Great Awakening in North America. John Wesley was representative of British leadership when he declared: "I . . . refuse to be distinguished from other men by any but the common principles of Christianity. . . . I renounce and detest all other marks of distinction. But from real Christians, of whatever *denomination*, I earnestly desire not to be distinguished at all. . . . Dost thou love and fear God? It is enough! I give thee the right hand of fellowship." Gilbert Tennant, based in New Jersey but itinerating throughout the colonies, was even more precise in defining what the word implied: "All societies who profess Christianity and retain the fundamental principles thereof, notwithstanding their different denominations and diversity of sentiments in smaller things, are in reality but one Church of Christ, but several branches (more or less pure in minuter points) of one visible kingdom of the Messiah."

Although the revivalists made current coin of the term, it had been used as early as 1688 by Samuel Willard, minister of Old South Church in Boston, in a lecture later published as part of his *Compleat Body of Divinity*, in which he commented: "Through our knowing *but in part*, it is come to pass that professors of Christianity have been of diverse opinions in many things and their difference hath occasioned several *denominations*, but while they agree in the *foundation* they may be saved." Moreover, the denominational concept was implicit in the participation of Increase and Cotton Mather in 1717 in the ordination of a Baptist minister. And it was equally implicit at about the same time in the acceptance by Harvard College of funds from Thomas Hollis, a Baptist, for the endowment of a professorship of divinity and for a scholarship fund that would be available to Baptist as well as to other ministerial students. Such incipient manifestations of a irenic denominational temper were precipitated by policies of James II and then by the perceived consequences of the Glorious Revolution of 1688 and the Act of Toleration of 1689. Still, the creative moment in forging the concept of denominationalism antedated the crisis of the years following 1688–1689 by almost half a century.

**SEVENTEENTH-CENTURY ORIGIN.** Usually a movement or a theology is born before it is named. This was true of denominationalism. The denominational understanding of the church had been hammered out by non-Separatist Puritan preachers prior to and during the sessions of the Westminster Assembly of Divines, a body of clergymen summoned in 1643 during the English Civil War to advise the "Long Parliament" in the shaping of a religious settlement. The problem that stymied the Parliament and the Westminster Assembly was the splintering and fragmenting of a triumphant Puritanism. Puritans of several hues had united to bring down rule by "lordly prelates" in the church, but, having done this, they were unable to agree on an alternate policy. A solution to this problem was proposed by non-Separatist Independents (Anglicans of a congregational persuasion) both within and outside the assembly. Those who were members of the Westminster Assembly were called the Dissenting Brethren.

The non-Separatist Independents were indebted to the Protestant reformers of the sixteenth century for their basic insights. They recalled repeated cautions against sanctifying churchly forms. The true church, the reformers had insisted, is not an institution, although it finds institutional expression in the world. Calvin was more confident than Luther that external ecclesiastical arrangements could be deduced from the Bible; still, he had a word of caution for those "who are not satisfied unless the church can always be pointed out with the finger." This, he said in the preface to the *Institutes*, cannot be done in any final sense. The whole question of the boundaries of the church must be left to God, "since he alone 'knoweth them that are his.'" The reformers acted upon this insight only to a limited degree, but they did recognize as true churches, more or less adequate in external form, those possessing an essentially common faith, whether they were Lutheran churches as in various political units of Germany and Scandinavia, Reformed churches as in other political divisions of Europe, or an Anglican church as in England. The new element introduced in mid-seventeenth-century England was the application of this understanding to a situation where divisions were within a geographical area rather than between geographical areas.

As the fragmentation of Puritanism increased after 1640, the moderates associated with the Dissenting Brethren became increasingly aware of "the danger of rending and dividing the godly Protestant party" at its moment of triumph when there was "an absolute necessity of their nearest union." Not only did divisions threaten the achievement of reforms desired by all the godly, they constituted a denial of the spirit of Christianity itself. "We are wrangling, devising, plotting, working against one another," said Jeremiah Burroughes, their most eloquent spokesman in the Assembly, whereas "love and unity are Christ's badge." It was an unhappy fact that "we are divided notwithstanding we are all convinced of the evil of our divisions." The problem was to find a way to peace and unity when Christians did not all agree. "If we stay for peace and love till we come to the unity of faith in all things," Burroughes confessed, "we must stay for ought I know till we come to another world."

With this dilemma in mind, seventeenth-century Independents elaborated a series of principles as a basis on which Christians could be united notwithstanding their differences.

First, so long as people live "in this muddy world" and "deceitfulness" lurks within the human heart, it is inevitable that there shall be differences of opinion even among the godly.

Second, even when differing convictions do not involve fundamentals, they cannot be lightly regarded. Those who fear God must first be persuaded themselves before they can accept the judgment of others.

Third, differences must be approached with humility and a degree of tentativeness. No one put this more vividly than Thomas Hooker of Connecticut, as his contribution to the ongoing discussion in England. "The sum is, we doubt not what we practice, but it's beyond all doubt that all men are liars and we are in the number of those poor feeble men; either we do or may err, though we do not know it; what we have learned we do profess and yet profess still to live that we may learn."

Fourth, as a corollary to human fallibility, Burroughes contended that "God hath a hand in these divisions to bring forth further light. Sparks are beaten out by the flints striking together." How can people know that they are right, asked another, until they "by discussing, praying, reading, meditating, find that out?"

Fifth, "though our differences are sad enough," they do not make us of "different religions." While "godly people are divided in their opinions and ways . . . they are united in Christ." Nor does the mere fact of separation constitute schism. It is schismatic only when it is not "loving and peaceable," only when it is "uncharitable, unjust, rash, violent."

Burroughes gave several illustrations of what he had in mind. Both Scots and refugees from abroad, he noted, had been permitted to have their own churches in England without being regarded as schismatics. This also had been true of Independents when they were in exile on the continent. Furthermore, persons of sufficient means in England had the liberty of "choosing pastors" by "choosing houses," moving from a parish where in good conscience they could not enjoy the means of grace to another parish where they could. When they did so, no cry of schism was raised. Should the same liberty be denied the less affluent who could not afford to move their dwelling from one side of the street to the other? Were they to be condemned as schismatics when their richer brethren were not?

What Burroughes and others were pleading for was a recognition that, although Christians may walk in different "ways" of outward obedience, they are still united in Christ and may work together for common ends of "godliness." They did, in fact, unite in defense of "the good old cause" of religious toleration. Many (those of Episcopal persuasion as well as Presbyterians, Congregationalists, and Baptists) did participate in Oliver Cromwell's "voluntary national establishment" during the 1650s. Later there were the "Heads of Agreement" of 1690, the joint petition to Queen Anne in 1702 from those who came to be called the "three old denominations," and the establishment in 1732 of a formal representative committee, known as "the Dissenting Deputies," to protect and expand the rights of the dissenting churches and their members.

**DENOMINATIONALISM IN THE UNITED STATES.** The denominational concept of the church was accepted in New England from the beginning. "We do not go to New England as Separatists from the Church of England," said Francis Higginson, "though we cannot but separate from the corruptions of it." As did their brethren at home, they adopted the neutral term *way* when explaining points of distinction from other orthodox Protestants (e.g., John Cotton, *The Way of the New England Churches Cleared*, 1648). Moreover, the elders of the Massachusetts Bay Colony expressed the same willingness to learn from others when responding to an inquiry concerning their practice. "We see as much cause to suspect the integrity of our own hearts as yours; and so much the more as being more privy to the deceitfulness of our own hearts than to yours . . . which causeth us with great reverence to accept and receive what further light God may be pleased to impart unto us by you. But as we have believed, so have we hitherto practiced." They were upset, however, when dissidents challenged their attempt to fashion a new Zion in the American wilderness, since there was ample room for dissidents to establish their own communities. Banishment was the response, but as John Cotton explained, perhaps somewhat blandly, "Banishment in this country is not counted as much a confinement as an enlargement," pointing out that "the jurisdiction (whence a man is banished) is but small, and the country round about it large and fruitful; where a man may make his choice of variety of more pleasant and profitable seats than he leaveth behind him."

Although New Englanders did not always match profession with practice, their understanding of the church was well adapted to the situation in other colonies where religious diversity prevailed and no single group occupied a dominant position. Even North Carolina could be regarded as a southern Pennsylvania in its ethnic composition and religious complexion, and the valley of Virginia and late-blooming Georgia were not greatly different.

Not only was the denominational theory of the church popularized by leaders of the Great Awakening, since 1690 it had been reinforced by the growing influence of John Locke, who had adopted and set forth, in his *Letter Concerning Toleration*, a view of the churches that he derived from his non-Separatist Puritan antecedents. (See George L. Hunt, *Calvinism and the Political Order*, 1965, pp. 111–113.)

By their acceptance of religious freedom following the American Revolution, most Protestant churches (with their general assemblies, general conventions, general conferences, general councils, or general associations) were committed to voluntarism and became, from a legal point of view, voluntary societies. They were under no legal restraint in dealing with their own internal affairs. Nor were most of them the least inhibited in following the practice developed during the years of the Great Awakening in joining together in efforts to promote concerts of prayer and religious revivals. In addition, in the early decades of the nineteenth century, out of their concern for the whole of society, a host of additional voluntary societies, both denominational and interdenominational, were founded to promote missionary, educational, benevolent, and reform activities. These societies became so ubiquitous that Orestes Brownson complained that "matters have come to such a pass that a peaceable man can hardly venture to eat or drink, to go to bed or get up, to correct his children or kiss his wife" without the guidance and sanction of some society.

This pattern of institutional activity persisted into the twentieth century, with new societies being formed as new needs were perceived to supplement the work of the older societies. Such newer societies were as varied as the Student Volunteer Movement, the League for Industrial Democracy, the Fellowship of Reconciliation, and the Southern Christian Leadership Conference. In addition, Protestant churches became linked by such official agencies as the Foreign Mission Conference of North America.

**COUNTERVAILING ATTITUDES IN THE UNITED STATES.** Not everyone was enamored with denominationalism as an expression of Christian unity. There were manifestations of "high church" sentiment by some groups (e.g., Landmark Baptists) who insisted that they alone represented the true church and refused to recognize or cooperate with those outside their ranks. Others (e.g., Old School Presbyterians) established official boards firmly under church control to carry on work hitherto delegated to voluntary societies. Still others, such as Thomas and Alexander Campbell, sought to fashion a unified movement in which denominational distinctions would disappear. They preempted the name Christian for themselves and called upon others to reject party names and nonbiblical creeds and practices that were a source of division and to unite instead on the basis of biblical names and practices alone. Typical of their point of view was the slogan "Where the Scriptures speak, we speak; and where the Scriptures are silent, we are silent." Although the adherents they gathered were regarded as a denomination by others, they repudiated the name and spoke of themselves as a brotherhood.

A major shift in attitude toward denominationalism began in the late nineteenth century. It grew out of a growing conviction among a few key leaders that unity should find expression in a comprehensive church sufficiently broad in outlook and tolerant in spirit to minimize differences of opinion. Phillips Brooks, pastor of Trinity Church in Boston (1869–1891) and briefly Episcopal bishop of Massachusetts, was one who helped cultivate the temper that led in this direction when he declared that humanity itself, not any organized body of believers, is the instrument through which God effects his purposes. This is the true church where "the great human impulses" lead people to do "Christian work in the spirit of Christ" even when they "studiously" disown him. Broad churchmanship, it was sometimes called, or catholic Christianity.

The roots of this catholic Christianity can also be traced back to seventeenth-century England, to the "latitudinarians" of the decades following 1660. Two streams converged to inform the views of the "men of latitude." One was derived from the Cambridge Platonists, non-Separatist Independents at the university, who, unlike fellow Independents serving as pastors, faced the problem of finding a basis for unity within an institution (the university) rather than between institutions (the churches). After 1660 they joined forces with those influenced by the rationalism of the Enlightenment to fashion a defense of diversity (latitude) within a comprehensive state-established church. Thus they stood in opposition to those who insisted upon a narrowly defined Caroline Christianity (i.e., during the reign of Charles II) as the only true faith of the Church of England. The latitudinarian apologetic initially had little relevance to a situation where religious diversity was widespread and there was no dominant state church. Additional changes in the climate of opinion were necessary before it could become pertinent.

Another impulse leading to unhappiness with the denominational concept was the belief that, from an organizational and administrative point of view, the denominational system was inefficient and financially improvident. John D. Rockefeller Jr., a Baptist who was deeply devout and devoted to the mission enterprise and whose social concerns had been awakened by men who surrounded his father, is a prime illustration of this second impulse. A careful steward, Rockefeller sought efficiency and economy through consolidation of missionary endeavor and other aspects of Christian activity. He used his influence and his money to make Christian outreach cost-effective by initiating such breathtaking schemes to redeem a global society as the Interchurch World Movement of 1919–1920 and the Laymen's Foreign Mission Inquiry of 1930–1932. In the end he ceased contributing to denominational projects, restricting his stewardship to consolidated efforts.

A third factor bringing denominationalism into disrepute was a by-product of German sociological studies, notably those of Ernst Troeltsch (1865–1923). The key concept was a typology that drew a distinction between "church" and "sect" applicable to countries with a predominant state church. A "denomination," however, was difficult to fit into this scheme, for it was neither "church" nor "sect" in terms of Troeltsch's analysis. Still, his views were intriguing. The most influential attempt to adapt Troeltsch's typology to the American scene was H. Richard Niebuhr's *The Social Sources of Denominationalism* (1929), which in a curious way idealized European state churches because they were institutions into which everyone was born, rich and poor alike.

A scathing indictment of denominationalism preceded Niebuhr's analysis of "the ethical failure of a divided church" and his descriptions of the churches of the disinherited, the middle class, and those produced by nationalism, sectionalism, and the color line. "Denominationalism in the Christian church," he declared,

> is an unacknowledged hypocrisy. It represents the accommodation of Christianity to the caste-system of human society. . . . The division of the churches closely follows the division of men into the castes of national, racial, and economic groups. It draws the color line in the church of God; it fosters the misunderstandings, the self-exaltations, the hatreds of jingoistic nationalism by continuing in the body of Christ the spurious differences of provincial loyalties; it sets the rich and poor apart at the table of the Lord, where the fortunate may enjoy the bounty they have provided while the others feed upon the crusts their poverty affords.

Niebuhr acknowledged the insights he had derived from Troeltsch's typology. "Churches" are natural social groups "akin to the family or the nation" into which people of all classes are born, whereas "sects" are "voluntary associations." Sects compromise the universality of the Christian faith by their surrender to various caste systems. As generations pass, sects become denominations that are inclusive in the sense that people are born into them, with membership being determined by custom and family tradition. But as denominations, these former sects perpetuate in the body of Christ the caste systems of society. The volume closed with a summons to organic unity. Denominations were challenged to transcend their social conditioning and coalesce into a comprehensive church that would express the brotherhood of the Christian gospel.

By 1937 Niebuhr had second thoughts and published *The Kingdom of God in America* as a partial corrective to his earlier volume. He was still aware of the ways in which ethnicity, race, sectionalism, and economic circumstance had led to the formation of separate Christian groups. But this was not the whole story. He had not taken into account that denominationalism in its initial manifestation was the product of a new religious vitality with a dynamic sense of mission that placed primary emphasis on inner Christian experience. While differences of outward form and structure were not deemed unimportant and although there were competing claims as to their relative adequacy to express and advance the claims of Christ, stress was upon changed lives and a shared mission that encouraged cooperative activities and a not unfriendly coexistence. Slowly, however, the differing patterns took on greater importance as they became institutionalized. Here the problem was not compromise with caste systems but the process by which institutions over a long period of time begin to regard their own perpetuation as an end in itself. The earlier Puritan and the later evangelical sense of mission that provided the denominations with their reason for existence and bound them together in common causes began to fade. Becoming self-satisfied and self-congratulatory, they made peace with the world. This acculturation won from Niebuhr a stinging rebuke: "A God without wrath brought men without sin into a kingdom without judgment through the ministrations of a Christ without a cross." Niebuhr's summons was a call for renewal, for the recovery of a sense of mission that must precede and accompany any movement toward unity. Only a renewal that translated the love of God into love of brother would be powerful enough to overcome the walls of partition—institutional, ethnic, racial, sectional, economic—that fragmented the body of Christ.

The strictures of *The Kingdom of God in America* did little to mitigate the negative connotation evoked by the term *denominationalism* as a result of its being equated with sectarianism. Niebuhr's earlier *Social Sources of Denominationalism* continued for more than half a century to be his most influential book. Many Protestants seemed oblivious to his second thoughts. Instead of responding to the summons for renewal as a prerequisite for unity, many had become converts to a twentieth-century version of "latitudinarianism" or "catholic Christianity" that sought a united church that would be ample enough to accommodate the views and opinions of everyone. Instead of seeking renewal as a first step, such leaders opted for the more direct approach of tinkering with institutional arrangements to increase the scope of comprehension, a procedure that did not differ in kind from the preoccupation with institutional concerns that Niebuhr regarded as the nub of the problem.

Since the common core of Protestantism had become so badly eroded, it is possible that *Protestant denominationalism* may no longer be a viable term to indicate anything more than Protestant diversity. Perhaps Sidney Mead, author of numerous perceptive and incisive essays dealing with the shape of Protestantism in America, is right in using the words *church*, *denomination*, and *sect* as synonyms. There is an overabundance of Protestant denominations in this sense, but only minority segments are linked by a common faith and few of these segments possess a theological concept of denominationalism to express their unity and undergird their cooperative activities.

Recognizing this situation, and conceding that the use of the word *denomination* is likely to persist, Martin E. Marty of the University of Chicago in 1982 made a sensible suggestion. As the Bible justifies the use of the word *church* only for a local congregation or the entire church, the word *denomination* can serve as a useful "in-between" term to designate existing ecclesiastical groupings that have provided "family tone" and clusters of memories and symbols that still can be invoked to sustain Christians in their daily lives. "Denominations," Marty noted, "are an offense only when they undercut the local church or the whole church," but when Christians are faithful to their "particular heritage," without condemning others, they enrich the whole church. Such an observation is not far removed from the spirit of those who initially fashioned the denominational concept of the church.

### BIBLIOGRAPHY

While there are many histories of individual denominations, numerous handbooks or guides with accounts of the different religious bodies (e.g., Arthur C. Piepkorn's *Profiles in Belief,* 7 vols., New York, 1977–), and much discussion of the churches as voluntary associations, bureaucratic structures, and ethnic groupings, surprisingly little attention has been given to the theory and concept of denominationalism itself.

The most important discussions of denominationalism, from a variety of perspectives, have been assembled by Russell E. Richey in *Denominationalism* (Nashville, 1977). Richey includes a chapter from H. Richard Niebuhr's *The Kingdom of God in America* (Chicago and New York, 1937) and calls attention to the importance of Niebuhr's *Social Sources of Denominationalism* (Hamden, Conn., 1929). He includes Sidney E. Mead's essay "Denominationalism: The Shape of Protestantism in America," reprinted from Mead's *The Lively Experiment* (New York, 1963), which contains other pertinent material. Other essays included are by E. Franklin Frazier, Fred J. Hood, Winthrop S. Hudson, Martin E. Marty, Elwyn A. Smith, and Timothy L. Smith. Richey notes that the understanding of Protestant denominationalism presented in this entry represents a fairly general consensus, having been adopted by Sydney E. Ahlstrom in *A Religious History of the American People* (New Haven, Conn., 1972), pp. 96, 381–382; Robert T. Handy in *A History of the Churches in the United States and Canada* (New York, 1976), p. 112; Winthrop S. Hudson in *Religion in America*, 3d ed. (New York, 1981), pp. 81–82; Martin E. Marty in *Righteous Empire: The Protestant Experience in America* (New York, 1970), p. 69; and *The Westminster Dictionary of Church History* (Philadelphia, 1971), "Denominationalism." For the most theologically informed explication of denominationalism, see Jacob Neusner's "Conservative Judaism in a Divided Community," in *Sectors of American Judaism* (New York, 1975), vol. 2 of his *Understanding American Judaism.*

WINTHROP S. HUDSON (1987)
***Revised Bibliography***

**DEPROGRAMMING.** The term *deprogramming* has been used since the 1970s to refer to a range of behaviors, all of which are aimed at convincing members of so-called new religious movements (NRMs) to leave such groups and return to more mainstream social and religious lifestyles. Such groups might be "cultic," that is, communal and with high-demand authoritarian leadership, or they may simply hold unconventional beliefs and rituals. Definitions of *cult* have been extremely variable and inclusive, and the term has been used to refer to groups ranging from Old Catholics, Mormons, and Jehovah's Witnesses to members of the Unification Church, the Hare Krishnas, the Seventh-day Adventist–derived Branch Davidians, and even Pentecostals.

Deprogramming is regarded by its advocates as a "liberating" process that frees NRM members from a presumed hypnotic state of involuntary servitude or "mind control" that has been previously "programmed" into them. Deprogramming (as a term and practice) began in 1971 as the ad hoc vigilante response of one man, Theodore (Ted) Roosevelt Patrick Jr., to the intense missionizing activities of the Children of God, a fundamentalist Christian sect that was later renamed The Family. Patrick was a civil rights activist and Special Representative for Community Relations under California governor Ronald Reagan. According to Patrick's autobiographical *Let Our Children Go!* (1976), his teenage son and nephew met several missionaries of the Children of God and returned home noticeably and "mysteriously" disoriented. Patrick attended a meeting of the group and, by his account, found himself powerfully drawn to surrender his rationality and free will. Patrick claimed that he was contacted within a single week by fifty-two families who complained that their children had been similarly affected by the Children of God. Patrick developed a rough explanation of the "programming" (or conditioning) performed by that group. At the time, he had no knowledge of the post–Korean War coercive influence/brainwashing literature developed by U.S. Central Intelligence Agency (CIA) propagandists and psychologists.

**DEPROGRAMMING INTERVENTION.** The style of intervention that Patrick developed to "rescue" young persons from NRMs included sudden forcible abduction of a NRM member, detainment for days or longer in secured locations, the demeaning of the NRM, constant argumentation, and a barrage of verbal assaults on the integrity, sincerity, values, and activities of the religion and its leaders, all frequently interspersed with biblically based references. Patrick and other deprogrammers never claimed to be proselytizing their own personal credos—a claim that is contradicted by the sworn depositions and testimonies of some deprogrammees—but rather to simply "free minds" so that NRM members could once again think for themselves.

Noncoercive deprogramming attempts also occurred, as when a parent or clergyperson—by telephone, mail, or face-to-face—tried to create doubts or second thoughts in the mind of a young "cult" member who, in the absence of more than moral or emotional persuasion (i.e., without forcible restraint or violence), decided to leave the new faith. However, the coercive form of deprogramming caught public attention and became the object of opposition by such groups as the American Civil Liberties Union.

By the fall of 1971, Patrick had resigned his state position to devote himself full-time to mostly coercive deprogrammings. By early 1972 he was actively pursuing such interventions nationwide against a variety of NRMs, and he inspired a cottage industry of imitators, some of whom had been his apprentices. These deprogrammers represented a variety of backgrounds, from private investigators, insurance salesmen, and used-car salesmen to attorneys, degreed psychologists, and convicted felons.

The heyday of deprogramming occurred at the same time that some highly visible new religions were in apparent expansion. One source of deprogrammers' clientele was a subculture of relatives of previous NRM members who referred subjects to Patrick and other deprogrammers. Other sources included several anticult or counter-NRM organizations, such as the Citizens Freedom Foundation and its successor, the Cult Awareness Network (CAN).

There are few reliable estimates of how many deprogrammings took place. In the late 1980s sociologist David G. Bromley used a triangulation of media reports and internal organizational documents to track down almost four hundred attempted deprogrammings of members of the Unification Church. Bromley found that most of the successful deprogrammings were performed on persons either newly affiliating with the church or just beginning the process of disaffiliating, which suggests that the deprogrammers' faith in the efficacy of their techniques was overblown. Nevertheless, Bromley concluded that "the practice of forcibly separating individuals from religious groups for the purpose of inducing them to renounce their memberships is unprecedented in American religious history" (1988, p. 203).

**DEPROGRAMMINGS IN DECLINE.** By the late 1980s deprogrammers were seeking to shed Patrick's legacy of kidnapping and forcible confinement of deprogrammees, and they tried to upgrade their image to that of mental health therapists, or "exit counselors." Meeting at annual CAN conferences over a period of several years, they struggled to craft a code of ethics and to work out details, including a sliding scale of counseling fees that differentiated between academically trained and nondegreed practitioners. However, the resulting code of ethics focused mainly on the abuses of some deprogrammers who took drugs during deprogrammings and had sex with their captive clients, indicative of the unregulated "profession" that deprogramming had become.

Deprogrammings became all but extinct by the late 1990s for several reasons. First, there were some spectacularly bungled attempts, as when deprogrammers abducted the wrong person or allowed targeted persons to escape. In addition, the deprogrammings frequently did not work; it was relatively easy for deprogrammees to pretend to be deconverted ex-members ready to rejoin mainstream society, and then, when the counseling was supposedly finished, to bolt back to the NRM group. Few families could afford repeated deprogramming attempts since the practitioners began to charge upwards of $30,000.

Second, there were mounting legal costs for unsuccessful deprogrammers in criminal and civil proceedings. Several high-profile deprogrammers, including Patrick and private investigator Galen Kelly, served time in prison as judges became more aware of the religious liberties implications of deprogramming, as well as its status as an unrecognized, ersatz therapy. Coercive deprogramming and its questionable brainwashing assumptions were also aggressively criticized by civil liberties advocates, behavioral science scholars, and NRM spokespersons. Such criticism eventually tainted anticult "rescue" heroics with an odious reputation.

With the collapse of the CAN in 1996 due to bankruptcy as a result of civil suits brought against it (mostly by members of the Church of Scientology), deprogrammers, who now called themselves "thought reform" counselors or consultants, lacked a national referral conduit and either had to establish internet websites or gain footholds in local church community networks. However, the single legal case that finally brought an end to the CAN was *Scott v. Ross* (1995), a civil suit brought by Jason Scott, a United Pentecostal adult whose mother hired an "exit counselor" named Rick Ross to deprogram her three sons from a church of which she disapproved. After Scott's two brothers were successfully deprogrammed, Scott was violently abducted, physically abused, and forcibly detained at a remote Washington State location for almost a week.

The jury was clear in its decision to award damages to Scott ($875,000 in compensatory damages, as well as punitive damages in the amount of $1,000,000; against CAN; $2,500,000 against Rick Ross; and $25,000 each against Ross's two accomplices). The CAN's primary activity in this and other operations was to provide the public and the media with false or inflammatory opinion in the guise of "information" about unconventional religions. The jury's decision, under the definitions provided in Washington law, was that CAN was an organized hate campaign. In a curt note to the defendants, who appealed the verdict, U.S. district court judge John C. Coughenour concluded:

> Finally, the court notes each of the defendants' seeming incapability of appreciating the maliciousness of their conduct towards Mr. Scott. Rather, throughout the entire course of this litigation, they have attempted to portray themselves as victims of Mr. Scott's counsel's alleged agenda. Thus, the large award given by the jury against both CAN and Mr. Ross seems reasonably necessary to enforce the jury's determination on the oppressiveness of the defendants' actions and deter similar conduct in the future (*Scott v. Ross*, 1995).

The final death knell for deprogramming was shrinking public and official concern over many NRMs, some of which (such as the Unification Church) accommodated to the larger society and became, therefore, less visible, while others simply disappeared. In a time of war and fear of foreign terrorism, which characterized most of the 1990s and the early twenty-first century, NRMs in North America were not a major source of disquiet, and the market for interventions dramatically declined.

## DERVISH SEE DARWĪSH

## DESCARTES, RENÉ

(1596–1650), French philosopher. Descartes is held to be the father of modern philosophy and chief architect of the modern approach to the relationship between science and religion. The scholastic tradition, already ably criticized by Descartes's time, was in effect obviated by a new, universal metaphysical construction based on the conceptual apparatus of Descartes. The entire development of European philosophy, in all its diverse tendencies, has been dependent, directly or indirectly, on the Cartesian legacy. If it is true, as Whitehead said, that European philosophy consists of footnotes to Plato, modern European philosophy, in the same sense, consists of footnotes to Descartes.

Born to a noble Roman Catholic family, Descartes was educated in the physics and metaphysics of an Aristotelian and Thomist tradition, and in medicine and law. He joined the Dutch army, and, while in the Netherlands, became interested in mathematics and the new physics. Having traveled in various countries, he returned to France, where he outlined the first version of a new method of thinking based on mathematics *(Rules for the Direction of the Mind)*, but he did not complete or publish it. After settling in the Netherlands, he maintained contact with scholars by letter; Marin Mersenne was his main correspondent. He passed the last year of his life in Sweden at the court of Queen Christina.

Descartes's aim was to use mathematics as a model for developing a fully unified form of human knowledge. He applied this method in his *Treatise on the World*. The trial of Galileo and condemnation of Galileo's *Dialogues* convinced Descartes not to print his own work, which clearly confirmed the heliocentric theory. In 1637 he published several parts of it with a methodological introduction, called *The Discourse on Method*, which was to become one of the greatest texts of modern thought. In 1641 he published his other major work, *Meditations on First Philosophy*, which had previously been sent to a number of scholars, among them Gassendi, Hobbes, and Arnauld; their objections and Descartes's replies were subsequently published with the main text. *The Principles of Philosophy* appeared in 1644 and *The Passions of the Soul* in 1649. Some other works and his voluminous correspondence were published posthumously.

The *Discourse* indicates that for Descartes philosophy was a methodological and conceptual basis for the sciences, to make them useful in the domination of nature. Although the metaphysical problems he discussed in his *Meditations* are not subordinated to this goal, it is clear that Descartes was interested only in matters that could be solved by rational means and that his mental attitude was essentially antihistorical.

Cartesian method demands that we accept as true only what is presented "clearly and distinctly" to our mind, leaving no room for doubt. We should suspend our judgment in all matters where the slightest doubt is possible, including all the truths of common sense, in order to find something that resists all doubts. Sense-perception does not provide us with any indubitable knowledge, since we cannot be a priori certain that we are not dreaming or that we are not being deceived by a malicious demon. But my very act of doubting, however far extended, and therefore the fact that I am thinking, cannot itself be doubted. And thus I find at least this one certainty in which I cannot be deceived: I think, and I, the thinker, must exist; no demon could induce me to err on this point. This reasoning, summarized in the famous formula "Cogito ergo sum," can be admitted as the basis of knowledge.

The cogito, accepted as a kind of epistemological absolute, is in Descartes's work an implicit challenge to the authority of tradition and an appeal to look for truth only in the reason of a thinking individual. And it implies that the only object that is directly and indubitably accessible to one's mind is its own activity; wherever else we start, our beliefs will be exposed to doubt.

While I grasp my existence as identical with the awareness of existence, I observe, according to Descartes, that nothing belongs necessarily to my nature except the fact that I think; therefore I may describe myself as a thinking thing, or thinking substance, or immaterial soul. This transition from "I think" to "I am a thinking substance" was strongly criticized by Descartes's contemporaries and later. It gave rise to the question, much debated in the twentieth century, whether or not the "self" or "I" can be described at all in "objective" categories.

Our mind, according to Descartes, has a natural light whereby it is capable of acquiring knowledge on most important issues without relying on sense-perception. We have in our mind a natural idea of God, or a perfect being. Since our mind clearly perceives that it is not perfect itself (of which the fact of doubting is evidence, if indeed evidence is needed), it could not have fabricated this idea, as a more perfect thing cannot be produced by a less perfect; consequently the very presence of this idea is a proof of the actual existence of the perfect being. This psychological argument for God's existence, like the ontological argument in traditional version, which Descartes accepts as well, implies nothing about God's presence and signs in the world. God's first function, in Descartes's construction, is to assure the reliability of human knowledge: being perfect, God cannot deceive us, therefore we can rely both on our commonsense belief in the reality of the material world and on our intellectual intuition. (Many critics pointed out the circularity in this reasoning: acts of intuition are necessary to acquire the certainty of the existence of God, who subsequently appears as a guarantor of the infallibility of those very acts.) We can thus affirm the reality of the material world.

Descartes conceived the material world, or "extension," in strictly mechanistic terms. All processes are explained by the laws of mechanics; living organisms behave according to the same principles that govern artificial automata; there is no specific realm of life. To be sure, human beings are endowed with an immaterial soul, which is the seat of all sensations; animals, having no soul, are no more than mechanisms, and their reactions are just mechanical movements. In human beings, organic (that is, mechanical) processes, should be distinguished from psychological events in the soul. The human organism does not differ from other mechanisms; its death is a physical phenomenon, whereas the separation of the soul is not the cause but the effect of death. The two substances—soul and body—that make up the human being cannot affect each other; therefore the question of how we can realize, in perception, the mechanical impacts of other things on our bodies and cause movements of our body by the sheer act of will becomes difficult to solve; and Descartes's followers, when trying to explain the unity of soul and body and their mutual influence, naturally tended to materialist or occasionalist explanations, none of which conformed to the master's doctrine, which implied both that the soul is absolutely free and capable of dominating the affects, and that the affects are passive states caused by the movement of blood.

Descartes's philosophy almost instantaneously produced new lines of division in European intellectual life. Though attacked, mainly for its rationalist rigor, by both Protestants (the school of Voetius) and Catholics (all Descartes's works were put on the Index of Prohibited Books in 1663), its impact was soon to be felt not only among philosophers, scientists, and physicians, but among theologians as well. In the Netherlands, Coccejus's school tried to apply Descartes's methods in theological investigations; in France, Malebranche and other occasionalists attempted a Catholic assimilation of a somewhat modified Cartesianism. In the Jansenist milieu the influence of Descartes was very strong. By the end of the seventeenth century few orthodox Cartesians remained, but the impact of the doctrine was felt throughout the early French Enlightenment; its general rationalist and determinist approach laid the foundation of eighteenth-century materialism, while its skeptical side and the cogito were crucially important in the rise of modern idealism, starting with Berkeley.

Although there are no reasons to doubt that Descartes himself believed in God and in the immortality of the soul, his philosophy made God absent in the world and thus useless in interpreting it. Descartes was not, strictly speaking, a deist, insofar as, according to him, the force needed to sustain the universe in existence is the same as that needed to create it; yet he contributed decisively to the deist and atheist movements of the subsequent centuries. He was the modern founder of totally secularized thinking. Outstanding twentieth-century Thomists (Gilson, Maritain) saw in Descartes the main author of what they believed to be the aberration of modern intellectual life, of its individualist, idealist, and rationalist tendencies. And the problem of the transition from the cogito to the world and vice versa has remained, thanks to Descartes, one of the crucial issues in modern phenomenology and existential philosophy.

LESZEK KOLAKOWSKI (1987)

**DESCENT INTO THE UNDERWORLD.** Narratives the world over tell of descents into the underworld. Many traditions include myths connected with journeys to the "otherworld" undertaken by both human and suprahuman beings. Experiences of such journeys are especially common in the shamanistic traditions, but they are also found in association with various ecstatic religious phenomena and various heroic and visionary contexts within a great number of cultures.

An important differentiation can be made between the descent with no return (accomplishing the due of human mortality) and the descent with return made by heroes, shamans, and other extraordinary humans. The imaginary experiences with return could fulfill different objectives: to explain the cosmic subterranean topography, to rescue someone from the realm of the dead, and to expose the punishments and sufferings in the otherworld with a moral purpose. The descent into the underworld, particularly to the kingdom of the dead, is one of the central themes in myths explaining the cosmic order, the limits and possibilities of the human being, the relationships between gods, and human relationships with god or the gods.

But the descent into the underworld is also a powerful imaginal and, on occasion, stereotyped literary motif. In the European traditions, due to the influence of the Homeric *Nekyia* (ninth book of the *Odyssey*), the descent (Greek, *katabasis*), an imaginary motif is present in major literary and artistic works despite the cultural, chronological, and religious differences between contexts and authors (between, for instance, Vergil's sixth book of the *Aeneid* and the *Inferno* in Dante's *Commedia*). Such a literary motif is also found in the Middle Eastern traditions from the *Epic of Gilgamesh* to the *Book of Enoch* or the *isra* of Muḥammad. There are cross-relationships among all of these literary traditions. Christ's descent into hell and medieval Christian literature developing the topic of the descent and the description of hell have, therefore, a long literary tradition.

The beliefs concerning descent into an underworld inhabited by spirits and supernatural beings could be based in part on experiences in which the soul is believed to leave the body during a state of altered consciousness—such as trance, sleep, or near-death experiences—or during the visions and hallucinations associated with these states. The content of such experiences, however, is determined to a large extent by the cultures and traditional beliefs of the persons undergoing them, but these phenomena also have remarkable similarities in different cultures and ages, a fact that encourages intercultural comparisons.

**THE ROADS TO DEATH: TOPOGRAPHIES OF THE DESCENT.** Beliefs concerning the descent into the underworld are often connected with the concept of a three-layer cosmos, according to which the human world is located midway between the realm of spirits above and the realm of the dead below—the "underworld." The underworld itself may also be thought of as divided into layers. In certain Asian, European, Mesoamerican, and Oceanic cultures, for instance, the underworld is believed to be divided into as many as nine layers. Mayan cultures recognized nine levels of the underworld, and some funerary temples reproduce a descent in nine phases. Scandinavians called the ninth and lowest level Niflhel.

These cosmic levels are often believed to be connected to one another by a cosmic tree or mountain, which is frequently believed to be located in the north. In inner and northern Asia, India, and northern Europe, the "center of the world" is found in the north. The cosmic tree that connects the levels of the cosmos also acts as a path of communication among them. The Vasyugan Khanty, the Maya, and the Scandinavians, for instance, believe that it has its roots in the underworld. In the shamanistic tales of Siberia, the opening leading to the underworld is represented as lying at the foot of the cosmic tree or at the foot of its counterpart, the shaman's tree. The Altaic Turks, on the other hand, locate this opening at the "center of the cosmos" and describe it as a "smoke hole." Many northerly peoples locate the opening to the different cosmic levels in the North Star that shines at the center of the world and symbolizes supernatural stability and eternity.

In all cultural traditions the most important part of the underworld is the realm of the dead. Most of the traditions describing the descent into the underworld are in fact concerned with visiting the dead, though this realm may be described differently in various cultures. In some cultures of the East, in central Asia, and in ancient Greek religion, for instance, it is described as the palace of the sovereign of death or as a mighty dwelling place. In ancient Scandinavian folklore it is a great hall, whereas in the Finnish epic it is a large living room. Among the hunting peoples of Siberia, it is conceived of as a yurt village, in the Celtic culture it is in an insular location, and in ancient Greek tradition Hades (the realm of Hades, the god of the underworld) seems to be described as a palace. Despite the variety in representations, however, many of the concepts surrounding the realm of the dead and the roads to entrances are similar in all parts of the world.

Belief in a local opening and a road leading to the underworld are common in the cultures of Europe, Asia, America, West Africa, Melanesia, and Polynesia. On the west side of Rarotonga, in the Cook Islands, for instance, one finds the Black Rock, from which the souls of the dead are thought to set off on their journey to the otherworld. Volcanoes, such as Etna, or caves, such as that of Lough Derg in Ireland, mark the beginning of the road to hell or purgatory, as in medieval Christian literature. In the ancient Greek imaginary topography, subterranean entrances to the realm of Hades are not uncommon (more than fifty are testified in the ancient sources), and sanctuaries could be located in caves or entrances to the underworld: the best-known example is the Nekyomanteion (oracle of the dead) at Ephyra.

One of the universal features of such a road to the underworld is darkness. This is why the Yakut shaman has disks representing the sun and moon sewn onto clothing—to provide light on the route to the otherworld. The road is also dangerous, fraught with difficulties and preternatural obstacles that only an initiate or a spirit being can overcome. In Finnish folklore such obstacles include a great eagle, a snake, a fiery pond or waterfall, and a river bristling with swords. Similar obstacles are also found in the mythologies of the Middle and Far East, of classical antiquity, and of the Germanic peoples, and they were also cultivated in the Christian vision literature and art of the Middle Ages. According to the ancient Germans and the Yakuts of Siberia, the dead had to be equipped either with shoes or a horse to protect them on their difficult journey.

Traditions familiar in both Asia and Europe tell of a stream surrounding the realm of the dead that must be crossed on a ferry or by a narrow bridge made dangerous by swords, or they speak of a wall surrounding the underworld over which the soul must leap. In ancient Greek mythology the ferryman Charon helps the dead cross the labyrinthine underworld waters and enter the realm of Hades. But Charon, as a literary and iconographic motif, is found even in Western Christian literature and arts (e.g., in the Sistine Chapel), despite the religious changes produced in the idea of the underworld by Christianization. It could be used as an example of the plurality of beliefs about the underworld that coexist in a culture or a religion and that encourage the microanalysis of cases, contexts, and points of view.

Another widespread concept connected with the underworld is that of the beast or dog that guards its gates. Examples include the Greek Kerberos, with its three heads; the Scandinavian Garmr, a huge and bloody monster; the Babylonian Nedu, with its lion's head, human hands, and bird's feet; and the Egyptian Ammut, the watchdog of the underworld god Osiris that has the body of a lion, the front limbs of a crocodile, and the rear limbs of a hippopotamus.

**THE SHAMANIC INITIATION AND THE DESCENT INTO THE UNDERWORLD.** A journey to the underworld under the helpful guidance of the spirits is the cornerstone of the classical shamanism of Siberia and inner Asia, and corresponding practices connected with the activities of a seer or an ecstatic healer are found in other parts of the world as well: in North America, in Oceania, in the folk religion of Indochina, among the early religions of Europe, and especially in the various religions of South America. One typical feature of this type of otherworldly journey is the use the shaman makes of ritual techniques intended to induce ecstasy.

Where there is a belief in an underworld, it is not uncommon for people to have chance experiences of descending into it during sleep or trance. In shamanistic cultures such spontaneous experiences were interpreted as proof that the spirits had selected a candidate as a future shaman. According to a Nentsy myth, a woodcutter suddenly found himself on the back of a *minryy* bird, from which he fell through a hole into the underworld. There he wandered from the dwelling of one spirit to that of another and had to recognize each in turn. He was then cut into pieces and put together again, after which one of the spirits guided him back to the earth's surface. This experience was taken to be the initiation as a shaman, particularly in view of the dissection and reassembling of the body by the spirits.

Chance visions, pains, and torments were interpreted as the shaman's sickness and were taken as signs of a person's candidacy as a shaman. While learning to use the drum and sing the shaman's songs, the candidate withdrew from the normal life of the community, fasted, and sought contact with the spirits. A journey to the underworld, experienced through visions and auditions, was a prerequisite for initiation. The central element of this journey was the experience of rebirth. The reports of such initiation visions prove that the initiate's experiences were shaped by the shamanistic tradition of the community in question. The older shamans interpreted the candidate's experiences in such a way as to channel them toward accepted, traditional patterns. During this initiation period the new shamans became familiar with that part of the spirit world to which they would later journey during shamanic séances.

A number of the peoples of inner Asia and southern Siberia referred to the shaman's journeying to the underworld as "black." This seems to be a reference to the fact that the underworld contained not only the abodes of the dead but also the dwelling places of various disease-causing or otherwise dangerous spirits. In order to be an accomplished shaman, one had to know the roads leading to these places and be able to recognize their inhabitants. This made it all the more important for a candidate to study the topography of the underworld during the initiation period. In the more northerly regions, this study was conducted under the guidance of special spirits, usually zoomorphic spirits of nature.

**THE DESCENT AS SHAMANIC RITUAL.** The ritual descent into the underworld takes place during a shamanistic séance, in the course of which the shaman describes in song the stages of the journey. In northern Siberia and the Arctic regions in particular, the actual transfer to the otherworld was thought to coincide with the highest point in the shaman's altered state of consciousness and was indicated by loss of external consciousness. The shaman's soul was then thought to have left the body and to be traveling in the otherworld in the form of an animal or accompanied by benevolent spirits.

The visit to the underworld was sometimes portrayed through performable means. The journey of the "black" shamans of the Altaic Tatars to Erlik Khan, the lord of the underworld, was expressed not only in song but also in mime and movement. The shamans gave detailed descriptions of the stages of the journey and the meeting with Erlik Khan. First they rode southward, climbed the Mountain of Iron, on whose slopes lay the fading bones of unsuccessful shamans, and then descended through a hole into the underworld. They next crossed the sea of the underworld by an extremely narrow and dangerous bridge and arrived at the dwelling of Erlik Khan. At first the lord of the underworld was angry, but as the shamans offered him drink and sacrifices, he became benevolent and promised to fulfill the shamans' wishes. The shamans then returned to earth riding on a goose.

When descending into the underworld, the shaman tried to solve problems that were thought to be caused by the spirits. The reasons for the journey to the underworld thus depended on the sorts of spirits living there and on the way they were thought to influence human life. If an illness was believed to be caused by a loss of soul, it was the shaman's task to fetch the patient's soul from the malevolent spirits who had stolen it. Other typical reasons for descending into the underworld were to acquire knowledge concerning the future, the weather, lost objects, or persons; to meet the spirits who assisted at a birth; to meet the keepers of the game during a period of famine; to escort the soul of a sacrificial animal to its destination; or to accompany the souls of the dead to the underworld. For example, the initiatory vision of the Nganasani shaman Sereptie Djaruoskin reveals that he knew the roads leading from the foot of the shaman's tree to the spirits responsible for every kind of sickness, to the main guardians of the game, and to the spirits who provide protection at births.

If the soul of a dead person should fail to go to the underworld but instead keep disturbing the peace of the living, the shaman was called upon to play the role of psychopomp (guide of souls). Indeed among the Nanay (Goldi), the Altaic Turks, and the Nentsy, escorting the soul of the dead to its new abode was one of the shaman's most important tasks. After a death, the Nanay arranged a festival, during which the shaman caught the wandering spirit and placed it on a cushion specially made for the occasion. A big clan memorial festival was then held, and the shaman escorted the soul of the dead to Buni, the clan's own kingdom of the dead. On the way the shaman and the soul in keeping were assisted by the spirit Buchu, who knew the way, and the bird Koori, who carried the travelers to the underworld on its back. At the séance during which all this took place, the shaman expressed the stages of the journey with dramatic effects, giving instructions to the assisting spirits and expressing in song the horror and relief over the difficulties along the way. As described at such séances, the road to Buni included eighteen stages that had special names and generally known features. The most difficult task along the journey was crossing the river separating the living from the dead. The shamans could tell when they had reached their destination from strange footmarks, the sound of dogs barking, and other traditional signs.

In modern shamanism (and in neoshamanism), because of undergoing the process of adaptation to the modern world and global society, some of the classical themes of the descent into the underworld are objects of redefinition and psychological interpretation (using, for example, the Jungian and New Age concept of shadow as explanation). The descent into the underworld has become an inner experience of combat against a personal alter ego. The cosmic topographical implication and the social interest of the shamanic exploit are transformed in a private experience without social or cosmic relevance.

**THE HEROIC DESCENT AND THE ORPHEUS THEME.** The journeys to the underworld undertaken by shamans and mystics typically involve visions experienced during trance. There are, however, myths and tales in parts of the world that tell of journeys to the underworld undertaken by humans or gods without the aid of ecstatic techniques or powers. Visiting the underworld was thought to be one of the standard deeds of mythical heroes. The heroes descending into the underworld need not necessarily be human, for Ishtar makes the journey in the Akkadian myth, Lemminkäinen's mother does so in the Finnish tradition, and the Mayan twins Hunahpu and Ixbalanque descend into Xibalba (the realm of the deities of the death) in the *Popol Vuh.*

The reasons for the descent were many. One of the most popular was the rescue of a relative or loved one who had died young. But the journey also could be undertaken to search for immortality, knowledge, or some special favor, to escort the dead to their final resting place, or to receive initiation in the mysteries of the underworld. Here exists a close parallel to the reasons given for the shaman's journey.

A test of strength between love and death is the basis of the legends and myths in which one left behind in this world follows the beloved or relative "to the land of no return." And when the result of the journey is positive, the inexorable law of mortality—the power of Thanatos—is overcome by the power of Eros. The best-known representative of this type of narrative is the Orpheus theme, various forms of which are found not only in Eurasia but also in North America, Oceania, and Melanesia.

In Vergil's version, in the fourth book of the *Georgics,* perhaps the best literary expression of the classical myth (because the Orphic versions, included in *Katabasis of Orpheus,* have unfortunately disappeared), Orpheus sets off for Hades in search of his wife Eurydice, who has died young. With his songs and his music, Orpheus relieves the suffering in the underworld and wins the favor of the gods. Eurydice is promised to him on condition that he not turn to look at her on the road up. The impatient Orpheus breaks his vow and loses his wife. Despite the negative result of the *katabasis,* for the followers of the Greek mystery cults who use the name of Orpheus as a sign of identity this underworld exploit is a demonstration of the possibility of acquiring knowledge that can defeat death. The Orphic initiation offers the wisdom to find the appropriate path in the underworld journey and the knowledge of the correct descent that is inscribed in the Orphic-Dionysiac gold lamellae (sheets) found in a number of burial sites in Greece and southern Italy.

A negative result is also obtained by the god Izanagi in his underworld search for his twin sister and wife Izanami in the realm of Yomi as reported in the Japanese *Kojiki.* The episode explains a cosmic division into two layers, upper and lower, ruled by the twin gods, a provisional arrangement changed by the following generation of gods.

Greater happiness befalls the heroes of the Polynesians, including the Maori of New Zealand, who rescue their loved ones by deceiving the spirits trying to prevent their escape. In one Maori narrative, Hutu follows Pane, who has died of love for him, to the underworld. There Hutu entertains the spirits, having them sit on the top of a tree that has been bent over and fastened to the ground by a rope. When Hutu lets go of the rope, the spirits are hurled into the air, and he escapes with his beloved.

In addition to spouses or lovers, the main characters in these tales may also be people who are attached to one another by some other tie. For example, there are stories among the Indians of North America that stress sibling attachment. The Tatars of the Sayan steppes tell the story of Kubaiko, who goes to look for her brother in the kingdom of death ruled by Erlik Khan. After carrying out the superhuman tasks imposed upon her by the princes of death, Kubaiko receives the body of her brother and brings him back to life with the water of life. The story gives a long description of the state after death and the punishment of sinners. The torments inflicted in Hades to the enemies of the gods (Sisyphos, Tantalos, Tityos) are described in the story of Odysseus's journey to the land of the dead. But because the goal of the hero is not to rescue someone but to obtain information, the episode seems more an invocation followed by a vision than a descent.

The related idea of the death and resurrection of a god lies behind certain invigoration rites. There is a myth connected with the Akkadian Ishtar and her Sumerian counterpart Inanna that describes the descent of the goddess into the underworld, probably to try to subjugate that realm. On her way, Ishtar takes off her clothes and her ornaments as she passes through the gates that lead to Arallu. On reaching her destination, she dies, and the earthly vegetation wilts. When the gods sprinkle her with the water of life, she recovers and returns to earth.

**THE HEROIC AND INITIATION DESCENT: IMMORTALITY AND APOTHEOSIS.** In some cases a hero penetrates the kingdom of death to gain immortality. One of the oldest known examples is the Sumerian myth of Gilgamesh, in which Gilgamesh crosses the waters of death and reaches the land of eternal life. There he finds a plant that guarantees immortality. But a snake snatches it from him on his return trip, and he is forced to accept mortality for humankind. The account of Gilgamesh's journey has been compared to the account of Herakles's visit to Hades and Odysseus's *Nekyia.* But Odysseus refuses the immortality promised to him by Calypso in order to to maintain his own identity. Herakles reaches apotheosis (the transformation into a god) after a number of exploits (crucially the visit to the garden of the Hesperides), not simply after his victorious return from the underworld, when he brings with him the watchdog Kerberos and delivers Alcestis and Theseus.

The pursuit of immortality is also part of the tradition woven around the Polynesian trickster and culture hero Maui. Maui believed he could make himself immortal by crawling through the body of his giant grandmother Hine-nui-te-po. Hine-nui-te-po wakes as Maui enters her mouth and, closing her mouth, kills the intruder. This swallowing motif, also found in the story of Jonah and the great fish, is quite common in traditions concerned with initiation and takes both mythical and ritual forms. It is found in the Finnish folk epic, in which Väinämöinen enters the belly of a giant sage who had long been dead. Väinämöinen descends to the underworld in the role of a sage to seek knowledge and incantations. In this respect he is reminiscent of a shaman. A similar seeking journey is made by the Scandinavian god Odin, who is described as having ecstatic powers.

Further reasons for traveling to the underworld include the search for some special object, as in the descent of Psyche, or the mere satisfaction of curiosity. In each case the journey is described as extremely dangerous and difficult, with its success depending on special conditions: the travelers should not eat any food offered in the underworld, nor should they look back on the return journey, lest they fall under the power of the spirits giving chase from below (which happens to Izanami in the Japanese myth and Persephone in the Greek myth).

In some cultures, a main reason to endure the descent is to demonstrate the supernatural condition of the traveler, a recognition of his or her extraordinary or divine nature. The *katabasis* of Dionysos, with the rescue of his mother Semele, shows without a doubt to his followers the power of the god over death. And then Dionysos, like a sort of mystic Hades, could offer to those who had endured the initiation into his mysteries the liberation from death: the Dionysian path (difficult to distinguish from the Orphic path) to over-shadow the mirage of common underworld destiny as it appears in the words inscribed in the golden intiatory lamellae.

In a similar way, some Christian theologians explain Christ's descent into the underworld as a complete victory over hell, overcoming the power of evil and rescuing the "saints of the Old Testament," highlighting the new alliance that changes the foundations of the cosmic topography with the descent. The complex theological implications of the episode have been understood in different ways in the various Christian denominations (a number of which discarded the cosmic implications of the descent, simply understood as a paraphrastic reference to the act of dying). But the iconographical possibilities of the episode have been widely exploited in art and literature, especially in the Middle Ages and in Oriental Christianity, due to the values of glory and sovereignty that underlie the episode and the classical and oriental imaginal implications of the descent into hell.

**THE VISIONARY DESCENT WITH MORAL PURPOSES.** Visions of descending into the underworld are a part of the traditions of the religions of the Middle East and the ancient Mediterranean world, Hinduism, Buddhism, Islam, and Christianity. The visit in question is usually to the kingdom of the dead, and one of its main themes is the observation of the torment awaiting sinners in the other world, along with the judgment of souls. The moral purposes of the journey are evident and serve as arguments to reinforce the belief in the ethical mainstream proposed by these religions.

One of the earliest records in the Greek tradition of the transformation of the literary heroic descent into a descent with moral purposes is the Platonic myth of Er, related at the end of Plato's *Republic* (c. 380 BCE), in which the visions of the postmortem destiny had a propaedeutic purpose in the philosophical way of life proposed by Plato. Earlier accounts about the punishment in Hades for amoral or criminal attitudes certainly existed—for instance, in the *Nekyia* painted in the fifth century BCE by Polygnotos in the Cnidian Lesche at Delphi (and described by Pausanias)—but in Plato the description had a moral purpose.

Multiple examples of the imaginal and moral effectiveness of these sorts of visionary descents exist in the ancient world. The *Book of Enoch* relates a descent into the She'ol that shows the diversity of the ideas about the underworld in Hellenistic Judaism. The judgment of the dead in an Egyptian papyrus of the first century CE describes how Setne Khamuas, a high priest of Memphis, descended into the halls of Amenti under the guidance of his son Si-Osiris. In the Christian *Apocalypse of Peter* (c. 135 CE), the visions detail, in an explicit and meticulous way, the terrible punishments of the sinners. These themes were particularly popular in the Christian literature and art of the Middle Ages, and the descriptive and imaginal possibilities of the journey were exploited in Christian countries. The popular medieval English mystery play *The Harrowing of Hell* is an example of this, although the most accurate and famous artistic expression of such beliefs is Dante's *Commedia* (1321).

But these descriptions of journeys into hell (and eventually paradise and other locations) repeat beliefs that are familiar from the Mediterranean and Middle Eastern traditions, and the relationships between authors and religious traditions are difficult to trace. The influence of a literary tradition that overcomes religious backgrounds using identical imaginal resources is undeniable, but the final purposes of the descriptions are also significant. For example, Aeneas's descent in Vergil's sixth book of the *Aeneid,* Christ's descent into hell in the *Gospel of Nicodemus,* the visions exposed in the Iranian *Ardā Wirāz Nāmag,* the journey described in the *Book of the Scale,* or other descriptions of the *isra* of Muḥammad had specific religious significance within each religious tradition.

The visionary descent appears also in Far Asian traditions. The ascetic practices known as *gyo,* practiced by Buddhist priests in Japan, sometimes led to trances that included visions of journeys to the underworld. Some of the visions were of an initiatory nature and had structural and thematic similarities to the shamans' visions. In the *Nihon ryōiki* a priest called Chikō, while feigning death, found himself accompanied by two messengers on the road to the underworld. The road led westward and finally to a golden palace, the door of which was guarded by two terrible beings. Three times the messengers ordered Chikō to clasp a burning hot pillar so that his flesh was burned and only his bones remained, and three times the spirits put him together again. They finally sent him back to earth, ordering him to renounce the sin of envy. In addition to such reports of initiatory trials, the Japanese narratives also contain revelations of the sentences passed by the king of the underworld and the horrors awaiting sinners. One type of narrative, which has parallels in the Chinese tradition, tells of persons descending into the underworld to save one of their relatives from the torments of hell. Such descriptions of the judgment and punishment of sinners could serve as a moral warning to lead a virtuous life, but they could also be used as a meditation resource (e.g., the visonary visit to the realm of the punished during the meditative practice with *bhava chakra* in Mahāyāna Buddhism).

The theme of visionary descent experienced a renewal in European tradition with Emanuel Swedenborg's (1688–1772) description of a supposed visit to the underworld in his *De coelo et ejus mirabilibus, et de inferno, ex auditis et visis* (Heaven and its wonders and hell from things heard and seen, 1758). He proposed a Christian esoterical topography of hell and an angelology, in which the torments of the sinners are transformed in an inner postmortem experience of the evil committed in life. Swedenborg is useful as an early example of the modern prevailing tendency to the interiorization brought about by the loss of imaginal fascination of the heroic motif of the descent. (The powerful 1998 iconographical adaptation of the classical *descensus* in Vincent Ward's film *What Dreams May Come* is perhaps an exception.) In fact, the descent into the underworld seems to be of little interest in the theological speculations and ritual practices developed in Christianity in particular and in the world religions in general, excluding perhaps some shamanic contexts.

## DESERTS.

In areas of continuous occupation, the presence of the sacred transcends and resolves the stresses produced by the environment. In the desert, humankind, deprived of the support of social solidarity and helplessly confronted by supernatural forces, is beset by anguish and fear.

**THE DESERT AND PERSONAL RELIGIOUS EXPERIENCE.** The first visions of the desert, therefore, are pessimistic. It is the region of the savage beasts and malevolent spirits, of demons of all kinds. In primitive societies it is the place of trials, of initiations. It is the place to which the rejected and the exiled are banished: Cain (*Gn.* 4:11–16), Hagar and Ishmael (*Gn.* 21:9–15), and the scapegoat that was burdened with the sins of Israel (*Lv.* 16:8–10). Particularly characteristic of the most ancient sedentary societies of the Middle East (Haldar, 1950), this conception was long lived. For the prophets of Israel (e.g., *Ez.* 20) and in the accounts of the Exodus, the time in the desert is that of infidelity (*Ex.* 17:7), of the golden calf (*Ex.* 32), and of punishment before the entrance into the Promised Land.

But another, parallel attitude also developed: the desert as apprenticeship and self-knowledge. As a terrain of struggle, the desert leads to the discovery of one's own being and, thereby, to the affirmation of the individual. At a more evolved stage of religious thought, it is the privileged place of divine revelation, of the betrothal of Israel with Yahveh

(Gillet, 1949), of the offer of alliance, and of law that brings liberation. After the infidelities in the land of Canaan, it was by means of a return to the desert, the place of love and intimacy with the divine, that reconciliation with Yahveh was achieved (*Hos.* 2:14–16; *Jer.* 2:2–3). The desert thus becomes a refuge from corruption and depravity. Philo Judaeus (d. 45–50 CE) adds to this specifically Jewish conception a theme of Hellenistic mysticism—the romantic yearning of the world-weary city dweller for solitude, for retreat to the desert, where he can find peace. The desert, where the air is pure and light (*On the Contemplative Life* 22–23), assumes for Philo an absolute value. It was for this reason that God gave his laws to his people "in the depths of the desert" (*On the Decalogue* 2). This idea leaves its trace, then, through a whole series of Christian authors, for example, Origen: "John the Baptist, fleeing the tumult of the cities, went into the desert, where the air is purer, the sky more open, and God more intimate" (*Homilies on Luke* 11). It is the point of departure of the entire Christian monastic movement toward settlement in the desert after the fourth century—a movement that to a large extent regains the primitive pessimistic vision in its land of choice, Egypt.

The desert is where the devil is encountered and where Christ contended with him (Mauser, 1963). Monastic asceticism developed as a struggle in a fearsome place that was the land of demons par excellence. But this struggle was victorious. The presence of the pious anchorites integrated the desert into the realm of faith either by transforming it into a city, *desertum civitas* (Athanasius, *Life of Anthony* 14; cf. Chitty, 1966), or by fertilizing it and making it bloom according to the prophecy of *Isaiah* 35:1: *desertum floribus vernans* (Jerome, *Letters* 14). Finally, it was in the desert that the monks would find *hēsuchia,* the serenity of solitude. Christian tradition would thus, in the course of centuries, base the movement toward the solitary life that was to become as essential component of it on the image of the desert as a place of solitude (*ēremia*).

This approbation of solitude, brought to its apogee in Christianity, was to be more or less present in all higher religions in which the ascetic imperative is based on meditation, which is facilitated by life in the desert: Buddhism, particularly in the Tantric forms, Daoism, and Islam. However, in the case of Islam, the acceptance was relatively cautious. For the Muslims, the desert was above all a *thème d'illustration* (Arnaldez, 1975). It is necessary to "realize" the desert of spiritual solitude before the sole existent being, God. But it is dangerous to actually take abode in the desert. It is true that there man can avoid hypocritical ostentation (*riʾāʾ*) and the artificial social role that destroys authentic sincerity (*ikhlās*). But he thereby runs the risk of arrogance, of developing the cult of his inner self. This more reserved attitude of Islam in regard to the reality of the desert does not affect the value attributed to the desert as a synonym for solitude and retreat, ending in the solitariness (*infirād*) that culminates in mystical ascension. Both by its nature and its symbols, the desert brings man closer to God.

**THE DESERT IN THE HISTORY OF RELIGIONS.** Does this proximity to the divine lead to the development of a particular religious structure? Ernest Renan thought so. In his *Histoire générale des langues sémitiques* (1885), inspired by the long Christian tradition, he wrote: "The desert is monotheistic. Sublime in its immense uniformity, it first revealed to man the idea of infinity, but not the perception of an unceasingly creative life that a more fertile nature inspired in other races" (p. 6). He later returned to this idea and defined it more precisely in his *Histoire du peuple d'Israël* (vol. 1, 1887, pp. 45, 59). He found the basis for the development of primitive monotheism, which he attributed to the Semitic peoples, to be "the customs of nomadic life," where there is little room for cultic practice and where "philosophical reflection, exercised intensely within a small circle of observation, leads to extremely simple ideas." More than a century after Renan, his idea of the desert as source and origin of Jewish monotheistic thought would again inspire the works of a master of biblical archaeology, William Albright (1964, pp. 154–156).

Actually, this idea is now largely outdated and has been vigorously disputed. All the studies on pre-Islamic Arab religion in particular (Wellhausen, 1897; Ryckmans, 1951; Henninger, 1959) have drawn a picture of it that has little to do with monotheism and that associates with the supreme deity, Allah, a numerous and varied cortege of deities. The desert is the domain of polymorphous and diffuse ritual. It is, to repeat the expression of the Qurʾān, "associationistic," and the desert bedouin are "the most obdurate in their impiety and hypocrisy" (sura 9:97).

However, the situation remains ambiguous. Beside and above the other gods was Allāh. He was incontestably a god of the nomads, a provider of rain (Brockelmann, 1922), and one can easily imagine the extreme importance that he assumed for a nomad whose survival depends entirely on the condition of the grazing land. Not only among the Arabs was the god of rain the unique god. It has been possible to reconstruct the special characteristics of the religion of pastoral peoples in general in conjunction with the peculiarities of their social structure and their way of life; such a reconstruction has been made for the first time in an environment very different from the desert, namely, that of the high grassy savannas of East Africa (Meinhof, 1926). The creation of powerful personages, of heroic saviors who are then frequently enrobed in historic myths connected with the origins of the tribe, is an expression of the instability of the pastoral tribe, which assembles or disperses in accordance with the importance of the individuals that direct and guide it within a context of aggressive relationships between groups. This orientation often accompanies that which consists of making the god of rain the unique god, dispenser of all benefices. The herdsman soon breaks free of polytheism. Ancestor worship is unknown to him, and the dead are forgotten. The herdsman is knowledgeable and intrepid, little inclined toward fear and superstition.

One is here indeed on the way to the monotheistic god, but under the impetus of a somewhat different logic. It is not that the desert is monotheistic but rather that the pastoral nomad has the tendency, at least, to become monotheistic. In contrast with the profusion of rituals in the Australian desert traversed by primitive hunters or gatherers is the evolution toward the monotheistic god of the warlike pastoral tribe, herders of large beasts of the African savannas or the bedouin of the deserts of the Old World. This trend toward monotheism is a late development in the cultural history of humanity. Contrary to Wilhelm Schmidt's opinion, this "great god of the herdsmen" is not the legacy of a primitive monotheism. Today we know that the pastoral nomads were, in the main, descendants of the first agrarian civilizations of the Old World, or were at least posterior to them. They constitute, in the world of the deserts and the steppes, a relatively recent cultural development, first in the form of the prebedouin herders of bovines, and then, after the domestication of the horse and the dromedary, in the form of the widespread, aggressive, warlike nomadism of the bedouin type, which in the Middle East does not go back further than the second millennium BCE.

But the appearance of monotheistic tendencies in the tribes of pastoral nomads can be rapid, as is shown by the analysis of neopastoral civilizations of the New World (Planhol, 1975). The Navajo of the Colorado plateaus of North America, whose pastoral mode of life did not emerge until the second half of the eighteenth century, still do not recognize a supreme deity (Reichard, 1950). But among the Goajira of Colombia and Venezuela, whose aggressive, cavalieristic, pastoral life goes back at least two or three centuries, there is a process of elaboration that seems much more advanced. Involved here is the predominance of a demiurgic creator (Maleiwa) and a rain giver (Juya), who are, however, not yet confused with each other, although the first signs of such a confusion are evident (Perrin, 1976). Among the herdsmen of East Africa, such as the Maasai, whose formation of a pastoral system goes back at least a thousand years, pastoral monotheism is well defined.

But, rather than being a true monotheism, it is in fact a monolatry in that it is willing to recognize the existence of other gods, who fulfil the same functions for the benefit of neighboring tribes or peoples; it is a protomonotheism in Baly's sense of the term (1970, pp. 258–259). The moral monotheism (Baly's "absolute" or "transcendent" monotheism) is a much more complex and revolutionary structure (Pettazzoni, 1950), the birth of which implies a break, not a simple evolution. Its occurrence exclusively in the Middle Eastern and Old World cultural environment reflects conditions of conflict. Here the presence of groups of pastoral nomads with still rather primitive monotheistic tendencies certainly played an essential role within the orbit of sedentary, sacerdotal civilizations that were polytheistic but much more highly developed (as Weindl, 1935, demonstrated). These conflicts could not be resolved except by a universalistic aspiration such as that of which the birth of Islam, following that of Judeo-Christian monotheism and Zoroastrian dualism, constitutes the final manifestation (Watt, 1953, 1956; Rodinson, 1961). Although Yahvism, as Nyström (1946) has shown, surpasses and in many particulars contradicts and transcends the bedouin ideal, this ideal is nonetheless necessary to it.

There is, therefore, no "religion of the desert." But, in the historical evolution of humanity in the Old World, the deserts have indeed been the privileged place for the development of the pastoral nomadic cultures that evolved precociously toward monotheism and that constituted an essential component in the genesis of the great monotheistic religions.

---

**DESIRE** is one of those important subjects that are seldom discussed under their own names, so that one hardly knows where to go for answers to questions about the nature of desire and its significance for the religious or spiritual life. The term *desire* is only rarely found in the index or tables of contents of books on religion, even when the term figures prominently in the author's description or interpretation of religion. In addition, there is no widely shared consensus about the meaning of the term, so it is put to a variety of uses. There is no standard inventory of experiences, realities, or relations to which the term refers.

In order to clarify the subject of desire and indicate some representative ways in which desire has been religiously and spiritually interpreted, its scope and boundaries will be discussed through a cross-cultural overview. In this context, the varieties of desire and of the experiences, realities, and terms closely associated with desire—and of other terms antithetical to it, terms of contrast through which some of the particular meanings of desire become fixed—will be examined. The dimensions of desire will thus be reflected upon by charting the regions of human experience to which the term *desire* refers.

In a discussion of the term *desire,* three kinds of questions need be considered. First, what is it that is being named? How is desire thought of, imagined, represented to oneself, and located in relation to other phenomena? Second, how does desire enter into human experience? In what circumstances does it become an issue for the religious or spiritual life? Third, how do people deal with desire in their religious or spiritual lives? What are the negative and positive strategies with which religious and spiritual individuals, communities, and traditions have dealt with desire? Where desire has been taken as a threat to the religious life or to spiritual integrity, what strategies have been developed to discipline, train, overcome, transcend, detach from, or eradicate desire? Where desire has been viewed more positively, what strategies have been developed to channel, direct, release, render articulate, or otherwise enlist and incorporate the energies and vitality of desire into the spiritual or religious life? In other words, how have individuals and communities sought to share and pass on what they have learned about desire and how to deal with it?

What is named when speaking of desire? How is it thought about, imagined, represented to oneself, and located in relation to other phenomena—particularly to matters of religious or spiritual importance?

Desire is commonly understood in volitional terms, in which case it is identified with such things as willing, wanting, and wishing, choice and appetite, inspiration and motivation, and even with intention. Desire is also understood in more emotional or affectional rather than volitional terms, in which case it is associated or identified with such things as emotion, feeling, passion, love, eros, (and eroticism), attachment, craving, yearning, greed, and lust. These volitional and affectional vocabularies for interpreting desire are, of course, not incompatible—especially if, as is often the case, the affections are understood as central to or constitutive of the self as willing and loving. Where reason is set over against and valued above either will or emotion, desire will usually be viewed as spiritually problematic.

In discussions of religious ethics, desire will figure more positively in teleological than in deontological ethics. Teleological ethics is likely to involve some consideration of the *telos* (goal or object) of desire—its satisfaction or fulfillment in happiness, well-being, pleasure, ecstacy, and/or union or communion or some other form of participation in the divine or sacred reality. In deontological ethics, on the other hand, desire will be seen in tension or conflict with the governing moral principles of obligation and duty. Yet here, too, reality goes beyond the terms of analysis, as when through the agency of religious rituals duty is sometimes converted into desire. According to anthropologist Victor Turner, sacred symbols have two semantic poles, one abstract and normative, the other physiological and "orectic"—that is, relating to desire or appetite, willing and feeling. The drama of ritual action, he suggests, may cause an exchange of properties between these semantic poles, condensing their many referents into a single cognitive and affective field, the biological referents ennobled and the normative referents charged with emotional significance. By such an exchange of qualities between semantic poles, what is socially necessary is rendered desirable, and duty becomes desire.

There is at least one striking contrast in the cultural and religious treatment of desire between Oriental and Occidental cultures. In Western cultures desire is generally given a more positive place in the vision of human being and well-being. But that affirmation tends to remain at a fairly abstract level, formulated by theologians. At the more pedestrian level of spiritual guidance and of daily life among ordinary people, desire is hedged about with all sorts of constraints. In both East and West, desire is treated in a highly differentiated fashion, but the pattern of differentiation varies significantly. In Asia desires are viewed in the context of the stages of life and are judged and constrained or released and licensed differently, according to the stage of life in question. In the West, desires are viewed more consistently in relation to their objects rather than to the stages of life, and desires are evaluated and graded according to higher and lower, finer and coarser objects of desire.

Desire figures in human experience in many ways and becomes religiously valid or problematic under a variety of circumstances. To illustrate the spiritual importance and power of desire and the complexity of the issues raised by desire, consider two of the greatest religious texts: the *Dao de jing,* the principal classic of Daoism, a collection of about the fourth century BCE attributed to Laozi, and Augustine's *Confessions,* a Christian classic written near the end of the fourth century CE. The *Dao de jing* is divided into two books. Book 1 begins and ends on the subject of desire:

> The way that can be spoken of
> Is not the constant way;
> The name that can be named
> Is not the constant name.
> The nameless was the beginning of heaven and earth;
> The named was the mother of the myriad creatures.
> Hence always rid yourself of desires in order to
> observe its [the way's] secrets;
> But always allow yourself to have desires in order to
> observe its [the way's] manifestations.
>
> The way never acts yet nothing is left undone.
> Should lords and princes be able to hold fast to it,
> The myriad creatures will be transformed of their own
> accord.
> After they are transformed, should desire raise its head,
> I shall press it down with the weight of the nameless
> uncarved block.
> The nameless uncarved block
> Is but freedom from desire,
> And if I cease to desire and remain still,
> The empire will be at peace of its own accord.
>
> (*Dao de jing,* trans. D. C. Lau, Baltimore, 1963, pp. 57, 96)

The ambiguity of desire is recognized, as well as the need to be acquainted with it. But real power and serenity lies in freedom from desire and in the active inactivity that is here identified with the "nameless uncarved block." Desire is presented as a problem rather than a resource for true spirituality.

In contrast, Augustine takes a very different view of desire. Addressing himself to God, he begins the *Confessions* by proclaiming the greatness of God and the desire to praise Him. "Thou movest us to delight in praising Thee; for Thou hast formed us for Thyself, and our hearts are restless till they find rest in Thee." But Augustine goes on to write of other desires that distract him from desire for God—desires for success and adulation, sexual desires, that great complex of desires that he came to identify as belonging to the City of Man in contrast with those of the City of God.

How do people deal with desire in their religious or spiritual lives? For some, desire itself, of whatever sort, is spiritually destructive. The primary—or at any rate initial—aim of their spiritual practice and discipline is to wean themselves from all desire, even the desire for enlightenment, self-transcendence, liberation, salvation, *nirvāṇa,* or mystical union with God. For others, desire is not itself intrinsically problematic but is seen as an essential and even a central mark of their humanity and of their spirituality. The issue for them is the right direction of desire, the right ordering of the various desires toward their appropriate objects, and a true perception of appropriate rank among possible objects of desire.

The experience of desire is often powerful and demanding. One may experience a single powerful desire as all-consuming and overriding all others. Or one may experience conflicting desires and find ourselves wrestling with their competing claims. Even if one has resolved the issues raised by a particular desire or set of desires, one may well find that resolution challenged and upset by the appearance of yet new desires, and at some point in this process one's response may well be to seek a path away from all desire—a way of apathy, disinterestedness.

Desire invokes, if it does not actually generate, tension and contrast—between the present and the future, the actual and the possible, the real and the ideal—and tends to nourish or express restless dissatisfaction with the former in each of these pairs and to assign higher value to the latter. And yet the disquieting role of desire can be seen as undermining complacency, mobilizing creative energies, and generating new achievements.

**EASTERN CONCEPTS.** A representative range of religious movements and texts will be selectively analyzed to illuminate the issues raised by the religious significance of desire. This examination will be a topical study rather than a chronological survey of historical records. For this reason some of the early religious movements are passed over entirely, and modern movements, texts, and developments have generally not been considered.

In India various sentiments have been recorded to define desire. At both the intellectual-scholarly and the popular levels, the element of desire has been discussed and analyzed.

**Hinduism.** Among the ancient sacred texts that deal with desire, the *Bhagavadgītā* (the most revered of Hindu texts, composed between the fifth and second centuries BCE) has been generally considered the most important one. In this tradition *kāma* (Skt., "desire") is one of the four basic aims or drives (*puruṣārthas*) that need to be either satisfied, redirected, or transcended in life. The four basic aims are *dharma* (in its narrower meaning of social duty), *artha* (enjoyment of material things), *kāma* (pleasurable experiences generally, but often, as in the context of the *Gītā,* the satisfaction of sensual desire), and *mokṣa* (release, liberation). They are to be realized, transformed, or transcended in such a way as to realize one's personal obligation (*svadharma*) in accordance with one's social station and stage of life. Thus the exact nature of one's response to desire depends upon one's place in the class system (*varna*) and one's advancement along the path marked by the four basic stages (*āśramas*) of life—student, householder, forest dweller, and renunciant.

The appropriate measure for the enjoyment or the control of desire and its objects and related passions is also seen in Hinduism in terms of the three *guṇas* (energy fields, or strands), which differently combine to form all things in nature (*prakṛti*). In ascending order of spiritual health, these three *guṇas* are *tamas, rajas,* and *sattva.* A life in which ignorance, insensibility, and lethargy predominate is *tamas* (dullness), one in which emotion and subjectivity predominate is *rajas* (turbulence), and one in which intelligence and objectivity predominate is *sattva* (dynamic equilibrium).

Fulfillment of one's own *dharma* (*svadharma*), again, involves some combination of three types of discipline (*yoga*), each of them requiring the sublimation and transcendence of desires, passions, and emotions together with an intensification of (1) action without attachment in *karmayoga,* the *yoga* of work and action, (2) loving devotion to a personal deity in *bhaktiyoga,* and (3) knowledge and wisdom in the most demanding path of *jñānayoga.* The aim is to rise above both *tamas* and *rajas* toward the equilibrium and detachment of *sattva,* knowing neither attraction nor repulsion, neither pleasure nor pain, having passed from both the absence and the turbulence of desire to the renunciation of all desires and aversions into a condition of equilibrium or serenity beyond desire.

In the *Gītā,* desire, anger, and greed are described as "the threefold gate of Hell that leads to the ruin of the soul" (16.21). Arjuna, the protagonist, learns that he must move among the objects of sense "with the senses under control and . . . free from desire and aversion" (2.62) if he would attain "serenity of mind" and that the same is required if he would attain intelligence, concentration, peace, or happiness. "He attains peace into whom all desires flow as waters into the sea, which, though even being filled, is ever motionless" (2.70). Yet it is only particular desires that are to be abandoned, for action without attachment involves "desiring [only] to maintain the order of the world" through one's action (2.71), and Kṛṣṇa, the god, declares: "I am the strength of the strong, which is free from desire and passion," but also "I am the desire in all beings, which is not incompatible with dharma" (7.11).

The *Gītā* is the most important sacred text in a tradition in which desires are ultimately to be overcome in detachment. In the Vedas and the Upaniṣads, desire is given a prominent place in the description of human nature, but then precisely for that reason it is ultimately desire that must be uprooted in order to achieve liberation from bondage to the wheel of existence. Nonetheless, in that same tradition, desires appropriate to the stages of life on the way to liberation are affirmed and even celebrated with imaginative exuberance. *Kāma* (desire, most especially erotic and sensual desire, delight, and pleasure) is often assigned a very positive role in the spiritual life and in the religious vision of reality. At one level of this tradition is the *Kāma Sūtra,* a manual for the enrichment of erotic and sexual pleasure appropriate to the householder stage of life.

At a deeper and broader level of this tradition there is the rich and complex Hindu mythology in which the place of desire in the life of the gods is portrayed. Wendy O'Flaherty, in *Asceticism and Eroticism in the Mythology of Śiva* (London, 1973), has shown, for example, how in the mythology of Śiva, desire and asceticism, chastity and sexuality, quiescence and energy, are variously related and yet in a fashion that affirms even where it does not clarify a profound inner connection between asceticism and eroticism and the power inherent in the transformation of one into the other. The tension is exhibited in part through the conflict between Śiva and Kāma—Śiva, the eternal *brahmacārin* (student), the god whose essence is chastity, and Kāma, the god of desire. But the conflict is also evident within Śiva himself, for he sometimes appears in the ambiguous figure of an erotic ascetic, both yogin and lover, (even a yogin because he is a lover) and is sometimes represented in images with an erect phallus, the ithyphallic yogin. While in Hindu mythology asceticism and eroticism revolve about each other in cycles of alternating ascendancy, chastity building into desire and the fulfillment of desire leading to chastity, the balance of these energies is found ideally through the control and transformation of desire.

Tantrism, a complex of teachings and practices that takes both Hindu and Buddhist forms, develops some of these last themes in a radical direction. Tantric teaching envisages the world as a field of energy generated through the sexual union of masculine and feminine aspects of sacred energy, *śakti.* The mobilization of *kāma,* desire, plays an important part in Tantric practice designed to participate in the restoration of the universe to its original unity with its sacred source. That practice involves the sublimation rather than the conquest or destruction of desire. It includes the ritually controlled performance of sexual union, but without consummation, redirecting the energy spiritually upward rather than physically outward. In emulation of the sacred activity of world-generation, erotic desire and play is thus ritually elevated into a vehicle of meditative discipline and devotion (*bhakti*)—and a means of sharing in the plenitude of sacred power by which the world is sustained.

**Buddhism.** The *Dhammapada,* an early Theravāda Buddhist collection of teachings about the moral life and the path to spiritual perfection, includes much on the subject of desire. Desire is a principal manifestation of the selfish craving, grasping, or blind demandingness (Pali, *taṇhā*) that, according to the four noble truths of Buddhism, is the cause of unhappiness, pain, and sorrow (*duḥkha*), and that can only be destroyed by following the eightfold path toward the freedom and joy of *nirvāṇa.* The 423 aphorisms of the *Dhammapada* offer guidance for those who would follow that eightfold path. Humanity is portrayed as besieged by dangerous and destructive desires on every side. "When the thirty-six streams of desire that run towards pleasures are strong, their powerful waves carry away that man without vision whose imaginings are lustful desires" (339). "The creeper of craving grows everywhere," and one must "cut off its roots by the power of wisdom" (340). Only if you "cut down the forest of desires" and its undergrowth, and not only a particular tree of desire, will you "be free on the path of freedom" (283). Beyond that, if the very "roots of craving are not wholly uprooted" (338) the tree and forest of desires will flourish again. Desire is specifically associated with pleasure, passion, lust, sensuousness, and craving (212–216), and all of these are portrayed as generating sorrow, fear, hatred, bondage, and disharmony. On the other hand, the surrender of all desires leads to the joy, wisdom, and freedom of *nirvāṇa.* "The loss of desires conquers all sorrows" (354). "When desires go, joy comes: The follower of Buddha finds this truth" (187). The true *brahman,* "leaving behind the desires of the world" (415), "has nothing and desires nothing" (421). "He who has no craving desires, either for this world or for another world, who free from desires is in infinite freedom—him I call a brahman" (410).

In Zen Buddhism, a Japanese religious movement of Chinese origin that emphasizes the direct experience of enlightenment, desire is treated in a somewhat different fashion. A Mahāyāna Buddhist text, popular in the Zen school, the *Laṅkāvatāra Sūtra,* extresses compactly the aim of *dhyāna* (Jpn., *zen,* "meditation, trance"): "The goal of tranquilization is to be reached not by suppressing all mind activity but by getting rid of discriminations and attachments." As discrimination dissolves and distinctions—between self and other, between this and that, even between *saṃsāra* and *nirvana*—are experienced as illusory, desire and attachment fall away as well, and delusion is displaced by enlightenment (Jpn., *satori*).

Zen Buddhism in Japan is most powerfully represented by the Rinzai and Sōtō sects, whose principal discipline is *zazen,* sitting meditation. The Rinzai practice is to concentrate meditation on a *kōan,* a riddle designed to break the grip of the discriminating rational mind, opening the way for *kenshō,* the experience of seeing into one's essential Buddha nature and realizing one's unity with all that is. In Sōtō practice the adherent moves through the unity of body and mind in sitting, to concentrate on the sitting itself, *shikantaza,* "just sitting"—not sitting in order to accomplish some objective but just sitting, letting the activity of the "monkey mind" come and go as it will, letting come what may and letting it go, accepting what comes but not desiring and not holding on, simply letting the mind be emptied of all discriminations and attachments, and in that simplicity of presence actualizing one's undefiled Buddha nature and opening the way to *satori,* enlightenment. In all of this there is no place for desire—except of course, paradoxically, for the desire to break through one's own illusory view of reality and experience the true reality of Buddha nature. That desire, too, is dissolved rather than conquered in the sustained discipline of Zen—a way of just being in accord with the Way, letting go of any desire that the "thatness" (*tathatā,* "suchness") of things be otherwise. The practice of meditation then becomes a model for activity in everyday life, with everything to be done just for what it is, just doing, just being, and not aiming at some desired end.

**Daoism.** Daoism is an important Chinese movement whose influence extended beyond the sectarian confines of the Daoist church to the arts, literature, and Chinese philosophy in general. Its influence can also be discerned in the formation of the Chinese Chan school (known in Japan as Zen) of Mahāyāna Buddhism. As is evident from the passages from the *Dao de jing* already cited, Daoism recommends freedom from desire as essential to the Way (the Dao) and its power or virtue (*de*). But it proposes to achieve that freedom, not by disciplined control of desire or even of the mind, nor quite by rising above desire, but rather by going beneath it, by following the wisdom of the valley, of water, in which is to be found the power of the Way. "The highest virtue is like the valley" (41). "Highest good is like water. Because water excels in benefiting the myriad creatures without contending with them and settles where none would like to be, it comes close to the Way" (8). Nature rather than empire provides the models. "The river and the sea" are powerful, and their power endures, because "they excel in taking the lower position" (66). Even the empire will be at peace if the ruler will but say with the sage, "I am free from desire, and the people of themselves become simple like the uncarved block" (57). Abandon desires, simply let them drop. Seek not to control them or the world, but find spiritual health—and, not incidentally, survival—in a life of simplicity, humility, and harmony with nature, the flow of which is only disturbed by desires. In *wuwei,* the action that is no action, lies the power of the Way. "The Way never acts yet nothing is left undone" (37). Do not try to establish harmony, as though it depended upon you, but let go and let harmony reign, as it will do of its own accord. Such is the perspective of Daoism on desire.

**WESTERN CONCEPTIONS.** Turning now from religions of Eastern origin to religions of Middle Eastern and Western origin, it is necessary to again be very selective, because there is no hope of even surveying the relevant literature on desire or of describing the many strategies for addressing desires. The principal sources that provide the themes upon which variations have been played are to be found in ancient Israel and in ancient Greece, in the Bible and in Hellenistic cultures. The variations are themselves substantial, although for the most part they share a generally more positive assessment of desire as an ingredient in human nature and as contributing to spiritual fulfillment than is characteristics of the religious movements already examined.

**Stoicism.** Among the traditions in the West, Stoicism provides a unique perspective. The *Enchiridion* of Epictetus, a Hellenistic philosopher who taught in Rome in the late first century and early second century CE, is the most influential formulation of basic Stoic teachings. Epictetus begins by distinguishing things within one's power from things beyond one's power. Desire is among the former things, and in a world where there is much that is beyond one's power, one can achieve spiritual serenity and freedom only to the extent that one disregards things beyond one's control and focuses on those things one can control. The basis of such a life is the perception that there is a universal *logos* (reason) and *nomos* (law) at work in all that happens and that if one keeps one's mind in harmony with that universal nature, responding to events according to reason and not emotion, then one's external circumstances will be of little consequence. One can live in simplicity, with moderate desires and expectations, not demanding that events happen as one wishes, but wishing them to happen as they do happen. Stoicism is a religious philosophy of lowered expectations and reflective responsibility in the station to which one is assigned by God.

**Old Testament.** The Old Testament contains many observations about various desires, ranging from the use of erotic love and desire and pleasure as metaphors for God's relationship to Israel to expressions of God's frustrated desire and longing for a covenant faithfulness on the part of the people of Israel and expressions of comparable desire on their part for intimacy with God, as well as injunctions to detach from or to discipline various desires in accordance with God's commandments and laws. What the Bible has to say directly about desire may fairly be summed up in three passages: the Lord's declaration through the prophet Hosea, "For I desire steadfast love and not sacrifice, the knowledge of God, rather than burnt offerings" (*Hos.* 6:60); the exclamation, "My soul thirsts for God, for the living God" (*Ps.* 42:2); and the saying of Jesus, "For where your treasure is, there will your heart be also" (*Mt.* 6:21).

**Early Christianity.** Augustine (354–430 CE) gives the most powerful classical formulation of the convergence of Hellenistic and biblical traditions. It is from Augustine that has come the most influential expression of Western religious thought about desire and also the most important expression of what has proved for many to be most problematic about the orientation toward desire. There is in Augustine something of the whole range of Christian attitudes toward desire.

Augustine affirms the basic biblical conviction that everything that is has its origin in God and is essentially good and that by the grace of God the world is being restored from a fallen condition to its proper destiny in God. The appropriate human role in that process is to conform the will to God in a covenant of faith and obedience to God's laws, or, to put the same matter differently, to conform the heart to God in love to God and neighbor. In either case the critical human response is a matter of will or of love more than it is of reason or of knowledge, and desire is central to Augustine's understanding of both will and love—or, more precisely, of willing and loving as different terms for the same activity. So, in the *City of God,* Augustine says: "The right will is . . . well-directed love, and the wrong will is ill-directed love. Love, then, yearning to have what is loved, is desire; and having and enjoying it, is joy; feeling what is opposed to it, is fear; and feeling what is opposed to it, when it has befallen it, is sadness" (14.7). In the *Confessions,* Augustine had said that "the mind can experience four kinds of emotion—desire, joy, fear, and sorrow" (10.14). It is these same four emotions that he here presents as forms of love, with the critical and spiritually constructive role assigned to the affirmative affections of desire and joy.

The way in which Augustine appropriates Hellenistic and especially Platonic ideas into his formulation of Christian thought is illustrated by his also presenting the four classical Greek virtues as forms of love:

> Temperance is love giving itself entirely to that which is loved; fortitude is love readily bearing all things for the sake of the loved object; justice is love serving only the loved object, and therefore ruling rightly; prudence is love distinguishing with sagacity between what hinders it and what helps it. The object of this love is not anything, but only God, the chief good, the highest wisdom, the perfect harmony. So we may express the definition thus: that temperance is love keeping itself entire and incorrupt for God; fortitude is love bearing everything readily for the sake of God; justice is love serving God only, and therefore ruling well all else, as subject to man; prudence is love making a right distinction between what helps it towards God and what might hinder it. (*Morals of the Catholic Church,* chap. 15)

The passage is worth quoting at length in this context, for the second formulation shows clearly that the first formulation is also about four forms of that true virtue that for Augustine is not just any love or all love but specifically the love of God. It is also clear that these forms of love are all manifestations of desire, that is, of that phase in the life of the virtuous lover marked more by yearning for what is loved than by the joy of actually or fully having and enjoying it.

Indeed, for Augustine all of human life is moved by desires. He takes it for granted that "we all certainly desire to live happily" and that without desire people do nothing. The problem is not to uproot or transcend desire, which is an essential mark of humanity and of belonging to God. It is right rather to direct desires toward their appropriate objects and to order all objects of desire in accordance with their true relation to God, the *summum bonum,* the source and center of all value and beauty, in whom alone restless human hearts will find the satisfaction of all their deepest desires. It is for Augustine the dynamic of desires that draws the heart toward God, though only an infusion of divine grace is sufficient to turn desire from all lesser goods toward God. Augustine makes a major distinction between desires directed upward, which he calls *caritas,* or love, and those directed downward, which he calls *cupiditas,* or lust. The one tends toward God, the other toward worldly goods. An even sharper contrast is invoked as he distinguishes between the City of God and the City of Man, the heavenly and earthly cities into which all humanity is divided, the one formed by the desire or "love of God, even to the contempt of self," the other by the "love of self, to the contempt of God" (*City of God,* 14.28). An otherwise Platonic contrast between lower and higher desires and their corresponding hierarchy of objects cumulating in God is thus transformed into a more historical contrast culminating in heaven and hell—a contrast and contest between those moved to seek God and respond to God's grace and those moved to seek self and the world.

Three kinds of objections have been raised against Augustine's views related to desire. Mention of them can serve as a shorthand way of indicating some alternatives to Augustine among Christians that cannot be surveyed here. One objection is that even if Augustine is right that all of human life is moved by desires, he is wrong in identifying the love of God with desire, and that he is led into that error by adopting the Platonic idea of love as *eros,* an aspiring love moved by the beauty of its object and the desire to possess and enjoy that object. Anders Nygren, a Lutheran theologian, has been most forceful in claiming that "*agape,* Christian love . . . has nothing to do with desire and longing" (*Agape and Eros,* London, 1932–1939), because it is a love which bestows value rather than being attracted by it. M. C. D'Arcy in *The Mind and Heart of Love* (New York, 1947) and Daniel D. Williams in *The Spirit and the Forms of Love* (New York, 1968) are among those who have challenged Nygren's diametrical opposition between *eros* and *agape.*

A second objection has been that Augustine, and with him Thomas Aquinas and much of Christian orthodoxy, has been led by Greek ideas about the impassibility of God—the idea, for example, that God's perfection includes his being unchanging and self-sufficient—into either denying or distorting the biblical view that God, too, is moved by desire, because desire is the mark of some need, some lack, which would be remedied or satisfied by what is desired. The issue is whether a God who is understood to love and act with a purpose in the world can without contradiction be construed as unchanging, impassible, unmoved by desires such as those that are often attributed to God in the Bible and in the piety of both Jews and Christians.

A third objection has been against Augustine's repudiation of sexual desire and his influence on the long history of the Roman Catholic Church's requirement of celibacy for the priesthood and its teaching that sexual pleasure and even the expression of love are at best only secondary ends of sexual intercourse, the primary end of which is said to be conception.

**Medieval and Renaissance Christianity.** The pivotal role of Augustine is illustrated by the fact that the other three most important theologians of Roman Catholic and Protestant Christianity, Thomas Aquinas (1225–1274), Martin Luther (1483–1546), and John Calvin (1509–1564), are all essentially Augustinian and in most respects do not depart from Augustine's views on desire. Thomas Aquinas, following Aristotle, assigns more importance to the intellect and reason in directing the will than does Augustine and gives a more Aristotelian turn to the ranking and the formation of intellectual and moral virtues in the governance of appetites, passions, and desires by reason. The classical Greek virtues are not presented by him as forms of love but are rather supplemented by the three theological virtues of faith, hope, and charity, through which God's grace makes possible and completes the natural desire of all intelligent creatures for the "vision of God."

On the subject of desire, Luther departs from Augustine principally in connection with his insistence upon the universal priesthood of all believers, the dignity of all callings and not only of the priesthood, and hence the abandonment of celibacy as essential to the priesthood. He also exhibits a certain lustiness of character and a more affirmative attitude toward the expression of sexual desire within the context of married love.

John Calvin departs from Augustine primarily by developing a distinctively political strategy in both church and state for the encouragement and the enforcement of sober, righteous, and godly lives turned from ungodliness and worldly lust. He was at war against what he called "irregular desires" or "inordinate desires of the flesh" (*The Institutes of the Christian Religion* 3.3.2). Such desires are considered sinful "not as they are natural, but because they are inordinate" and are contrasted with "those desires which God implanted so deeply" in human nature "that they cannot be eradicated from it without destroying humanity itself." Desires are to be drawn away from the world and toward God. "Whatever is abstracted from the corrupt love of this life should be added to the desire for a better" one in full communion with God (3.2.4). But Calvin rejected too great an austerity as well as a stoic divestment of all affections, arguing that God's gifts are given for human pleasure and delight as well as for human necessity—though people are to use them as though they used them not, according to the requirements of their calling.

**European Enlightenment.** Barukh Spinoza (1632–1677), a freethinking but "God-intoxicated" philosopher (as some have called him), developed a religious philosophy akin to Stoicism in its determination to see things from a universal and rational perspective. But he assigns to desire a much more crucial and positive role in human experience than does Epictetus. In his *Ethics* he examines the conditions under which desire can spring from reason, from the knowledge and love of God. In his view, there are but three primary emotions—joy, sorrow, and desire. Of these three, to which all other emotions are related, it is the two affirmative affections of desire and joy that are most important, and of these "desire is the very nature or essence of a person" (3.57). It is the intellectual love of God that gives the mind power over its emotions, and the *Ethics* is an elaborate analysis of how this process culminates in and flows from a condition of blessedness.

**MONASTICISM.** Monasticism has been an important strategy for spiritual discipline and the control of desires in most religious traditions. For Buddhism it is the *saṃgha,* the community of monks. For Christians there have been a variety of monastic orders, many of them following variations on the rule drawn up by Benedict of Nursia (480–543), with many desires renounced by the three vows of chastity, poverty, and obedience. The Benedictine rule requires manual labor in part to control desires by diverting energy and employs the image of the "ladder of humility" for the disciplinary steps by which "desires of the flesh" are cut away and displaced by the love of God and a "second nature" that delights in virtue. The *Little Flowers* of Francis of Assisi (thirteenth century), a collection of legends and traditions about the saint, reflects a different pattern of monastic discipline, more severe in its insistence upon poverty and freedom from all compromise with the world, but it also offers a more joyful asceticism, sending monks out of the cloister to delight in the created world and its beauty and to celebrate the realized desire for ecstatic union with Christ.

**MYSTICISM.** For the mystics, desire is generally equated with search for the transcendent. The testimony of Francis of Assisi has much in common with religious mysticism around the world, in which the experience as well as the language of desire and joy, of ecstasy and delight, play an important role. For the mystic, the spiritual desires cultivated and realized are of far greater significance than all the abandoned worldly desires. In his *Sayings of Light and Love,* John of the Cross (1542–1591) advises: "If you desire that devotion be born in your spirit and that the love of God and the desire for divine things increase, cleanse your soul of every desire and attachment and ambition in suchwise that you have no concern about anything." In *The Spiritual Canticle* he notes that "the soul lives where she loves more than in the body she animates," and that "God does not place His grace and love in the soul except according to its desire and love." And in *The Living Flame of Love* he declares to God:

> What you desire me to ask for, I ask for; and what you do not desire, I do not desire, nor can I, nor does it even enter my mind to desire it. . . . Tear then the thin veil of this life and do not let old age cut it naturally, that from now on I may love you with the plenitude and fullness my soul desires forever and ever.

Similiarly, the Ṣūfīs considered spiritual union with the transcendent beloved as the pivotal aspect of all their desires and endeavors. All else in existence was generally regarded as superfluous. The urgent quest for the almightly is thus reflected in the prayers of Rābiʿah al-ʿAdawīyah (d. 801):

> O God, my whole occupation and all my desire in this world, of all worldly things, is to remember Thee, and in the world to come, is to meet Thee. This is on my side, as I have stated; now do Thou whatsoever Thou wilt. O God, if I worship Thee for fear of Hell, burn me in Hell, and if I worship Thee in hope of Paradise, exclude me from Paradise; but if I worship Thee for thy own sake, grudge me not Thy everlasting beauty. (quoted in Arberry, p. 51)

As the prayer indicates, for Rābiʿah all aspects in life were subservient to her intense desire for spiritual elevation and union with God.

## DESTINY SEE FATE

## DETERMINISM SEE FREE WILL AND DETERMINISM

## DEUS OTIOSUS.

The Latin term *deus otiosus* (pl., *dei otiosi),* meaning literally "god at leisure" or "god without work," denotes a god who has withdrawn or retired from active life. The paucity of detailed descriptions of these deities, when coupled with their widespread appearance in cultures around the globe, presents a puzzle for the study of religions. Athough the outline of these divine personalities is usually sketchy, they maintain a firm hold on the religious imagination. The study of gods who have retired from their arena of activity has provoked deep reflection on the meaning and function of symbols, especially of divine forms, in religious life.

**CELESTIAL ASSOCIATIONS.** Many African creation myths involving *dei otiosi* recount how the divine sky lay flat on the earth at the beginning of time. Nuba and Dogon myths, for example, describe how the chafing of the sky against the earth stunted human growth and disrupted normal routines of work. (R. C. Stevenson, "The Doctrine of God in the Nuba Mountains," in *African Ideas of God*, ed. E. W. Smith, London, 1950, p. 216; Marcel Griaule, *Masques Dogons*, Paris, 1938, p. 48). "In particular, women could not pound their grain without knocking against the sky, and so close relations finally ended when the sky's anger at the annoying blows of the women's pestles caused it to withdraw from the earth" (Dominique Zahan, *The Religion, Spirituality, and Thought of Traditional Africa*, Chicago, 1979, p. 16). In other African societies, such as the Nyarwanda and Rundi of central Africa, the creator god lived with the first people at the beginning of time (or the first people lived in the sky with the god). For one reason or another, the god moved away from the company of his creatures—upstream, downstream, to a mountaintop, or to the sky (R. Bourgeois, *Banyarwanda et Barundi*, Brussels, 1957, vol. 3, pp. 19–25).

Most forms of the *deus otiosus* cluster around the symbolism of the sky. The manifestation of the sacred in the sky and the belief in supreme beings of the sky is most often overwhelmed and replaced by other sacred forms. We do not mean to say that devotion to the beings of the sky was the first and only religious practice of archaic humankind. In the first place, we do not have the data we need to reconstitute the first forms of religious practice and belief in human history. More important, the study of histories that we know more fully indicate the unlikelihood that a belief in a supreme being of the sky would exclude all other religious forms. The point to begin with is that the experience of the sky as a religious reality, in fact as the divine sphere, places emphasis on the religious value of withdrawal and transcendence. The sky itself, as a symbol of sacred being, embraces or constitutes these elemental structures of a *deus otiosus*, withdrawal and transcendence. For this reason, countless other hierophanies can coexist with this sacred manifestation of the remote sky.

For example, Puluga is an omniscient sky-dwelling divinity revered in the Andaman Islands. After a stormy relationship with the first people, Puluga reminded them of his commands and withdrew. Men have never seen him since that time of estrangement at the beginning (Paul Schebesta, *Les Pygmées,* Paris, 1940, pp. 161–163). In a similar way, Témaukel, the eternal and omniscient creator of the Selk'nam of Tierra del Fuego, is called *so'onh-haskan* ("dweller in the sky") and *so'onh kas pémer* ("he who is in the sky"). Témaukel created mythical ancestors who took over the process of creating the world. Once creation was accomplished, he withdrew beyond the stars. For his part he remains indifferent to human affairs. Correspondingly, human beings possess no images of Témaukel or regular cult dedicated to him, and they direct their prayers to him only in cases of dire illness or bad weather (Martin Gusinde, "Das höchste Wesen bei den Selk'nam auf Feuerland," in *Wilhelm Schmidt Festschrift*, Vienna, 1928, pp. 269–274). The Muring people of the east coast of Australia recount in their myths the story of Daramulun, their "father" (*papang*) and "lord" (*biamban*). Daramulun, the true name of this divine being of the sky, is known only to initiates. For a brief time he lived on earth and instituted the rites of initiation. Since his return to the heavens his presence is made known mostly in the sounds of thunder, the eerie groans from the nocturnal jungle, and through the sound of sacred bull-roarer used in initiation rites (Alfred W. Howitt, *The Native Tribes of South-East Australia*, New York, 1904, pp. 362ff., 466ff.). Similarly, Bunjil, the heavenly supreme being of the Kulin tribes of Australia, created earth, trees, animals, and human beings and then left the world to live in the heaven beyond the "dark heaven" visited by holy men (ibid., p. 490).

**ABSENCE OF MYTH AND CULT.** The most striking feature of the *deus otiosus* is the absence of an active cult dedicated to the god. Even where there is sporadic and spontaneous devotion, it is remarkable how often there is no regular calendar of seasonal rituals celebrated in honor of the god. Mythic accounts of the *deus otiosus* are scanty. Even those myths that exist are short compared to the dramatic epics of heroes, storm gods, or the divine forms associated with the agricultural cycle. A large number of celestial supreme beings receive no regular worship. Among them we may mention Muladjadi of the Batak of central Sumatra, Petara remembered by the Sea Dyaks of Kalimantan (Borneo), Ndengei of Fijian mythology, and Yelefaz from the island of Yap.

The absence of scheduled cult and the brevity of mythic reference to the *deus otiosus* led scholars to a misconception. At the end of the nineteenth century and beginning of the twentieth (and even today, in some circles), scholars of religion and culture overlooked the importance of this religious form. The *deus otiosus* was seen as an anomalous piece of speculation, as a recent addition to the divine pantheon in response to contact with Christian missionaries, or as an archaic idea that had lost the clarity of its expression and meaning. It did not fit into the schemata that evaluated mythic thinking as infantile, unsubtle, or undeveloped. Rather than regard the absence of the *deus otiosus* from myth and cult as an inherent feature of its structure, scholars frequently ignored the issue or slighted its value in favor of theories that portrayed tribal peoples as theologically naive or intellectually underdeveloped.

**WITHDRAWAL OF GOD.** Myths that mention the *deus otiosus* usually face head-on the question of the god's absence from the preoccupations of culture. The narratives themselves describe the withdrawal or substitution of the supreme being. For example, Ọlọrun, the Yoruba divinity whose name means "lord or owner of the sky," turned over the project of creating the world to Ọbatala, one of his sons. When Ọbatala became drunk and mismanaged the creation of humans from clay, Oduduwa, his younger brother, usurped the task of creation. Ọlọrun then permanently absented himself from human history. He does not intervene directly in human affairs, for he delegated the care of human creation to his sons and to the *oriṣa*, a collection of deities each with its own precinct, priesthood, temple, and devotees. Although absent from the unfolding course of human affairs, Ọlọrun remains an essential presence, for he inspires the breath of life into all individuals and allots them their destiny. Furthermore, the Yoruba call upon Ọlọrun in times of desperate calamity (E. Bọlaji Idowu, *Olódùmarè: God in Yoruba Belief,* London, 1962; Peter Morton-Williams, "An Outline of the Cosmology and Cult Organization of the Oyo," *Africa* 34, 1964; Benjamin C. Ray, *African Religions: Symbol, Ritual, and Community,* Englewood Cliffs, N. J., 1976, pp. 49–76, esp. pp. 52ff.).

Myths describe the origins of the status of the *deus otiosus* in cultural life as well as in the religious imagination. On the one hand, the god withdraws on his own initiative after finishing his work of creation or of overseeing its accomplishment. On the other hand, another frequent scenario is the usurpation of the supreme being's sovereignty by a younger and more active god. In the Hittite translations of Hurrian texts made around 1300 BCE, there is an initial episode that describes the struggle for the "kingship of heaven." At first, the god Alalu was king, then the divinity named Anu overpowered him. At the beginning of Anu's reign, Kumarbi, the main protagonist of Hittite myth and the father of the gods, was Anu's servant. After nine years, Kumarbi chased Anu into the sky, tossed him to the ground, and bit off his loins (Hans G. Güterbock, "The Hittite Version of the Hurrian Kumarbi Myths: Oriental Forerunners of Hesiod," *American Journal of Archaeology* 52, 1948, pp. 123–124; and C. Scott Littleton, "The 'Kingship in Heaven' Theme," in *Myth and Law among the Indo-Europeans,* edited by Jaan Puhvel, Berkeley, 1970, pp. 93–100). A parallel in Greek mythology describes the castration of the sky god Ouranos and the forced separation of Heaven (Ouranos) from Earth (Gaia). In Mesopotamian mythology as well, the young gods led by Marduk guarantee that the great gods such as An, Enlil, and Ea lose their supremacy in the cult.

The existence in mythology of this most streamlined and ethereal of divine forms, the *deus otiosus,* teaches a lesson about the dynamics of the religious imagination. The *dei otiosi,* especially those supreme beings of the sky who retire after the creative episode, withdraw from the world in several senses. They withdraw on high and leave their creation behind. They also withdraw to the outer margins of the religious imagination and define the outermost reach of creativity, for they assume the most wispy of images. No doubt, contact with outsiders, especially Christians or Muslims, has often played a role in shaping the contemporary forms of *dei otiosi.* However, such contact does not preclude the existence of an indigenous structure of the *deus otiosus.* In fact, the existence of a myth of an otiose god enabled many cultures to recognize aspects of the foreign supreme being and reconcile them with their own. Far from remaining insignificant, the features of the *deus otiosus* exhibit definite signs, especially of vagueness and sublimity, that demarcate the outer reach of imaginable being.

**SYMBOLIC CHARACTERISTICS.** The *deus otiosus* is a limit-image, for before and beyond the *deus otiosus* nothing exists. The Winnebago Indians of Wisconsin admitted, "What there was before our Father Earthmaker came to consciousness, we do not know."

**Sublimity.** The descriptions of supreme beings who withdraw on high introduce students of religion to the most sublime end of the spectrum of divine forms, for the *deus otiosus* is often the most sublimated of sublime forms. By narrating descriptions of the most remote, transcendent, invisible, or intangible reality, cultures offer themselves and scholars expressions of an experience of being that, by definition, most transcends the senses. The myths of the *deus otiosus* are statements about the nature of creativity itself and about the subtle powers and rarefied capacities of the religious imagination. The Witóto of Colombia offer the following example: in the beginning nothing existed except "mere appearance," which was "something mysterious." Moma, the supreme being, touched this phantasm. Moma calls himself Nainuema, "he who is or possesses what is not present." He is an illusive appearance linked to sacred sounds associated with ritual words and chants. By means of dream, Nainuema held the phantasm against his breast and fell into deep thought, his breath helping him hold onto the illusion with the thread of his dream. Moma plumbed the dream-contained, breath-held phantasm to its bottom and found that it was empty. He fastened the illusion to his dream-thread with a gluey substance and then stamped on the bottom of the illusion until he came to rest on the earth. He made the forests rise by spitting and covered the earth with heaven (Konrad T. Preuss, *Religion und Mythologie der Uitoto,* vol. 1, Göttingen, 1921, pp. 27, 166–168). Such sublime features of the *deus otiosus* have great value for the student of religious forms, for they describe the outer boundaries of imaginable being.

**Passivity.** The passive character of the *dei otiosi* leaves the gods' personalities vague and ill-defined. The deities often avoid dramatic action and remain inert or aloof. In fact, the creativity of the *dei otiosi* is often described in negative terms. Their omnipresence comes across as a lack of presence in any single or definable place over another. Their omnipotence implies an uninvolvement with any single or specific cosmic operation, such as the growth of crops or the transitions of the human life cycle. Their omniscience implies a certain indifference to, or lack of interest in, any one fact over another. Their immortality implies a certain stasis, immobility, and inability to change. These negative valences are a function of the gods' association with creation at the very beginning. Once creation is accomplished and being has appeared for the first time, the function of a creator is completely exhausted and the god becomes otiose. The divinities and their unique creative powers retire from the active world they have initiated. They remain the ground of all created being and of all creative possibilities and, for that very reason, retire into infinity, beyond the bounded spaces of creation. Once the universe comes into existence, the supreme being's active mode is no longer in need of full manifestation, nor is it desired.

**Primordiality.** The withdrawal of the *deus otiosus* from the creative scene marks the end of the primordium. Therefore, it may be said that the presence of the *deus otiosus* defines primordiality, a potent condition full of possibilities. *Dei otiosi* have always existed; they bespeak the meaning of eternity and antiquity. The sky, or whatever paradisal place the gods dwelled in, has always been inhabited by supernatural beings. For example, for the Aranda of Australia, the "great father" (*knaritja*) is an eternal youth (*altjira nditja*) who lives in an eternally green countryside covered with flowers and fruits. The Milky Way transects this immortal dwelling place. The great father and his heavenly companions, all equally young, take no interest in the affairs of earth; the great father leaves the management of such affairs to the ancestors. The Aranda great father represents the primordium, the state of being that has no immediate significance, although it has unprecedented ontological bearing. Beatific existence, immortality, anteriority, or static antiquity are unmatched conditions of being. That primordial state was interrupted, and direct contact with it became difficult or impossible. Only a few privileged people, such as mythic heroes or specialists in ecstasy, can revisit a situation that has become irretrievably lost. Primordiality reveals something about the very nature of time and space. It is a quality that cannot be recaptured in terms of the present conditions of the cosmos. The withdrawal of the *deus otiosus* is part of the definition of a primordial world that stands over and against history. Primordiality is the milieu in which reality and eternity can truly manifest themselves. Knowledge of the existence of a *deus otiosus* affirms that even unique modes of being can be apprehended as a species of time.

**Transcendence.** The fate of the *deus otiosus* in mythic history guarantees that the first state of being becomes something less immediate and pressing. The god withdraws and becomes distant, and, for its part, human history becomes enveloped by the wrappings of symbolic life. For example, in the very beginning of the Makiritare creation cycle, all that existed was sky and eternal light. Shi, the invisible sun, had already created Wanadi, the heavenly creator, by blowing on quartz crystal. During that first period, there was no separation between the sky and the earth; the sky had no door in it as it does now, and Wanadi was bright and shining everywhere. He wished to make houses and place good people in them, and for this reason sent aspects of himself to earth. Attawanadi ("house-Wanadi"), the third aspect of Wanadi, specialized in constructing enclosures. He created the enclosed stratum called earth. Attawanadi made a new, visible sky for the earth so that the real sky could no longer be seen. The *atta*, the house or village of the Makiritare, is an exact replica of the first universe created by Attawanadi. Attawanadi's creation of the house-world achieved symbolic closure. He withdrew from his creation.

Myths of creation involving a *deus otiosus* frequently recount the lifting up of the sky and the installation of that heavenly body, the primordial image of transcendence. The sky becomes the paradigm of distance and difference. As the object of first real separation, the *deus otiosus* and its celestial manifestations betoken the possibility of distance between one kind of being and another; their continued transcendence and absence guarantee the symbolic life they signify. Many myths portray the danger that the sky will fall; that is, they portray the fear of the collapse of symbolic possibilities. If the symbolism of withdrawal of the *deus otiosus*, the reality transcendent above all others, will not stand up to scrutiny and cannot stay removed, then no symbolic distance of any kind can be guaranteed, and representational life fails. In fact, it is only at the end of time that many *dei otiosi* make their return. Attawanadi, for example, will return to the Makiritare when the earth ceases to exist (Marc de Civrieux, *Watunna: An Orinoco Creation Cycle*, ed. and trans. David M. Guss [San Francisco, 1980, pp. 28ff.]. The relationship between gods and humans comes into being when the separation of creator from created is acknowledged. "The period of man's 'religiousness' is not at all the 'paradisiac' era when God lived in the 'village' of men but the period following when God had lost his earthly and human qualities in order to live separately from mankind" (Zahan, *The Religion, Spirituality, and Thought of Traditional Africa*, p. 16). The withdrawal of the *deus otiosus* becomes the foundation-stone of religious life: "the African feels deeply that the more inaccessible God seems to be, the greater is his need of him" (Zahan, p. 16).

Symbolic life, made possible by the withdrawal of primordial being, offers humankind the freedom of the symbolic condition, a dynamic existence that could never have flourished if the creator had continued to crush or overwhelm his creation with his ponderous presence and immediacy. Mediation, intermediaries, and symbolic distance become indispensable and possible when the god retires from the scene.

**IMPLICATIONS FOR THE STUDY OF RELIGIOUS SYMBOLS.** The knowledge of the mythic history of the *dei otiosi*, the story of their creative acts and the transformations they undergo while disappearing into the starry vault or into the forest or downstream, are an indispensable part of culture. Equipped with this knowledge, members of a culture live in awareness of the sacred nature of their environment and of their sociocultural order because they know the mythic history of each one of its forms. The withdrawal of the primordial being, the *deus otiosus*, leaves indelible marks on the physical universe and its organic contents.

For example, the Campas of Peru describe the migration of the sun (Pava) into the sky. He enlisted the aid of the hummingbird Neoronke, who carried one end of the sky-rope to the highest level of the universe. As Pava ascended, transformations occurred that gave nature its present condition. Many primordial beings, which at that time existed in protohuman form, became animals such as the tapir or the mouse. Certain trees and flowers used to demarcate the calendrical year were daughters of Pava. The trees are the clothes that these young women shed when they migrated to heaven with him. When the sky-rope dropped to the earth after the ascent, a number of beings fell from heaven to earth, including the wasp, the porcupine, and the sloth (Gerald Weiss, *Campa Cosmology: The World of a Forest Tribe in South America*, New York, 1975, pp. 219–588; esp. pp. 389–390).

There is no guarantee that the divine form of the *deus otiosus* will remain balanced on the periphery of the religious imagination. In some cases it seems that the god lapses into total oblivion. In other instances, prophets re-form and revitalize the concept of the supreme being and reinstate his cult. Where mythic knowledge of the retired god disappears entirely, the deity becomes completely otiose and no longer has religious value. Such was probably the fate of Dyaus, the Indo-European sky god, who eventually was no longer worshiped. No hymns or myths present this oldest Vedic religious form. The name simply designates the "sky" or "day." However, there lingers the memory that the "Sky knows all" (*Atharvaveda* 1.32.4) and that there is the "sky father" (*Atharvaveda* 6.4.3), who is one element of the primordial pair, Dyāvāpṛthivī, "sky and earth" (*Ṛgveda* 1.160). This draws Dyaus into the circle of similarly named Indo-European sky gods for whom we possess mythologies: Greek Zeus Pater, Roman Jupiter, Illyrian Daipatures, Scythian Zeus-Papaios, and Thraco-Phrygian Zeus-Pappos.

The god Mwari of the Shona people of Zimbabwe appears to be an instance of the recovery of the *deus otiosus.* Since the fifteenth century, circumstances have contributed to the revitalization of this remote sky god's cult. The Rozvi royal dynasty patronized the cult in the center of the city of Zimbabwe and the priests of Mwari have become important political figures (Daneel, 1970, pp. 30–35).

The form of the *deus otiosus*, even if it is recalled only in wispy outline, is an essential stimulus to the life of the religious imagination. To one degree or another such a form is implied in every complete corpus of myths. Since every reality appearing in the mythic beginnings of the world is a total and absolute statement of its kind of being, the change and dynamism that undergird human history provoke a total eclipse or disintegration of primordial form. The death, transformation, or withdrawal of supernatural beings into the heights or into the extremes of the cosmos exemplifies the fate of primordial existence as a whole.

**DEVĀNAṂPIYATISSA** (247–207 BCE), king of Sri Lanka. According to the *Mahāvaṃsa*, Devānaṃpiyatissa was an ally of Aśoka and through Aśoka's influence introduced Buddhism to Sri Lanka. At the outset of his reign, Devānaṃpiyatissa sent envoys to India with gifts for Aśoka. In return, Aśoka sent gifts and implicit support for Devānaṃpiyatissa's kingship. The Sinhala chronicles also relate that the Buddhist elder, Mahinda, who was either the son or the brother of Aśoka, visited Devānaṃpiyatissa to establish the Buddhist tradition in Sri Lanka.

Mahinda is said to have arrived in the island on the full-moon day of Poson (May–June), a day still celebrated in Sri Lanka as the date of the founding of Buddhism there. Devānaṃpiyatissa greeted Mahinda on Missaka Hill, now called Mihintale, and proceeded from there to the site of Anurādhapura. Near the royal pavilion in Mahāmegha Park at Anurādhapura, Mahinda and Devānaṃpiyatissa laid out and subsequently built the monasteries and shrines that came to be the international center for the Theravāda Buddhist tradition. The heart of their complex was the Mahāvihāra, the Great Monastery, which was established 236 years after the Buddha. The king also built the first stupa or *cetiya* in Sri Lanka, the Thūpārāma, to enshrine the collarbone relic of the Buddha.

At the request of the women in Sri Lanka, Devānaṃpiyatissa arranged for Mahinda's sister Saṃghamittā to come from India to ordain women into the Buddhist order of nuns. Saṃghamittā brought with her a branch from the bodhi tree under which the Buddha attained enlightenment. The king planted this branch at Anurādhapura, where it remains today as a sacred shrine for Buddhists.

**DEVĪ** SEE GODDESS WORSHIP, *ARTICLE ON* THE HINDU GODDESS

**DEVILS.** The definition and derivation of the term *devil* need to be carefully delineated. This need for care in defining *devil* arises from the fact that the very class of creatures being designated as malign may have been originally benign or may be capable of acting in either a benign or malign way. One species of devils in classical Hinduism consists of the *asura*s, also called *pūrvadeva*s, or "those who were formerly gods or benign beings." In Zoroastrianism, the same *asura*s, by contrast, are called *ahura*s, or "lords." In Christianity, Satan, the Prince of Darkness, is regarded as a fallen angel. According to Origen (whose view is considered heresy by orthodox Christians), he will, in time, be reinstated in his "pristine splendor and original rank." There are, however, also classes of intermediate beings whose association with evil is equivocal. In Islam, genies or, more properly, *jinn* provide a useful illustration: "They were vaguely feared, but were not always malevolent" (Watt, 1970, p. 153).

**BIBLICAL TERMINOLOGY.** The problem is also, in part, etymological. The English word *devil* derives from the Greek *diabolos*, which has the original sense of "accuser" or "traducer" (from *diaballein*, "to slander, traduce," lit., "to throw across"). The Hebrew Bible (Old Testament) uses the word *satan* in the sense of "adversary," and it was translated in the third century BCE by Egyptian Jews as *diabolos.* When the Greek Septuagint (Old Testament) was translated into Latin, *diabolos* was rendered as *diabolus* (in the early translations) or as *saṭan*, in the standard Vulgate text (Robbins, 1959, p. 130). In the New Testament, on the other hand, the name *Satanas* is used to mean not just any adversary, as is often the case in the Old Testament, but *the* adversary of God. Throughout the New Testament, *Satanas* refers to the Devil, and *Revelation* 12:9 describes "the great dragon . . . that ancient serpent, who is called the Devil and Satan." As Robbins points out (p. 130), English translations generally render both the *saṭan* of the Hebrew scriptures and *Satanas* of the New Testament as "Satan."

Thus two different conceptions were fused, and this idea of an evil demigod became the common heritage of Judaic and Christian traditions. The word *devil* as used in the New Testament fuses two elements—the Greek and the Judaic. The Greek element is provided by the inclusion of the sense of *daimōn* ("demon"), which referred to a guardian spirit or a source of inspiration. The description of the Devil as the "prince of the demons" (*Mt.* 9:35) is particularly significant in this respect, for, according to Russell (1977, p. 229), the association of the Devil with the demons is paralleled by his association with the fallen angels (see *Rv.* 12:4, 12:7ff.; *Eph.* 2:1–2). However, the Greek Septuagint "used *demon* for the Hebrew words meaning 'vengeful idols' (*schedim*) and 'hairy satyrs' (*seîrim*). The Vulgate Latinized accordingly and the English authorized version (1613) translated both by 'Devil,' while the revised version (1881) substituted 'demon' in Deuteronomy and the Psalms [and] retained 'Devil' in the New Testament." The overall result of these philological developments was that "originally distinct species of spirits were unified by interchangeable translations of Devil, demon, fiend. All these terms devolved on Satan" (Robbins, 1959, p. 131). This explanation should clarify the use of the terms *demon* and *devil* as they are employed here. The word *demon* denotes spirits in general while the word *devil* denotes evil spirits, malign beings viewed as embodiments of evil.

**TYPOLOGY.** Several typologies of devils are possible, and consideration may be limited to those that proceed by habitation and function. Psellus (eleventh century CE) distinguishes devils by habitat as fiery, aerial, terrestrial, aqueous, subterranean, and heliophobic. A simpler scheme may be applied in the case of Africa and Oceania, where devils could be associated with animals, waters, forest, and mountains. The former scheme has the merit of being comparable with those of otherworld religions, wherein, however, the site of habitation may not be described in terms of elements but may be located in space. Islam provides a link between the two types. The *jinn* are created out of a single element, fire, but are "associated with deserts, ruins and other eerie places, and might assume such forms as those of animals, serpents, and other creeping things" (Watt, 1970, p. 153). But the *jinn* are not necessarily evil like the devils, or *shayṭān*s, who prompt human beings to evil.

According to one tradition the species (for which we may use "genies" as a convenient westernized rubric) is made up of five orders, namely, *jānn*, *jinn*, *shayṭāns*, *ʿifrīt*s, and *mārid*s. The last are said to be the most powerful and the first the least; *shayṭān* is generally used to signify any evil genius; an ʿ*ifrīt* is a powerfully evil genius, while a *mārid*, as indicated, is an evil genius of the most powerful class. At this point it should be noted that sources admit to some confusion between *jānn* and *jinn;* while it is held that *jānn* are transformed *jinn*, just as certain apes and swine were transformed men, it is also admitted that the two are often used indiscriminately as names for the whole species, whether good or bad (*jinn* is the more common term, however). As for the characteristics of *jinn*, they are of different shapes, appearing as serpents, scorpions, lions, wolves, jackals, and so on; they are of land, sea, and air; and either have wings that allow them to fly, move like snakes or dogs, or move about like men. Other embodiments of evil in Islam may also be mentioned: *quṭrub*, *gharrār*, *si*ʿ*lah*, *shiqq*, and *nasnās*. Of these, the *gharrār* is comparable to the ogre inasmuch as the latter is also a figure of folklore who feeds on human beings.

In the Indic worldview the devils have been provided with a habitation and a name. Jainism provides an example of the many typologies of devils in Indic religions. The seven netherworlds contain the hells, one of which, the Vyantaras, includes demons, goblins, ghosts, and spirits, which are divided into eight ranks—*kinnara*s, *kimpuruṣa*s, *mahoraga*s, *gandharva*s, *yakṣa*s, *rākṣasa*s, *bhūta*s, and *piśāca*s, all of which are found in Hindu mythology in nearly the same forms (Jacobi, in Hastings, 1911, p. 608).

Anthropological studies of Buddhism, particularly as practiced in Burma (Spiro, 1978) and Thailand (Tambiah, 1970), have led to the identification of devilish beings in Buddhism. Thus it has been noted in the case of Burmese Buddhism that *nat*s, witches, ghosts, and demons, though substantively different, share the functional attribute of causing pain (Spiro, p. 40). It is noteworthy that although Hinduism does not acknowledge a specific devil, which Buddhism does in the form of Mara, it acknowledges the existence of devilish beings, who are also functionally differentiated. Hindu lore distinguishes between *asura*s, a class of supernatural beings continually opposed to the gods; *rākṣasa*s, demonic beings who roam about at night, disturb the penances of ascetics, and harass and kill people; *piśāca*s, who frequent cremation grounds; *vetāla*s, or vampires; and *preta*s and *bhūta*s, phantoms of the dead who bother human beings on occasion. Sometimes the word *bhūta* is inclusive of *preta* and *piśāca* (Crooke, in Hastings, 1911, p. 608). The Hindu god Śiva, incidentally, presides over his own *gaṇa*s, or malevolent troopers, who include some of the abovementioned creatures and can act in extremely unpleasant ways when incensed.

By contrast, in Islam, the various functions of the one and same class of demons—the *shayṭān*s—may be distinguished: they teach humans magic, lead them to unbelief, try to eavesdrop on heaven, and accompany obstinate unbelievers. An intermediate form of functional differentiation, between the Hindu one, organized by class as well as function, and the Islamic one, where different functions are performed by members of the same class, is provided by Zoroastrianism, where the devil, Angra Mainyu, rallies around his standard Aka Manah ("evil thought"), Indra, Saurva, Nanhaithya, (parallel with three Indian deities who are opposed), Taurvi ("hunger") Zairich ("thirst") and Aēshma ("fury"), so that one finds closely allied devil figures performing several diabolical functions, only some of which have been listed. One of the clearest formulations of devilish functions in Christianity is found in the *Admirable History* (1612) of Sebastien Michaëlis, which is set forth in three sets of hierarchies, each specifying the name of the devil, his function, and his adversary (Robbins, 1959, p. 129).

Another way in which devils could be typologized is by gender differentiation, for female devils are not unknown. In popular Hinduism the Churalin, a demoness regarded as the composite spirit of women who have died in childbirth (Babb, 1975, p. 248), is referred to as identifiable by an inverse foot formation. Islam speaks of beings called *ghūl* in general, though properly speaking it is said to apply only to the female, whose male counterpart is the *gharrār.* She is supposed to lead a solitary existence in the deserts, to waylay travelers and practice cannibalism. The case of the lamia, a vampire or (night-)mare, may also be discussed here. The word serves a dual sense, which may cut across gender differentiation: it could mean a succubus demon or a witch. It was suggested in the fifteenth century in Germany and Czechoslovakia that lamiae were demons in the shape of old women who stole children and roasted them.

**POSSESSION.** As universal as belief in evil spirits is belief in the phenomenon of possession of the body by these evil spirits. The history of Christianity records epidemics of possession, and a distinction is drawn between possession and obsession, the former being more grave inasmuch as it involves actual residence by the evil spirit in the body of the possessed.

Exorcism has been associated with Christian evangelization since its inception. This is also true of other religions. Tambiah (1970) clearly distinguishes between possession by benevolent and malevolent spirits (*phī*) in the context of Thailand, and notes how the distinction figures in Buddhist mortuary rites. Although the Thai beliefs about such evil spirits are so free-floating as to resist typologizing, certain kinds of devilish spirits most often cited as attacking people may be mentioned. Spirits of the rice field (*phī rai phī naa*) can attack villagers; so can the spirit that lives on a mountain (*phī pu loob*) but the attack of the *phī paub*, a malevolent disembodied spirit, is to be feared most as it may be hosted by some living being. Its origin is attributed to the transformation of spells into an evil force inside a magical expert, either a man or a woman. The force then acquires an existence of its own and can possess others.

**DEBATE ON ORIGINS.** Speculation regarding the origin of belief in devils has proceeded along several routes. According to one view, belief in devilish beings may have its roots in the experience of prehistoric man. At this time wild animals of strange shapes and sizes roamed the earth, and it would have been easy for early human beings to assume that nonhuman evil spirits abounded and assumed animal forms. Alongside this explanation may be placed the anthropological view, according to which beliefs in all classes of spiritual beings—benign or malign—are derived from belief in the disembodied spirits of the dead. Considerable controversy surrounds this view, but it may be safe to affirm that among many peoples the hostile spirits of the dead would be identified as devils. Psychological explanations for the origin of devils include the ideas of hallucinations and projection with various degrees of sophistication. As early as 1218, Gervase of Tilbury suggested that belief in lamia or nightmare was simply nocturnal hallucination, and some modern scholars would argue that man manufactures his devils out of his fears. It is often considered self-evident that the "conception of such beings doubtless stems from man's instinctive fear of the unknown, the strange and horrific. It is significant that belief in evil spirits or Devils can exist without the idea of the Devil, i.e. the personification of the principle of evil in a single being" (Brandon, 1970, p. 229).

In addition to the historical (i.e., prehistorical); anthropological (i.e., animistic); and psychological (i.e., psychoanalytical) explanations, one must consider also the theological aspect, for what is really involved is an explanation of the problem of evil. How is its existence to be reconciled with belief in a benevolent God? Evil creatures that defy God, despite his potential supremacy, may offer the scaffolding for some kind of a theological explanation. Given the existence of evil, one can offer a certain range of justifications: (1) what is perceived as evil is necessary for greater good; (2) evil exists as a necessary part of a good creation; (3) the universe is not perfect but is being perfected, hence the existence of evil; and (4) evil is necessary to retain free will. The existence of devils, as of the Devil, can be reconciled in various ways, as representing the principle of evil either singly or collectively and emerging out of an attempt to come to existential grips with the fact that evil exists. Since most events are caused by an agent, one might assume that evil is also caused by an agent, which may itself be either intrinsically or instrumentally evil.

## DEVOTION.

Religious *devotion* is ardent affection, zealous attachment, piety, dedication, reverence, faithfulness, respect, awe, attentiveness, loyalty, fidelity, or love for, or to, some object, person, spirit, or deity deemed sacred, holy, or venerable. Devotion may also be thought of as action, such as worshiping, praying, and making religious vows.

Devotion is a very common phenomenon in all areas of the world and in most religious traditions. In some traditions, sects, or cults, devotion is the central religious concern or is almost synonymous with religion itself. This is the case, for example, in some versions of Chinese and Japanese Pure Land Buddhism, several Hindu devotional movements, and some Christian movements, such as Pietism. The centrality of devotion seems to be more common in religious traditions in which theistic tendencies are central, although its importance in Pure Land Buddhism is sufficient evidence to caution against equating devotion with theism. Religious devotion frequently exists in a theological context of hierarchy where there is at least functional if not ontological theism and divine being(s) are considered to be superior to and have power over a human devotee.

**OBJECTS OF DEVOTION.** The extensiveness of devotion in religion becomes evident when the variety of objects of devotion is considered. While deities are usually considered the principal objects of devotion, a great many other things are also given devotion in the world's religions. In many African religions, as well as in such historical traditions as Hinduism and Confucianism, ancestors are important objects of reverence, awe, and devotion. Various people, living and dead, are also objects of devotion or the focus of devotional cults. *Gurūs* in Hinduism, saints in Christianity, the *xian* (immortals) in Daoism, the sage kings in Confucianism, *imāms* in Islam, *tīrthaṃkaras* in Jainism, and the buddhas and *bodhisattvas* in Buddhism are only a few examples of divine personages who receive devotion in the world's religions.

In most religions, devotion is primarily addressed to a deity. This could be male, female, or androgynous (as in the half-male, half-female deity Ardhanārīśvara in Hinduism,). The deity or divinity could be in the form of an animal or tree; sometimes, the deity may temporarily possess a human being and during the period of possession that person is the object of veneration. Devotion can also be shown to saints, *gurūs*, and charismatic teachers.

Relics associated with sacred personages are the objects of devotion in many religions. The physical remains of the Buddha were incorporated into stupas, the shrines around which devotional Buddhism began. To this day, parts of the Buddha's physical body are enshrined in temples such as the Temple of the Tooth in Kandy, Sri Lanka. In Christianity, particularly in the late medieval period in Europe, there was a lively traffic in relics, which became extremely important in popular piety. Relics were incorporated into church altars and often represented the concrete, objective aspect of the divine around which the church was built. Pieces of the true cross, bones of martyrs, vials of the Virgin Mary's milk, even the foreskin of Jesus, were among the holy relics that were the objects of popular devotion. In contemporary Christianity the Shroud of Turin is probably the best-known example of a holy relic. In other traditions as well, the physical remains of saints are commonly revered, and the burial places of saints, where purported miracles attributed to devotion are not uncommon, often become centers of healing cults.

In many societies, charismatic leaders, relics, and shrines of saints also become the devotional focus of adherents from communities different from the one to which they were originally associated. Thus, Hindu devotees throng the *dargāh*s (shrines where Ṣūfī saints are entombed) in India. In many cases, the land where these shrines were built was donated by Hindu rulers to the Muslim saints they venerated. Sites where miraculous cures and healing are said to take place also draw devotees from a variety of religious affiliations. Thus, Lourdes, Fátima, Velankanni, and other places where it is held that Marian apparitions took place are pilgrimage centers for devotees from a variety of religious traditions. Devotion in these cases is focused on a person, site, or object not ordinarily considered to be part of the religious tradition to which one officially belongs. These "fuzzy boundaries" between religions abound in South, Southeast, and East Asia, where rigid affiliation to a religious tradition has historically not been part of a community's ethos.

Rivers in Hinduism and mountains in Shintō are often especially revered; indeed, most religious traditions associate sacredness with specific places. Certain cities, such as Vārāṇasī in Hinduism, Jerusalem in Judaism and Christianity, Mecca in Islam, and Ise in Shintō, play an important role in the tradition of many religions and are often themselves the centers of pilgrimage and devotion. Sometimes whole geographical areas or countries are the objects of devotion, such as the Indian subcontinent as a whole for Hindus and Israel for many Jews.

Where it is not possible to visit an original pilgrimage site, devotion often focuses on ritual objects such as the Ark of the Covenant in ancient Judaism and the Host in Christianity. Sacred texts are also objects of devotion in some religions, insofar as they are seen to be the locus of divine revelation. Although the place and function of these texts in the various religious traditions are quite different, the Torah in Judaism, the *Lotus Sūtra* in Nichiren Buddhism, the *Adī Granth* in Sikhism, and the Qurʾān in Islam are books held in great reverence. Indeed, the sacred, holy, or divine has revealed itself to, or been apprehended by, humankind in so many different ways and in such a variety of forms that at some point in the religious history of the world almost every conceivable object has received religious devotion.

And finally, in a circular fashion, people perceived to be paradigmatic devotees themselves become the objects of devotion. Many saints, teachers, and devotees are honored, venerated, and prayed to as bestowers of earthly favors, as mediators between human beings and gods, and as exalted divinities in themselves.

**TYPES OF DEVOTION.** Devotion is of different types and takes place in different physical settings, with different attendant moods, and within different kinds of communities. It is often meditative, emotionally disciplined, and subdued, and consists primarily of the willful directing of one's attention to the object of devotion. This is the nature of devotion, for example, as described in the *Bhagavadgītā*. There, Kṛṣṇa teaches Arjuna to center himself mentally on God in all his actions in order to make his entire life an act of devotion. There is a similar emphasis in most theistic traditions in which the devotee is taught to be attentive to God in all things.

Devotion may also express itself in emotional frenzy and passion. Ṣūfī devotion is usually accompanied by music and dance, and much Ṣūfī devotional poetry is intensely passionate. The *Bhāgavata Purāṇa*, a medieval Hindu devotional text, says that true devotion is always accompanied by shivering, the hair standing on end, tears, and sighs of passion. The Hindu saint Caitanya (1486–1533) exemplified this kind of devotion. He was so often overcome by fits of emotional devotion to Kṛṣṇa, in which he would swoon or become ecstatic, that he could barely manage the normal routines of daily life.

The setting of devotion may be quite formal. Churches, synagogues, temples, and mosques are all places in which people devote their minds and hearts to the divine. In such settings devotion may be highly formalized, even routinized, and under the direction of professional clergy. In its formal expression devotion is often communal or congregational and arises from, or is even dependent upon, the coming together of a group of people for a common devotional purpose. On the other hand, devotion in such formal physical settings may also take the form of a lone individual performing an act of devotion to a special saint.

Devotion may also be highly informal and unstructured. The best examples of this are the lives of famous saints who were great devotees. Francis of Assisi (1182–1226) in Christianity and Caitanya in Hinduism were both characterized by spontaneous outbursts of passionate devotion in nearly any setting.

Devotional communities (groups formed primarily as a result of, or in order to cultivate, devotion) also vary from the highly structured to the very unstructured. Monastic orders in Christianity and the Ṣūfī orders in Islam, in which devotion serves a central role, are examples of highly structured devotional communities. The South Indian devotee-saints of Śiva (the Nāyaṉārs) and Viṣṇu (the Āḻvārs), in comparison, were part of unstructured traditions in which individual poet-devotee-saints wandered the countryside or resided at temples and sang devotional hymns to their lord. The devotional community may extend no further than an individual saint and his or her admirers, students, followers, or devotees. Such was the case in the early days of Saint Francis's religious life and for such Hindu saints as Lalleśvarī or Kashmir (fourteenth century) and Mīrā Bāī of Rajasthan (1498–1546).

The practice of devotional rituals may also have several goals. While most religions portray the ideal goal as submission to the deity's love without any expectation of reward or fear of punishment, millions of devotees pray or perform votive rituals for the fulfillment of specific desires. Thus prayers may be offered or devotional exercises performed for the cure of a family member, achievement of a particular career goal, the birth of a child, the marriage of a son, or even the selling of a house. These prayers and votive rituals form the bulk of most devotional petitions in many religions.

**CHARACTERISTICS OF DEVOTION.** Although the contexts, objects, and moods of devotion vary, there are several characteristics that typify most religious devotion. These involve the emotions, the will, and the mind.

1. The object, person, or deity to whom devotion is directed is regarded with awe and reverence. There is a recognition, often more emotional than mental, that the object is imbued with sacred power. This awe or reverence may assume a passionate intensity, exclusivity, or ardor that overwhelms the devotee.
2. There is faith—conviction, trust, or confidence—on the part of the devotee that the object of devotion is real, that it underlies, overarches, or in some way epitomizes reality. This aspect of devotion is usually associated with the will; it involves commitment, loyalty, and often submission to the object of devotion.
3. Single-mindedness, at least for the time that a particular person, object, or deity is venerated, often involves mental concentration on its object. Spiritual techniques that aim at focusing and concentrating the mind are often part of religious devotion.

**Characteristics of theistic devotion.** When religious devotion is theistic in nature it is further typified by the following characteristics.

1. Theistic devotion involves a personal relationship in which the deity is imagined and approached as a person and is expected to respond to his devotees accordingly. In Islam, for example, the term *manājāt,* meaning "intimate converse," is supposed to characterize a person's devotion to God. The attitude the devotee adopts in this personal relationship varies and is often dependent upon how the deity is perceived.
2. One of the most common metaphors used in theistic devotion is that of a love relationship. The love of the devotee may be like that of a servant for the master, child for a parent, parent for a child, friend for a friend, or lover for the beloved. In theistic devotion the mood of love, especially when the relationship is familial, erotic, or romantic, introduces great intimacy, passion, and tenderness into the devotional experience. When devotion is expressed in terms of a love relationship, the deity is usually cast in a very approachable role and is described as reciprocating the devotee's love with a passionate love of his or her own. Many goddesses, for example, are portrayed as mothers who are attentive to and fiercely protective of their devotees/children, while the Lord's Prayer in Christianity describes God as the devotees' father. Throughout theistic devotion, deities assume the roles of loving parent, intimate friend, playful child, or impassioned lover in response to the devotee's own devotional role. In some roles of intimacy, the devotee may even tease or scold the deity; such is the case with Andal (c. eighth century) and Nammāḻvār (c. ninth century), who composed Tamil devotional hymns, hailing Kṛṣṇa as harsh and cruel and as the person who knows no righteousness.
3. Theistic devotion is also characterized by expressions or feelings of praise and submission. Both attitudes presuppose that the deity is morally superior to, wiser, and more powerful than the devotee, and usually that the devotee has been created by the deity or is wholly dependent on the deity for his or her continued existence and well-being. In praise, the deity's qualities of goodness, greatness, and generosity are often mentioned. The deity is praised for bestowing various blessings, particularly the blessing of life, on the devotee, the country or nation, or the world as a whole. Theistic devotion typically expresses itself by praising the deity as the source of all good things and as the embodiment of all good qualities. In Islam, for example, the term *ḥamd,* meaning "thankful praise," often characterizes devotion. The relationship that is frequently spoken of when praise and submission dominate is that of a master and servant.

The devotee of a deity often expresses total dependence upon the god by feelings, attitudes, gestures, or acts of submission. In Arabic the word *muslim* means "one who surrenders (to God)," suggesting the centrality of this attitude in Islamic tradition. The Muslim term *ʿibādah* (worship) is often used to characterize devotional observances to God, clearly indicating that the divine-human relationship is like that of a master to a slave *(ʿabd).* In Śrī Vaiṣṇavism, a Hindu devotional movement, the theme of complete self-surrender *(prapatti)* is central; such submission is held to epitomize *bhakti*, or devotion to God.

The style of submission may depend upon the type of relationship envisioned by the devotee. The submission of a child to its mother, for example, might be quite different from the submission of a slave to his owner. In many traditions the devotee is affirmed to be greatly inferior to the deity; men and women are often described as morally weak, sinful, corrupt, and insignificant, and the deity as overwhelmingly superior. In this relationship the proper attitude of the devotee is abasement and submission.

**Devotion in the context of nontheistic traditions.** Devotion, most prominent in theistic traditions, is sometimes considered a form of justification for letting loose the flow of divine grace. One may ask if it has any place in philosophical schools such as Zen Buddhism and Advaita Vedānta, where individual meditation in a nontheistic context is seen as the way to reach the final goal. Zen, Advaita Vedānta, and some yogic traditions have ontologies which consider the distinction between the deity and devotee meaningless or challenge concepts of reality as we know them. In many of these schools there is no ultimate gracious deity whose grace will give salvation or liberation. Thus, in the nontheistic traditions, philosophically speaking, devotion has no ultimate value as a path to liberation, *nirvāṇa*, or the final goal. Yet, many adherents of these traditions have, in fact, composed devotional hymns addressed to teachers and deities.

**DEVOTION AND RELIGIOUS PRACTICES.** Devotion is often associated with or expressed in the context of several common types of religious practices.

**Prayer.** Devotion often takes the form of prayer. In prayer a deity is entreated, supplicated, adored, or praised in a mood of devotional service or attentiveness. In some cases, the devotee cultivates a mood of devotion before praying, in order to ensure sincerity and concentration. In medieval Judaism, for example, some authorities recommended the practice of *kavvanah*, the directing of attention to God, before prayer so that prayer might be undertaken with the proper mental inclination.

Moving and dramatic expressions of devotion are found in poems and hymns that articulate the prayers of devotees to the divine in many indigenous religions and in every theistic religious tradition among the world's historical religions. Hymns, such as those central to Protestant Christianity, are devotional prayers set to music. Collective prayer, common in many religions, is another example of formalized devotion.

**Worship.** As a formal expression of homage, service, reverence, praise, or petition to a deity, worship is closely related to, or expressive of, devotion. Much worship represents a formal, periodic, structured expression of devotion. The prescribed daily and Friday prayers in Islam, called *ṣalāt*, for example, are essentially devotional in nature. In Hindu *pūjā* (worship), which occurs in both temple and domestic settings and which may be performed by an individual or by large groups, the basic pattern of ritual actions denotes personal attendance upon and service of the deity by the worshipers. The deity is symbolically bathed, fanned, fed, and entertained by the priest or directly by the devotee. It is common in worship to make an offering to the deity, which again is often done in the spirit of devotion. Some forms of worship are primarily occasions for devotees to express together their devotion to their god. This is the case, for example, with Hindu *kīrtana* and *bhajan*, gatherings of devotees at which songs are sung in praise of a deity. The setting is usually informal and the mood warm and emotional. It is not uncommon for devotees to dance and leap for joy while they sing their hymns of praise. In Protestant revival meetings, too, open expression of emotional devotion to God is encouraged and expected of those present.

**Performing and fine arts.** Devotion in many religions is expressed through music and dance. Many church and synagogue services deploy music, chants, and ritual action to express devotional intensity in an aesthetic framework. Making joyful noise or using the body to depict one's longing for the divine have been hallmarks of almost all religious traditions. Deities and devotees in many traditions dance the cosmos, dance their relationship to each other, and dance to the powers of the universe. Devotees in the Hindu tradition emulate the dance of the deities Śiva, Pārvatī, or Kṛṣṇa. Many dances portray a soul's longing for the supreme being; the devotional songs of Hindu schools are standard accompaniment for dancers. Devotion to the deity is expressed through a number of *bhavas* or attitudes, including the attitudes connected with service, maternal love, and romantic love. Singing emotional lyrics with devotion is said to be a path through which one can reach salvation. In the Hebrew scriptures, Miriam took a tambourine in her hand and danced with all the other women; *Psalm* 149 exhorts one to praise the Lord's name in dance. There is a palpable expression of devotion in the dances of some Ṣūfī traditions and in the circular dances seen among the Ismāʿīlīs.

Divine beings are often painted, carved, or fashioned out of various materials to be used as objects of devotion. These objects are frequently invested with life and the divine is said to reside in them after ritual consecrations. Many of these icons are carved with devotion for worship by other devotees.

**Pilgrimage** is a popular undertaking in many religions, and for many pilgrims the journey is an act of devotion. Setting off on a long trip to a sacred place is a sort of physical prayer. Through the pilgrimage the pilgrim may be making a special appeal to a deity or expressing gratitude for a blessing received from the deity. In Islam a pilgrimage to Mecca is enjoined as one of the fundamental acts of submission incumbent upon all Muslims.

The pilgrim may be making the pilgrimage simply to steep himself or herself in an atmosphere of piety and devotion that is far more intense than in ordinary circumstances. The feeling of community that arises among pilgrims is often strong, and the entire journey, which can last for weeks or even years, may turn into a devotional extravaganza with hymns being sung all day long, devotees swooning in fits of ecstasy or possession, and miraculous cures or incidents being reported. The annual pilgrimage to Pandharpur in Maharashtra is an act of mass devotion sustained for weeks, not unusual in Hinduism.

Devotion is also closely connected with patronage. The large cathedrals of medieval Europe, the Hindu temple complexes of South and Southeast Asia, Buddhist stupas and temples, and Shintō shrines were frequently built by royalty, nobility, or wealthy patrons as a testimony to their devotion and piety.

**Meditation.** Although many kinds of meditation may not involve devotion, devotion often uses meditative techniques. Meditation usually involves disciplining the mind so that it can focus on something without being distracted by frivolous thoughts or bodily needs and discomforts. For many practitioners the goal is to achieve or maintain attentiveness to a deity. Meditation is used to perfect, deepen, sharpen, or enhance devotion. In such cases meditation and devotion may become synonymous. In Japanese Pure Land Buddhism the term *anjin* (which is sometimes translated as "faith") refers to a meditative calm in which the heart and mind are quieted through concentration on Amida Buddha and his paradise. A particularly common meditative technique used to engender, express, or enhance devotion is the constant repetition of the deity's name or a short prayer to the deity. Ṣūfīs invoke the names of God over and over as part of their *dhikr* (a term meaning recollection that refers to devotional techniques); Eastern Orthodox Christian monks chant the Jesus Prayer ("Lord Jesus have mercy on me a sinner") as often as possible; devotees of Kṛṣṇa chant his names repeatedly. In Pure Land Buddhism, devotees chant a short prayer ("Hail to Amida Buddha") over and over to sharpen and concentrate their faith in Amida.

**Asceticism and monasticism.** Asceticism and monasticism are often undertaken in the context of devotion, especially in the theistic and Pure Land Buddhist traditions. The Desert Fathers sought solitude in the desert in order to develop their attentiveness to God without distractions or hindrances from society or other people. Their asceticism was clearly associated with, and intended to cultivate, devotion. An ascetic strain is also strong in Sufism, a highly devotional expression of Islam, and many of the most important Hindu devotional leaders and saints have been world renouncers. In many cases, it is clear that asceticism, or renunciation of the world, has been found not only compatible with devotion but a positive encouragement of it.

The case is similar with monasticism. An isolated, cloistered, highly regimented religious community was for centuries esteemed in Christianity as the best place to devote oneself to God. Life in the monastic community was dominated by regular worship and prayer several times a day and imposed a devotional discipline on the individual. To a great extent, monasticism in Christianity was a systematic attempt to perfect a human being's devotional predilections. As in Christian asceticism, the goal was to become attentive to God at all times, except that in the monastic context this goal was sought with the help of a like-minded community and under the guidelines of a carefully regulated spiritual discipline or rule. In many respects, several Ṣūfī brotherhoods and Pure Land Buddhist monastic communities were also organized attempts to create the ideal environment for cultivating the devotional sentiment.

Apart from acts of renunciation in which a devotee may make a clean break with the world he or she lives in, there are many acts of asceticism that are woven into the daily life of the faithful. Thus, Muslims may fast during the month of Ramaḍān, from sunrise to sundown. Hindu women fast on particular days of the week, lunar month, or year for the welfare of their families. In many situations, acts of devotional asceticism addressed to specific deities may be performed for immediate worldly benefits, rather than for salvation or liberation.

**Mysticism.** For many devotees, particularly in theistic traditions, there is a deep longing to be close to, in the presence of, or absorbed into the deity. This is also the goal of mysticism in theistic traditions, and devotion and mysticism are often closely associated. In medieval Jewish mysticism, *devequt*, which is usually translated as "cleaving to God," is considered the highest religious state that can be attained. This state of cleaving to God is synonymous with an intense devotion in which the devotee is completely preoccupied with and absorbed into the divine. In Sufism the term *fanāʾ* describes a point in the devotee's or mystic's spiritual quest in which all feeling of individuality and ego fall away and the Ṣūfī is overwhelmed by God. In Christianity, Paul expresses the idea of union with the divine as follows: "It is no longer I who live, but Christ who lives in me" (*Gal.* 2:20). In trying to describe the intimacy of his unmediated experiences of God, John of the Cross (1542–1591), a Spanish mystic, spoke of a river merging with the ocean and of iron heated until it becomes one with the fire. Mystical union, then, represents the ultimate goal of many devotees in several different traditions, and the mystical path is often understood as being the highest path a devotee can embark upon. In many of these cases, devotion is gendered and a submitting devotee is portrayed as a woman in the ecstatic embrace of her lover.

**Social action and charity.** In some religious traditions, charitable service to one's fellow human beings is considered the most perfect form of devotion to the divine. Several Christian movements with a strong devotional bias have emphasized works of charity as central to devotional life. With the inauguration of active religious orders for men by Francis of Assisi in the thirteenth century, and for women by Mary

Ward and Vincent de Paul in the seventeenth century, the focus of religious life, which had earlier been cloistered, shifted from the cultivation of one's spiritual predilections in isolation from society to serving the poor and needy in the world. Several religious brotherhoods and sisterhoods in Protestant Christianity aim at serving the poor, while the Social Gospel movement of the nineteenth century in the United States represents an attempt to provide theological justification for social involvement as central to Christian life.

A dramatic modern example of devotion as inextricably associated with social service is the life of Mother Theresa of Calcutta and her Sisters of Charity, who minister to the "poorest of the poor" as a way of life. Mother Theresa said that she taught the women who joined her order to see Jesus in each person they served; in serving men and women, they serve Jesus.

Other traditions, too, equated service to human beings with service to God. Mahatma Gandhi, for example, who had a strong devotional bent, was once asked why he did not withdraw from the world in his search for God. He replied that if he thought for one moment that God might be found in a Himalayan cave, he would go there at once, but he was convinced that God could only be found among human beings and in their service.

**DEVOTION AND ETHICS.** Some narratives depict devotees as flouting the accepted norms of ethics of the tradition. Thus, a devotee may resort to highway robbery or may sell her body so that the money may be used for charity or a pious cause. In some such narratives, the devotee is depicted as undergoing a test. In some there is a miraculous intervention and the devotee is vindicated, but in others, the story may aim to show that within the world of devotion, the normal code of behavior may be nuanced or even reversed, with a logic of its own that is not seen in everyday life. In some traditions, this philosophy is taken one step further to make the point, in an exaggerated manner, that the devotion of a so-called sinner is more "pure" or acceptable to a devotee than the half-hearted or mindless devotional ritual of one who is considered to be virtuous or morally upright.

**The philosophy of devotion.** The Hindu and Buddhist traditions, in which there are very strong competing paths alongside the devotional path, put forth two kinds of arguments in defending the excellence of the devotional way. Both traditions assume that the world has entered a final period of moral, religious, and ethical decline (the *kaliyuga* in Hinduism, and *mappō* in Japanese Buddhism), in which human beings are no longer spiritually capable of undertaking certain religious paths that were popular among people in earlier ages. Asceticism, meditation, monasticism, and religious ceremonialism, in particular, are held to be too demanding for people of the present age, whose spiritual capacities are weak. In this age, devotion is the best way to reach the spiritual goal, the best because it is the easiest. It can be practiced by anyone, by monk and peasant, rich and poor, priest and layman, man and woman, young and old.

The second argument follows from the first. Why is devotion the easiest path? Because it is the most natural to human beings. In some Hindu devotional movements, *bhakti* (devotion) is said to represent one's inherent *dharma* (proper way of acting) as opposed to one's inherited *dharma*, which is equated with one's caste, occupation, and social roles. All human beings, according to this logic, have an inner longing to love God, and until they do they remain frustrated, incomplete, lonely, and lost. Devotion is understood as a person's cultivation of this natural urge to serve and love the creator, who has instilled in human beings at the deepest level a longing to be reunited with their source.

The idea of devotion representing a person's natural inclination is also expressed in many Ṣūfī images that speak of one who is not devoted to God as being like a fish out of water, a camel far from a watering hole, a bird separated from its mate. To seek God by means of the mystic way is to return home, to seek the familiar and comfortable, to indulge one's natural longings. A similar idea is expressed in Augustine of Hippo's (354–430) famous saying to the effect that human beings are restless until they find their rest in God.

In the vision of Francis of Assisi, all creation was brought into being in order to praise the creator; every species in existence praises God in its own special way. Even inorganic nature celebrates the creator in some way. For Francis, devotion to God represents the inherent and underlying law of the creation and is apparent everywhere. Some Ṣūfīs write that the entire creation is said to be pervaded by the presence of God, that his divine presence intoxicates all creatures and sets them singing and dancing in ecstatic praise.

In the *Bhagavadgītā*, when Kṛṣṇa teaches Arjuna how to discipline his actions so that he will not reap the fruits of *karman*, he tells him to dedicate all of his actions to God, to become God's instrument in all that he does (9.27). One who is truly devoted to a deity makes every action, no matter how apparently insignificant, routine, or frivolous, an act of devotion to the divine. Similarly, Hasidic Judaism teaches that the state of *devequt*, or cleaving to God, should be a person's constant state of mind. In everyday life, even while performing the most mundane acts, a person should cleave to the Lord.

**SEE ALSO** Worship and Devotional Life.

## BIBLIOGRAPHY

There is a lack of books on devotion as a religious phenomenon. Friedrich Heiler's *Prayer: A Study in the History and Psychology of Religion*, translated by Samuel McComb (London, 1938), seeks to describe a widespread devotional phenomenon in religion, but it focuses primarily on Western religious traditions. There are more and better sources for individual traditions. Abraham Zebi Idelsohn's *Jewish Liturgy and Its Development* (New York, 1967) has sections on devotion in the Jewish tradition. Owen Chadwick's *Western Asceticism* (London, 1958) contains translations of important ascetic texts in the Christian tradition and deals with the exemplary

role of the ascetic in Christian piety. David Knowles's *Christian Monasticism* (New York, 1969) is a standard work on the monastic ideal in Christian life. Annemarie Schimmel's *Mystical Dimensions of Islam* (Chapel Hill, N.C., 1975) treats the Ṣūfī traditions in Islam, which are highly devotional in nature. Constance Padwick's *Muslim Devotions: A Study of Prayer-Manuals in Common Use* (London, 1961) surveys popular devotional manuals in Islam. A. K. Ramanujan has translated several devotional hymns of a South Indian Hindu devotee and presented an overview of Hindu devotion in a volume entitled *Hymns for Drowning: Poems for Visnu by Nammalyar* (Princeton, 1981). Edward C. Dimock and Denise Levertov have translated several Bengali Hindu devotional hymns in a book entitled *In Praise of Krishna: Songs from the Bengali* (New York, 1967). Alfred Bloom's *Shinran's Gospel of Pure Grace* (Tucson, Ariz., 1965) and Gendo Nakai's *Shinran and His Religion of Pure Faith* (Kyoto, 1946) deal with devotional Buddhism in Japan.

## DE VRIES, JAN See VRIES, JAN DE

**DGE LUGS PA.** The Dge lugs pa (Geluk pa) order of Tibetan Buddhism was founded in the early fifteenth century by Tsong kha pa (1357–1419) in the area of Lhasa, the capital of Tibet. He established a monastic university on a mountain called Dga' ldan ("the joyous") in 1409, and his sect was thus originally called Joyous Way (Dga' ldan pa'i lugs); later it came to be called Virtuous Way, Dge lugs pa. Students built two other large monastic universities in the Lhasa area, 'Bras spung (Drepung) (1416) and Se ra (1419), and the system gradually spread throughout the country. Within two hundred years the sect had become an important political force, such that around 1640, with the help of the Mongolian potentate Gushri Khan, the fifth Dalai Lama (1617-1682) assumed power as head of the government. The lineage of Dalai Lamas maintained this position until the Chinese takeover in 1959.

The Dge lugs pa educational system so captured the imagination of Tibetans that its universities attracted great numbers of men. Dge lugs pa gradually became the dominant mode of religious education and the dominant cultural force in an area ranging from the Kalmyk Mongolian lands in Russia near the Caspian Sea through Outer Mongolia, Inner Mongolia, Mongolian Siberia, parts of China, and Tibet. Lhasa, with its large Dge lugs pa universities, became the cultural, religious, educational, medical, and astrological capital of Buddhist Inner Asia. Great influence was exercised by a complex system of education, devotion, meditation, and cultism, the pattern for which was set by brilliant Dge lugs pa leaders in Lhasa over several centuries.

In Lhasa each monastery had at least two competing faculties and student bodies, which periodically met to debate in intense competition. Factionalism between groups of differing philosophic opinion was highly encouraged; thus there was more intellectual activity within the Dge lugs pa order on this level than between Dge lugs pa and the other orders of Tibetan Buddhism.

Although the Western study of Dge lugs pa education is scarcely more than a half century old, it is possible to piece together a picture of this highly developed program for stimulating the metaphysical imagination. In general, Dge lugs pa doctrinal training is classified into two types, sūtra and Tantra, based on a division of the texts regarded as the Buddha's word. Training in the sūtra system is further divided into a more "practical" and a more "theoretical" system of study. Both practical and theoretical systems are based on great Indian books and Tibetan texts that consist of either explicit commentaries on those texts or expositions of main themes in them.

The practical system centers on Tsong kha pa's *Lam rim chen mo* (Great exposition of the stages of the path) and Indian texts such as Śāntideva's *Bodhicāryāvatāra* (Engaging in the Bodhisattva deeds). The theoretical system centers either on comparative systems of tenets, both Buddhist and non-Buddhist, or on the "Five Great Books." The large Dge lugs pa universities take the latter approach for a curriculum of sūtra study that begins when the student is around eighteen and continues for twenty to twenty-five years.

To prepare students for study of these texts, the curriculum begins with a class on introductory debate that serves to establish the procedure of combative and probing analysis used throughout the entire course of study. The approach is at once individualistic (as used in the preparation and execution of specific debates) and group-stimulated (in that information and philosophic positions are acquired from fellow debaters in an ongoing network of communication). The preliminary classes further study basic psychology and basic theory of reasoning. Then begins a reading of the first of the Five Great Books: the future Buddha Maitreya's *Abhisamayālamkāṃra* (Ornament for clear realization), a rendering of the hidden teaching on the path structure in the *Perfection of Wisdom Sūtras;* this work is usually studied for six or seven years.

The class then passes on to the second Great Book, Candrakīrti's *Madhyamakāvatāra* (Supplement to [Nāgārjuna's] treatise on the middle), to explore for two years the explicit teaching on the emptiness of inherent existence expounded in the *Perfection of Wisdom Sūtras.* Next is Vasubandhu's *Abhidharmakośa* (Treasury of manifest knowledge), a compendium of the types and nature of afflicted phenomena (*kliṣṭadharma*) as well as the pure phenomena (*vaiyavadānikadharma*) that act as antidotes to them; this takes two years. The fourth Great Book is Gunaprabhā's *Vinaya Sūtra* (Aphorisms on discipline), also studied for two years.

Each year throughout the entire twenty-year program, time is taken out for pursuit of the last of the Great Books, Dharmakīrti's *Prāmaṇavarttika* (Commentary on [Dignāga's] compilation of prime cognition), largely epistemological and logical studies. At the end there are several years for review and preliminary rounds of debate in preparation for the national yearly debate competition in Lhasa; the winner becomes a national hero.

Throughout the long course of study reasoned analysis is stressed, but at the same time the student maintains daily practice of Tantric rites revolving around visualization of himself as a deity. He also participates in cultic rites at the university, college, and subdivision levels to appease and satisfy various protector deities associated with those units, and participates in devotional assemblies on a daily basis centered on deities like the savioress Tārā. Because of the long training period in sūtra studies, this less obvious, yet very strong and even dominant Tantric side of Dge lugs pa often goes unnoticed by foreign observers.

After taking a *dge bśhes* degree, a monk can proceed to a Tantric college, the two prime ones being the Tantric College of Upper Lhasa and the Tantric College of Lower Lhasa. Both have as their main purpose the study, transmission, and practice of the *Guhyasamāja Tantra,* again through the extensive commentaries of Tsong kha pa. The distinguishing feature of Tantrism is deity yoga; its practitioners meditate on themselves as having the physical form not of an ordinary person, but of a deity embodying the highest levels of wisdom and compassion.

Underlying this entire program of religious immersal through doctrinal, devotional, ritualistic, and meditational means is a commitment to reason. The harmony of reason with the most profound religious experiences of compassion, wisdom, deity yoga, and manifestation of the fundamental innate mind of clear light is stressed. Meditation is viewed as being of two varieties, stabilizing (or fixating) meditation and analytical meditation, with the latter receiving great stress in Dge lugs pa. To develop compassion, reflective reasoning is used to enhance basic feelings that are recognized as part of common experience. To develop wisdom, reflective reasoning is used in an intricately devised process so that the student may penetratively understand the incorrectness of assent to the false appearance of phenomena as if they existed in their own right. The aim is not merely to defeat rival systems but to overcome an innate, unlearned misconception of the nature of phenomena.

Such analytically derived realization of emptiness constitutes the first step in practicing deity yoga in Tantrism. The wisdom consciousness—the realization of emptiness impelled by compassion—is then used as the basis for manifesting as a divine being. The wisdom consciousness itself appears as a deity in an indivisible fusion of wisdom and compassion that is symbolized by a *vajra,* a diamond. Utilizing these continuous divine appearances, stabilizing meditation can then be performed on essential points within the body to induce subtler levels of consciousness that are used to realize the same emptiness of inherent existence. When the most subtle consciousness, the fundamental innate mind of clear light, is actualized, the wind (Skt., *prāna;* Tib., *rlung*), or energy, associated with this most subtle consciousness is said to be used as the substantial cause for appearing in an *actual* divine body such that one no longer needs the old coarse body. Transformation is literally both mental and physical.

This most subtle mind is the same as the clear light of death that terrifies ordinary beings, who fear they are being annihilated when it manifests. The Dge lugs pa system of education is aimed at overcoming this fear of one's own most basic nature; thus it suggests that the sense of otherness that many of the world's cultures associate with profound religious experience of the awesome is based on a misconception about the basic nature of one's own being. Further, it suggests that this fear and sense of otherness can be caused to disappear through an understanding of the actual status of phenomena, which is gained through reasoned investigation brought to the level of a profoundly moving experience. This highly developed view of the compatibility of reason and deep mystic insight, expressed in a system of education and ritual exercise, is a distinctive feature of Dge lugs pa.

Since the Dalai Lama's flight from Tibet in 1959, just prior to the takeover of the government by Chinese Communists, a refugee community of Dge lugs pas under his leadership (which is not confined to members of the Dge lugs pa order) has, in scattered places throughout India, reestablished smaller versions of Lhasa's three main monastic universities (each having two competing colleges as subdivisions) as well as two of the Tantric colleges and the monasteries of the Dalai Lama and Panchen Lama. Thus the Dge lugs pa educational system has been reestablished in India and, as of 2003, involved approximately ten thousand monks. There are also approximately eight hundred Dge lugs pa nuns in India and Nepal, with scholastic education being introduced in the early 1990s in some nunneries, a remarkable development in the empowerment of women. Clearly this re-establishment of monastic training in exile is a feat of considerable achievement by an overall Tibetan refugee population in India and Nepal of 120,000.

## BIBLIOGRAPHY

The study of Dge lugs pa is in its infancy, but several helpful expositions have emerged. For a historical and political study, see David L. Snellgrove and Hugh E. Richardson's *A Cultural History of Tibet* (1968; reprint, Boulder, Colo., 1980), pp. 177–267. An anthropological treatment of Dge lugs pa power structures is found in Martin A. Mills' *Identity, Ritual and State in Tibetan Buddhism: The Foundations of Authority in Gelukpa Monasticism* (London and New York, 2003). A short biography of Tsong kha pa, the founder of Dge lugs pa, and scattered samples of his teachings are given in *The Life and Teachings of Tsong Khapa* (Dharamsala, 1982), edited by Robert A. F. Thurman. Tsong kha pa's *Lam rim chen*

*mo* is being translated as *The Great Treatise on the Stages of the Path to Enlightenment* by the Lamrim Chenmo Translation Committee, Joshua W.C. Cutler, editor-in-chief (volume one: Ithaca, N.Y., 2000; volume three: Ithaca, N.Y., 2003). Tsong kha pa's analytic style in which reason dominates over and interprets tradition is evidenced in his *Tantra in Tibet,* translated and edited by me (London, 1977, Ithaca, N.Y., 1987). Glenn H. Mullin's *The Fourteen Dalai Lamas: A Sacred Legacy of Reincarnation* (Santa Fe, 2001) includes biographies of all fourteen Dalai Lamas. Janice D. Willis's *Enlightened Beings: Life Stories from the Ganden Oral Tradition* (Boston, 1995) presents hagiographies of a number of saints from the Dge lugs pa order. For a stirring autobiography of a Dge lugs pa scholar and lama as well as a description of the course of training and basic teachings of the school, see *The Life and Teaching of Geshé Rabten,* translated and edited by B. Alan Wallace (London, 1980). Georges B.J. Dreyfus's *The Sound of Two Hands Clapping: The Education of a Tibetan Buddhist Monk* (Berkeley, Calif, 2003) compares the educational systems of Dge lugs pa monasteries with that of Rnying ma pa. A sense of how a Dge lugs pa scholar's mind probes issues can be gained from Lati Rinbochay's *Mind in Tibetan Buddhism,* edited, translated, and introduced by Elizabeth Napper (London, 1980); in this work the topic of basic psychology is examined in depth. The themes of death, the subtler levels of consciousness, and the mind of clear light, as presented by an eighteenth-century Dge lugs pa scholar, Yang jen ga way lo drö, is given in Lati Rinbochay and my *Death, Intermediate State, and Rebirth in Tibetan Buddhism* (London, 1979, Ithaca, N.Y., 1985), and these topics are also treated in intimate and practical detail in His Holiness the Dalai Lama's *Advice of Dying and Living a Better Life* (New York, 2002). The doctrine of emptiness and its place in the Dge lugs pa worldview is presented in considerable detail, drawing from several works of their scholastic tradition, in my works *Meditation on Emptiness* (London, 1983,1996), *Emptiness in the Mind-Only School of Buddhism* (Berkeley, Calif., 1999), and *Reflections on Reality* (Berkeley, Calif., 2002). How the doctrine of emptiness and expression of compassion is practiced in Anuttarayoga Tantra is presented in detail in Daniel Cozort's *Highest Yoga Tantra* (Ithaca, N.Y., 1986).

PAUL JEFFREY HOPKINS (1987 AND 2005)

**DHAMMAKĀYA MOVEMENT.** At the turn of the twenty-first century, the Dhammakāya (Thai, *Thammakāi*) movement was one of the most dynamic and controversial aspects of Thai Theravāda Buddhism. The Pali word *dhammakāya* corresponds to the Sanskrit term *dharmakāya,* which in Mahāyāna Buddhism has come to refer to one of the three aspects of the buddha-nature, specifically its unmanifest yet all-pervading essence. By the late twentieth century the term had also been applied to a specific meditation method and to the movements that taught it. By the early twenty-first century, the most prominent of these movements, based at Wat Phra Dhammakāya on the north edge of Bangkok, had attracted tens of thousands of followers in Thailand and established several branch centers abroad. Highly skilled at organization and proselytization, this movement was also plagued by public controversies and periodically threatened with suppression.

**ORIGINS AND GROWTH.** Dhammakāya meditation was developed in the early twentieth century by the Thai monk Luang Phọ̄ Sot Jandasarō (Thai: Čhanthasarō). Supporting his teaching with references to the Pali texts of Theravāda Buddhism, Sot claimed his new method of meditation was taught by the Buddha and resulted in an actual vision of the Buddha's essence. Though these teachings eventually proved controversial, they drew little note in Sot's day. He was eventually appointed abbot of Wat Paknam in what is now western Bangkok, which he made a center of dhammakāya teaching and practice, a role continued into the late twentieth century.

Following Sot's death in 1959, several disciples continued teaching his method. By the late 1960s one of them, a white-robed nun named Chandra Khonnokyoong (Thai, Čhan Khonnokyūng), had attracted a group of university students into her circle. In 1969 one of them, a recent graduate of Kasetsart University, took ordination as Phra Dhammachaiyo (Pali, Dhammajayō; Thai, Thammachaiyō) and served from then on as titular head of this new branch of the movement. By 1970 Chandra's core of devotees had attracted the funds to establish a new meditation center just north of Bangkok, and the movement's activities rapidly expanded. By the early 1980s the movement had attracted thousands of devotees, and its meditation center was now registered as a monastery under the name Wat Phra Dhammakāya.

The founders of Wat Phra Dhammakāya had a talent for organization. The movement's core of university and technical-school students quickly took control of the student Buddhist clubs at several of the most prestigious campuses in Bangkok. In the 1980s on-campus activities expanded rapidly, and by the late 1980s the movement controlled clubs on more than fifty campuses around the country. The group also organized annual meditation and indoctrination retreats that gradually increased in length and numbers. In Thai Buddhism, young men have long been expected to undertake temporary ordination before assuming adult responsibilities, but for many urban men this tradition had become increasingly abbreviated, and the movement was seeking to reverse this trend. By the late 1980s the Dhammakāya movement's program of meditation retreats, which it dubbed *dhammadāyāda* (Thai, *thammathāyāt,* meaning "heir of the *dhamma"*), was enrolling more than a thousand participants a year in a program that entailed a two-month commitment and culminated in a highly publicized mass ordination.

In the 1980s a competing center opened in Ratchaburi province, a little west of Bangkok. This center, led by Phra Sermchai Chaiyamanggalo, became registered as the monastery Wat Luang Pho Sodh Dhammakāyaram, which takes great pains to distance itself from Wat Phra Dhammakāya. A third center, Wat Paknam, reportedly also functions as a center of dhammakāya teachings. However, as of late 2003, the largest, best known, and most controversial of the movements continued to be the one based at Wat Phra Dhammakāya.

By the late 1980s Wat Phra Dhammakāya was drawing a congregation of more than 1,000 on Sundays (more than 5,000 at the beginning of the month), and claimed to draw more than 50,000 on major Buddhist observances. Its followers also organized branch meditation groups and centers throughout the country, and by the 1990s several overseas branches had also been organized. By the late 1990s the crowds had gotten even larger, and the organization had acquired a full square mile of land and was nearing completion of a massive stupa faced by a pavilion said to accommodate 100,000 people. Meditation retreats continued to multiply (including *dhammadāyada* retreats for young women), and the movement had required additional land for temples and meditation sites throughout the country.

**CONTROVERSIES.** The Wat Phra Dhammakāya movement has been plagued by controversy throughout its existence. Criticisms have focused variously on its style of meditation, its interpretation of the terms *dhammakāya* and *nirvāṇa*, the alleged self-aggrandizement of its leaders, and the potential threat to competing streams of Thai Theravāda Buddhism entailed by its size, its financial power, and its political connections.

The exact nature of the controversies changed over time. In the 1970s, the movement was thought to be communist because of its successes among university students, who at the time tended to be leftist. By the late 1980s the movement was more likely to be considered right-wing due to its connections with the government and military officials; criticism shifted to the movement's size, ambitions, and organizational methods, though few in this period raised questions about doctrinal issues. In addition, visible and sometimes violent rifts arose between the movement's educated urban followers and the farmers, who tended to be less well-connected and outside the movement and who sometimes lost their livelihoods as the movement expanded its land holdings. These conflicts came to a head in the late 1980s as the movement was expanding its main center near Bangkok.

By the late 1990s, leading critics had amplified their attacks to include allegations of doctrinal heresy. During this period several of the movement's leading monks were also charged with financial improprieties. In the midst of this, the most serious crisis in the movement's history, leading governmental officials seriously proposed replacing the monastery's entire leadership with non-dhammakāya monks. In 1999 Wat Phra Dhammakāya's abbot was briefly suspended, but the monastery and movement remained in the hands of his deputies, and in late 2003 neither abbot nor movement seemed to have suffered lasting damage.

**TEACHINGS.** Wat Phra Dhammakāya is known for its emphasis on meditation and on a strict lay morality. It is dhammakāya meditation that has drawn the greatest attention.

**The meditation.** Participants in dhammakāya meditation are urged to relax, focus on a meditative object such as a clear crystal ball, and recite the *mantra sammā ārahaṅ* (Thai, *sammā ārahang*, literally, "fullness of spiritual attainment"). When devotees meditate in groups, as they often do, the voice of the session leader becomes an additional (unacknowledged) meditative object.

Leaders teach that when meditators have become sufficiently skilled, or their store of merit sufficiently full, they will see a glowing sphere called the *paṭhommamagga* (Thai, *pathommamak*, or "beginning of the path"). As they continue to gaze upon the sphere, it should pass through a series of self-representations (or "sheaths") of increasing clarity, resulting in a vision of the dhammakāya. Visual representations of these successive sheaths show a glowing circle containing a man sitting in meditation; in the later spheres he is wearing a yellow robe, and in the final, "dhammakāya," sheath he looks like a glowing saint, or Buddha.

The dhammakāya seen in meditation is a self-representation both of the Buddha's eternal essence and of the buddhahood within. Thus the meditator does not attain something he or she does not have, but rather sees what was already there. This clarity is founded on the merit accumulated in past lives, but is enhanced by the practice of meditation, especially dhammakāya meditation. Not only can meditation on the dhammakāya speed attainment of *nirvāṇa,* owing to the tremendous amount of merit it generates, but advanced practitioners can also use meditation to explore past lives and to visit the heavens and hells of traditional Thai Buddhist cosmology.

**Points of orthodoxy.** In many ways the Dhammakāya movement operates entirely within the norms of Thai Theravāda Buddhism. Its emphasis on meditation is paired with an emphasis on lay morality and the promotion of Buddhist identity and Buddhist missions. The movement justifies its teachings with references to the Pali texts of the Theravāda traditions, and the majority of its practices (other than the meditation itself) are grounded in Thai Buddhist convention. The cosmology is also fairly conventional, asserting the reality of past and future lives, as well as the existence of multiple heavens and hells, all of which can be visited (and experientially verified) through meditation.

**Heterodox teachings.** The movement also promotes several heterodox teachings, two of which deserve special note. The first has to do with the notion of the dhammakāya. The Dhammakāya movement says that this notion, which is found in the Pali texts, refers to the Buddha's eternal essence, or to the buddhahood within, which can be viewed directly through meditation. Opponents say that the Pali references to dhammakāya refer solely to the inwardly comprehended truth of the Buddha's teachings.

The second of these teachings has to do with the nature of *nirvāṇa.* Although most Theravāda teachers hold that *nirvāṇa* refers to a "snuffing out," or the end of the cycle of existence and suffering, the Dhammakāya movement asserts, again with references to the Pali scriptures, that *nirvāṇa* is a place where past buddhas can be visited through meditation.

It appears that these teachings were developed by Luang Pho Sot, and versions of them are propagated by all of the movement's competing branches. As noted above, until the 1990s these teachings drew little public comment, but late in the decade they were the subject of much controversy, as opponents branded them heretical.

**SIGNIFICANCE.** In terms of the educated, relatively urban Thai culture from whom the movement draws most of its followers, Wat Phra Dhammakāya takes a middle of the road position, appealing to the mind while avoiding intellectualism, and appealing to popular fascination with the miraculous while rejecting traditional magical rituals. The movement's leaders lecture in classroom style, its followers read religious literature voraciously, and the organization sponsors Pali quiz contests, yet its commitment to building its own organization, and the relatively simple nature of its teachings, separate it from more intellectual Thai Buddhist leaders such as Buddhadāsa and Prayut Payutto. On the practice side, the movement believes strongly in the action of karma and the beneficial power of merit (especially merit accumulated through meditation); many devotees expect that the practice of dhammakāya meditation will not only help to calm the mind, but can also have miraculous effects on external circumstances. Yet the movement also discourages allegedly "non-Buddhist" or "magical" practices such as traditional divination, possession, and healing rituals.

Wat Phra Dhammakāya is an extension of the nineteenth-century reforms of Prince Mongkut (later King Rama IV) and Prince-Patriarch Vajirañāṇa (Thai, Wachirayan), who fully accepted Western science for investigating and mastering the material world, while asserting traditional Thai Buddhist cosmology as the means of understanding one's place in the world and strict textualism as a means of understanding Buddhism. To this reformist stance the Wat Phra Dhammakāya movement added late-twentieth-century organizational and public-relations techniques, along with a pragmatism, emphasis on lay practice, and advertisement of success that appeals to many educated city dwellers. Unlike most earlier Buddhist movements, Wat Phra Dhammakāya organizes lay practice much like a school would organize its students or a corporation its workers, while continuing to proclaim the superiority of the monastic path. The organization views its role as calling people, especially secularly educated people, back to a whole-hearted devotion to Buddhism, while hoping to make Wat Phra Dhammakāya the primary center through which meditation's meritorious power will be channeled for the benefit of the world.

## BIBLIOGRAPHY

Despite the movement's size and notoriety, there are few examples of English-language scholarship based on fieldwork with the movement's devotees. The best examples of fieldwork-based writings include Apinya Fuengfusakul, "Empire of Crystal and Utopian Commune: Two Types of Contemporary Theravāda Reform in Thailand," *Sojourn: Social Issues in Southeast Asia* 8, no. 1 (February 1993): 153–183, which includes a description of the movement's organizational structure; Edwin Zehner, "Reform Symbolism of a Thai Middle-Class Sect: The Growth and Appeal of the Thammakai Movement," *Journal of Southeast Asian Studies* 21, no. 2 (September 1990): 402–426, which includes discussion of the controversies of the 1980s and a description of a major religious observance at Wat Phra Dhammakāya; and Jeffrey Bowers, *Dhammakaya Meditation in Thai Society* (Bangkok, 1996), a published master's thesis that includes an extended description of dhammakāya meditation from the perspective of the rival center at Wat Luang Phor Sodh Dhammakāyaram. Of these, Apinya has conducted the most sustained fieldwork with the Wat Phra Dhammakāya movement. Unfortunately, most of her fieldwork results are available only in the Thai-language research report titled *Sātsanathat khǭng chumchon mư̄ang samai mai: sưksā karanī wat phra thammakāi* [Religious perspectives of contemporary urban society: A case study of Wat Phra Dhammakāya] (Bangkok, [undated, but appearing sometime between 1996 and 1998]).

For information on the controversies of the 1980s, see Zehner (1990, cited above) and Peter A. Jackson, *Buddhism, Legitimation, and Conflict: The Political Functions of Urban Thai Buddhism* (Singapore, 1989). The best set of English-language materials on the controversies of the late 1990s is the archive of articles maintained by the Bangkok Post at http://www.bangkokpost.com. Wat Phra Dhammakāya (under the guise of its Dhammakāya Foundation) maintains its own website at http://www.dhammakaya.or.th/, and the rival Wat Luang Phor Sodh Dhammakāyaram maintains a website at http://www.concentration.org/. Both websites include information about teachings and recent events.

For scholarly interpretations of the Wat Phra Dhammakāya movement, see Donald K. Swearer, "Fundamentalistic Movements in Theravāda Buddhism," in *Fundamentalisms Observed*, edited by Martin E. Marty and R. Scott Appleby, pp. 628–690 (Chicago, 1991), which analyzes the movement as a kind of Buddhist fundamentalism; also Charles F. Keyes, "Buddhist Politics and Their Revolutionary Origins in Thailand," *International Political Science Review* 10, no. 2 (1989): 121–142, which cites the movement as an example of the recently increased emphasis in Thai Buddhism on seeking a better future through ethically impelled practical action. Several authors, including Zehner, Jackson, and Keyes (all cited above), have explored aspects of the movement's appeal to its primarily urban, middle-class following. Additional information on the social and economic contexts of the movement is provided in Pasuk Phongpaichit and Chris Baker's respected survey *Thailand: Economy and Politics* (Kuala Lumpur, 1995).

# DHARMA

*This entry consists of the following articles:*

HINDU DHARMA
BUDDHIST DHARMA AND DHARMAS

## DHARMA: HINDU DHARMA

The term *dharma,* central to Hindu conceptions of morality, tradition, and national identity, is a notoriously difficult one to define. Standard definitions relate the word variously to the individual's duty to observe custom or law, to the individual's conformity to duty and nature, or to divine law itself. An examination of the word in context, however, quickly reveals that all of these simple definitions gloss over numerous complexities and contradictions. This is primarily due to the fact that *dharma* both embraces and tries to bridge a foundational ambiguity in Hindu thought.

Hindu cosmologies, histories, and normative traditions describe a wide gap that separates that which is essentially true and eternal from its historic and contingent manifestations. The broadest and most compelling way of putting the matter is in the distinction between Veda (transcendent knowledge) and *itihāsa* (history), or between *śruti* (revelation) and *smṛti* (tradition based on memory). *Śruti* represents the source of absolute authority—revealed knowledge—while *smṛti* is the tradition that humans obey in order to live the sanctioned life. At the heart of Hinduism, then, is this paradox: the tradition that tells Hindus how to live in the world is a tradition of recollection, and memory must bridge a daunting gap between the present and the timeless absolute.

The concept of *dharma* encompasses this paradox and reflects Hindu cosmology's understanding of the ambiguous relationship between absolute truth and history and time, between revelation and remembrance. This can be seen, for example, in the story that holds that Prajāpati composed a book on *dharma* that, at one thousand chapters, was so vast it had to be reduced to a mere four thousand *ślokas* in order to accommodate human frailty (*Nāradasmṛti,* Introduction). It can also be seen in the belief that at the end of each cosmic age (*yuga*) the Veda will disappear, requiring recurring *dharma* legislation at the beginning of each successive new age (*Viṣṇu Purāṇa* 3.2). Something eternal and absolute remains forever, but what we as humans see of it changes, gets lost to forgetfulness, and must be gleaned from limited memory in order to serve as a binding moral tradition. These profoundly important ideas must be taken into account in any attempt to understand the concept of *dharma* and the nature of ethical discourse within Hinduism.

**THE LEXICAL DIVERSITY OF *DHARMA.*** *Dharma* is generally understood as a concept that encompasses several meanings, including morality, law, religion, and tradition, as well as the nature of reality or the nature of individual members of society. For contemporary and western scholarship this is far too ambiguous: the conceptual distinction between the nature of reality and morality, or between religious and legal rules is too important to gloss over by means of one term. Nonetheless, the lexical meanings of *dharma* remain extremely diverse and the decision to translate the word into one term or another remains difficult and context-sensitive.

In fact, the wealth and subtlety of meanings denoted by *dharma* belies any brief definition. Even a cursory glance at the numerous textual examples reveals a number of broad meanings. Like the term *ṛta,* which refers to the Vedic conception of cosmic and social order, *dharma* is depicted as a cosmological principle that encompasses both the structure of reality and the essential rightness of this structure. It is Varuṇa's *dharma* that separates Heaven and Earth, and Mitra-Varuṇa are the two guardians of this order, whose laws are truth itself (*Ṛgveda* 6.70.1; 5.63.1). Both of these gods are wise with *dharma* (*Ṛgveda* 5.63.7). This conception extends to the much later *dharma* texts. *Manusmṛti* (Manu), for example, argues that the practice of appointing a childless widow to another man is unacceptable because it destroys the eternal *dharma* or the natural order of things (9.64).

*Dharma* often recurs in the plural nominal form in Vedic literature, referring either to religious laws or ritual practices. Agni is said to cherish the laws (*dharmani*) (*Ṛgveda* 5.26.6; 8.43.24). Soma, like a steer, which is both powerful and fecund, ordains laws (*Ṛgveda* 9.64.1), while Varuṇa enforces them (*Ṛgveda* 7.89.5), but the sacrifices are the first laws (*Atharvaveda* 7.51). In fact, several Vedic gods are given the name Dharma or some variation of it, most notably Agni, who is called Svadharma—"whose very self is the law" (*Ṛgveda* 3.21.2). Other gods who bear the name Dharma are Savitṛ, Viśvadeva, Mitra, and Varuṇa. And, of course, Dharma himself is a Vedic god (*Ṛgveda* 8.35.13) and the post-Vedic divine father of Yudhiṣṭhira in the *Mahābhārata* (1.1.69).

The strong religious and ritual meanings of *dharma* extend to post-Vedic literature, including Dharmasūtras and Dharmaśāstras, but more specialized meanings are added as well. *Dharma* can mean "Law" as a sacred normative order of reality, as in the *Āpastamba Dharmasūtra,* in which a student is encouraged to take delight in *dharma* (5.11). A similar meaning attaches to *dharma* in Manu, in which the birth of a *brāhmaṇa* is described as the eternal physical form of *dharma* (1.98).

The renowned cosmological doctrine of the four *yugas* (aeons) entails the successive deterioration of *dharma.* In Manu, *dharma* is compared to a bull that loses one leg in each age following the initial *Kṛtayuga.* This conception, along with the implication that the loss of *dharma* leads to a deterioration of health and longevity in each age, resembles the Vedic doctrine of *ṛta* in which moral and natural factors are inseparable. A sense prevails here that *dharma* implies some substance that increases or diminishes with the rise or fall of order—or, for that matter, with the observance of rituals or good and bad actions. This "substance" has often been translated as "merit" in texts that use *dharma* in the following sense: "Four things increase and thrive for a man who habitually greets other people . . . long life, *dharma,* fame and strength" (Manu 2.121; 3.131). This sense of *dharma* overlaps with the ethical and eschatological domain of karma in its psychological implications as *puṇya* (merit) or *pāpa* (demerit or sin)—the attendant consequences of doing right or wrong. Perhaps "virtue" would be a fair translation for *dharma* in the sense of a quality that attaches to individuals who follow the law—though the distinction between the law that is followed and the virtue that increases may be arbitrary here.

The meanings of *dharma* extend far beyond the topics mentioned above to areas that circumscribe the social domain, particularly law and morality. A paradigmatic expression of this usage is the famous statement in the Śanti Parvan of the *Mahābhārata* that *dharma* restrains the evil acts of men and helps the acquisition and preservation of wealth (12.91.5). In other words, *dharma* can be broadly understood as the law that underlies social order—a juridical equivalent of law as cosmic order, or a principle of absolute justice: "Because of *dharma* alone people are sustained in their separate stations" (*Mahābhārata* 12.110.11). The broad principle that upholds social order and economic activity becomes instantiated in the work of the king as the dispenser of justice: "No one should violate the justice (*dharma*) that the king dispenses" (Manu 7.13). The king is the guardian of *dharma* in this sense, and the paradigmatically righteous king, Yudhiṣṭhira in the *Mahābhārata,* is the *dharma rāja.*

But *dharma* also refers to the specific laws that the king enforces, such as the law (*dharma*) for the division of inheritance (Manu 1.115), the duties of husband and wife (Manu 8.7), the duties of the priest (Manu 12.71), and others. The distinction made between rules of conduct that are enforced by the court ("positive law") and those that are sanctioned by religious principles (God's revenge, hell, *karman*), does not apply here. The legal concept of *vyavahāra* (legal transaction), often contrasted with *dharma,* simply refers to the manner by which a legal dispute is brought to the attention of the court, not to the source of authority or sanction. In other words, whatever particular problem the king addresses (settling inheritance disputes; defining the boundary between the rights of two castes), the issue is always regarded as a matter of *dharma,* in this case, *rāja dharma.*

***DHARMA* AND AUTHORITY.** The complexity and richness of *dharma* reflects not so much the failure to make conceptual distinctions as the multiplicity and durability of the traditions in which the term figures. A great number of texts over millennia simply cannot speak with one voice. Nonetheless, Hindu theorists began to synthesize and unify the conception of *dharma* from an early age. Their theories seek to ground *dharma* as rule of conduct in some type of metaphysical foundation such as the Vedic conception of *ṛta.* Possibly the oldest such theory is found in the *Gautama Dharmasūtra,* which lists three sources (*mūla*) of *dharma* (1.1–2). These are Veda, tradition, and good custom. Later *dharma* texts (such as Manu and Yājñavalkya) added a fourth, namely "self-contentment" (*ātma-tuṣṭi*) or conscience. The doctrine of the four sources (or "feet"—*pada*) of *dharma* achieves two primary goals: one is technical, the second ideological. Technically, the four sources reflect a hierarchy of prestige and therefore the ranking of applicability among rules. One may look to tradition only where the Vedas are silent and to good custom only where the first two say nothing. In a conflict between rules—for instance, the widow's right to inherit as opposed to her obligation to perform *satī* (self-immolation) on the funeral pyre—the rule that originates in a higher source of *dharma* prevails.

The ideological goal of this doctrine is to ground *dharma* (as contingent law and morality) in a transcendent and fixed source of authority. The law on the books, the customary practice in the region, even moral common sense, ultimately point to the Veda and to the sacred order of reality.

Despite the efforts of some scholars, such as P. V. Kāne, to show that the Vedas do cover a wide array of *dharma* topics, and even specific rules, most contemporary scholars agree that the Vedic texts (*saṃhitā*) contain little in the way of explicit rules of conduct. Consequently, the Veda should be regarded as a source of authority, a metaphysical constitution, so to speak, rather then a positive source for rules of conduct or ethical reasoning. This recognition underlies the later synthesizing theories of Mīmāṃsā philosophers. When the foundational Mīmāṃsā text, Jaimini's *Mīmāṃsāsūtras* (c. 100 BCE), states that *dharma* is a beneficial act indicated by Vedic injunction, it is attempting to ground the authority of contingent rules of conduct on the eternal validity of Vedic language and its meanings (1.1.2). In other words, the Mīmāṃsā philosopher, like his colleagues within the Nyāya and Vaiśeṣika schools, is aware of the gap that separates present circumstances and the justifying norm, which is said to be eternal and immutable. The commentaries on the *Mīmāṃsāsūtras,* such as that of Kumārila, argue that what makes *dharma* binding even as it changes over time, is precisely this grounding of the language of *dharma* in the language of Vedic injunctions. What makes *dharma* known are the rules of interpretation based on Mīmāṃsā hermeneutics of Vedic language, primarily the distinction between injunction (*vidhi*) and statement of fact or embellishment (*arthavāda*). In short, the doctrine of the four sources of *dharma* in its basic form, and the philosophical-grammatical speculations on the link between *dharma* and Veda, reflect a sharp awareness of the problematic nature of law and morality in relation to ultimate authority.

**THE LITERARY SOURCES OF *DHARMA*.** Among its many lexical meanings *dharma* can indicate "tradition" in a very broad sense, or, as *sanātana dharma* (eternal *dharma*), it can refer to the normative tradition loosely identified with Hinduism. However, in the narrower technical sense of rule of conduct (religious, moral, legal), *dharma* is found mainly in a large but clearly circumscribed literary corpus.

The Vedic Saṃhitās do contain some references to matters of *dharma,* and the newer Gṛhyasūtras are systematic expositions of procedures for domestic and life-cycle rituals. However, the explicit and comprehensive enumeration of *dharma* rules begins with the Dharmasūtras, which originally belonged to Kalpasūtras associated with specific Vedic schools. The four major Dharmasūtras are attributed to Gautama, Baudhāyana, Vasiṣṭha, and Āpastamba. The texts, written in the post-Brāhmaṇa period but notoriously difficult to date, were probably composed between 600 and 200 BCE. The sūtra texts were composed in a brief aphoristic prose style, and they are regarded as parts of the *smṛti* (rather than Veda) tradition within the broad classification of the four sources of *dharma.* Far grander in scale and elaboration are the Dharmaśāstras, written in *śloka* (a four-part meter) verse using the classical Sanskrit that was the hallmark of the *Rāmāyaṇa* and *Mahābhārata* as well. The Śāstras cover the same topics as the Dharmasūtras but they expand and add detail, and they reflect many of the social changes that took place in the intervening centuries. The major, and oldest, works are *Mānava Dharmaśāstra* (or *Manusmṛti*), *Yājñavalkyasmṛti*, and *Nāradasmṛti.* Like the preceding sūtra texts, these works are impossible to date with precision. The most renowned and often-discussed of all *dharma* texts, *Manusmṛti,* reveals the hand of several compilers and contains both internal and external evidence of a contradictory nature (see Doniger and Smith, 1991). Its dating is very broadly placed between the third century BCE and the second or third century CE. Yājñavalkya and Nārada are slightly more recent, as are additional *dharma* texts such as *Parāśarasmṛti, Bṛhaspatismṛti,* and *Kātyāyanasmṛti.*

Roughly contemporary texts with the early Dharmasūtras, and serving as respected sources of *dharma,* are the two great epics, the *Rāmāyaṇa* and *Mahābhārata.* The latter is a consciously framed model of good conduct, and the twelfth book (Śanti Parvan) is a virtual encyclopedia of *dharma.* Georg Bühler believed that a full 10 percent of the *ślokas* in Manu were shared with the *Mahābhārata,* and P. V. Kāne gives the nod of precedence to the Dharmaśāstra. The *Arthaśāstra* of Kauṭilya, though specializing in matters of statecraft and polity over law and morality, was nonetheless a valuable source of *rāja dharma,* or the rules that apply to the king. It dates to the first two centuries BCE, perhaps to the court of Candragupta Maurya.

Far more specialized as sources of *dharma* are the commentaries (*bhāṣya*) that have been attached to the Dharmaśāstras, especially Manu and Yājñavalkya. The oldest is Bhāruci's commentary on Manu—an incomplete work, possibly of South Indian origins. The most prestigious commentary on Manu from the perspective of adjudication, is *Medhātithi,* dating to the ninth or tenth century. However, the *Manvartha Muktāvali* of Kullūka, a fifteenth century work composed in Banaras, is far more comprehensive and clear. The Dharmaśāstra of Yājñavalkya also inspired several commentaries. By far the most important was the *Mitākṣarā,* authored by Vijñāneśvara in the eleventh century. This large work had a vast influence on family law, especially matters of succession and inheritance, throughout India, with the exception of Bengal, where the *Dāyabhāga* digest of Jīmūtavāhana (twelfth century) prevailed. The Anglo-Indian courts turned the *Mitākṣarā* into the virtual law code for personal law under British dominion.

While commentaries were being composed in medieval and early modern India for the sake of clarifying and promoting legal schools, large compendia or digests (*nibandhas*) also began to appear. These were collections of quotes from the older *dharma* texts, logically arranged under various headings, with occasional brief commentaries. The most prominent among the many digests were the *Kṛtyakalpataru* of Lakṣmīdhara (twelfth century), which was a vast collection of nearly 30,000 *ślokas.* The *Smṛti Candrikā* of Devanna Bhaṭṭa is a South Indian digest from roughly the same period and contains a very important commentary on the Dharmaśāstra. Additional works of note include the *Vivāda Ratnākara* of Caṇḍeśvara, the *Smṛti Sindhu* of Nanda Paṇḍita, and the *Vyavahāra Mayūkha* of Nīlakaṇṭha Bhaṭṭa.

It is important to note that along with the specialized sources of *dharma* there have always been the informal or popular sources of moral and religious norms. Among many others, these include mythical and folk narratives contained in the *Mahābhārata* and *Rāmāyaṇa* (along with explicit *dharma* sections), oral and theatrical performances in temples or during festivals, the *Pañcatantra* and *Hitopadeśa* (collections of stories about moral and pragmatic conduct), the *Kathāsaritsāgara,* the plays of Kālidāsa and other dramatists, the Purāṇas, and devotional songs.

**THE TOPICS OF *DHARMA.*** Because the concept of *dharma* is so fluid and encompasses so many domains, it is difficult to limit the range of *dharma* to a fixed set of "topics." In a sense, everything is *dharma.* Still, the most prestigious and systematic literary source of *dharma,* Manu, does consciously enumerate a number of clearly defined areas. Manu 1.111–118 serves as a general table of contents for the work as a whole and includes the following major topics, among others: rituals of change (*saṃskāras*—"rites of passage"), the duties of a student, rules for marriage, sacrifices and last rites, rules that describe and restrict means of livelihood, food, purification, the duties of women, rules for the ascetic, matters relating to the king and court procedure, rules for husband and wife, inheritance, protection of the state, rules for time of emergency, expiation, and rules that apply to foreigners and heretical social groups.

***VARṆĀŚRAMADHARMA.*** The central domain of *dharma,* which gradually came to be equated by several texts with *dharma* itself, is *varṇāśramadharma:* the duties of the four social classes (*varṇas*) and the four stages of life (*āśramas*) (*Viṣṇusmṛti* 1.48; *Yājñavalkyasmṛti* 1.1). The social classes include the *brāhmaṇa* (priest), *kṣatriya* (warrior), *vaiśya* (merchant), and *śūdra* (laborer). The Dharmaśāstras explicitly regard these as social categories rather than specific or definitive occupations. All *kṣatriyas* are not warriors and many *brāhmaṇas* perform tasks different than officiating in rituals.

Still, the rules that indicate the appropriate duties (*svadharma*) befitting each social class are firm, enforced by the rule of law and fortified by the threat of ritual pollution and the retributive psychology of *karman.* Some *svadharma* rules may be suspended during times of emergency (*āpaddharma*). The rules or duties that apply to all members of society are designated *sādhāraṇa* (or *sāmānya*) *dharma.* These are not very numerous and, though prestigious, they have never gained the sanctity one sees invested within Judaism in the Ten Commandments. There are several lists of *sādhāraṇadharma* but Manu specifies nonviolence (*ahiṃsā*), truthfulness, not taking other people's property (*asteya*), purity, and restraint of the senses as the *dharma* of all the *varṇas.* The *Vāmana Purāṇa* describes a tenfold *dharma* common to all, adding generosity, forbearance, quiescence, not demeaning oneself, and ascetic discipline to Manu's list (Kāne, 1968–1975, vol. 2, p. 11).

The doctrine of the four stages of life, so central to the Dharmaśāstras, follows the older Dharmasūtra version (*Gautama Dharmasūtra, Baudhāyana Dharmasūtra*), which included only three stages: the student (*brahmacārin*), the householder (*gṛhasthin*), and the forest-dweller (*vānaprasthin*) who is not a complete renouncer. Only from the sūtra texts of Āpastamba and Vasiṣṭha onwards does a fourth *āśrama* emerge—that of the *saṃnyāsin* who renounces all social relations and identity in full pursuit of *mokṣa* (liberation). The addition of the fourth stage of life represents, according to Patrick Olivelle, the attempt to resolve a perceived tension between the competing values of *dharma* and *mokṣa* in the enumeration of life's four supreme values: *kāma* (love), *artha* (wealth), *dharma* (morality), and *mokṣa* (liberation). In broader terms yet, the addition of the fourth stage of life is another effort to encompass, by means of *dharma,* both contingent reality and transcendent or ultimate value. The synthesis corresponds to the contemporaneous drive to ground *dharma* in Veda as transcendent authority (*prāmaṇa*). Both types of synthesis may have been historic reactions to the challenges of heterodoxy (Buddhism, Jainism), or more specifically, the threat that the quietist or monastic life (*nivṛtti*) posed to the pursuit of active engagement (*pravṛtti*) in social life. Hence, in Manu both *nivṛtti* and *pravṛtti* are regarded as domains of *dharma,* and the fourth stage of life (*saṃnyāsa*) is fully integrated into the *āśramadharma.* In a different vein, the roughly contemporary *Bhagavadgītā* resolves the tension between meditative inactivity and *varṇa* duty (*svadharma*) by postulating yet other integrative concepts—devotion (*bhakti*) to God (Kṛṣṇa) and selfless action.

***Dharma,* Time, and Social Reform.** The *dharma* texts, which tipped their hats to the eternal Veda as their eternal source of authority (in theory), contained several rules of conduct that later communities were bound to find unworthy of their values. A small number of hermeneutic and ideological devices were constructed either by the compilers of *dharma* texts or by subsequent theorists to admit changes into an ostensibly immutable tradition. Chief among these were the doctrines of *Kālī-varjyas* (rules unfit for the Kālī age) and *āpaddharma* (rules for time of emergency). But additional techniques included the Mīmāṃṣā distinction between injunctive text (*vidhi*) and mere explanatory passages (*arthavāda*), as well as the concept of *loka-vidviṣṭa*—norms that are odious to the public despite their origin in *dharma* texts.

The *dharma* literature does not provide more than a few dozen explicit examples of exceptions to the immutability of *dharma.* But the principle is familiar and prestigious, and so it may be invoked to substantiate legal and social reforms when the time is right. The most notorious examples among the fifty or so *Kālī-varjya* rules are the prohibitions against *nīyoga*—the pairing of a childless widow with her deceased husband's brother, the remarriage of widowed virgins, eating meat, or killing a *brāhmaṇa* aggressor (in self-defense) (Kāne, 1968–1975, vol. 3, pp. 930–968). The rules of *āpaddharma* tend to loosen prohibitions against upper-caste freedom: A *brāhmaṇa* may study under a *kṣatriya,* upper-caste members may engage in low-caste professions (which are usually polluting), a *vaiśya* may lend money at interest, and, most notoriously, a high-caste Hindu may steal and eat polluting meat. This latter case is illustrated in the famous story of Viśvāmitra who stole dog meat from a *caṇḍāla* (untouchable) during time of drought and famine (Manu 10.108; *Mahābhārata* 12.141.90), as well as in the lesser-known stories of Uṣati Cakrāyaṇa and, earliest of all, Vāmadeva (*Ṛgveda* 4.18.13).

Like the ranking of the four sources of *dharma,* these concepts were intended to situate law and ethics in the historic and contingent world while preserving *dharma*'s authority as grounded in Veda. However, when pressure for reform began to build up under Anglo-Indian courts in the nineteenth century, these devices were seldom explicitly invoked by either reformers or conservatives, although they occasionally figured in substance. The abolition of *satī* (widow burning), known as the Bengal Satī Regulation of 1829, was the first major case to test the Dharmaśāstra and the judicial autonomy given by the British to Hindu law in modern times. Reformers claimed that *satī* did not originate in *smṛti* (authoritative tradition—Dharmasūtras and Dharmaśāstras) but in custom, and that it was "revolting to the feelings of human nature." The opponents of reform appealed both to *smṛti* (although the texts were sharply divided on the matter) and to the sanctity of "immemorial" practice in matters of religious belief. In other words, both sides appealed to the prestige invested in the hierarchy of the four sources of *dharma,* but the reformers also introduced the matter of *loka-vidviṣṭa.* Similar legal battles followed (for instance, the Caste Removal of Disabilities Act of 1850; the Hindu Widow Remarriage Act XV of 1856). In the case of widow remarriage, the opponents of reform appealed to the *Kālī-varjya* principle as showing that precisely because the Kālī age was morally depraved: widows, even the very young and virgins, should not be allowed to remarry. These conservatives showed that the principle of overriding positive legal rules could be used as a tool for protecting the status quo and not only for reform. The reformers, as usual, argued that the rule they wished to reform was not Sastric but rooted in custom, and that the change promoted social morality by enshrining what the British called "equity." Backed by British courts and power, reformers consistently won the legal battles, but social practice was far slower to change.

Due to the fact that Hindu *dharma* has always encompassed religious, social, and juridical matters, twentieth-century legislation has been strongly shaped by the culture of *dharma.* The social and legislative battles of the nineteenth century continue to influence various aspects of Hindu law today in topics such as marriage, succession, adoption, guardianship, caste law, and minority rights. In other words, conflicting interpretations of *dharma* still effect social policy in India today. Moreover, the question of *dharma* has spilled out of the courtroom and legislature to become part of a far more impassioned ideological contest over what constitutes Hindu consciousness (*Hindutva*) in the face of competing values such as feminism, social equality, and religious pluralism.

The concept of *sanātanadharma,* which both conservatives and liberals now often equate with normative Hindu identity, emerged in the early years of the nineteenth century in response to Anglo-Indian social legislation. The orthodox opponents of Ram Mohan Roy (members of the Dharma Sabha) used it as an ideological response to the reformers' claim on the Veda as a source of equity and a blueprint for reform. *Sanātanadharma* thus became conflated with Hindu identity and national pride. This is how even such figures as Aurobindo Ghose and India's president-scholar Sarvepalli Radhakrishnan used the term. For social and religious conservatives, "*satīdharma*" could then be defended—as it is still defended in some nationalist circles today—as a voluntary affirmation of national and religious ideology by Hindu women of courage. And, although no one justifies dowry murders (the killing of brides whose dowry was deemed unsatisfactory), or the violence toward Dalits (scheduled castes, tribes) over matters of land or labor, the remedy for such tragedies has been complicated by the ideological contest over the meaning of *dharma* and the seemingly ageless conflation of religious and ethical discourse within matters of *dharma.*

## DHARMA: BUDDHIST DHARMA AND DHARMAS

The pan-Indian term *dharma* (from the Sanskrit root *dhṛ,* "to sustain, to hold"; Pali, *dhamma;* Tib., *chos*) has acquired a variety of meanings and interpretations in the course of many centuries of Indian religious thought. Buddhism shares this term and some of its meanings with other Indian religions, but at the same time it has provided a set of unique and exclusive interpretations of its own. *Dharma* can imply many different meanings in various contexts and with reference to different things. Here we shall consider it under two general headings: the first as *dharma* in a general sense, comprising a variety of meanings, and the second as *dharma*(s) in a technical sense, denoting the ultimate constituents or elements of the whole of the existing reality.

**GENERAL USAGES.** *Dharma* was and still is employed by all the religious denominations that have originated in India to indicate their religious beliefs and practices. In this sense, *dharma* refers broadly to what we would term "religion." *Dharma* also designates the universal order, the natural law or the uniform norm according to which the whole world (*saṃsāra*) runs its course. Within the Buddhist context this universal order is coordinated in the doctrine of dependent origination (*pratītya-samutpāda*). This rigorous natural law, which controls the sequence of events and the behavior and acts of beings, has no cause or originator. It is beginningless and functions of its own nature. It is said in the *Aṅguttara Nikāya* and the *Saṃyutta Nikāya*, and later rephrased in the *Laṅkāvatāra Sūtra*, that the nature of things is such that the causal law as the inevitable determination of *karman* continues to evolve spontaneously whether or not the *tathāgata*s appear in this world. It is an inherent and all-pervading law that does not depend for its existence on the appearance of the Buddhas, whose mission in this world is merely to reveal it. Śākyamuni Buddha first perceived and understood this fundamental law and then proclaimed and explained it to his followers. The discovery of the nature of *dharma* is compared in some sūtras to the discovery of an old and forgotten city. In the Mahāyāna, especially within the context of the doctrine of the three Buddha bodies (*trikāya*) and the reinterpretation of the relationship between *saṃsāra* and *nirvāṇa* as two aspects of the same reality, *dharma* as the universal norm received a wider and deeper interpretation. As a part of the compound *dharmakāya*, it signifies both the immanent and transcendental reality of all beings and appearances. Thus, it clearly denotes the essence of sentient beings as well as the nature of the Buddhas. In the sense of denoting phenomenal existence, it is also referred to as reality (*dharmatā*), the essence of reality (*dharmadhātu*), suchness (*tathatā*), emptiness (*śūnyatā*), or store-consciousness (*ālaya-vijñāna*). In the sense of referring to the nature of the buddhas, it is known as buddhahood (*buddhatā*), as the self-nature of the buddhas (*buddhasvabhāva*), or as the womb of the buddhas (*tathāgata-garbha*).

*Dharma* as the Buddha's teaching or doctrine as a whole comprises his exposition of the universal order of nature as described above and his proclamation of the path toward deliverance. Thus, when his teaching is meant as a whole system it is the term *dharma* (or *śāsana*) that is employed. When his teachings are referred to or explained from two different angles, that is, when theoretical and practical aspects are differentiated, two terms are employed: *dharma*, as a body of religio-philosophical discourses as contained in the Sūtras, and Vinaya, or monastic discipline, the rules and regulations for the application and practice of *dharma*. The Prātimokṣa (monastic code) contains rules of conduct, each of which is also called *dharma*.

The shortest and yet the clearest exposition of *dharma* as the Buddha's word (*buddhavacana*) is epitomized in Śākyamuni's first sermon, when he "set in motion" (i.e., proclaimed) the wheel (lore) of *dharma:* the four noble truths and eightfold noble path. There is suffering and it has a cause that can be eliminated through the knowledge and practice of the path of *dharma* as summarized by the Eightfold Noble Path: right views, right conduct, and so forth. Another presentation of the same path is articulated within the basic trilogy of monastic practice of cultivating wisdom (*prajñā*), morality (*śīla*), and meditation (*dhyāna*). Through wisdom one acquires a full vision of *dharma*, through morality one purifies all that obscures the vision of *dharma*, and through meditation one matures *dharma* within oneself and indeed transforms oneself into an epitome of *dharma*.

*Dharma* denotes truth, knowledge, morality, and duty. It is the truth about the state and function of the world, the truth about how to eliminate its evil tendencies, and the truth about its immutable spiritual potentiality. It is knowledge in the sense that once one becomes aware of *dharma* one acquires the knowledge to become free from the bonds of phenomenal existence. It is morality, for it contains a code of moral conduct that conduces to spiritual purification and maturation. It is duty, for whoever professes *dharma* has a duty to comply with its norms and to achieve the goal that it sets forth. In this sense there is only one duty in Buddhism: the ceaseless and constant effort to strive for *nirvāṇa*.

*Dharma*, together with the Buddha and the *saṃgha*, constitute a "threefold jewel" (*triratna*) before which one makes prostrations and in which one takes refuge. Here *dharma* does not so much represent a body of teachings as it assumes a character of awesomeness, protection, and deliverance wholly appropriate to the Truth. One stands in awe of *dharma* as a self-sustained righteousness whose universal legacy is to protect through its righteousness those who profess it. Soon after his enlightenment, realizing that there is no one more perfect than himself in virtue, wisdom, and meditation under whom he could live in obedience and reverence, Śākyamuni decided that he would live honoring and revering *dharma*, the universal truth he had just realized. As one of the Three Jewels, the Buddha is *dharma*'s embodied personification, revealer, and teacher. The *saṃgha* constitutes a body of *dharma*'s followers among whom *dharma* thrives as the norm of daily life, becoming an inspiration and a path to deliverance. The Three Jewels as conceived in the early period can be paralleled, as a somewhat general compar-ison, with the later concept of the three buddha bodies. *Dharma* as *dharmakāya* represents its own sublime and absolute aspect, the Buddha as a *saṃbhogakāya* represents the pure and glorified state of *dharma*, and the *saṃgha* as *nirmāṇakāya* represents *dharma* as discovered and operating within the world.

**TECHNICAL USAGES.** The strictly technical meaning of *dharma*s as ultimate elements or principles of existence as systematized in the Abhidharma literature, especially in the Abhidharma works of the Sarvāstivāda school, is not so distinct or rigidly formulated in the four Nikāyas (Āgamas). In the sūtras of the four Nikāyas we find many descriptions of *dharma*s and their various classifications, but their systematization into what we could call "*dharma* theory" took place within the Abhidharma literature. Thus, in the Nikāyas *dharma*s are usually characterized as good or bad with reference to ethical conduct, but receive little attention as coherent metaphysical or epistemological systems. The *Dasuttara Sutta* enumerates some 550 *dharma*s to be cultivated or abandoned. The *Saṅgīti Sutta* gives an even larger number of them, and the *Mahāparinibbāna Suttanta* lists some 1,011 *dharma*s. In this latter work we also find a set of *dharma*s that Śākyamuni ascertained to be for the benefit of living beings. These include the thirty-seven *bodhipakṣya dharma*s that constitute the thirty-seven practices and principles conducive to the attainment of enlightenment.

Rather than providing further examples from the sūtras I propose now to concentrate on describing the *dharma* theory of the Sarvāstivāda school. Within its systematized presentation one finds practically all the important aspects of *dharma*s and their role; the variant interpretations of other schools will be mentioned wherever appropriate.

Buddhism makes an emphatic and "dogmatic" statement that a "soul" (*ātman*) as interpreted by non-Buddhist schools in India does not exist. By denying the existence of a soul as a permanent and unifying factor of a human entity it has removed all grounds for asserting the permanency of the human entity or the existence of any indestructible element therein. With reference to the substantiality of physical things it has removed the concept of substance and replaced it by modalities: there is no substance but only the appearances of what we call substances or things. Having removed the notion of substance Buddhism has construed an explanation as to how this world functions. According to this explanation, the universe is seen as a flux of *dharma*s, the smallest elements or principles of which it consists, but this flux is not merely a flux of incoherent motion or change. On the contrary, the world evolves according to the strict law of dependent origination (*pratītya-samutpāda*).

This universal flux can be conveniently viewed, for the moment, at three simultaneous and interrelated levels. If we take the inanimate world (matter) alone, it flows in accordance with a uniformly homogeneous and natural law of change. Similarly, the organic world (vegetation) flows according to its own uniform evolution of natural life (germination, growth, etc.). The third level is constituted by sentient life. This last one, apart from comprehending the other levels (matter and organic functions), includes a sentient element (consciousness or mind) as well. In general, we can say that it includes material as well as immaterial elements. Such sentient life, in which the material and immaterial elements are tied together, evolves or flows according to the strict law of causality as decreed in the causal nexus of dependent origination. Furthermore, this constant flux of sentient life coordinated by the law of dependent origination has a moral law superimposed upon it: the "law" of *karman*. It is with regard to such a flux that the *dharma* theory attempts to provide an explanation. There is no substance or person but there are *dharma*s (psychophysical elements) that flow according to the law of dependent origination that is set in motion by the law of *karman*. Basically, the *dharma* theory provides an explanation of how the universe functions within the context of a sentient life, in particular a human flux, for it is human life that Buddhism is concerned with. *Dharma* theory constitutes then not so much an explanation of what the universe is as it does an attempt to describe of what it consists and how it functions. Thus, in the detailed enumeration of *dharma*s as basic and infinitesimal elements that constitute the conglomeration of the universe we find an analysis of human life and its destiny. But this analysis is not "Buddhist psychology," as many call it; it is an exposition of both the constant and inevitably coordinated flux of phenomena and the inherent potentiality of bringing this flux to a halt.

I shall now describe some general classifications of *dharma*s (again, after the Sarvāstivāda Abhidharma). *Dharma*s are divided into conditioned (*saṃskṛta*) and unconditioned (*asaṃskṛta*). The conditioned *dharma*s (seventy-two in all) comprise all the elements of phenomenal existence (*saṃsāra*). They are called conditioned because by their nature and in their flow they cooperate in and are subject to the law of causality; they conglomerate or cooperate in the production of life (*pṛhagjana*). The unconditioned elements (three in all) are those that are not subject to the law that governs phenomenal existence. *Dharma*s are also divided into those that are influenced or permeated by negative tendencies or depravities (*āsrava;* in a moral sense, bad *karma*s) and those that are not under the influence of depravities (*anāsrava;* morally, good *karma*s). These are the same *dharma*s as in the previous classification but here they are viewed from two aspects: when they are influenced chiefly by ignorance (*avidyā*) their flux has the tendency to perpetuate itself; when they are under the influence of intuitive wisdom (*prajñā*) they acquire the tendency toward appeasement or tranquillity. By their nature the unconditioned *dharma*s must be classed among the *dharma*s that are not under the influence of depravities. We should recall here that the chief characteristic of *saṃsāra* is motion or unrest, *duḥkha*, and that of *nirvāṇa* is tranquillity, *nirodha*. The *dharma*s can be also divided in relationship to the four truths. Here again we have a twofold division. The first two truths (unrest, *duḥkha*, and its cause, *samudaya*) refer to the seventy-two *dharma*s that are permeated by depravities or that are conditioned. The two other truths (rest, *nirodha*, and the means to it, *mārga*) refer to the three unconditioned *dharma*s that are always at rest (*nirodha*) and to the *dharma*s that are on the way (*mārga*) to become extinguished (*nirodha*).

Having described the general divisions I shall now proceed to list a set of three standard classifications within which individual *dharma*s are distributed. The first classification, which includes the conditioned *dharma*s alone, refers to their grouping as perceived in a sentient life. This classification divides *dharma*s into five aggregates or *skandha*s. Here we have (1) matter or body (*rūpaskandha*): eleven *dharma*s; (2) feelings, sensations, or emotions (*vedanāskandha*): one *dharma*; (3) perceptions (*saṃjñāskandha*): one *dharma;* (4) impulses or will-forces (*saṃskāraskandha*): fifty-eight *dharma*s; (5) consciousness or mind (*vijñānaskandha*): one *dharma*. This division into five *skandha*s not only constitutes an analysis of all phenomena but also serves to prove that there is no soul (*ātman*) in a human entity, for none of the five *skandhas* can be identified with or regarded as a soul.

The second classification divides *dharma*s with reference to the process of cognition. Here we have the six sense organs (*indriya*) and the six sense objects (*viṣaya*) jointy called the "bases" or "foundations" (*āyatana*) of cognition. The six sense organs or internal bases are (1) sense of vision (*cakṣur-indriyāyatana*); (2) sense of hearing (*śrotra-*); (3) sense of smell (*ghrāna-*); (4) sense of taste (*jihvā-*); (5) sense of touch (*kāya-*); and (6) consciousness or intellectual faculty (*mana-*). The six sense objects or external bases are (7) color and form (*rūpa-āyatana*); (8) sound (*śabda-*); (9) smell (*gandha-*); (10) taste (*rasa-*); (11) contact (*spraṣṭavya-*); and (12) nonsensuous or immaterial objects (*dharma-*). The first eleven *āyatana*s have one *dharma* each; the immaterial objects comprise sixty-four *dharma*s.

The third classification groups *dharma*s in relationship to the flow (*santāna*) of life that evolves within the threefold world (*kāma-*, *rūpa-*, and *ārūpya-dhātu*) as described by Buddhist cosmology. This group is divided into eighteen *dhātu*s, or elements. It incorporates the previous division into the twelve bases, to which is added a corresponding set of six kinds of consciousness to the intellectual faculty. Thus we have (13) visual consciousness (*cakṣur-vijñānadhātu*); (14) auditory consciousness (*śrotra-*); (15) olfactory consciousness (*ghrāṇa-*); (16) gustatory consciousness (*jihvā-*); (17) tactile consciousness (*kāya-*); and (18) nonsensuous consciousness (*mano-*). Within this group the five sense organs and their five objects contain one *dharma* each (ten *dharma*s in all). Consciousness (no. 6) is divided here into seven *dhātu*s (no. 6 plus 13–18). The *dhātu* that represents immaterial objects (no. 12) contains sixty-four *dharma*s. All the eighteen *dhātu*s exist in the sensuous world (*kāmadhātu*) or the world in which the mind operates through the sense data. In the world of refined matter (*rūpadhātu*), the objects of smell and taste (nos. 9–10) and the olfactory and gustatory consciousnesses cease to exist. In the world without matter (but frequently interpreted as very subtle matter for we are still within *saṃsāra*) all the *dhātu*s cease to exist except for consciousness (no. 6), its immaterial objects (no. 12), and its nonsensuous aspect of cognition (no. 18).

Now at last we come to enumerate the individual *dharma*s. Within the classification into the five *skandha*s, matter (*rūpa*) contains eleven *dharma*s: five sense organs (*āyatana*s 1–5) and their five corresponding sense objects (*āyatana*s 7–11), plus an additional element to be discussed below. *Āyatana* (*dhātu*) number 12 (nonsensuous objects) is in this system classified as an immaterial *dharma*, as we shall see, and hence is not considered here.

Matter or body is conceived as consisting of the four primary elements (*mahābhūta*s)—earth, water, fire, and air. Secondary or refined matter (*bhautika*, derived from or related to matter) is represented by the senses and their objects (i.e., sense data). As already mentioned above, there is no substance as such. The four primary elements are talked about in Buddhism, but rightly understood these are taken to refer to properties: hardness (earth), cohesion (water), heat (fire), and motion (wind). The primary matter (four elements) present in a body sustains the secondary matter (the senses and their objects). Since the Buddhists analyze matter within the context of a sentient life, their description of matter is mainly concerned with discerning how it functions and how it appears, not with what it is, for properly speaking it does not exist. The world is in constant flux, the living life changes from one moment to the next. Consequently, because Buddhists are constrained from speaking in terms of soul or substance, matter is styled as sense data alone. Such a definition of the physical *dharma*s that constitute the sense data (ten *dharma*s) accounts for the component of matter that sustains consciousness, the other component of sentient life. What then is the eleventh *dharma*?

The Sarvāstivāda, viewing the human personality as a threefold aspect of body, speech, and mind, divided *karman* (as it operates within a sentient life) into mental action (*manas*, identified with volition, or *cetanā*) and physical and vocal actions. Mental action was classed as immaterial but physical and vocal actions that proceed from mental action were classed as belonging to matter (*rūpaskandha*). Furthermore, physical and vocal action was seen as being an (external) "expression" (*vijñapti*), but when mental action was committed but not externalized its "material" concomitant was seen as "nonexpression" (*avijñapti*). It is the latter "unexpressed matter" (*avijñaptirūpa*) that constitutes the eleventh *dharma* among the *skandha* division. Although immaterial, it was classed as matter because physical and vocal action with which it was associated was classed as such.

Three *skandha*s (feelings, perceptions, and impulses) contain jointly sixty *dharma*s, which are included as immaterial objects within the two other (*āyatana*, *dhātu*) classifications (no. 12 in both). The three immutable elements (*asaṃskṛta*) and *avijñapti* are also included among the immaterial *dharma*s of these two latter divisions, thus making a total of sixty-four *dharma*s.

Now I shall describe the sixty *dharma*s that are included in all three classifications (*skandha*, *āyatana*, and *dhātu*). They are divided into two main groups: one group comprises forty-six associated *dharma*s or mental *dharma*s (*caittadharma*), that arise from or in association with pure consciousness or mind (*citta-saṃprayuk-tasaṃskāra*); the second group comprises fourteen unassociated *dharma*s, that is to say, *dharma*s that can be associated neither with matter nor with mind (*rūpa-citta-viprayukta-saṃskāra*).

The forty-six associated *dharma*s include ten mental *dharma*s that are present in a sentient life (*citta-mahābhūmika*): (1) feeling, (2) perception, (3) will, (4) contact, (5) desire, (6) comprehension, (7) memory, (8) attention, (9) aspiration, and (10) concentration; ten morally good (*kuśala-mahābhūmika*) *dharma*s that are present in favorable conditions: (11) faith, (12) courage, (13) equanimity, (14) modesty, (15) aversion to evil, (16) detachment from love, (17) detachment from hatred, (18) nonviolence, (19) dexterity, and (20) perseverence in good; six obscuring (*kleśa-mahābhūmika*) *dharma*s that enter the stream of a sentient life in unfavorable moments: (21) confusion (ignorance), (22) remissness, (23) mental dullness, (24) lack of faith, (25) indolence, and (26) addiction to pleasure; ten additional obscuring (*upakleśa-bhūmika*) *dharma*s that may occur at different times: (27) anger, (28) hypocrisy, (29) maliciousness, (30) envy, (31) ill-motivated rivalry, (32) violence, (33) malice, (34) deceit, (35) treachery, and (36) self-gratification; two universally inauspicious (*akuśala-mahabhūmika*) *dharma*s: (37) irreverence, and (38) willful tolerance of offences; and eight *dharma*s that are called undetermined (*aniyata-bhūmika*) or undifferentiated in the sense that they can have different moral implications: (39) remorse, (40) deliberation, (41) investigation, (42) determination, (43) passion, (44) hatred, (45) pride, and (46) doubt. All forty-six *dharma*s listed above cannot be associated with (or cofunction with) consciousness at the same time on the general principle that their inner inclinations are variously geared toward either good or evil.

The fourteen unassociated *dharma*s are (47) acquisition (*prāpti*), or the controlling force of an individual flux of life, (48) force (*aprāpti*) that suspends some elements, (49) force of homogeneity of existence, (50) force that leads to trance, (51) force produced by effort to enter trance, (52) force that stops consciousness, thus effecting the highest trance, (53) force that projects life's duration, (54) origination, (55) duration, (56) decay, (57) extinction, (58) force that imparts meaning to words, (59) force that imparts meaning to sentences, and (60) force that imparts meaning to sounds.

Pure consciousness or mind constitutes one *dharma* (fifth *skandha*, sixth *āyatana*). In the division into *dhātu*s *vijñāna* is, as it were, subdivided among seven *dhātu*s (no. 6 plus 13–18) where the same consciousness is viewed in relation to the sense organs and immaterial objects.

Adding all the conditioned *dharma*s together yields eleven material *dharma*s, one *dharma* representing consciousness, forty-six associated *dharma*s, and fourteen unassociated *dharma*s—seventy-two in all. These are the *dharma*s into which the whole of phenomenal existence is analyzed and which account for all events that take place within it.

The Sarvāstivāda also enumerate three unconditioned *dharma*s: space (*ākāśa*), emancipation through discerning knowledge (*pratisaṃkhyānirodha*), and emancipation through nondiscerning knowledge (*apratisaṃkhyā-nirodha*). Thus, the total of *dharma*s both conditioned and unconditioned amounts to seventy-five in the Sarvāstivāda school.

The Theravāda tradition enumerates only one unconditioned *dharma* (*nirvāṇa*) and eighty-one conditioned *dharma*s: four primary elements; four secondary elements; five sense organs; five sense objects; two aspects of sex (male and female); heart as the sustaining element of psychic life; two kinds (bodily and vocal) of *avijñaptirūpa;* a psychic vitality of matter; space; three properties (agility, elasticity, and pliability) of body; three characteristics (origination, duration, and decay) of conditioned *dharma*s; material food; fifty-two mental elements, including twenty-five wholesome, fourteen unwholesome, and thirteen morally neutral elements; and consciousness.

The Sarvāstivāda asserted that all the conditioned *dharma*s are real (they exist for they happen) and that they have the characteristic of coming into existence, lasting for a short period, and disappearing again in order to reappear in a new karmically determined formation. They also maintained that *dharma*s exist in all three times: past, present, and future.

The Lokottaravāda school, a Mahāsāṃghika subsect, treated all the conditioned *dharma*s as unreal and held that only the unconditioned *dharma*s are real. The Prajñaptivāda school, another Mahāsāṃghika group, argued that the twelve *āyatana*s are not real because they are the products of the *skandha*s, which are the only real entities. The Sautrāntikas admitted the existence of thought but rejected the reality of the majority of the associated and all the unassociated *dharma*s, denied the reality of the past and future, and maintained that only the present exists. They also rejected the existence of the unconditioned *dharma*s, considering them mere denominations of absence. The Mādhyamika school rejected the ultimate reality of *dharma*s altogether. The Vijñānavāda school recognized mind as the only reality (*cittamātra*) and treated the whole of phenomenal existence as its illusive projection. Finally, a well-known Buddhist formula (*ye dharmā hetuprabhavā*, etc.) expresses the soteriological aspect associated with the analysis of sentient beings in terms of *dharma*s: "Whatever events arise from a cause, the Tathāgata has foretold their cause, and the Great Hermit has also explained their cessation."

**DHARMAKĪRTI** (c. 600–660), Buddhist philosopher of South Indian origin, pupil of Īśvarasena, and teacher at Nālānda. Dharmakīrti's thought brings the tradition of Buddhist epistemology and logic as founded by Dignāga (c. 480–540) to its culmination and final accomplishment.

Dharmakīrti's philosophical work consists of seven treatises still extant either in the original Sanskrit or in Tibetan translation. Dharmakīrti's stated intention was to give an explanation of Dignāga's ideas, and tradition accepted his explanation as such. His works, however, surpassed those of the earlier philosopher to become the basis for the study of this tradition by later Indian and Tibetan Buddhists. His first major work, *Pramāṇavārttika* (Commentary on the means of valid cognition), is a verse text in four chapters. The first chapter, "On Inference," was written with a prose commentary, thus constituting his earliest work, and was only later joined with the other chapters, "Establishment of the Means of Valid Cognition," "On Perception," and "On Proof." The *Pramāṇaviniścaya* (Analytical determination of the means of valid cognition), contains chapters on perception, on inference, and on proof, and is the final formulation of Dharmakīrti's epistemological and logical thought in mixed verse and prose. For its clarity in structure, presentation, argument, and verbal expression, it is a masterpiece of Indian scholarly literature. In what is largely an excerpt of the latter work, the *Nyāyabindu* (A drop of logical argumentation), Dharmakīrti gives a succinct *sūtra*-like formulation of his epistemology.

The *Hetubindu* (A drop of logical reason) examines logical reason, negative cognition, and causality. The *Vādanyāya* (The rule for disputations), his last work, attempts to apply the new logical theory to the dialectical practice. Dharmakīrti refuted solipsism in his *Santānāntarasiddhi* (A proof of other mental continuities) and rejected the reality of relations in *Sambandhaparīkṣā* (Examination of Relation).

Most of Dharmakīrti's thought is devoted to epistemological and logical themes. In its context, this must be understood as an attempt to establish a philosophical foundation of meaningful everyday and Buddhist practice. For Dharmakīrti, valid cognitions can be established only with regard to the Buddha, who—himself a means of valid cognition—can provide the motifs and goals of all human actions that are the frame of judgment necessary to differentiate the validity or invalidity of cognitions. At the same time, perception and inference, the two kinds of valid cognition, can be used to demonstrate that the Buddha is the only conceivable source from which we can derive such advice.

In the field of logic, Dharmakīrti overcomes the formal character of Dignāga's theory, in which only three forms or characteristics of logical reason are formulated as the necessary conditions of logical certainty, by giving an ontological explanation for such certainty. According to this explanation, concepts are related to each other only when they refer to the same real entity or to an entity caused by that referred to by the other concept. The necessary logical relation is thus based on a relation of real identity or of causality. Consequently, only such concepts may be used as logical reasons (*hetu*) that are either "essential properties" (*svabhāva*), "effect" (*kārya*), that is, concepts referring to something as the effect of something else, or "non-perception of something perceivable" (*dṛśyānupalabdhi*).

Dharmakīrti's theory of concepts (*apoha*) explains a concept as the difference from other things that is common to individual entities. Lacking any principle of unity, absolutely different individual entities nonetheless cause the same judgments precisely on account of such experience of them that differs from experience of others. The resultant concept is nothing real, but by recourse to experience and practice there is nevertheless a relation between reality and the false realm of linguistic constructs of varying degrees of reliability. While perception is a direct valid cognition of what is real, inference is an indirect valid cognition, since it is conceptual by nature and must be gained under strict control by means of logical reason (*hetu*). Concepts that may be used as logical reasons serve to infer other concepts as necessarily true or to remove or correct wrong concepts. One of the most influential results of this new logical theory is a new form of the inference of universal momentary destruction (*kṣaṇikatva*) in which Dharmakīrti derives it from the concept of being (*sattvānumāna*), thereby offering a new method for establishing the first of the four noble truths, "All is suffering."

**DHARMAPĀLA** (530–561), Indian Buddhist thinker associated with the Yogācāra school and founder of a Vijñānavāda ("consciousness only") tradition that was to become highly influential in the scholastic traditions of East Asian Buddhism. His numerous followers include Śīlabhadra, his successor as abbot of Nālandā and teacher of the famous Chinese monk Xuanzang (569–664). It was Xuanzang who introduced Dharmapāla's thought to China, where, under the name of Faxiang ("dharma characteristics"), it supplanted the traditions transmitted by Paramārtha (499–569) and Bodhiruci (d. 527) to become the dominant form of Yogācāra there. The Faxiang "school" was introduced to Japan beginning in the late seventh century by the monk Dōshō (629–710), enjoyed three subsequent transmissions, and, as the Hossō school (the Japanese pronunciation of the Chinese Faxiang), became perhaps the most eminent of the six scholastic traditions that flouished during the Nara period (710–784).

The eldest son of a minister in Kāñcīpuram, Dharmapāla became a Buddhist monk in his youth. He studied Buddhism at the Nālandā monastic university and later became its head. In several doctrinal debates Dharmapāla defeated philosophers representing both non-Buddhist and Buddhist (especially Hīnayāna) opinion. At twenty-nine, however, realizing that he was not destined to live long, he retired from his post at Nālandā to concentrate on writing. He died two years later. Despite the relative brevity of his career, Dharmapāla wrote a number of works, some of which are preserved in the Chinese canon. These include the *Guansuo yuan lun shi* (T.D. No. 1625), the *Cheng wei shi lun* (T.D. no. 1585), and the *Dasheng guang bolun shi lun* (T.D. no. 1571). The second of these, Xuanzang's translation of the *Vijñāptimātratāsiddhi*, a compilation of ten commentaries on Vasubandhu's *Triṃśika* (Thirty verses), includes a commentary by Dharmapāla's own hand. More than a mere gloss of the original text of Vasubandhu, however, Dharmapāla's commentary constitutes an original doctrinal treatise in its own right.

Unlike the Mādhyamika thinkers, who concentrated on the refutation of fallacies without explaining how the magic (i.e., the illusion, in Buddhist terms) of "self" should arise in every living being, Dharmapāla offered an intricate analysis of this process from the Yogācāra point of view. This analysis begins with an interpretation of causality, or "dependent co-origination" (*pratītya-samutpāda*): every action creates a pattern or potential for future action, just as in legal cases a single decision becomes a precedent for the future. The precedents, karmic residues in this case, are technically referred to as "seeds" (*bīja*), which are "deposited," as it were, in a "receptacle" or "store" consciousness, from which, under the proper conditions, they manifest themselves at some future time. The process by which actions "deposit" seeds in the subconscious is known as "impression" (*vāsāna*); the actualization of these seeds in the mental life of the being involved is known as "manifestation."

The accumulation of these numerous potentials suggests a division of labor between the storage function, the coordinating function, and the discriminating function. In Yogācāra thought, these functions represent concrete activities of different levels and types of consciousness, usually numbered eight in the system championed by Dharmapāla. The storage function is referred to as *ālaya-vijñāna* ("storehouse consciousness"). It is the *ālaya* that receives the *bījas* deposited by actions and as such functions as a karmic repository in which the continuity of past actions in the stream of an individual's lives is preserved. The coordinating function is called the "cognitive" center (*manas*); it serves to synchronize all the activities of mind so that they function as an integrated whole. It is the *manas* that, turning inward, fails to perceive that the *ālaya* essentially has no existence other than the seeds that it stores, and thus falsely imputes to the *ālaya* the permanence and unity of a self or *ātman*. Such a (false) belief in the existence of a self is traditionally regarded by Buddhists as the very source of suffering. Ordinary sentient beings (as opposed to Buddhas and very highly advanced *bodhisattvas*) are unaware of the actions of these two functions. *Ālaya* and *manas* thus constitute unconscious functions of mind.

The discriminating function is represented by the six types of consciousnesses of which we are all aware: the five senses and the thinking process itself (*mano-vijñāna*). These, like the *manas*, are ultimately the very creations, "evolutes," of the seeds stored in the *ālaya*, which manifest themselves under the proper causal conditions as our psychophysical "selves." What appears in consciousness, under this interpretation, is thus not an external reality but simply the products of previous actions and cognitions thrown into consciousness by the functioning of the *ālaya*. Thus the mind, which should be indivisible, is, in Dharmapāla's view, fundamentally fractured into subjective and objective components: that which is conscious and that which we are conscious of.

The interaction of the three functions, further complicated by the subject-object split, transforms the reality of the illusional existence of living beings. These functions are therefore referred to as the "three sources of transformation." What is usually called "self" is merely the "subject portion" of the *ālaya* as interpreted by the *manas*. Similarly, what is usually called the "external world" is the "object portion," a mere sense of externality. Whether or not there exists a world outside of consciousness is not at issue here: it is the sense of externality that obtains *within* consciousness that is the subject of Dharmapāla's analysis, for deliverance or enlightenment consists in realizing that the "self" and the "real" world are mere reifications, enforced in language, of consciousness.

Yogācāra analysis of reality, a term as ambiguous in Sanskrit as it is in English, thus must take into account the varying ways in which a thing may be construed as real. According to Yogācāra doctrine, a "triple nature" (*trisvabhāva*) is inherent in all things. First, there is the sense in which all things are mere constructs of mind, mental fabrications devoid of reality outside of the consciousness that creates them. This character of things is referred to as *parikalpita-lakṣaṇa* ("imaginary character"). Second, there is the sense in which things are dependently originated, devoid of any independent reality but "real" in the sense that they exist as part of a nexus of events that mutually condition and reinforce each other. This character of things is referred to as *paratantra-lakṣaṇa* ("dependent character"). Finally, things are characterized as "ultimately real" when viewed without the distortions of conceptualization. But what constitutes this "perfected character" (*pariniṣpanna-lakṣaṇa*) is precisely the "emptiness" (*śūnyatā*) of the thing, its *lack* of self-nature (*svabhāva*) or the "ultimate absence of a reality-in-its-own-right." Such a reality is also referred to as "suchness" (*tathatā*).

Dharmapāla's *Vijñāptimātratāsiddhi* was the subject of at least three major commentaries (T.D. nos. 1830, 1831, 1832) and a host of subcommentaries. Although Faxiang thought failed to survive the challenges posed by the creation of the new, more fully sinicized, Buddhist traditions of the Tang period (618–907), its doctrines were kept alive in the wide dissemination of the commentaries to the *Cheng wei shi lun*. In Japan, Hossō thought continues to this day to serve as part of the basic Buddhist training of scholars and clerics alike.

RICHARD S. Y. CHI (1987)
***Revised Bibliography***

**DHIKR** (Arab., "remembrance, mention") is an important Islamic concept and practice best known in the West as a form of Ṣūfī ritual. Because it signifies a kind of prayer, the term *dhikr* is usually translated as *invocation*, since it involves the repetition of a name or names of God, often within a set phrase such as "Praise belongs to God." The sources frequently discuss it in conjunction with supplication (*duʿaʾ*, "calling [upon God]"), which normally adds a request to the mention of a name or names; supplication may take the form of a personal prayer in any language, while *dhikr* employs Arabic names drawn from the Qurʾān. Both are fundamentally voluntary and in any case need to be distinguished from the daily prayer (*salāt*), which is incumbent upon all the faithful.

Studies of *dhikr* in Western languages usually emphasize the bodily movements and the techniques for bringing about concentration that are employed by various Ṣūfī groups and thus neglect the centrality of the concept in the Qurʾān, where the term is employed, along with various closely related derivatives, about 270 times. Although techniques have certainly fascinated a number of Islamicists and travelers to the East, they have always been of secondary interest within the Ṣūfī tradition itself. Nor is it necessary to search for outside influence to explain their genesis: perseverance in remembering God—and sincere Islam is nothing if not this—will eventually entail a certain concern with the technical aspects of controlling one's thoughts and attention.

The basic meaning of the term *dhikr* can be brought out by answering three questions:

1. What is the object of remembrance? God, whose nature is defined succinctly by the first *shahādah*, or creedal statement, "Lā ilāha illā Allāh" ("There is no god but God"), and in detail by the whole range of names and attributes (*al-asmāʾ wa-al-ṣifāt*) mentioned in the Qurʾān.
2. Why should God be remembered? Because human beings are commanded to remember him by his revelations to the prophets and because ultimate human felicity depends upon this remembrance.
3. How can God be remembered? By imitation of the Prophet, who provides the model through his *sunnah* (practice or custom) for all religious and spiritual activity.

In short, to understand the full implications of the term *dhikr* as it is employed in the Qurʾān and the tradition one needs to have a clear grasp of the three "principles of religion" (*uṣūl al-dīn*), namely divine unity, prophecy, and the return to God (in its widest sense, embracing both the "compulsory return" through death and the "voluntary return" through spiritual practice).

**QURʾANIC SOURCES.** The Qurʾān refers to itself as a remembrance (*dhikr*) or reminder (*dhikrā*, *tadhkirah*) more than forty times and also alludes to other revelations by the same terms (*sūrahs* 10:71, 21:48, 21:105, 40:54). God had to send a long series of prophets—124,000 according to a *ḥadīth*—because Adam's children keep on falling into forgetfulness, the shortcoming of their father (20:110). If the Qurʾān is a remembrance, so also is the human response to it (here the root's fifth verbal form, *tadhakkur*, is often employed). To be human is to remember: to acknowledge and confirm the obvious. "Not equal are the blind and the seeing man, those who have faith and do deeds of righteousness and the wrongdoer. Little do you remember!" (40:58).

The ultimate object of remembrance is God, since nothing else is truly worthy of human devotion, which is to say that "there is no god but God." The Qurʾān employs the term *dhikr Allāh*, "the remembrance of God," twenty-six times in nominal or verbal form. In a number of other instances where the word *ism* ("name") is inserted into this phrase, the emphasis is placed upon the verbal mentioning of the name *Allāh*, for example, when people are commanded to remember/mention God's name before sacrificing animals (5:4, 6:118, and elsewhere), but the command to remember/mention God's name is also a general one: "And remember the name of thy Lord, and devote thyself to him" (73:8; also 2:114, 22:40, 24:36, 76:25, 87:115). In any case the remembrance of God is almost invariably interpreted to coincide with the mentioning of his name, whether vocally or mentally.

Fifteen verses actually command the remembering of God. But beyond obedience to such commands, human beings must remember God because true life—life with God in the next world—depends on it. In Qurʾanic terms, "to be forgotten by God" is to burn in the Fire; to be remembered by him is to dwell in Paradise. If we want God to remember us, we must follow the divine command to remember him: "Remember me, and I will remember you" (2:152), since God will forget those who disobey this command. Speaking of the resurrection, God says, "Today we do forget you, even as you forgot the encounter of this your day; and your refuge is the Fire" (45:34; also 20:126, 32:14, 38:26, 59:19). Such verses help explain why the Ṣūfī Ibn ʿAṭāʾ Allāh al-Iskandarī (d. 1309) can say in his well-known treatise on *dhikr*, "All acts of worship will disappear from the servant on the Day of Resurrection, except the remembrance of God" (*Miftāḥ al-falāḥ*, Cairo, 1961, p. 31).

Just as *dhikr* brings about felicity in the next world, so too it provides the way to achieve proximity to God in this world. In contrast to the hearts of the godfearing, the hearts of the unbelievers are "hardened against the remembrance of God" (39:22–23). Note the emphasis through repetition in "Those who have faith, their hearts being at peace in God's remembrance—in God's remembrance are at peace the hearts of those who have faith and do righteous deeds; theirs is blessedness and a fair resort" (13:28). The way to achieve this peace of heart (cf. the "soul at peace with God," 89:27) is to follow the Prophet, one of whose names is Dhikr Allāh: "You have a good example in God's Messenger, for whosoever hopes for God and the Last Day and remembers God frequently" (33:21). The Prophet is the perfect embodiment of

God's remembrance; hence, his *sunnah* provides all the details of how to remember God in every act of life. Ibn ʿAṭāʾ Allāh quotes a short *ḥadīth* that epitomizes the pervasive rationale for the love of the Prophet: "He who remembers me has remembered God, and he who loves me has loved God" (*Miftāḥ*, p. 46).

***Ḥadīth.*** The *ḥadīth* literature provides a wealth of material on *dhikr* corroborating the Qurʾān picture while emphasizing the practice of mentioning or invoking God's names and the benefits it provides beyond the grave. The Prophet calls *dhikr* the best act of worship. Every word a person utters in this life will be counted against him or her in the next life, except "bidding to honor and forbidding dishonor" (sura 3:11, 7:157, and elsewhere) and remembering God. When a companion of Muḥammad complained about Islam's many ordinances and asked for a single practice to which he could cling, the Prophet replied, "Let your tongue remain moist in the remembrance of God." The Prophet reported that God says, "I am with my servant when he remembers me. If he remembers me in himself I remember him in myself, and if he remembers me in an assembly, I remember him in an assembly better than his." Such "assemblies" of God's remembrance are well attested in the Prophet's time and became the model for Ṣūfī gatherings.

The *ḥadīth*s make clear that the important formulas of remembrance or invocation are those still heard throughout the Islamic world on every sort of occasion: "There is no god but God," "Praise belongs to God," "Glory be to God," "God is greater," and "There is no power and no strength save in God." Only the last is non-Qurʾanic, while the first, the Shahādah, is said to be the most excellent. The *ḥadīth*s also make clear that all of God's names, traditionally said to number ninety-nine, may be employed in invocation and supplication, though certain names, such as *All-Merciful* or *All-Forgiving*, have always been employed far more than others, such as *Avenger* or *Terrible in Retribution.*

The idea that each name of God has a specific characteristic is already well reflected in the *ḥadīth* literature. Thus, for example, many *ḥadīth*s allude to "the greatest name of God" (*alism al-aʿẓam*), the name "when called by which he answers and when asked by which he gives." Litanies (*awrād, aḥzāb*) composed of divine names, formulas of remembrance, and Qurʾanic verses have been common among Muslims from earliest times. Some of them mention the ninety-nine "most beautiful names"; others, such as *al-jawshan al-kabīr* (quoted from the Prophet in Shīʿī sources, e.g., ʿAbbās Qummī, *Mafātīḥ al-jinān*, Tehran, 1961/2, pp. 179–207), list one thousand names of God.

**Ṣūfī Tradition.** The Shīʿī *ḥadīth* literature, which includes sayings from all twelve imams as well as from the Prophet, helps to demonstrate that the remembrance of God remained central to Islamic piety in the two centuries following Muḥammad. But while the Qurʾān commands the faithful to remember God, the jurists could not impose remembrance upon the community except in the form of the ritual prayer and other outward acts of worship, since by its nature remembrance is a personal affair related more to the domain of intention than to outward activity. In general, therefore, the Ṣūfīs more than any other group emphasized the importance of the devotional practices. In the words of Khwājah Muḥammad Pārsā (d. 1420), "The root of being a Muslim *[aṣl-i musalmānī]* is 'No god but God,' words that are identical with remembrance.'" Hence, he says, the soul of the daily prayer and the other ritual practices, such as fasting and pilgrimage, is "the renewal of God's remembrance in the heart" (*Qudsīyah*, ed. Aḥmad Ṭāhirī ʿIrāqī, Tehran, 1975, p. 30). In the same way, the Ṣūfīs considered all Islamic doctrine and theory to be aimed at awakening remembrance in the soul. If on the one hand the Qurʾān commands human beings to remember God, on the other it provides a full justification for the necessity of this remembrance in its teachings about human nature and ultimate felicity, as, for example, in its description of the "trust" given to human beings in preference to all other creatures (33:72).

In commenting on the Qurʾanic teachings, the Ṣūfīs in particular demonstrate that remembrance of God implies far more than just the ritual activities that go by this name. Full remembrance means actualizing all the ontological perfections latent within the primordial human nature (*fiṭrah*) by virtue of its being a divine image. These perfections belong ultimately to God, the one true being, and in his case they are referred to as the divine names. Al-Ghazālī and many others speak of human perfection as "assuming the traits of the divine names" (*al-takhalluq bi-al-asmāʾ al-ilāhīyah*); Ibn al-ʿArabī (d. 1240) even offers this phrase as the definition of Ṣūfīsm (*Al-futūḥāt al-makkīyah* 2.267.11). Since *Allāh* is the all-comprehensive name (*alism al-jāmiʿ*), the referent of all other divine names, the stage of full human perfection is also known as "being like unto Allāh " (*taʾalluh*), or "theomorphism." For Ibn al-ʿArabī and others, the remembrance of the name *Allāh* is the sign of the fully realized human individual to whom reference is made in the prophetic saying, "The Last Hour will not come as long as there remains someone in this world saying, 'Allāh, Allāh!'" (*Futūḥāt* 3.248.17, 3.438.21).

The hallmark of this potential theomorphism is the particular nature of human intelligence, which sets men and women apart from all other creatures. Turning to God—remembrance—actualizes the divine image latent within humans; ultimate felicity is nothing but the remembrance of our own true nature, or the realization of genuine human character traits, the names of God.

Ṣūfī teachings and practice can be summarized by the "best of invocations," the Shahādah: "La ilāha illā Allāh " ("There is no god but God"). The aim is to "annihilate" (*fanāʾ*) all "others" (*aghyār*) and to "subsist" (*baqāʾ*) in the divine. In the words of Ibn ʿAṭāʾ Allāh, "No one says correctly 'No god but God' unless he negates everything other than God from his soul and heart" (*Miftāḥ*, p. 28). Likewise Najm al-Dīn Rāzī (d. 1256): "When one pursues the *dhikr* and persists in it, the attachment of the spirit to other than God will be gradually severed by the scissors of *la ilaha*, and the beauty of the monarch of *illa Allāh* will become manifest and emerge from the veil of might" (*The Path of God's Bondsmen*, p. 270). For Rūmī as for many other Ṣūfīs, the fire of love drives the seeker to remember God constantly; only this can effect the final transformation: "Love is that flame which, when it blazes up, burns away everything except the beloved. It drives home the sword of *lā ilāha* in order to slay other than God" (*Mathnavī* 5, vv. 588–590).

Though many authorities agree that "Lā ilāha illā Allāh" is the most excellent invocation, others hold that the "single invocation" (*al-dhikr al-mufrad*)—the mention of only the name *Allāh*—is superior. Ibn al-ʿArabī often quotes approvingly the words of one of his masters, Abū al-ʿAbbās al-ʿUraybī, who held that this invocation is best, since in invoking "no god but God" one could die in the terror of negation, but in invoking Allāh one can only die in the intimacy of affirmation (*Futūḥāt* 1.329.2, 2.110.21, 2.224.34).

Ṣūfī masters employed various names methodically to bring out the spiritual potentialities and shape the character traits of their disciples. Many Ṣūfī works provide information on names that can be appropriately invoked—though never without the permission and inculcation (*talqīn*) of a master—by disciples at different stages of spiritual growth. Works on the "most beautiful names," such as al-Ghazālī's *Al-maqṣad al-asnā* (partially translated by R. Stade, *Ninety-nine Names of God*, Ibadan, 1970), often discuss the moral traits and spiritual attitudes that reflect each of the individual names on the human level. Ibn ʿAṭāʾ Allāh devotes several pages to the properties of various names and their influence on disciples at different stages of the path. He points out, for example, that the name *Independent* (*al-Ghanī*) is useful for a disciple who seeks disengagement (*tajrīd*) from phenomena but is unable to achieve it (*Miftāḥ*, p. 35). Nonetheless, those who invoke the name *Allāh* should not be interested in specific benefits but should exemplify the attitude expressed in the famous prayer of the woman saint Rābiʿah al-ʿAdawīyah (eighth century): "O God, if I worship thee for fear of Hell, burn me in Hell, and if I worship thee in hope of Paradise, exclude me from Paradise; but if I worship thee for thy own sake, grudge me not thy everlasting beauty" (A. J. Arberry, *Muslim Saints and Mystics*, London, 1966, p. 51).

Some Ṣūfīs wrote of transcending *dhikr*, since in the last analysis it is an attribute of the seeker and is therefore "other than God," a veil concealing God from sight (al-Kalābādhī, *The Doctrine of the Sufis*, p. 107). Ibn al-ʿArabī explains that there can be no invocation after the veil has been lifted and contemplation (*mushāhadah*) takes place, for "invocation disappears in the theophany of the invoked" (*Futūḥāt* 2.245.21). According to al-Nūrī (d. 907), true invocation is "the annihilation of the invoker in the invoked" (Rūzbihān, *Mashrab al-arwāḥ*, ed. Nazif H. Hoca, Istanbul, 1974, p. 139). Ibn al-ʿArabī's foremost disciple, Ṣadr al-Dīn al-Qūnawī (d. 1274) writes that the Ṣūfī must gradually abandon all invocation, both outward and inward, until total emptiness is achieved (*Al-risālah al-hādiyah al-murshidīyah*, MS; cf. M. Valsan, "L'épître sur l'orientation parfaite," *Études traditionnelles* 67, 1966, pp. 241–268). But the final word for most seekers remains with Ibn al-ʿArabī: "Invocation is more excellent than abandoning it, for one can only abandon it during contemplation, and that cannot be achieved in an absolute sense" (*Futūḥāt* 2.229.24).

Many classifications of types of *dhikr* can be found in Ṣūfī works. Some of these refer to the depth of concentration achieved by the disciple, such as invocation of the tongue, of the heart, of the innermost mystery. Another common classification distinguishes between loud or public and silent or private *dhikr*. The former was usually performed in groups according to various ritual forms that took shape within the different Ṣūfī orders. Sessions of public invocation range from the reserved to the ecstatic; some groups, such as the Mawlawīyah, or "whirling dervishes," considered music and dance aids to concentration, while others banned anything but sober recitation. Most Ṣūfīs would probably agree that public sessions are really a secondary form of Ṣūfī practice, since the individual's progress on the path, to the extent it does not derive totally from God's grace, depends upon his or her own efforts. Thus Saʿdī (d. 1292) is not speaking metaphorically when he says at the beginning of his famous *Gulistān:* "Every breath taken in replenishes life, and once let out gives joy to the soul. So each breath contains two blessings, and each blessing requires thanksgiving." It is the silent and persevering remembrance of God with each breath or each heartbeat, always within the context of the prophetic *sunnah*, that takes the seeker to the ultimate goal.

## BIBLIOGRAPHY

For a representative sampling of the *ḥadīth* literature, see al-Khaṭīb al-Tabrīzī's *Mishkāt al-maṣābīḥ*, 4 vols., translated by John Robson (Lahore, 1963–1965), pp. 476–492. Shīʿī sources provide more of the same in far more detail, for example, Majlisī's *Biḥār al-anwār* (1956–1972; reprint, Beirut, 1983), vol. 90, pp. 148–285. Al-Ghazālī brings together Qurʾān, *ḥadīth*s, the sayings of the pious, and the views of contemporary theologians and Ṣūfīs in the chapter on *dhikr* and supplication in his *Iḥyāʾ ʿulūm al-dīn*, 5 vols. (Cairo, 1932), translated by K. Nakamura as *Ghazali on Prayer* (Tokyo, 1973).

For *dhikr* in the Ṣūfī tradition, see Louis Gardet's entry in *The Encyclopaedia of Islam*, new ed. (Leiden, 1960–), and J. Spencer Trimingham's *The Sufi Orders in Islam* (New York, 1971), pp. 194–217, both of which deal mainly with techniques. A far more insightful treatment is provided by Annemarie Schimmel's *Mystical Dimensions of Islam* (Chapel Hill, 1975), pp. 167–178. Among translated texts a brief overview of the views of the early Ṣūfīs is provided by al-Kalābādhī's *The Doctrine of the Sufis*, translated by A. J. Arberry (Lahore, 1966), pp. 105–108, while a comprehensive explanation of its significance is given by Najm al-Dīn Rāzī's *The Path of*

*God's Bondsmen from Origin to Return*, translated by Hamid Algar (Delmar, N.Y., 1982), pp. 268–285. For a description of various forms of *dhikr* within the context of contemporary Egyptian Sufism, see Michael Gilsenan's *Saint and Sufi in Modern Egypt* (Oxford, 1973), pp. 156–187.

William C. Chittick (1987)

**DIALOGUE OF RELIGIONS.** Etymologically, the word *dialogue* (Gr., *dialogos*) means simply "conversation," although in Western intellectual history its dominant meaning has been "a piece of written work cast in the form of a conversation." In the history of religions, "conversations" about the meaning of beliefs, rituals, and ethics have no doubt been taking place, though informally and unrecorded, from the very beginning, or at least from the first encounter of divergent belief systems. However, the phrase *dialogue of religions* has become common in various religious traditions only since the second half of the twentieth century.

Written dialogues on religion and on philosophical subjects have a long history. The most celebrated Western examples are no doubt the dialogues of Plato, and particularly those in which the teaching methods of Socrates are presented on a question-and-answer basis. Within many religious traditions, dialogues between teachers and their pupils were recorded as a means of communicating and deepening insights. But in virtually all such cases the neophyte occupied a position of submission to the teacher, whose authority derived from what he had learned orally from his mentor and proved in practice. This type of dialogue is especially marked in the Indian traditions, Hindu and Buddhist alike. A relationship of faith and trust is set up between master and disciple, whereupon the disciple receives instruction, often in response to respectful questioning. Many of the Upaniṣads are cast in dialogue form, as is the *Bhagavadgītā* and a portion of the Buddhist Pali canon. The Judeo-Christian tradition likewise contains much instruction in dialogue form: the Law (Torah) is interpreted orally by rabbis to the circle of their disciples, whereas the teachings of Jesus are often placed in the context of conversations and instruction sessions within the company of followers. It is hardly possible in any of these instances to speak of a dialogue between equals, since the disciple or pupil comes seeking the insights that only that particular teacher can provide. In the Socratic dialogue the pupil is made to play a more active role, certainly, but the presence of the master is what guarantees that insights will emerge.

Artificial or imaginative dialogues on religious and metaphysical subjects also occur frequently in Western literature, following the pattern established in classical antiquity. An early medieval example of the genre was the Icelander Snorri Sturluson's *Prose Edda* (early thirteenth century), in which Gangleri asks three informants about the contents of Norse mythology. Later examples are very numerous, and include works as diverse as David Hume's *Dialogues Concerning Natural Religion* (1779), R. A. Vaughan's *Hours with the Mystics* (1856), and Ninian Smart's *A Dialogue of Religions* (1960). This type of dialogue relates closely to the conventions of the theater and the novel, which may serve a similar purpose and of which this type of dialogue is a didactic offshoot. Less artificial were attempts to record the conversations and informal statements of literati and religious leaders—Martin Luther's *Tischreden* (*Table Talk*, 1566), Boswell's *Life of Johnson* (1791), *Dialogues of Alfred North Whitehead* (1954), and, from India, *The Gospel of Sri Ramakrishna* (1897).

Imaginative dialogue has also served the cause of interreligious controversy—for example, by convincing an imaginary opponent of the error of his ways. An early missionary example was K. M. Banerjea's *Dialogues on Hindu Philosophy* (1861), which set Indian traditions against one another in the interests of Christianity. This apologetic method was, however, short-lived.

Common to the older forms of didactic or controversial dialogue was the assumption that religious truth is to be arrived at rationally, by reasonable discourse and the weighing of evidence and proofs. Doubtless there were cases in which this actually happened. In the eighteenth and nineteenth centuries, contacts between religious traditions increased rapidly, and along with them actual (as opposed to imaginary) conversational encounters between believers. How often these followed an ideally rational course must remain a moot point: one suspects they seldom did so. But since during this same period the Western countries were politically and economically dominant, and the Christian missionary enterprise was experiencing its greatest successes, conversations usually involved Christians, and were seldom between equal partners. Where other traditions were concerned, for instance in confrontations between Hindus and Muslims in India, there could be a level of mutual suspicion that prevented constructive conversations from taking place at all. The West was, however, becoming steadily better informed on matters concerning other religious traditions, while the rapid onset of theological liberalism was modifying the terms in which Western religion was expressed. Before World War I, the dominant concepts were "sympathy" and "fulfillment," and although innumerable conversations took place, no one applied to them the word *dialogue.*

Apologetics and controversy aside, in the late nineteenth century began a serious attempt to bring the religious leaders of the world together in a spirit of reconciliation, concentrating on what united them rather than what kept them apart. The pioneer assembly was the World's Parliament of Religions, held in Chicago in 1893; its original impulse came from Swedenborgians, yet it gathered under the banner of a common theism. The parliament at least attracted delegates from every major tradition, and although it dismayed the orthodox of many creeds (especially within evangelical Christianity), it established many important contacts. It also marked the beginning of the modern Hindu "mission" to the

West in the person of Swami Vivekananda, who taught, following Ramakrishna, the equal value of all religions as pathways to the Real. This view was strongly supported in theory by organizations like the Theosophical Society (founded in 1875) and Bāhā'ī. A Chicago "continuation committee" was formed, though no further full-scale parliaments were ever held. The Chicago spirit survived, however, in an International Council of Unitarian and Other Liberal Religious Thinkers and Workers, which worked between 1901 and 1913. Its aims were to introduce believers to one another, to emphasize the "universal elements" in all religions, and to work for the "moral uplift of the world." World War I brought these efforts to a temporary halt, but after the war, when internationalism was held to be one safeguard against further conflict, various interfaith movements emerged, culminating in the World Fellowship of Faiths (1929).

Eight years earlier, Rudolf Otto had instituted his Religiöser Menschheitsbund (Interreligious League) with the same end in view—the lessening of international tensions through the banding together of believers. These moral objectives were accepted on the liberal wing of Christianity, coming to expression at the Jerusalem conference of the International Missionary Council in 1928, and classically in the liberal manifesto edited by W. E. Hocking, *Re-Thinking Missions* (1932). In general, however, Christians were uneasy about interfaith cooperation. Hindus adjusted to it more easily, and in the person of Sarvepalli Radhakrishnan gained an international spokesman of great force and clarity. Radhakrishnan held that the comparative study of religion made exclusive claims on the part of any individual tradition impossible, and that behind all empirical forms of religion there is "the same intention, the same striving, the same faith" (Radhakrishnan, *East and West in Religion*, London, 1933, p. 19).

Between the wars, world congresses and fellowships of faiths continued to meet regularly, even under the lengthening shadow of various forms of totalitarianism. Mention might also be made of the Oxford Group Movement (subsequently retitled Moral Re-Armament), which was basically Christian but which was more concerned with moral than with theological issues: it enjoyed its heyday in the late 1930s, and attracted many non-Christians. On another level, the *philosophia perennis* proclaimed by Coomaraswamy, Schuon, and Guénon gained followers from various traditions, Eastern as well as Western. This, however, was less a meeting place of religious traditions than a means by which they might be transcended. In the area of scholarship, although the study of religion on a multicultural basis undoubtedly did increase mutual respect among the traditions and further dialogue between them, few individual scholars were prepared to pronounce on the issue. One exception was Friedrich Heiler of Marburg, who stated at an international conference in Tokyo in 1958 that "a new era will dawn upon mankind when the religions will rise to true tolerance and co-operation on behalf of mankind. To assist in preparing the way for this era is one of the finest hopes of the scientific study of religion" (quoted in Sharpe, 1975, p. 272). Other scholars, however, regarded this ideal as less than "scientific."

Parliaments, congresses, and conferences continued to bring together religious leaders in a spirit of irenic idealism, on the pattern of the League of Nations. Yet there was an increasing sense of the threat to religion being posed by the European totalitarian regimes, as well as by materialism, and frequent calls were made for the world's religious leaders to band their people together to meet these pressures. What the leaders could not guarantee to do, however, was change the religious configurations of the world. Local situations were still, during the interwar years, dominated by local concerns. Within the Christian churches, there were several notable moves in the direction of increasing visible unity—among Methodists in Britain, Presbyterians in Scotland, Protestant churches in Canada and South India—but relatively little could be done on the interfaith level.

The notion of dialogue in its modern sense entered the world of religion during the confused and confusing years after World War I, and was closely connected with the philosophy of existentialism. Its first and most widely read manifesto was Martin Buber's *I and Thou* (1923), which urged that human beings should cease to look upon one another merely as objects ("I-It") and approach one another directly and with mutual acceptance as fellow humans ("I-Thou"). Buber was Jewish and therefore well acquainted with racial, religious, and economic oppression. But such forms of oppression might emerge whenever and wherever negative value judgments were applied by a dominant group to their (supposed) inferiors. The only cure was the recognition of common humanity, and the personal discourse—or dialogue—of individuals, whatever their beliefs, on that level.

Although Buber and the other existentialists were widely read, and although, as we have seen, many interfaith initiatives were begun between the wars, the application of the term *dialogue* to the relation between religious traditions did not become common until the years after World War II. By that time the political and religious patterns of the world had begun to change more and more rapidly. Western political imperialism was being rapidly dismantled; former colonies were becoming independent almost daily, with a consequent questioning of the values of the colonial period, religious values not excepted; but at the same time Christianity was an important factor in the lives of the new nations, and needed to find a new role, independent of the former governing powers. The newly independent nations were seldom other than partly Christian. India became officially "secular," while having a massive Hindu majority, and Pakistan was created as a Muslim state, for Hindu-Muslim dialogue on the subcontinent had been a marked failure. Elsewhere in the world, whether official ideology was Muslim, Buddhist, Jewish (in the sole case of Israel), or "secular," Christianity was in almost all cases thrust on to the defensive. In the Western countries themselves the Christian pattern underwent a progressive polarization between conservative and liberal views, with liberals in particular suffering greatly from postcolonial guilt on the one hand and an uncertainty as to ultimate religious values on the other.

It was in this atmosphere that the word *dialogue* began to emerge as the only workable term with which to describe the proper attitude of one group of believers over against another. It should be remembered, however, that during the time of its greatest popularity, between the mid-1960s and the mid-1970s, the word was used almost exclusively by the liberal wing of Christianity (both Catholic and Protestant) in the West, and by similarly liberal Christians in the developing nations. Conservatives found the term unacceptable, since it implicitly placed religious traditions on a par with one another, or at least was less than explicit when it came to affirming the claims of Christianity. In the non-Western world, too, there were those who suspected that the new emphasis on dialogue was no more than a subtler and more insidious form of missionary apologetics.

An important symbolical breakthrough was achieved by the Second Vatican Council (1962–1965) of the Roman Catholic church, which spoke in several documents about dialogue, the church for instance urging "her sons . . . prudently and lovingly, through dialogue and collaboration with the followers of other religions," to "acknowledge, preserve, and promote the spiritual and moral goods found among these men, as well as the values in their society and culture" (*Nostra aetate* 2). Similarly, the disciples of Christ "can learn by sincere and patient dialogue what treasures a bountiful God has distributed among the nations of the earth" (*Ad gentes* 2.11). Statements of this kind had the effect of liberating Catholics from previous restrictions on fellowship with non-Catholics, and of releasing a flood of "dialogue literature," in the production of which Protestants were soon to share.

But not all this literature saw the nature and purpose of dialogue in the same light. In addition, much of it suffered in that it was not actually emerging from discussions between believers belonging to different traditions, but remained on the level of theorizing *about* dialogue. Various types of activity seemed to be capable of being contained beneath the "dialogue" canopy.

1. *Discursive dialogue* (previously "debate" or "discussion") involves meeting, listening, and discussion on the level of mutual competent intellectual inquiry. As such it was neither very new nor very remarkable, though it had always been fairly uncommon. As an intellectual activity, it could only ever be profitable among equally equipped partners, since it presupposes the willingness of both to listen, as well as speak.
2. *Human ("Buberian") dialogue* rests on the existential foundations previously described, and assumes that it is possible for human beings to meet purely and simply as human beings, irrespective of the beliefs that separate them. The great drawback to this approach is its individualism. Although suitable enough among intellectuals in the semisecular West, it leaves out of consideration the extent to which the individual is shaped by the community of which he or she, depending on its support and adhering to its values, is part. To bypass the community is often simply impossible, and although this approach rests on high ideals, it may prove to be little more than a theoretical stance.
3. *Secular dialogue* stresses that where there are tasks to be performed in the world, believers in different creeds may share in a program of joint action, without regard to their respective convictions. In the theological climate of the 1960s and 1970s, dialogue very frequently appeared to be pointed in this direction. It simply bypassed the belief question in the interests of practicalities. "Desacralization turns the eyes of men to the world, to time and history, and the realities of history are often more manageable for purposes of dialogue than the supramundane things of an ethereal world" (Jai Singh, 1967, pp. 43–44).
4. *Spiritual dialogue* has been advocated chiefly by those who have been trained in the contemplative and monastic traditions, and who have learned to set high value upon Eastern (or other) spirituality, while not wishing to lessen their hold upon their own. Its locus is not debate and discussion, but prayer and meditation, and in recent years it has given rise to a considerable number of ashrams and meditation centers in East and West alike. In theoretical terms, it rests on a monistic theology similar in many ways to Vedānta; in practical terms, it often concedes to the East a level of attainment in matters of spirituality superior to that of the West, and is prepared to use non-Christian scriptures, liturgies, and techniques alongside those that are specifically Christian. Often it will stress the importance of *theologia negativa*, negate the primacy of logic and conceptual knowledge, and rely on experience, intuition, and contemplation. In this respect it was a typical product of the 1960s.

Since about the mid-1970s, the term *dialogue* has been somewhat less used than during the previous decade, partly on account of changing fashions, partly in response to socioeconomic pressures. There is little real evidence that the stated goals of dialogue (at least as formulated by Christians) were ever reached, and in any case, each new generation has had to take up the task of meeting other believers afresh. But at least the "dialogue period" helped to banish some of the impatience and the inaccuracies of the past, although doubtless creating fresh problems of its own. While it taught many Christians the importance of sympathy and seriousness in interreligious discourse, it failed to engage the attention of most other traditions on anything but a superficial level. As such, what has often been called a "dialogue of religions" and set forth as a practical activity, has remained on the level of theory and ideals. Actual encounters of believers there will always be. They will undoubtedly remain haphazard, unpredictable, sometimes violent, and always determined by local conditions.

## DIAMOND.

The diamond, first of all, participates in the hierophany of stones signifying in religious consciousness that which is hard, rugged, and unchanging. Above all, stone *is*. Like all precious stones, the diamond also partakes of the general symbolism of treasures and riches, which in religious terms represent moral and intellectual knowledge.

As a symbol the diamond, as the hardest of all stones, has a wide range of meanings, among them indestructibility, constancy, the unyielding, and dominance. Because of its brilliance it also signifies unconquerable light, excellence, frankness, joy, life, and purity.

In Greek the word for "diamond" is derived from *adamas*, meaning "invincible, unconquerable." In some places, and especially on Greek emblems, it indicated the irradiant mystic center, a meaning discovered in the most obscure examples as well as in the most prominent. Jean Chevalier and Alain Gheerbrant (1982) point out that the German word *Eckstein* ("cornerstone") also refers to the diamond in a deck of cards. The cornerstone is one of many symbols for the center. In a more obvious example, Plato likens the axis of the world to a diamond.

Until the nineteenth century, diamonds were found almost entirely in India. On the subcontinent the word *vajra* meant both "lightning" and "diamond." Thus, the *vajra* of the god Śiva has a double aspect as thunderbolt and diamond scepter. *Vajra* also belongs to the god Agni as a spiritual power and to Indra as a temporal power. As a diamond *vajra* is adamantine and depicts spiritual power, but as thunderbolt and lightning it also represents both destruction and fertilization, death-dealing and life-giving powers, the alternating and complementary forces of the universe.

The symbol of the *vajra* is important in Buddhism as well, where it symbolizes the power of the Buddha's teaching (the *dharma*) to overcome the deluding passions of sentient beings. The Diamond Throne or Seat is the place of enlightenment. Situated at the foot of the bodhi tree, it is the unchangeable axis or center of the world.

In Tantric Buddhism *vajra* represents immutable, unalterable spiritual power. Symbolizing clarity and light, it also refers to the indeterminate character and ultimate emptiness of the Buddha nature. Mircea Eliade cites a Tantric text that makes a clear identification between *śūnyatā* ("voidness") and *vajra*. The Chan patriarch Huineng is said to have declared that neither that which is waxing nor that which is waning is the diamond.

In the traditional mineralogy of the Indian subcontinent, the diamond represents perfection. Stones and metals were thought to grow within the earth's womb, each with its own lethargic pace and rhythm. The crystal was unripe (Hindi, *kacchā)* and constituted a state of intermediate maturation. The diamond was the epitome of maturity and ripeness (Hindi, *pakkā)*. The crystal is not hard; the diamond is. The Indian alchemist, associating the diamond with immortality, identified it with the philosophers' stone.

Similarly, in Tibetan iconography the diamond scepter signifies the adamantine or immutable world, which is also potential or nonmanifest. The bell or *tilpa* refers to the phenomenal world, which is manifest and changing. The diamond scepter is the active principle; the bell is the passive. The former is wisdom and the latter, human reason.

The diamond has also been linked with the supreme female divinity, who is usually associated with the earth. In Tibet the earth goddess Tārā has a human incarnation, the Diamond Sow. She is also traditionally regarded as the consort of or feminine counterpart to the *bodhisattva* Avalokiteśvara. In the transition from tarot cards to modern playing cards, diamonds replaced the ancient suit of pentacles, which had been symbols of Mother Earth (Tārā) and of the earth as feminine.

The characteristics of hardness and durability have lent themselves to other meanings. In the Old Testament the diamond could symbolize hardness of the heart and forehead (*Jer.* 17:1). In Rome it was believed that the stone promoted harmony, and that it guarded health and vitality if worn on the left hand, close to the heart. This belief probably informed its character as an emblem of reconciliation in the Middle Ages and as a sign of betrothal in the modern world.

In some places the diamond's brilliance and lucidity made it a symbol for Christ. In Hebrew culture the sixth stone of the high priest's breastplate, a diamond, was said to become dark or light according to the guilt or innocence of an accused person.

Mircea Eliade (1958) has related diamonds to "snake stones," which in many cultures are thought to have fallen from the heads of snakes or dragons. In ancient India, and later in the Hellenistic and Arab worlds, it was believed that the stones were poisonous if anyone touched them with their lips, because they had once been in a snake's throat. The notion that precious stones came from snake spittle has been found in areas ranging from China to Great Britain.

Pliny the Elder (23–79 CE) described the *dracontia*, or dracontites, that were to be found in the brains of dragons. Philostratus the Lemnian (b. c. 190 CE) reported that the eyes of some dragons were stones of blinding brilliance imbued with magical powers. Sorcerers, he relates, after they have worshiped reptiles, cut off their heads and take out the precious stones.

Given such beliefs, it is not surprising that the diamond has a reputation as a remedy for snakebite. Indeed, Pliny describes it as a universal talisman, rendering poisons and every malady harmless and causing evil spirits and bad dreams to depart. In occidental Europe, the diamond has been thought to chase away savage beasts, phantoms, sorcerers, and the terrors of the night. In Russia, its purity and lucidity have made it a charm to impede lust and to strengthen the resolve of the chaste.

## BIBLIOGRAPHY

Jean Chevalier and Alain Gheerbrant, in *Dictionnaire des symboles* (Paris, 1982), have written an interesting and often provocative essay on the diamond. Mircea Eliade, in *Patterns in Comparative Religion* (New York, 1958), primarily discussed the diamond as a magical object. His description of the significance of the stones in the same book is also helpful. Berthold Laufer's book *The Diamond: A Study in Chinese and Hellenistic Folklore* (Chicago, 1915), is one of the few sources that include substantial material on the diamond as a symbol rather than a physical object.

*Revised Bibliography*

**DIANA.** Latin grammarians offer the oldest and most commonly accepted etymology of the name of Diana. She is the female counterpart of Zeus/Deus, following the etymological chain: *Deus, dius, Divus, Diovis, dies, duius, Diviana, Diana.* Therefore, Diana is "the goddess," and she is often defined as such in inscriptions of the imperial era, which honor her as *Dea Diana, Deana*, or simply, *Diana.*

Varro (*De lingua Latina* 5.68), following the ancient texts of Epicharmus and Ennius, states that "the Moon (*luna*) takes her name from *lucere* (to illuminate) because it shines alone at night." For this reason it is called *Noctiluca* over the Palatinus, where her temple shines at night. Varro adds that *lucere* derives from *luere* (to undo, to dissolve), because light (*lux*) dissolves darkness; from *lux* derives *Noctiluca* (*De lingua Latina* 6.79). In her temple a lamp remained lit, illuminating the night. That rite is not Greek, but Italian. For his part, Cicero commands that "just as the Sun receives the name of Apollo, so the Moon receives that of Diana" (*De natura deorum* 3.20.51); the same duality of day versus night appears in Horace's *Ode* 4.6, when the poet, in this hymn honoring Augustus, praises Apollo *Phoibos* (= Sun) and, later, the rites celebrated in honor of Diana-*Phoibe*, whose flame grows, ripening the wheat fields: *rite crescentem face Noctilucam, prosperam frugum celeremque pronos volvere mensis* (As with a torch that rekindles the moonlight, to bring back favorable prosperity and swift fruitfulness).

Catullus dedicates his *Carmen* XXXIV to Diana. Here, the rhythmic repetitions transform the poem into a true hymn or a prayer where she is invoked as Mistress (*domina*) of wild life in verses 9 through 12: *montium domina ut fores / silvarumque virentium / saltuumque reconditorum amniumque sonantum* (Thus you are mistress of the hills, and the flourishing woods and the secluded pasture land and the resounding river). The verses show the duality of Diana as a midwife and protector of children, and as regent of the gloomy night. Thus, Diana is the light that rules the night. This is why she is also invoked as *Lucina* (and by the Greeks as *Lucifera*), stealing the role from Juno herself, who aids women in labor (Cicero, *De natura deorum* 2.68).

The Italic cult to Diana is very ancient. Legend attributes to King Tatius the establishment of her cult in Latium, brought from the land of the Sabines. According to Livy (27.4.12), a temple and a forest (*templum et lucus*) were consecrated to her in Anagnia, the land of the Hernici, as was a hill near the *Tusculum.* These natural landscapes defined from early on the sacred surroundings of Diana: dark forests, luxuriant woods, and caves.

The paradigm of such a cult can be found in the oldest and most renowned of Diana's sanctuaries in Latin worship, that of *Diana Aricina*, located in the forest of Nemus, on a lakeshore at the foot of the Alban hills (Pliny, *Naturalis historia* 16.91). From the name of the lake and the forest, the goddess takes the epithet *Nemorensis.* In Aricia, the worshipers of Diana were mostly female, and her night rituals were impressive. Once the women had performed the rites, they returned to Rome in a procession, carrying torches and illuminating the night with the fire of their goddess. The procession was repeated, more theatrically, on the ides of August, when the women, carrying the torches, would stand around Lake Nemi until they could feel the presence of the goddess: "Diana herself, who crowns with flowers her chosen hounds, sets her darts and lets the wild beasts lose, while in their chaste homes, the people, throughout the land of Italy, celebrate the day of Hecate" (Statius, *Silvae* 3.1.55–60).

This archaic temple held extraordinary importance in the organization of the later cult of the goddess, for, when it was moved to Rome, the priest of the temple of Diana in the Aventine was addressed by the "archaeological" title *rex nemorensis* (Ovid, *Fasti* 3.265; 6.735). The title conferred sacred respect, and was evidence of the ancient barbarism. The priest of Diana "always had to defend himself sword in hand against his foes" (Ovid, *Ars amandi* 1.260). The notion of barbarism and a constant state of "defense and vigilance" are probably at the heart of Diana's success among slaves and gladiators. In the time of Augustus, the bronze tables with the founding decree of the confederate temple, the *lex arae Dianae in Aventino*, were still preserved. As in Aricia, in Rome the anniversary of her cult was August 13. On that date, slaves received symbolic freedom and women purified themselves by washing their hair and combing it delicately (Plutarch, *Quaestiones Romanae* 100).

The early commingling with Artemis can explain those aspects of Diana that contrast with her virginal nature. At Aricia, votive objects have been discovered that take the form of vulvas and phalluses. Syncretism progressively altered the Latin goddess to the point of conferring various features of the Greek goddess upon her beyond her lunar function; thus she became a midwife like Artemis *Locheia*, a huntress-goddess, and, as Diana *Trivia*, a goddess of crossroads, after the example of Hekate *Trioditis*. By the time of Augustus, the absorption of Diana by Artemis was virtually complete, as can be seen in the *Carmen saeculare* of Horace. On the other hand, Strabo (4.1.5) relates that the cultic statue on the Aventine displayed the same traits as the Artemis of Marseilles, which in turn was identical with the Artemis of Ephesus.

In Campania, north of Capua, there was another great archaic sanctuary to Diana, called the Diana Tifatina because of the abundance of evergreen oaks on its surrounding hills. It was created around the third century BCE. The numerous inscriptions found there suggest the popularity of her cult, especially between the first century BCE and the first century CE, which depict Diana Tifatina as "huntress." The temple received generous tributes from Sulla in gratitude for his victory over C. Norbanus not far from the temple of Tifatina (Velleius, *Paterculus* 2.25.4; Plutarch, *Sulla* 6). Economic activity, based on the ownership and farming of the land, extends to the imperial era. The policies of protection of the temple by the emperors is exemplified by the actions of Vespasian in 77 or 78 against private individuals who improperly occupied lands surrounding the temple of Diana Tifatina—by illegally expanding the size of adjacent plots during the first century CE. The emperor demanded that the land be returned to the temple *(quibus secundum instrumentum fines restituuntur)*. Sulla granted the land to the temple of Diana in 82 CE, and its boundaries were legally recorded in the land registry under Augustus. The imperial judgment is preserved in an inscription in Capua, stating that Emperor Vespasian "restored the limits of the lands under litigation to the temple of Diana Tifatina, donated by Cornelius Sulla" (*CIL* X 3828).

After the burning of Rome in 65 CE, Nero ordered the construction of a temple to Diana in the Aventine, which is also mentioned by Vitruvius (5.5.8) and Ovid (*Fasti* 3. 883–884). The temple took the place of another one, in a different location, that "Servius Tullius had consecrated to the moon," according to Tacitus (*Annales* 15.41.1). Livy also refers to the temple (40.2.2) when he tells the prodigious story of how, in the year 182, the door to the sanctuary was blown down by a hurricane.

During the first and second centuries CE Diana was highly honored by the military, especially equestrian officers throughout the Roman Empire. Dedications allude to Diana's ancient names, as well as her earlier functions as goddess of the forests and ruler of wild animals. Thus, in Altava (Mauretania Caesariensis) she is invoked as "Diana Dea nemorum comes, victrix ferarum" (*CIL* VIII, 9831); Diana Nemorensis is worshiped in Narona (Dalmatia) (*CIL* III, 1773); while in Intercisa (Lower Pannonia), honors go to Numen Dianae Tifatinae (*Année Epigraphique,* 1968, 429). In an important inscription in León (Hispania), dating to the second century CE, a senator who was also *legatus* in legion VII *Gemina*, writes a long votive invocation of the goddess, building a temple in her honor and offering her his hunting trophies: boar tusks, deer antlers, and a bear skin, all of them hunted by Tullius Maximus, who calls himself "general of the descendants of Aeneas" (Del Hoyo, 2002).

In late antiquity, the name of Diana and her nocturnal names (such as Hekate, *Triva*, Selene, Luna) had great acceptance in the religion of the people and in magic.

## DIETARY LAWS SEE KASHRUT

## DIETERICH, ALBRECHT

**DIETERICH, ALBRECHT** (1866–1908), German philologist and historian of Greco-Roman religions. Born in Bad Hersfeld (in the Hesse region of Germany), Albrecht Dieterich completed his secondary studies in the school where his father (who wanted Dieterich to become a theologian) was a member of the faculty. At the University of Leipzig in 1885–1886, Dieterich studied the New Testament and church history; he also took an interest in the philosophy of religion in general and enrolled in courses in classical philology (taught by Georg Curtius, Otto Crusius, and Otto Ribbeck). He pursued higher studies at the University of Bonn from 1886 to 1888, where the teaching of Hermann Usener (whose daughter he later married) had decisive influence upon his scientific orientation. He also studied under Franz Bücheler, who introduced him to funerary epigraphy, and under Reinhard Kekulé, who taught him to appreciate iconography.

Dieterich consolidated the bases of his philological training at Usener's urging, who had him write a dissertation on Aeschylus. He then worked on an edition (with comments) of the magical papyrus J 384 of Leiden; it was submitted to a competition sponsered by Bücheler and won the prize (the text was published in the *Jahrbücher für klassische Philologie*, supp. vol. 16, 1888). In this work Dieterich showed his concern for historical and linguistic comprehension of the papyrus's strange elements (that at first glance appear irrational) by paying attention to how these elements manifest the marginal strains of Greco-Roman religion (e.g., Orphism, Hermetism, and Gnosticism). Having obtained his doctoral degree in 1888, he passed his state examination in 1889 with his dissertation addressing the question, "What do we know about the theism or pantheism of Plato?" In 1891 he qualified as a doctor of philosophy at the University of Marburg with his work *De hymnis Orphicis capitula quinque*, in which the problems of literary and religious history are treated together. (The hypothesis that he advanced in this book—that of an Alexandrian elaboration of some "Orphic hymns"—is no longer supported, but nevertheless it is still generally agreed that certain aspects of Orphism in Ptolemaic Egypt deserve attention.)

He had at first planned to edit another magical papyrus of Leiden (J 395) as part of his doctoral work; it was instead published as an appendix to his *Abraxas* (1891). This book, written in homage to Usener, displayed Dieterich's remarkable mastery over hermetic and Gnostic literature. He applied himself in *Abraxas* to uncovering in this literature elements of Stoic, Orphic, astrological, Egyptian, and Judaic origin. Yet for all that he did not neglect Classical Greek literature (especially Aeschylus and Aristophanes). He wrote the article "Aischylos" for the *Real-Encyclopädie* (1893); in this article the religious sense of tragic grandeur surpasses the level of purely verbal and bibliographical erudition. The origins of Christianity were part of his concern as well. His study of the *Apocalypse of Peter*, a text discovered in a tomb in Akhmim, Egypt, led to the publication of *Nekyia* (1893), an in-depth study of the Greek tradition of descent (*katabasis*) into the underworld and of Judeo-Christian apocalyptic tradition. It stressed the importance of popular beliefs and of beliefs of popular origin at the periphery of official cults or of Classical paganism.

During 1894 and 1895, a long Mediterranean voyage took him to Greece, Asia Minor, Naples and Pompeii, Sicily, and finally Rome. He thus made direct contact with the objects of his studies: the countrysides, the representational monuments, the common people's way of life, and the ever-living folklore in rustic festivals. The paintings of Campania (commented upon by August Mau) and Italian theater inspired Dieterich's book *Pulcinella* (1897), a perspicacious study of the history of comic characters from classical antiquity extending into the present. His visit to the Lateran Museum resulted in his publication in 1896 of a commentary on the epitaph of Aberkios (a bishop of Hierapolis, Phrygia) in which he proposed a pagan interpretation, which generated both enthusiastic support (e.g., from Salomon Reinach) and sharp criticism (e.g., from Franz Cumont).

In 1895 he became an auxiliary professor of philology at the University of Giessen, and then became in 1897 a full professor there, succeeding Edvard Schwartz. His teaching on Greek and Latin literature made reference to iconography as well as to popular mythology. Greatly impressed by Erwin Rohde's *Psyché* (1890–1894) and Wilhelm Mannhardt's *Wald- und Feldkulte* (1875–1877), he became fascinated with ethnography and collaborated in the projects of the Hessische Vereinigung für Volkskunde. In this activity he always insisted upon the necessity of providing a philological basis for comparisons. He held conferences at Frankfurt on the rites of birth and death that served as a prelude for his book *Mutter Erde* (1905).

Dieterich was interested in the magical aspect of literature manifested in the mysticism of signs, in demonology, and in all the aberrant and disturbing fringes of Greco-Roman paganism, which until then were somewhat neglected by classical philologists. In a similar way, Oriental religions also concerned him. In a letter written in 1897, he argued that the Egyptian deity Sarapis was a syncretic god foreshadowing a kind of henotheism that would pave the way for Christian monotheism. Hugo Hepding, with his book *Attis* (1903), inaugurated the series "Religionsgeschichtliche Versuche und Vorarbeiten," which Dieterich, along with Richard Wünsch, edited until Dieterich's death. The same year saw the publication of Dieterich's *Eine Mithrasliturgie*, an expansion of an article he had published in 1902 ("Die Religion des Mithras" in the journal *Bon ner Jahrbücher*); the topic was the famous papyrus in the National Papyrus Library in Paris (Supplementum Graecum 574) that contains the "formula for immortality." Although Dieterich's description of this text as a Mithraic liturgy is no longer generally accepted, his commentary does display prodigious erudition.

Dieterich moved to the University of Heidelberg in 1903, succeeding Crusius as professor of classical philology. There he dedicated himself mainly to the history of religions. Beginning in 1904, his editing (at first with Thomas Achelis but from 1905 to 1908 alone) of the journal *Archiv für Religionswissenschaft* occupied the greater part of his time. This, however, did not prevent him from writing a *magnum opus* that he had been nurturing for some time: *Mutter Erde: Ein Versuch über Volksreligion* (1905). In it he defends the thesis that rites of birth and death can be explained as functions of a fundamental belief, a primitive and universal given in the history of religions. His idea enjoyed considerable success. It was answered with justified criticisms (for example, by Olof Pettersson in his book *Mother Earth*, Lund, 1967); yet the work still has merit, and any criticisms of it ought to be nuanced (see my review of Pettersson's book in *Revue de l'histoire des religions* 175, 1969, pp. 69–71). Significantly, *Mutter Erde* was dedicated to Usener on the occasion of his seventieth birthday. In the same year (1905), a supplement to *Archiv für Religionswissenschaft* was also dedicated to Usener; in it, a piece entitled "Sonnentag" by Dieterich drew a relationship between a Heidelberg custom and the ancient and modern feasts of Palm Sunday. He was planning one work on popular religion and another on the origins of Christianity.

Dieterich died of a cerebral apoplexy shortly after beginning a course of lectures at Heidelberg; he was fully active and in the prime of his career. His students (notably Friedrich Pfister, Eugen Fehrle, and Otto Weinreich) bear the clear stamp of his teaching. He contributed to a greater understanding of Greco-Roman paganism by opening classical philology to the exegesis of obscure texts from late antiquity; he also contributed to the comparative study of religions and to the study of popular traditions without ever losing sight of the great Hellenic literary tradition.

## BIBLIOGRAPHY

Dietrich's published works include the following:

*De hymnis orphicis capitula quinque.* Marburg, 1891.

*Abraxas: Studien zur Religionsgeschichte des spätern Altertums.* Leipzig, 1891.

*Nekyia: Beiträge zur Erklärung der neuentdeckten Petrusapokalypse.* Leipzig, 1893.

*Die Grabinschrift des Aberkios.* Leipzig, 1896.

*Pulcinella pompjanische Wandbilder und römische Satyrspiele.* Leipzig, 1897.

*Eine Mithrasliturgie* (1903). 3d ed. Edited by Otto Weinreich. Leipzig, 1923.

*Mutter Erde: Ein Versuch über Volksreligion* (1905). 3d ed. Leipzig, 1925.

*Kleine Schriften.* Edited by Richard Wünsch. Leipzig, 1911. Includes detailed biographical information on Dieterich.

ROBERT TURCAN (1987)
***Translated from French by Paul C. Duggan***
***Revised Bibliography***

**DIETERLEN, GERMAINE** (1903–1999), a towering figure in French ethnography, is especially known for her exhaustive documentation of the Dogon of Mali. In 1931 she joined the famous ethnographic expedition, the Dakar-Djibouti mission, led by Marcel Griaule (1898–1956). She became an integral part of Griaule's interdisciplinary research team and his closest associate. Dieterlen's interests and investigations were wide-ranging. She made more than forty expeditions, mostly to Mali but also to Burkina Faso, Ivory Coast, Niger, and Ghana. She researched Bozo, Peul, and Bambara (Bamana) as well as Dogon cultures, including music and instruments, statuary and art, jewelry, oral literature, language, and religion.

Dieterlen was already married and thirty years old when she decided to earn her baccalaureate in order to pursue a vocation in the nascent science of ethnography. That she defied the constricting social conventions of her day shows the extraordinary will and determination that she extended into the field, where she was reputed to be both exacting and tireless.

Dieterlen's first work, "Calebasses dahoméennes" ("Documents de la mission Dakar-Djibouti"), published in 1935 in collaboration with Griaule, was a descriptive study of the more than thirty-six hundred objects brought back by the Dakar-Djibouti mission for the Trocadero Museum. Dieterlen's careful attention to material culture reflects the influence of her teacher Marcel Mauss (1872–1950). Her first great work, *Les âmes des Dogons* (1941), inaugurated her innovative research on religious ethnology. During three subsequent expeditions she deepened her focus on belief systems, producing the classic *Essai sur la religion des Bambara* (1951). These three works, though disparate in content and style, reflect the two orientations in Dieterlen's scientific life: concrete objects and symbolic representations. Dieterlen's fascination with the relationship of concrete manifestations to systems of belief is evident in another work coauthored with Griaule, *Signes graphiques soudanais* (1951).

Dieterlen carefully attended to the very words of those she studied as a means of understanding their beliefs and systems of representation. Her method was to note their language and then later develop reflections and deepened insights by examining their words. This was the method used in *Le renard pâle* (1965), which she published after Griaule's death under both their names. An extraordinary work, it is the extended study and amplification of the cosmogonic system first expounded by a Dogon elder seventeen years before and related by Griaule in his landmark book, *Dieu d'eau* (Conversations with Ogotemmêli) in 1948. Her comprehensive synthesis of Dogon cosmogony is complemented by a thorough analysis of its concrete manifestation in their social arrangements. Dieterlen's respect for the authority of her native informants' own self-representation is epitomized in *Le titre d'honneur des Arou* (1982), almost entirely comprised of direct transcription.

Dieterlen's assumption that key informants were articulate exponents of local knowledge provided the guiding impulse for her novel use of ethnographic film as a research tool. She viewed filmed ceremonial events with informants to elicit a dialogue and insights that led to fuller comprehension. A unique achievement in the history of ethnography was the series of eight films she made with Jean Rouch (1917–2004) between 1967 and 1973 consecrated to the Sigui, a Dogon masking ritual held every sixty years that extends over a seven-year period. A pioneer of the medium, Dieterlen eventually served as the president of the Committee on Ethnographic Film.

Another critical contribution Dieterlen made to the field was her promotion of dialogue between the French and British schools of anthropology, which employed characteristically opposing means of interrogating West African culture. The French approach, personified by Griaule and Dieterlen, gave primacy to the symbolic and mythical features of culture, while the British method, more analytical than metaphysical, documented social organization, particularly kinship and politics. Collaborating extensively with British colleagues, Dieterlen played an ambassadorial role that fostered constructive discussion about method even as it promoted work that cut across the boundaries of Francophone and Anglophone countries. Dieterlen served on the Council of the International African Institute (CIAI) along with Daryll Forde (1902–1973), who edited the important collection *African Worlds: Studies in the Cosmological Ideas and Social Values of African Peoples* (1954) that also bridged French and British preoccupations.

During the mid-1960s the CIAI organized two seminars on the Voltaic region. The result was an important collection, *African Systems of Thought* (1965), coedited by Dieterlen and the British anthropologist Meyer Fortes (1906–1983). The volume initiated a wide and enduring debate on the meaning of non-Western thought. It also explored the degree to which the contrasting theoretical orientations and methods of the two schools determined strikingly different appraisals of similar cultures.

A founding member and director of research for the Centre National de la Recherche Scientifique (CNRS), Dieterlen created a research group on African religions. She organized the CNRS's influential 1971 international colloquium on what later became a fashionable theme in anthropology, the "notion of personhood." Dieterlen's contribution recovered the feminine as important aspects of the Dogon mythology and social system, including a consideration of pregnancy, childbirth, and the placenta as the bearer of the sacred signs of creation. In an astounding homage to Dieterlen, the Dogon gave her the status *yasiguine* (sister of Sigui), which entitled her to be a member of the male masking society.

## DIFFUSIONISM See EVOLUTION, *ARTICLE ON* EVOLUTIONISM; KULTURKREISELEHRE

**DIGNĀGA** (c. 480–540 CE), founder of the Buddhist school of epistemology and logic in India. Born near Kāñcī in South India, Dignāga first belonged to the Vātsīputrīya school of Hīnayāna Buddhism, but unconvinced of the adequacy of its doctrine, he left the school. Some source materials record that he became a pupil of Vasubandhu, a renowned scholar of Buddhist philosophy, but his direct relationship to Vasubandhu may be questioned: a passage in one of Dignāga's works indicates an uncertainty concerning the authorship of a book traditionally attributed to Vasubandhu. Dignāga stayed for some time in Nālandā, then the center of Buddhist learning, and obtained mastery of the Vijñānavāda philosophy and of logic. His later years were spent in Orissa.

Dignāga composed many philosophical treatises. Most are no longer extant in Sanskrit, but a certain number of them are available in Tibetan or Chinese translation. The important ones are (1) *Prajñāpāramitā-piṇḍārtha-saṃgraha*, a summary of the *Prajñāpāramitā Sūtra* from the Yogācāra standpoint; (2) *Traikālya-pa-rīkṣā*, a treatise on the concept of time consisting of verses taken from Bhartṛhari's *Vākyapadīya* with a slight but significant modification: it is intended to set forth the Yogācāra view that phenomenal existences are produced by the consciousness (*vijñāna*); (3) *Abhidharmakośa-marma-dīpa*, an abridgment of Vasubandhu's book treating the dogmatics of the Hīnāyana schools; (4) *Hastavāla-prakaraṇa*, an examination of the Sautrāntika concepts of ultimate reality (*paramārtha-sat*) and empirical reality (*saṃvṛti-sat*); (5) **Upādāya-prajñapti-prakaraṇa*, a clear explanation of the Sautrāntika concept of empirical reality, arguing at the conclusion from the Yogācāra viewpoint that empirical reality is a product of the consciousness; (6) *Ālambana-parīkṣā*, an examination of the object of cognition; (7) *Hetucakraḍamaru;* (8) *Nyāyamukha;* (9) *Hetumukha* (not extant except for a few fragments); and (10) *Pramāṇa-samuccaya.* These last four works treat logic and epistemology.

Dignāga was a proponent of the Yogācāra doctrine insofar as he maintained that phenomenal existence was fabricated by the consciousness. However, the notion of the *ālaya-vijñāna* ("receptacle consciousness"), a central Yogācāra doctrine, is not mentioned in any of his works. He belonged to that school of the Yogācāras that did not recognize the *ālaya-vijñāna* and the "I-consciousness" (*manas*) separately from the six kinds of ordinary sense consciousness: visual, auditory, olfactory, gustatory, tactile, and discriminative. In some of his works he evinces an interest in Sautrāntika doctrine, and in fact, Dignāga's epistemological theories as expounded in the *Pramāṇasamuccaya* were made acceptable for both the Sautrāntikas and the Yogācāras.

Among the treatises concerning the Yogācāra philosophy, the *Ālambana-parīkṣā* is most important. In this work Dignāga repudiates the realists by arguing that a cognition cannot take for its object a thing in the external world, whether it is an individual atom or an aggregate of atoms. His discussions are similar to those presented by Vasubandhu in his *Viṃśatikā-vijñaptimā-tratāsiddhi.* However, the originality of Dignāga lies in his insistence that an object of cognition (*ālambana*) must fulfill two necessary conditions: first, the object must be the cause (*kāraṇa*) of a cognition, and second, it must possess the same form (*ākāra*) as that which appears in the cognition. To satisfy these two conditions the object must be a real entity (*dravya-sat*) and possess a gross form (*sthūlākāra*). With these two conditions in view Dignāga examined and rejected the realist theories and drew the conclusion that the object of cognition is nothing other than the form of an object that appears in the cognition.

Dignāga's major contribution in the field of logic is the invention of the "wheel of reasons" (*hetucakra*), which shows nine possible relations between a logical reason (*hetu*) and what is to be proven (*sādhya*), and enables one to distinguish a valid reason from invalid ones. The *hetucakra* was first presented in the *Hetucakraḍamaru*, and later incorporated in the *Nyāyamukha*, a work treating the dialectic on the model of Vasubandhu's *Vādavidhi*, and in the *Pramāṇasamuccaya*, a systematic exposition of the theory of knowledge.

The *Pramāṇasamuccaya* is the most important of Dignāga's works, for it is the synthesis of the doctrines expounded by him in different treatises. It comprises six chapters focusing on, respectively, (1) perception (*pratyakṣa*), (2) inference *svārthānumāna*), (3) syllogism (*parārthānumāna*), (4) proper and improper examples in syllogism (*dṛṣṭānta-dṛṣṭāntābhāsa*), (5) "differentiation from others" (*anyāpoha*) as the meaning of a word, and (6) futile rejoinder (*jāti*). In the first chapter, Dignāga makes a radical distinction between the two means of cognition, namely, perception, which apprehends the particular (*svalakṣaṇa*) with no conceptual construction (*kalpanā*), and inference, which apprehends the universal (*sāmānyalakṣaṇa*) produced through conceptual construction. The doctrines that invited attack from opponents, such as that of the identity between the means (*pramāṇa*) and the result (*pramāṇaphala*) of cognition and that of "self-awareness" (*svasaṃvitti*) of cognition, are advocated in this chapter. Chapters 2, 3, 4, and 6 deal with logical problems. In these chapters Dignāga discusses in full detail such topics as the distinction between inference for oneself (*svārthānumāna*) and inference for others (*parārthānumāna*), the three character-istics (*trirūpa*) of an inferential mark (*liṅga*), the object of inference (*anumeya*), the "wheel of reasons" (*hetucakra*), and the concomitance in agreement (*anavaya*) and in difference (*vyatireka*) between inferential mark and example, and establishes the system of three-membered syllogism. The fifth chapter is devoted to the elucidation of the *apoha* doctrine, that is, the doctrine that the function of a word consists in the "differentiation (of an object) from other things" (*anyāpoha*) and not in the direct reference to a real entity. This doctrine also aroused controversy among the scholars of the different philosophical schools.

Dignāga had a great influence on the scholars of both Brahmanic and Buddhist schools. Uddyotakara (c. sixth century) of the Nyāya school, Kumārila Bhaṭṭa (c. seventh century) of the Mīmāṃsā school, and Mallavādin (c. sixth century) of the Jain school made vehement attacks on his doctrines as presented in the *Pramāṇasamuccaya.* Praśastapāda (c. sixth century), a Vaiśeṣika philosopher, was much indebted to Dignāga for the formulation of his theory of inference. Among Buddhist scholars, Dharmakīrti (c. 600–660) wrote an elaborate commentary on the *Pramāṇasamuccaya*, the *Pramāṇavārttika*, in which he fully developed the ideas formulated by Dignāga. Soon this work took the place of the *Pramāṇasamuccaya* in academic circles, and was studied both by Buddhists and by members of rival schools.

## DIHLAWĪ, SHĀH WALĪ, ALLĀH SEE WALĪ ALLĀH, SHĀH

**DILTHEY, WILHELM** (1833–1911), German philosopher of history and intellectual historian. Dilthey was born in Biebrich am Rhein, where his father, a liberal Calvinist theologian, was court chaplain to the duke of Nassau. Following graduation at the head of his *Gymnasium* class in nearby Wiesbaden, he enrolled at Heidelberg in 1852 to study theology. After only a year, however, he left for Berlin and there began to concentrate on history and philosophy, studying with some of the greatest representatives of German historical scholarship: Leopold von Ranke, Theodor Mommsen, Jakob Grimm, August Boeckh, Franz Bopp, and Karl Ritter. In philosophy, his principal mentor was the Aristotelian F. A. Trendelenburg. Dilthey's interest in the German theologian and philosopher Friedrich Schleiermacher also stems from this Berlin period. In 1860, his essay on Schleiermacher's hermeneutics was awarded two prizes by the Schleiermacher Society and was followed by a commission to complete an edition of Schleiermacher's correspondence and write his biography. Dilthey defended his doctoral dissertation on Schleiermacher's moral principles in 1864. In the same year he presented a monograph on the analysis of moral consciousness that served as his *Habilitationsschrift*, the thesis that qualified him for university teaching. After a brief period of teaching at Berlin, he was called to Basel in 1867, and then to Kiel in 1868.

In 1870, Dilthey published the initial volume of his *Leben Schleiermachers* (Life of Schleiermacher), the first of several ambitious projects that would remain unfinished. In 1871, he accepted a chair at Breslau, where his main efforts were devoted to the problem of the nature and methods of the human sciences. In 1883, he published the first part of his major philosophical work, *Einleitung in die Geisteswissenschaften* (Introduction to the Human Sciences). In 1883, Dilthey also returned to Berlin to succeed Hermann Lotze in the chair that had once been occupied by Hegel. Election to the Prussian Academy of the Sciences followed in 1897. In 1900, he gave up his seminars, and in 1907 he retired from teaching altogether in order to develop more systematically the philosophical ideas put forward in the *Einleitung*. Dilthey died while on a working holiday in the Austrian Tyrol in 1911.

Dilthey's research on Schleiermacher and his account of the process of understanding the activity of a religious thinker constituted an important component of his work on the theory and practice of intellectual history. Yet his major contribution to religious studies lies in his theory of the human studies and its implications for the scientific investigation of religion.

Dilthey's theory of the human studies may be understood as an attempt to establish the idea that these disciplines have a distinctive subject matter and method that differentiate them from the natural sciences. The difference in subject matter is not grounded in two different modes of being but is, rather, based on two different ways of experiencing the world. Each is empirical, and each has its own definitive scientific objectivity and validity. The distinctive subject matter of the natural sciences is the world as given in the abstractions of sense perception and structured by reference to causal laws. The distinctive subject matter of the human sciences is the world as the person actually experiences it: the historically constituted ensemble of meanings and values that are the objects of his practical projects and interests. Because the artifacts of this historical world are all expressions of the human spirit, or *Geist*, the human sciences are the *Geisteswissenschaften*, the disciplines that investigate expressions of the human spirit.

*Verstehen*, or understanding, the distinctive method of these disciplines, is a consequence of the attitude that defines their subject matter. Because the actions and artifacts that express the human spirit are meaningful entities, a kind of knowledge is possible in the human sciences that cannot be reduced to explanation, or knowledge of the nomological structure of natural phenomena. *Verstehen* identifies the meaningful content of expressions of the spirit and the structures in which they are implicated. Much of Dilthey's work in the philosophy of the human sciences was concerned with the elucidation of this process of understanding and its distinctive epistemological quality, which he called the hermeneutic circle. An interpretation of the Romantic movement, for example, presupposes prior knowledge of which persons, actions, and artifacts fall within it. However, the latter are identifiable only on the basis of a general criterion that defines the features of romanticism. Thus knowledge of the whole rests on knowledge of the parts, which in turn presupposes knowledge of the whole.

The main aim of Dilthey's philosophical work was to develop a critique of historical reason that would resolve the question of how knowledge in the human sciences is possible. Dilthey struggled with this enterprise for more than forty years in the attempt to identify a basic or foundational science for the human sciences. In his writings of the 1880s and the early 1890s, he seems to have envisaged a descriptive, analytical, and phenomenological psychology as this foundation. Beginning in 1895, however, he stressed hermeneutics, or the theory of interpretation, as the basis for a valid theory of knowledge on which the human sciences can be grounded. Nevertheless, in his last works Dilthey retained intact many of the psychological theses of his earlier writings; moreover, the hermeneutic doctrines of his later work are also present in his earlier writings. As a result, the relationship between psychology and hermeneutics in the development of Dilthey's thought remains one of the most controverted issues among scholars who have attempted to understand his project of a critique of historical reason.

## BIBLIOGRAPHY

The standard edition of Dilthey's works is the *Gesammelte Schriften*, 2d ed. (Stuttgart, 1957–), of which twenty-three volumes, prepared by various editors, have appeared. Also being published is a six-volume English edition of selected works by Dilthey. Under the general editorship of Rudolf A. Makkreel and Frithjof Rodi, five volumes have so far been issued. Major works on Dilthey in English include Makkreel's *Dilthey: Philosopher of the Human Studies* (Princeton, 1975), Michael Ermarth's *Wilhelm Dilthey: The Critique of Historical Reason* (Chicago, 1978), H. P. Rickman's *Wilhelm Dilthey: Pioneer of the Human Studies* (Berkeley, 1979), and Theodore Plantinga's *Historical Understanding in the Thought of Wilhelm Dilthey* (Toronto, 1980). For extant English translations of Dilthey's works, see Plantinga's bibliography. Since 1983 there has also been a scholarly journal devoted to Dilthey's work, with some articles in English and current bibliography: *Dilthey-Jahrbuch für Philosophie und Geschichte der Geisteswissenschaften* (Göttingen).

## DINÉ RELIGIOUS TRADITIONS SEE NAVAJO RELIGIOUS TRADITIONS

## DINKA RELIGION SEE NUER AND DINKA RELIGION

## DIOLA RELIGION.

Numbering some four hundred thousand people, the Diola inhabit the well-watered coastal plain between the Gambia and São Domingo rivers of Senegambia and Guinea-Bissau. They are sedentary wet-rice farmers and usually described as a stateless people, governed by village councils. Despite a common ethnic label the various Diola subgroups speak distinct dialects and have somewhat divergent religious beliefs and political organizations.

The past two centuries of Diola religious history have been characterized by the increasing interaction of Diola religion with Islam and Christianity. While Muslims and Christians have been in contact with the Diola at least since the sixteenth century, few conversions occurred before the late nineteenth century. On the north shore of the Casamance River, where contact with Islam was both earliest and most violent, many Diola have embraced Islam and, to a lesser extent, Christianity. However, the growth of these new religions had to await the firm establishment of colonial rule and the growth of commerce in peanuts before gaining dominance over the traditional religion. On the south shore the vast majority of the population resisted the advance of Islam and Christianity until after World War II. While Christianity has made substantial inroads since that time, Diola religion remains dominant. This may partly result from the south's escape from the devastation of the Mandinka invasions and its slower integration into the colonial economy. A major factor, however, was the ability of south shore religion to adapt to rapidly changing conditions in the nineteenth and twentieth centuries. Innovations in ritual structures, the creation of new cults, and the emergence of Diola prophets have all contributed to the vitality of Diola traditional religion. This study will focus on south shore Diola religion.

Adherents of Diola religion believe in a creator god and in a number of lesser spirits whose powers originate with the supreme being but who are more accessible to the religious community. A study of Diola ritual might suggest that the supreme being, variously known as Ata-Emit or Emitai, was a remote high god whose name was rarely invoked in prayer, who had no shrines, and who was not a moral force in community life. The lesser spirits, variously known as *ukine* or *sinaati*, dominate ritual life. By examining the history of various cults and other religious beliefs, it becomes clear that Emitai is an active force in Diola life as a provider of life itself, as a source of spiritual aid in a time of crisis, and as the creator of the various cults. His name is derived from *emit*, meaning both "sky" and "year," thus indicating a strong relationship with the heavens and the order of an agricultural year. Furthermore, *Emitai ehlahl*, which means "it is raining," indicates Emitai's crucial role in the disbursement of that life-giving resource.

Emitai is seen as the creator of the world and all its inhabitants and as the source of human knowledge of farming, ironworking, and healing. He established a set of duties and interdictions to which he holds people accountable. At the time of death, Emitai decides whether a person has lived morally enough to become an ancestor or whether, if the individual concerned disregarded Emitai's interdictions, he will become a phantom wanderer or, ambivalently, a village dweller in a land to the south. All fates are temporary; the dead are eventually reincarnated.

Emitai communicates with people through dreams and visions and endows some of them with powers to communicate with him and with lesser spirits. While lesser spirits receive the bulk of ritual attention, prayers are ultimately received by Emitai. In times of crisis or when people feel they have exhausted other means, Emitai is prayed to directly. This is especially true during droughts when a ritual known as Nyakul Emit is performed. Rituals are conducted at all the village shrines, and prayers are offered directly to the supreme being: "Ata-Emit, is it true that this year's rice is destined to wither in the rice paddies? . . . The misfortune will be so large that we will not have the strength to speak. Give us water, give us life."

In Diola religion, the lesser spirits provide specific ways for individuals, families, and communities to resolve recurrent problems and to sustain a religious community. Thus there are shrines associated with rain, women's fertility, farming, hunting, fishing, war, ironworking, healing, family welfare, and village councils. These cults were introduced in a variety of ways. Some are said to have existed since the time of the first ancestors, that is, beyond the memory of Diola historians. Others were borrowed from the Bainounk, a people who were conquered by the Diola but who still retain a spiritual authority as the first inhabitants of the region. Still others were introduced by people who had spiritual powers, who were said to be able to travel up to Emitai or make contact with spirits through dreams or visions. Others were learned about from neighboring Diola or from other neighboring peoples. Such shrines were installed by elders from the outside community who also initiated a local group of shrine elders. The large number of shrines helps to ensure that one path can resolve any particular problem, and it allows a broad access to religious authority. Most people eventually become shrine elders. The shrines themselves contain ritual objects associated with spirits but not the spirits themselves. These objects help to summon the spirits and focus the attention of the worshipers.

While the preceding description represents broad continuities in Diola religion since 1700, environmental disruption, political and economic changes, and prophetic leaders have all influenced Diola religion. Droughts and epidemics have created spiritual challenges that have led to the formation of new cults and changes in ritual structure. Diola participation in the slave trade generated new sources of community vulnerability as well as new sources of social stratification, each of which had religious consequences. Men who gained wealth from the ransom or sale of captives often invested their wealth in the acquisition of priestly offices, thereby changing the role of priests and the ability of the less fortunate to gain religious authority. A new series of cults stressing lavish sacrifices to gain ritual authority became increasingly important to the Diola in the eighteenth century.

During World War II a Diola woman named Alinesitoué had a series of visions of Emitai. It was a time of severe drought and increasing French military conscription and confiscation of rice and cattle. Alinesitoué revealed that Emitai had given her a series of shrines that would help procure rain but whose ritual offices would be open to all, regardless of wealth, age, or sex. She advocated a renewed commitment to community, a stripping away of social and religious hierarchies, and a reaffirmation of many customs that had fallen into disuse. She taught that Emitai was deeply involved in the lives of the Diola and that they could expect his assistance if they followed his ways. Alinesitoué's teachings enabled the Diola to meet the crisis generated by the French occupation and a renewed Christian mission challenge. They allowed the Diola to adapt to their increasing integration into the rapidly changing order of a colonial and independent Senegal with the support of a vital Diola religion.

### BIBLIOGRAPHY

The major ethnographic study of the Diola, with extensive discussion of religious issues, is Louis-Vincent Thomas's *Les Diola*, 2 vols. (Dakar, 1958). Thomas has also written a vast number of articles on Diola ritual, concepts of death, initiation, and so on. J. David Sapir has written a number of articles on Diola symbolic thought, of which "Kujamama: Symbolic Separation among the Diola-Fogny," *American Anthropologist* 72 (December 1970): 1330–1348, is the most important. On the relationship between religious beliefs and legal and economic change, see Francis G. Snyder's *Capitalism and Legal Change: An African Transformation* (New York, 1981). Historical approaches to Diola religion include Jean Girard's *Genèse du pouvoir charismatique en Basse Casamance (Sénégal)* (Dakar, 1969) and my "Belief and Value Change among the Diola-Esulalu in Eighteenth and Nineteenth Century Senegambia" (Ph.D. diss., Yale University, 1986). There are also two important studies of the influence of Islam among the Diola: Frances Anne Leary's "Islam, Politics and Colonialism: A Political History of Islam in the Casamance Region of Senegal, 1850–1914" (Ph.D. diss., Northwestern University, 1970) and Peter Allen Mark's "Economic and Religious Change among the Diola of Boulouf (Casamance), 1890–1940" (Ph.D. diss., Yale University, 1976).

ROBERT M. BAUM (1987)

## DIONYSIUS THE AREOPAGITE (c. 500 CE),

Christian mystical theologian, also known as Pseudo-Dionysius. In the early sixth century, a set of treatises and letters appeared under the name of Dionysius the Areopagite, whom Paul had converted in Athens (*Acts* 17:34). At a synod in Constantinople in 533, the writings were used to support the monophysite position, but their authenticity was challenged. Nevertheless, the works soon came to be accepted as both apostolic and orthodox, and assumed nearly canonical status and authority in Eastern and Western Christendom.

Hilduin first translated the works into Latin (c. 832), and mistakenly identified Dionysius the Areopagite with Denis, the first bishop of Paris and patron saint of France. Though Abelard challenged this last identification, not until the Renaissance did Lorenzo Valla and Erasmus again question the authenticity of the writings' apostolic claims. These claims were decisively overturned in 1895, when two scholars, Joseph Stiglmayr and Hugo Koch, documented the dependence of the Dionysian corpus on Proclus, the fifth-century Neoplatonic philosopher. The works were thus composed in the late fifth or early sixth century. Despite many scholarly attempts to identify their author, he remains hidden behind his influential pseudonym. Dionysius's treatises are *Divine Names*, *Celestial Hierarchy*, *Ecclesiastical Hierarchy*, and *Mystical Theology*. The titles indicate Dionysius's principal concerns: religious language, hierarchy, and spirituality.

*Divine Names* poses the problems of religious knowledge and language by contrasting divine transcendence and theophany. In itself the divine nature is beyond being (*huperousios*), yet God becomes manifest in all being as its cause. God is both utterly transcendent and present in all things. This paradox underlies Dionysius's affirmative and negative theology. Affirmative theology focuses on divine causality and knows God through God's self-manifestations. It traces the causal procession from God's unity, through the divine ideas, or forms, to celestial hierarchy and thence to the sensible world; as it follows this descent, affirmative theology discovers an increasing variety of divine names, from "good" and "one" to "ancient of days," "sun," and "rock." Conversely, negative theology retraces the procession of beings in a return that moves from the sensible world, through the intelligences and forms, and to divine unity. Thus Dionysius emphasizes the dissimilarities in sensible symbols and the limits of all intelligible divine names. His work *Mystical Theology* negates all language about God because divinity cannot be known in its transcendence. For Dionysius, therefore, God is both nameless and praised in all names.

In *Celestial Hierarchy* Dionysius defines hierarchy as "a sacred order, activity and knowledge" that seeks "as far as possible [an] assimilation and union with God" (3.1–2). Its order is defined by each rank's capacity for assimilation to God, and its activity is purification, illumination, and perfection as it receives and communicates divine knowledge.

The celestial hierarchy consists of nine ranks of angelic intelligences, arranged in groups of three: (1) seraphim, cherubim, thrones; (2) dominations, virtues, powers; and (3) principalities, archangels, angels. The first triad is immediately united to God, whose light and knowledge it communicates to the lower ranks. In its turn the third triad presides over the human hierarchies. The ecclesiastical hierarchy stands between the celestial hierarchy and the hierarchy of the Mosaic law, which it supersedes (*Ecclesiastical Hierarchy* 5.2). Within the church there are six ranks in two triads: (1) bishops, priests, and ministers or deacons; and (2) monks, the "holy people of God," and those being purified (e.g., penitents and those awaiting baptism). Dionysius again stresses the activities of perfecting, illuminating, and purifying, but his focus here is symbolic and sacramental. Baptism is the sacrament of initiation and illumination, and the eucharistic liturgy exemplifies both the christological mystery and the perfecting "communion and union with the One" (*Ecclesiastical Hierarchy* 3.1). Contemplation (*theoria*) of the sacraments' hidden meanings purifies and illumines the understanding, and produces an intellectual insight akin to that of the celestial hierarchy.

The brief treatise *Mystical Theology* both completes and transcends the schemes of the divine names and of the hierarchies. It emphasizes the divine nature's radical transcendence, and it envisions mystical union in terms of unknowing (*agnōsia*). The concluding chapters present negative theology's ascending motion by stripping away the sensible and intelligible names of God. Dionysius then denies that God can be named adequately even in negative terms, because God is prior to all affirmation and negation. In itself the divine nature remains beyond all the contrasts that arise in its causal self-disclosure—and thus beyond all knowledge and speech. For Dionysius, mystical theology is an austere, intellectual ascent to union with God, and because divinity is essentially unknowable, this union occurs in the cloud and darkness of unknowing. This assimilation to God also completes the task of hierarchy. It is the perfection that the intellect seeks in symbols, sacraments, and intelligible divine names. Yet mystical theology accomplishes this ecstatically, by going out from intellect and hierarchy to their hidden source in the divine nature itself. In this way mystical theology completes the return to the God "beyond being."

The Dionysian writings are the product of a thoroughly hellenized Christian mind. Their reliance on Proclus and Damascius continues and even exaggerates the Greek patristic use of Platonic and Neoplatonic thought to interpret Christian faith. Dionysius was drawn into the mainstream of Byzantine theology by Maximos the Confessor, John of Scythopolis, and John of Damascus. Dionysius's major impact, however, came in the medieval West, where he was an immensely authoritative but alien figure. As the only Greek father to be fully and widely welcomed in the West, Dionysius influenced the whole range of Latin theology and spirituality. His account of the angelic hierarchy became standard, and his treatment of liturgy and the sacraments enriched the symbolic thinking of the Middle Ages. The Dionysian corpus became a major source for speculative thinkers, including John Scottus Eriugena, Albertus Magnus, Thomas Aquinas, and Nicholas of Cusa. Perhaps most important was the influence of Dionysius on mystical theology, evident in the Victorines, the Rhineland and English mystics, and in John of the Cross. Even while these Western thinkers were transforming his doctrine in their schools and monasteries, they consistently revered him as the "divine Dionysius." Although Dionysius's influence waned with the increasing suspicion concerning his identity, he still speaks powerfully on the issues of religious knowledge, language, and symbolism and their inherent limits.

## BIBLIOGRAPHY

The standard edition of the extant works of Dionysius remains that of Balthasar Cordier (Antwerp, 1634), published in volume 3 of J.-P. Migne's *Patrologia Graeca* (1857; reprint, Turnhout, 1977). Gunther Heil has prepared a new edition of *La hiérarchie céleste* with a French translation by Maurice de Gandillac and an introduction by René Roques (Paris, 1970). The Dionysian corpus is available in English translations: John D. Jones's *Pseudo-Dionysius Areopagite: The Divine Names and Mystical Theology* (Milwaukee, 1980); *Mystical Theology and the Celestial Hierarchies*, 2d ed. (Fintry, U.K., 1965); Thomas L. Campbell's *The Ecclesiastical Hierarchy* (Lanham, Md., 1981; from a Ph.D. diss., 1955); and Ronald F. Hathaway's translation of Dionysius's letters in his study *Hierarchy and Order in the Letters of Pseudo-Dionysius* (The Hague, 1969). An excellent survey of Dionysius and his influence is the series of articles by René Roques and others under "Denys l'Aréopagite," in the *Dictionnaire de spiritualité*, vol. 3 (Paris, 1957), edited by Charles Baumgartner. Other studies include Denys Rutledge's *Cosmic Theology: The Ecclesiastical Hierarchy of Pseudo-Denys* (Staten Island, N.Y., 1965); Bernhard Brons's *Gott und die Seienden* (Göttingen, 1976); and Jan Vanneste's "Is the Mysticism of Pseudo-Dionysius Genuine?," *International Philosophical Quarterly* 3 (1963): 286–306.

DONALD F. DUCLOW (1987)

**DIONYSOS** is included in the pantheons of the majority of Greek cities and is present at such very early festivals as the Apaturia, the festival of the phratries, and the Anthesteria, that of new wine and the assembly of the dead. The youngest of the Olympian gods, he is somewhat insecure about his divine identity because he was conceived in the womb of a mortal woman, Semele. His semidivine status may account for his consistent interest in mortals and wine drinkers. As the god of masks, Dionysos appears in many forms, but he most loves to disguise himself as a god of the city, posing as a political deity and expressing absolute power. He appears in this form at Teos, where the city and the territory are consecrated to him and where he has a magnificent temple. In the town of Heraia in Arcadia, one of the two Dionysian temples is reserved for Dionysos the Citizen (Dionysos Polites). In Patras, where he is promoted to the rank of tyrant and given the title of Aisymnetes, he is the magistrate in charge of giving every person his rightful share. His political career begins in the seventh century on the island of Lesbos. Here he appears alongside Zeus and Hera in the common sanctuary as the god who is an "eater of raw flesh" (Alcaeus, *Fragment* 129). Thus the keystone of this political and religious edifice is Dionysos's subversive character, expressed in his rejection of the sacrificial system of eating food that is cooked according to the proper order (roasted then boiled) in favor of *omophagia*, the desire to eat raw flesh. The most extreme form of *omophagia* is *allelophagia*, in which men devour one another, becoming like wild beasts and ferocious animals. Such behavior allows them to escape from the human condition: it is a way of getting outside oneself by imitating those animals least subject to domestication.

It is at Delphi, in the great pan-Hellenic sanctuary of the eighth century, that Dionysos presents the full extent of his influence. In partnership with Apollo, the most ambitious god in the pantheon, Semele's son dominates not only the assemblies of local gods but also the whole course of Greek religion. Although he is originally from Thebes, Dionysos can be found in two parts of Delphi: in the heights of Mount Parnassus, where the members of the Thyiads, "the agitated ones," gather every other year in the Corycian cavern to honor him in the secret liturgy of the *trietēris* ("triennial festival"); and in the sanctuary of the Pythia, in a tomb-cradle beside the golden statue of Apollo, where he waits in mortal slumber until his servants come to wake him and where the Pure Ones, the priests of Apollo, privately offer sacrifice to him. At Delphi, Dionysos holds himself aloof from the giving of oracles, whereas in other sanctuaries oracles are closely connected with him. But this is because at Delphi he forms, together with Apollo, one of a pair of forces who are alternative poles in a system open to all of the altars or sanctuaries they share. Apollo has his Dionysian side, just as Dionysos presents more than one Apollonian aspect. The close connection between them at Delphi is the culmination of all the alliances that link them together at other places and in other ways.

Dionysos and Apollo are particularly joined in Orphic thought and its theogonic discourse, which was wholly at variance with the official dogma of Hesiod's theology. The religious system of the city and of the world, Hesiod's theology categorically rejected the way of life advocated by followers of Orpheus, who renounced the world and sought to be saved by returning to the primordial unity that preceded diversity. In the succession of divine ages described in the Orphic theogony, Dionysos is at once the last ruler and the first. In the last age he appears in the guise of the child who is lured by the Titans with toys—a spinning top, a devilish rhombus, and a mirror—and then slaughtered and devoured after being first boiled and then roasted (in breach of the normal order of the sacrificial ceremony). In being torn apart, scattered abroad, and broken into seven pieces, Dionysos experiences for himself the effects of the utmost differentiation, in accord with the process that began after the first age under the aegis of Phanes-Metis, another name for Dionysos. The primordial god of the perfect Unity, Phanes-Metis comes back at the end in order to return things once again to the beginning. In this scenario Apollo, even at Delphi, plays a role in the odyssey of Dionysos. Apollo buries the remains of Dionysos's murdered body at the foot of Mount Parnassus; shares the sovereignty of the oracle with Night, the primordial power; and, finally, becomes the Sun, the greatest of the gods even to Orpheus himself, rising to the summit of Mount Pangaeus in Dionysos's Thracian kingdom.

The success of Dionysos in Orphic theology reveals more than his ability to appear as the youngest of the Olympians and the oldest of the ancient gods. It demonstrates too his mystical calling, his natural tendency to rule over mysteries. In Ephesus, in the late sixth century, the philosopher Heraclitus denounced those who prowl in the night, in particular "magi, Bacchants, and mystics." It is sacrilegious, according to Heraclitus, for people to be initiated into what they dare to call mysteries. From the discoveries at Olbia on the shores of the Black Sea, we now believe that Dionysos first appears as the initiator in the sixth century, long before a Scythian king had enrolled in the band of Bacchus (Gr., Bakchos) in this same city, where he was fond of going for the aesthetic pleasure of living *à la grecque*—even to the extent of becoming a follower of Dionysos. This initiation was already known to King Scylas (Herodotos, 4.79), who had already begun preparations for it when a prodigy occurred: his palace of white marble, struck by lightning, was reduced to ashes. Nonetheless Scylas went ahead with the initiation ceremony, during which he publicly played the Bacchant, staggering through the town with a band of revelers.

What Herodotos implies in his account of Scylas going through with the initiation (*teletē*) is stated clearly in Euripides' *The Bacchae* in the voice of Dionysos. To Pentheus, who has failed to recognize his divinity and who will remain firmly entrenched in a ridiculous error, Dionysos, appearing as a stranger, recounts how the god introduced him to his rites, during which Dionysos watched him while he himself looked upon the god. In this mirror image, the initiation seems to denote an experience in which the Bacchant comes face to face with his god: he becomes as much a Bacchus as is Dionysos. The lord of the Bacchanalia refuses to reveal this experience to Pentheus; these are unspeakable things (*arrēta*) that non-Bacchants may not know (1.472). At Cumae, in the fifth century, a similar formula prohibited entry to a Greek cemetery "save to those who have been initiated to Dionysos."

At Olbia and at Cumae, Dionysos obviously does not receive the official, public worship that so many cities practice during the winter months, when solemn processions are attended by the entire population. Sacred laws from Asia Minor clearly distinguish between regular sacrifices, in which a goat or even a large ox is offered to Dionysos in full view of the city, and more private ceremonies in which the priestess of Dionysos celebrates an initiation into the cult of the god who drives people mad, inciting men and women to raving lunacy. There is a difference between *thuein* and *telein.* The same holy law of the Miletians, in 276 BCE, specifies that the rites of consecration (*telestēria*) should be invested in the priestess, who can initiate people into Dionysos Bakcheios "in the city, in the country, or in the islands." These are the so-called trieteric mysteries, which take place every two years. At Miletus they were celebrated at the same time as the Feast of the Return, when the god, escorted by the priests and priestesses, came back and entered the town.

In more than 150 cities of Asia Minor and the islands, Dionysos appears in the guise of Bakcheios, the god of the bacchanals—those who, like him, have become *bakchoi.* "Many are those who carry thyrsi; few are the Bacchants," according to a saying of the initiation masters quoted by Plato in his *Phaedo* (69c). To the initiate is reserved the experience of frenzy and possession, seeing the god face-to-face and sharing his madness and delirium. In the last golden tablet, a book of the dead unearthed at Vibo Valentia in Calabria in 1974, the titles *mystic* and *bacchant* are given to the chosen ones who go to the right, under the sign of memory, and take the sacred path that leads to the gods. Dionysos follows the same direction, from the sixth century on, to enter, via Iacchos, into the system of Eleusinian gods—the mysteries founded by Demeter on the fringes of Athens.

In connection with Dionysos the Initiate—who, under the name of Mustes, has a temple between Tegea and Argos (Pausanias, 8.54.5)—we find esoteric practices and rules of secrecy. Near Mantinea, in a great ancient chamber known as the *megaron*, the honey companions (*meliastai*) worship Dionysos, a neighbor of Black Aphrodite (Pausanias, 8.6.4). At Brysai, on the slopes of Mount Taigetos in Laconia, only women are permitted to view the statue of Dionysos, ensconced in an open-air sanctuary, and the sacrifices they perform are carried out in the greatest secrecy (Pausanias, 3.20.3). Males are also excluded on Lesbos, at Aigai, and on the island on the shores of the Atlantic described by Posidonius. The privilege of experiencing a private, face-to-face encounter with Dionysos or of being truly possessed by him is restricted to women, notwithstanding the violent objections of some modern-day feminists, who condemn the Dionysian interest in women as another way of oppressing them. The most unfortunate effect of this misinterpretation is to obscure the Dionysian union and its fundamental aspect: it is an individual allegiance that rejects kinship or feudal ties and, in the fluid form of the private *thiasos*, creates associations and communities independent of authority and outside the control of the state. If the mystical and mysterious side of Dionysos appears less clearly in the Athenian city-state—no doubt because the mystical pole there is called Eleusis—still it is a major component of Dionysianism in very many cities from the earliest times. Whether he resides in the center of town or camps on its outskirts, Dionysos is always the lord of dementia and of the ability to get outside oneself.

The popular tales of his coming and his manifestations describe, often in explicit terms, the favored *modus operandi* of Dionysos. It has to do with what the Greeks call the god's *epidēmia:* the tendency of a power to take up residence in one sanctuary and then switch to another temple and another country. Thus Apollo likes to spend the winter in the company of the Hyperboreans, making it possible for Dionysos to be "woken" by his priestesses, who proclaim his return. This is *epidēmia* in the sense of appearance or presence (*parousia*) and not in the sense of contagion, which would suggest that Dionysos moves from one place to another like a contagious disease whose infectious source is located on foreign soil (in the country of the Thracians) and is responsible for the violent fevers that invade the healthy, vigorous body of the Hellenic nation. One need only peel the outer shell of legend from this picture, only recently revealed with the aid of a number of myths concerning Dionysian Thrace and the god's enemies, to uncover the reality of a very faithful history. The Dionysian *parousia*, as originally intended, presents two interlocking aspects. The god who comes is a foreigner and remains so, carrying within him the most unwavering strangeness.

Yet the opposite side of Dionysos, and his appearance vis-à-vis the other gods, is that he affirms through his disavowal that he is a god too strange, and too much a stranger, to be believable. In Greece, the stranger, as opposed to the "barbarian," belongs to the society of those who share the same blood, the same language, and the same gods, according to Herodotos's definition. Dionysos, indeed, is no barbarian god, even when his outrages smack of barbarism. Born in Thebes, in the town of Kadmos, he is a great god, the equal of Apollo, the oracular power known as Ismenios. Dionysos presents himself in his status as a foreigner in more than one of his Joyous Entrances. For example, at Patrae in Achaia (Pausanias, 7.19.7–9), Dionysos enters as an idol in a sealed chest, like a demon god classed as a foreigner, and is conveyed by an equally strange king, a prince stricken with madness for having looked at the face, the mask, of Dionysos. This strange team puts an end to an equally outlandish sacrifice in which the human blood of both sexes had to be shed, bringing forth a sickness (*nosos*) in the land; the earth is diseased with punishment imposed by a cruel Artemis.

But the stranger who comes with Dionysos, instead of making himself a host and returning the gracious generosity seen in a feast like the Xenia, appears ungrateful to those who find him. The strangeness of Dionysos seems to imply that he cannot be recognized as a god at first sight. Thus he is obliged to offer a public demonstation of his divine power so that all people can see what a great god they have failed to acknowledge.

The appearance of Dionysos requires the revelation of Otherness through its exacting violence. There are those who do not know him and still slight him, doubters and those who neglect, scorn, or refuse to believe in or accept him. And there are those who are called on to persecute him, whom he has chosen to be his tormenters and thus the most striking witnesses to his *parousia*, once they have become his rightful victims. In Boeotia, in the city of Orchomenus, the daughters of King Minyas, absorbed in household tasks, pay no heed to Dionysos. But then the god, in the guise of a young girl, carefully encourages them to join in his mysteries. Suddenly, all three are entranced by Dionysos's metamorphoses—the girl disappears, and the god is a bull, a lion, a leopard. They watch in fascination as milk and nectar flow along the weaver's loom. Already they are caught in the web; wishing to honor the unknown god by offering sacrifice, they draw lots to see who will have the privilege of providing the chosen victim. The tragically elected Leucippe falls upon her own son and, with the help of her sisters, tears him to pieces in front of Dionysos (Antoninus Liberalis, *Metamorphoses* 10).

In Thrace, where Dionysos is also treated as a stranger, Lykurgos embodies the irreconcilable foe whose blindness compels the god, despite himself, to unleash the cruelest of deeds. Like a madman, Lykurgos brandishes his double ax, the *pelekus*, to kill Dionysos, not knowing that in Thessaly, at Pagasai, Dionysos is called the god of the ax, Pelekus. Lykurgos, hallucinating in his *mania*, turns the weapon back upon his own flesh and blood: he strikes down his children, whose living limbs, arms, and lopped-off legs appear to him as so many branches on a vine. This happens before the Edonians, incited by Dionysos, attempt to put an end to the fatal barrenness of their land by handing over their king to wild horses. The king is to be torn apart on Mount Pangaeus, where the oracle of Dionysos, like that at Delphi, will be erected. On its peak, Orpheus, the worshiper of the greatest of the gods, whom he names Apollo, is torn to pieces by Thracian women with a violence borrowed from Dionysos.

The stranger-god finds the full measure of his *parousia* in murderous frenzy, in the *mania* that leads to killing and to the spilled blood of a son torn apart by his mother, to children who are cut down alive by their father, and to father and daughter, such as Icarus and Erigone, losing their lives for lack of pure wine. Dionysos is truly himself only in *unyielding* madness, when the *mania* creates, through murder, a taint, a *miasma*, a sickness or pestilence. One must be cleansed of this stain; it is urgent to escape the plague, for in it appears the contagious power of those who fall into madness, which affects an entire town or even a whole country. In the *mania* of Dionysos is a taint that the god himself experiences in the course of his life (Apollodorus, *Library* 3.5.1). When he discovers the vine, Hera, his stepmother, breathes madness into Dionysos, dooming him to the wanderings of all madmen. Dionysos goes to Proteus, then to Cybele in Phrygia; at last he finds Rhea, who eases and puts an end to his nomadic delirium. Dionysos is purified, delivered from the taint of his madness. While with Rhea he learns the rites of his cult, and he receives from her his raiment, his Bacchus outfit, which he gives to Pentheus in *The Bacchae*.

The tales of his epiphany thus show how the worship of Dionysos, with its formalized mythology, establishes itself within the sphere of the purification called for by the insanity that the stranger carries. Dionysos the Purificator (Lysios) is the opposite side of the Bacchanal, the god who leads men and women astray in his frenzy. That he is a dual god is shown by his pairs of neighboring temples, at Thebes, at Corinth, and at Sicyon. The unclean madness that forms the basis of his cult is always part of him, however disciplined and civilized Dionysos may seem in the pantheons of cities unmindful of his fundamental wildness.

## DIOSCURI SEE TWINS

**DISCIPLESHIP.** Scholars of the world's religions have contributed much to the study of discipleship in the settings of specific religious communities. But there remains much to be done in framing a general estimate of the social meaning and historical impact of discipleship as a communal pattern in the history of religions. The present entry, therefore, offers a model of discipleship that might be helpful in organizing comparative studies of this important type of religious society.

Religious discipleship, in the sense defined below, seems to be specifically rooted in the great civilizational religious and philosophical systems that arose in the Mediterranean world, Mesopotamia, South Asia, and East Asia from the middle of the first millennium BCE through the middle of the first millennium CE. Buddhism, Christianity, Confucianism, Greco-Roman philosophical tradition, Islam, Hinduism, Judaism, Daoism, and Zoroastrianism are the most influential traditions to have emerged or reached classical expression during this period. At the conceptual center of each stands a moral seriousness that challenges adherents to transform themselves in light of a comprehensive vision of the place of human life in the cosmic order. At the social center of these traditions stand strikingly similar types of authoritative figures—literate intellectuals (priests, scribes, teachers, or prophets) who claim, on the basis of learning in ancient tradition or personal insight, to mediate wisdom about the essential purposes of life. Communities established for the perpetuation and transmission of such wisdom were probably the earliest settings for the practice of religious discipleship.

**A WORKING MODEL OF DISCIPLESHIP.** Discipleship can be defined most generally as a particularly intense mentoring relationship in which a body of knowledge deemed essential to the wise conduct of life is transmitted from the mentor (or master) to the protégé (or disciple). This wisdom, about how to properly live, necessarily combines practical matters of daily life with more esoteric bodies of theory or doctrine. In the practice of discipleship, moreover, such wisdom is believed to be available only within the mentoring relationship. The disciple's belief that the master is uniquely capable of communicating wisdom is crucial to the master's continuing authority in the relationship. It is also crucial to the disciple's ongoing willingness to emulate those elements of the master's way of living that are taken to embody the latter's own possession of wisdom.

Indeed, emulation of the master is the essence of the master–disciple relationship. It is both a primary strategy in the disciple's quest for wisdom and proof that this knowledge has been properly mastered. So, for example, the disciples of Stoic philosophers in the Hellenistic world would seek to embody the attitude of *apatheia* (indifference to pleasure or pain) modeled in the lives of such masters as Epictetus (50–130 CE). Similarly, initiates into Islamic Ṣūfī circles would be expected to emulate the specific discipline or path (*ṭarīqah*) modeled by the guide (*shaykh*). Another common aspect of emulation involves, as in early rabbinic Judaism (from about the third century CE) and Tibetan Buddhist monastic settings even in contemporary times, memorizing the master's formal teaching in oral or written texts, and interpreting their meaning in oral instructional settings.

In many cases, orally recited stories that first circulated among disciples about the deeds of a master were written down to provide hagiographic material for circulation both within and beyond the immediate circle of disciples. The diverse oral collections of Jesus' sayings and deeds that underlie the canonical and extra-canonical Gospels may well have been collected by Jesus' disciples prior to the point at which they were combined into a broader evangelical literature. Later, more formal examples of hagiography in the Christian tradition include the *Life of Anthony* and the *Life of Pachomius*, both of which were fundamental to the development of fourth-century asceticism as a pattern of Christian discipleship. Comparable writings are transmitted in Sufism (e.g., *The Way of Aḥmad ibn ʿAlī ar-Rifāʿī* of the twelfth century), Jewish contemplative circles (*The Life of the Holy Lion Rabbi Isaac Luria* of the early seventeenth century), and Daoism (*Collected Accounts of the Perfected* of the tenth century), among many others.

Emulation of the master necessarily involves disciples in intense psychological identification with, and dependence upon, their mentors. Thus the virtue of humility or self-effacement before the master is a prized trait of the disciple. Symbolic postures of subordination can be as simple as carefully observed protocols governing, for example, which rabbinic disciples walked to the left or the right of the sage, and which the sage actually chose to lean upon when walking. In this context, it is not unusual for disciples to expect and receive corporal punishment as a form of discipline, as specified, for example, in the *Rule* of the Christian monastic order of Saint Benedict. In other systems of discipleship, as in some Tantric traditions of India or in ancient Greek philosophical discipleship, identification with or subordination to the master can also be expressed via sexual intimacy.

**DISCIPLESHIP AND SOCIAL HIERARCHY.** The basic social protocol of discipleship involves practices for ordering human relationships in view of hierarchy of power and authority. The fundamental purpose of that relationship is to authorize the transmission of knowledge and wisdom from the superior (the master) to the subordinate (the disciple). The nature of this knowledge will be discussed below. For now, it is important to focus upon the nesting of the discipleship relationship within a web of other types of hierarchical institutions in which the transmission of knowledge is also an essential goal.

Most historical examples of religious discipleship involve not simply a teacher and a student, but a group. This group is the discipleship community. Such communities, in many respects, are analogous in intention and structure to such common social institutions as kinship systems and schools. The social hierarchy created within the discipleship community is different from that of family and school, but dependent upon both. In discipleship, the community is a kind of school that recapitulates at a more refined level the cultural task of the family. Here the disciple returns to the psychological situation of childhood to be fundamentally reformed as a human being. Now the task of emulation involves absorbing the teaching of a master in such a way as to embody the master's own achievement.

What is that achievement? It is at this point that the question of special knowledge and wisdom arises. The master's achievement is greater than that of the biological parent or other elder, who has merely become a participant in the received cultural or religious tradition. The master, by contrast, has reached that form of human perfection held out by tradition as the highest attainable. The master, then, is a parent, but more so. Often called "Father" or "Mother," the master can displace the biological parents in the disciple's scale of loyalties and affections. Certain Greco-Roman philosophical paths, echoed by some rabbinic teachers of the early common era, as well as medieval Ṣūfī masters, held, for example, that a disciple owes more respect to a master than to a biological parent. The reason should not be hard to predict: parents only bring their child into physical life, whereas the master, by contrast, brings the disciple into eternal, life-transforming knowledge.

The master is also more than a teacher, for a system of discipleship is more than a school. Schools transmit the knowledge expected of functional participants in the religious tradition or culture. Whether at a relatively fundamental or at a more sophisticated level, they transmit "formative" knowledge, knowledge that shapes the cultural and autobiographical identity of the knower and enables one to both share in and contribute to creativity in the culture. In the setting of discipleship, however, students are trained to reconceive their own human perfection in emulation of the model presented by their master. In this sense, the knowledge offered in the discipleship relationship is not formative but "transformative." It holds out to the disciple the promise of becoming in some fundamental sense a new being. In possessing the master's transformative knowledge and embodying it, one passes from a state of ignorance to one of wisdom, illumination, or grace, depending upon the symbolic vocabulary native to the traditions that nourish specific discipleship communities.

**CHARACTERISTICS OF TRANSFORMATIVE KNOWLEDGE.** As mentioned above, transformative knowledge can be known only through a direct relationship of discipleship with the master. Familiarity with a master's teaching alone, either as oral tradition or written text, does not constitute a transformative appropriation of the master's knowledge. Rather, it is necessary to hear the master's own teaching accompanied by the master's explanation; it is necessary to observe the master's behavior in various settings, in order to emulate the ways in which the master's teachings are embodied in concrete models of execution.

The master, from this perspective, is a living medium through which a truth, otherwise hidden from natural sight, is disclosed and made tangible. The master is a disclosure of truth, and this disclosure is only in part mediated through specific verbal teachings. Its fullness must be found in the actual existence of the master. Thus the disciple commonly views the master as a kind of text to be decoded and interpreted. The full, transformative knowledge imparted by the master is available only to the disciple who knows how to read the master's text—and this text includes more than the master's verbal utterances. It includes the entire being of the master as it is disclosed to the disciple in the personal encounter.

In the history of religions, the nature and significance of the transformative knowledge made available to disciples by masters is always linked to broader cultural and religious traditions within which the discipleship communities themselves have emerged. In other words, masters control, focus, and refine symbol systems that penetrate widely throughout a given culture. They transform "culture" into a disciplinary path that creates a "subculture," a community living out the larger values of a cultural tradition in particularly intense and concentrated form. Monasticism in the diverse Christian and Buddhist traditions are examples of discipleship communities that are perceived, by both insiders and their lay or royal patrons, to represent the purest representation of the path of life defined by Christ or the Buddha. Depending upon circumstances, however, discipleship communities can define themselves, under a master's guidance, in an adversarial relationship to the larger cultural and religious tradition. A "subculture" of discipleship, in other words, can become a "counterculture."

Thus the so-called Dead Sea sect of second-century BCE Jewish Palestine, founded by a priest known as the Righteous Teacher (*moreh tzedek*), was certainly a discipleship community that framed itself in opposition to the existing culture of the Jerusalem Temple priesthood. It is highly probable as well that the original discipleship communities surrounding Siddhārtha Gautama, the founder of Buddhism, were defined in some sort of adversarial relationship to socially dominant forms of Hindu asceticism and Brahmanic traditionalism. Buddhism and Christianity, from this perspective, are examples of countercultural discipleship communities that ultimately became comprehensive religious civilizations in their own right, and that lived to spawn further subcultures of discipleship.

The precise social agendas of discipleship communities are distinct, at least theoretically, from the specific sorts of transformative knowledge that they offer to their members as the pinnacle of and reward for a life of self-discipline. For the present introductory purpose, it will be helpful to organize the patterns of transformative knowledge transmitted within discipleship communities into the following clusters: (1) knowledge concerning the cultivation and interpretation of visions; (2) knowledge concerning the cultivation of conditions of ego-lessness and loss of self-consciousness; and (3) knowledge concerning self-mastery in view of ultimately authoritative laws or norms. It is important to remember that, like all typological exercises in the history of religions, these types rarely appear in "pure" form. Rather, students should be prepared to find various degrees of admixture of one or more of these patterns in any given discipleship community.

The cultivation of visionary experience, especially associated with healing, is, according to some historians of religion, among the oldest forms of religious activity. Often referred to under the general rubric of shamanism, its roots lie in the preagricultural societies of hunters and gatherers, and it continues in a variety of forms into contemporary times. It is impossible to know how prehistoric shamanic experiences were transmitted or whether training in the cultivation of such experiences took the form of discipleship communities as defined here. It is clear, however, that guidance in the shamanic arts among contemporary practitioners often takes forms quite similar to discipleship, although the life-defining vision that inaugurates the life of the shamanic healer is commonly sought in isolation.

The point is that the formation of discipleship communities for the cultivation of extraordinary visions is not limited to classical shamanic rites of healing. The prophetic guilds of ancient Israel and other Mediterranean and Mesopotamian cultures also cultivated visionary experiences. Here, however, the healing of individuals was not a primary concern, but rather the disclosure of divine purposes in relation to communities or to society as a whole. Many scholars have suggested, moreover, that the tradition of pseudepigraphic apocalyptic literary prophecies of Second Temple period Judaism (c. 520 BCE–70 CE) and early Christianity (c. 30 CE–120 CE) had its roots in visionary discipleship communities formed among scribes in particular. The ability to receive visions of a heavenly world, to interpret their meaning for others, and to cultivate new visions, was read as a sign of the visionary's transformation into a new being, no longer entirely earthbound, but capable of tasting in this life the immortality of the divine world. This form of visionary pursuit proved to be of particular salience among the various Christian communities of Late Antiquity labeled by their Orthodox Christian theological opponents as Gnostics. It was richly apparent as well among neighboring Jewish communities associated with heavenly ascent to the *merkavah*, or divine Throne, who witnessed angels bathed in divine light and surrounded by rivers of fire singing hymns to the hidden God of Israel.

The cultivation of experiences of ego-lessness and loss of self-consciousness is commonly found among contemplative traditions frequently defined as mysticism. It is entirely fair to assert that mysticism is among the most frequent settings for the flourishing of discipleship communities. Contemplative exercises associated with yogic disciplines for focusing awareness beyond the self, necessarily mediated by a guide or *gurū*, have very ancient roots in the Indian subcontinent and continue to be widely practiced in traditional and westernized forms. Equally well known are the contemplative traditions of Japanese Zen Buddhism, Tibetan Buddhism, Islamic Sufism, some forms of Jewish Qabbalah, and a host of Christian meditative practices cultivated primarily in monastic settings. All of these require protracted periods of discipleship to a master in order to achieve and control the interpretation of various states of loss of self.

In one sense, the search for self-mastery in view of ultimately authoritative norms or laws is common to any form of discipleship, for the essence of discipleship is the incorporation of a discipline framed by rules. In certain types of discipleship circles, however, self-mastery is viewed not merely as a means toward the acquisition of transformative knowledge, but as the essence of wisdom itself. This is particularly so when heroic cultivation of memory is regarded as part of the discipline of self-transformation. Scrupulous Brahmanic performance of ancient Vedic rituals, associated with the memorization of vast corpora of orally transmitted Sanskrit texts, is one of the oldest continuous traditions of this sort of discipleship community. In Judaism, this type of discipleship became prominent in the rabbinic communities of late antiquity (c. 200 CE–700 CE). Disciples in this tradition studied under masters who had memorized the traditions of Oral and Written Torah that had been revealed on Sinai to Moses and incorporated them into their very being. Like their masters, disciples sought to be transformed into "living books" from which the revelation of God could be read.

**SOME QUESTIONS FOR FURTHER STUDY.** As stated above, the comparative study of discipleship as a pattern of religion remains relatively undeveloped, especially in light of the massive documentation of discipleship communities in specific religious traditions. It is useful, therefore, to pose some pointed questions for further research on the nature of discipleship and the relationship of discipleship communities to the larger patterns of the religious cultures in which they emerge.

The first is as follows: What structural and historical roles have discipleship communities played in forming and transmitting traditions central to religious traditions as a whole? To what degree, in other words, does the discipleship community constitute a formative, culturally influential context for the production and transmission of aesthetic, ideological, ritual, or other traditions? Are there religious civilizations that appear to have been largely generated by discipleship communities; are there others in which discipleship communities appear relatively late in the articulation of the tradition? What historical or ideological factors might explain such differences?

The second question concerns the wisdom cultivated within discipleship communities. How is transformative knowledge constructed in relationship to the sorts of ritual or theological knowledge mediated beyond the discipleship community? That is, in what settings do discipleship communities represent themselves as self-selecting elites who must protect their special knowledge from outsiders? What conditions account for moments in which discipleship communities seek to expand the circle to include and transform those originally outside the circle? How have discipleship communities been involved in the politics of knowledge within their several host cultures?

A third question focuses upon the media in which transformative knowledge is communicated in the situation of disciple mentoring. Discipleship as such seems to be largely associated with religions in which literacy and the interpretation of writings play important roles. Yet the importance of the mentoring relationship commonly places a premium on orally transmitted knowledge. Can the study of discipleship communities shed light on the relative importance of written and oral forms of communication within the broader religious traditions in which they participate? Many discipleship communities are profoundly hostile to, or at least ambivalent about, the use of written sources in the teaching of disciples. These include the following: Brahmanic priests, rabbinic sages, Hindu *sants*, Greco-Roman philosophers, and Christian monastic ascetics, among others. How do such attitudes mirror broader cultural attitudes regarding the authority of books and teachers as repositories of knowledge?

Finally, a fourth question: To the degree that the discipleship community is constructed hierarchically, how does its hierarchy replicate or undermine other social hierarchies beyond the community? At times, for example, initiation into discipleship communities offers relief from confining gender roles (as in female monasticism in Buddhism and Christianity). What principles explain this creation of a space in which normal gender practices are suspended? Why are such principles absent in other discipleship traditions, such as those created in Judaism, where—with the possible exception of the first-century Therapeutrides of Alexandria—female discipleship is largely unknown?

MARTIN S. JAFFEE (2005)

**DISCIPLES OF CHRIST.** The Disciples of Christ is an American-born religious group formed in 1832 by the merger of the Christian movement led by Barton Stone with the "Reforming Baptists," headed by Thomas and Alexander Campbell. Most of the early leaders of the movement, including Stone and the Campbells, had been Presbyterians, but they imbibed deeply of the spirit of religious freedom in the wake of the American Revolution. Stone was one of the leaders of the Kentucky revival at the turn of the nineteenth century. Distressed by Presbyterian opposition to the revival, in 1804 he and five other ministers left the church, announcing their plan to be "Christians only" in "The Last Will and Testament of the Springfield Presbytery."

Thomas Campbell came to America in 1807, having been a Presbyterian minister in Northern Ireland. Disturbed by the sectarian spirit of the American church, Campbell clashed with the synod, and in 1809 he was suspended from the ministry. Campbell and a few of his supporters almost immediately formed the Christian Association of Washington (Pennsylvania), and Campbell wrote a fifty-six page explanation of his views, called the *Declaration and Address*. Thomas Campbell's son, Alexander, arrived in America shortly after the publication of the *Declaration and Address.* Twenty-one years old at the time, Alexander Campbell had been influenced by the reforming ideas of Scottish evangelist Robert Haldane while spending a year in Glasgow, and he immediately embraced his father's independent position. He quickly rose to the leadership of the movement. The Campbells joined with Baptist associations from 1815 until 1830 and were known by the name Reformers.

Preaching similar pleas for Christian union and in frequent contact with one another in Kentucky, the Stone and Campbell movements sealed a remarkably successful union in 1832. Alexander Campbell and his followers generally favored the name Disciples of Christ, while the Stone churches continued to use the name Christian Church. Many local congregations were called Churches of Christ. All three names have been used throughout the movement's history. The new church spread rapidly with the westward migration of population; at the time of the union in 1832 it was estimated to have 22,000 members, and by 1860 that figure had grown to nearly 200,000.

Two ideas undergird Disciples thought, both of them highly attractive amid the optimism on the American frontier in the 1830s. First was an emphasis on Christian union. Second was an appeal for the "restoration of the ancient order of things" as a means of attaining unity. The battle cry of the movement, stated in 1809 by Thomas Campbell, was "Where the Scriptures speak, we speak; and where the Scriptures are silent, we are silent."

The Disciples were Arminian, believing in freedom of the will, and they were revivalistic, although never given to extreme enthusiasm. They held traditional views on most questions and were most visibly set apart by their restorationist views on the local church. They organized autonomous congregations presided over by elders and deacons and emphasized weekly observance of the Lord's Supper. In the early years of the movement, Alexander Campbell was caustically anti-institutional, but by the 1840s antimission sentiment abated. Most early Disciples were also strong postmillennialists, believing that the second coming of Christ would be ushered in by the world reformation begun by Luther and capped by their own restoration movement.

In addition to the Campbells and Stone, the most prominent early leader of the Disciples was another Scottish Presbyterian minister, Walter Scott, who is credited with formulating the "five-finger" plan of salvation—faith, repentance, baptism, forgiveness of sins, and gift of the Holy Spirit—which was preached by a generation of pioneer Disciples evangelists. The Disciples were slow in developing denominational institutions; consequently, the most powerful leaders of the movement were editors of religious journals. Alexander Campbell edited the *Christian Baptist* from 1823 to 1830 and the *Millennial Harbinger* from 1830 until 1864, just two years before his death. Stone, Scott, and scores of other preachers also published papers that tied the loose-knit movement together.

While conceiving of themselves as a protest against sectarian division, the Disciples quickly became a part of the denominational competition in the American Midwest and South. Alexander Campbell's influence among the Baptists was particularly strong, and in some parts of the West, the Disciples devastated Baptist associations. The church spread rapidly westward from Ohio and Kentucky and as far south as Tennessee and Texas.

The years after the Civil War form a second era in Disciples history. By 1866, all of the first generation leaders of the church were dead, and dramatic shifts in power occurred within the church. The Disciples continued to grow rapidly; the religious census of 1906 listed around 1,150,000 members in the movement. But the census also revealed that a major schism had taken place within the church. Deep sectional and sociological tensions had begun to appear shortly after the Civil War.

In spite of the facts that the Disciples were strongest in the border areas and that most of the church's leaders had urged moderation during the slavery controversy, Disciples were seriously divided by the Civil War. In 1863, northern Disciples passed a resolution of loyalty to the Union at the meeting of the American Christian Missionary Society, which had been formed in 1849. Southern Disciples were deeply angered. Although most Disciples argued that the church could not divide because it had no denominational apparatus, in the years after the Civil War northern and southern newspapers and other institutions became increasingly antagonistic. In the census of 1906 the most conservative wing of the movement (which was almost entirely southern) was identified separately and designated the Churches of Christ.

Although the tensions of the nineteenth century had clear sectional and sociological underpinnings, the debate also had a doctrinal focus. As it became ever more apparent that the hoped-for millennium of peace and unity was not imminent, conservative Disciples lost interest in Christian union as a practical goal, and liberal Disciples increasingly discarded legalistic restorationism as a means of attaining union. The most visible issues that divided churches were support for the missionary society that had been founded in 1849 and the scripturality of the use of instrumental music in worship. The founding of the society (which had Alexander Campbell's tacit approval) seemed to some an abandonment of the anti-institutional principles of the early movement; the society further alienated many southerners because of the passage of political resolutions during the Civil War; finally, the organization was attacked as "unscriptural" by rigid restorationists. The introduction of organs into the churches also rankled conservatives, who considered them symbols of decadence and found no evidence of their presence in the New Testament churches. By 1900, hundreds of conservative local congregations had separated from the movement as independent Churches of Christ.

The most powerful Disciples journal during the late nineteenth century was the *Christian Standard*, published in Cincinnati, Ohio, by Isaac Errett until his death in 1888. The most influential journal among the conservatives of the South was the *Gospel Advocate*, edited for over half a century by David Lipscomb in Nashville, Tennessee. By the end of the century, however, leadership of the movement had drifted toward James H. Garrison, who in 1874 became editor of the Saint Louis-based *Christian-Evangelist*. Garrison was grounded in the nuances of Disciples theology, but he was irenic in spirit and encouraged a new generation of Disciples leaders to take the mainstream of the movement into the center of liberal American Protestantism.

In the early twentieth century the Disciples suffered a second major division and a slowing growth rate. As a new generation of Disciples liberals, particularly a group associated with the University of Chicago, pressed for a more ecumenical view of the Disciples mission and a more liberal understanding of the scriptures, conservative opposition solidified around the *Christian Standard*. Finally, in the 1920s, the conservatives began withdrawing their support from Disciples organizations and in 1927 established the rival North American Christian Convention. These dissentient conservative congregations remained loosely associated in the Undenominational Fellowship of Christian Churches and Churches of Christ. The more liberal wing of the movement adopted the name Christian Church (Disciples of Christ).

A full body of boards and commissions developed in the twentieth century, headquartered mostly in Indianapolis and Saint Louis. In 1968 the church restructured into a representative and more centrally controlled organization, losing perhaps one-third of its listed congregations in the move and completing the second schism, which had been in progress since the 1920s.

Disciples have been important leaders in modern ecumenical activities. The *Christian Century* began as a Disciples journal (founded as the *Christian Oracle* in 1884), and its editorial corps was long dominated by Disciples. The Disciples have also been prolific builders of universities and colleges, perhaps the most widely known being Texas Christian University, Butler University, Drake University, and Bethany College.

### Bibliography

The best general summary of Disciples history is William E. Tucker and Lester G. McAllister's *Journey in Faith* (Saint Louis, 1975). A sociological interpretation of Disciples history in the nineteenth century can be found in my books *Quest for a Christian America* (Nashville, 1966) and *The Social Source of Division in the Disciples of Christ* (Atlanta, 1973). A survey of the movement written by a leader of the conservative Christian churches is James D. Murch's *Christians Only* (Cincinnati, 1962). A Churches of Christ perspective can be found in Earl I. West's *The Search for the Ancient Order*, 2 vols. (Indianapolis, 1950). Three older works that remain significant are William T. Moore's *A Comprehensive History of the Disciples of Christ* (New York, 1909), and two books by Winfred E. Garrison, *Religion Follows the Frontier* (New York, 1931) and *An American Religious Movement* (Saint Louis, 1945).

David Edwin Harrell Jr. (1987)

## DISCIPLINE, SPIRITUAL See SPIRITUAL DISCIPLINE

## DISMEMBERMENT.

Among the many procedures that are carried out in sacrificial ritual, dismemberment and distribution of the victim's body figure prominently. Moreover, beyond its physical dimension, dismemberment also possesses complex and highly significant social, symbolic, and intellectual dimensions, as has been shown, for instance, in Jean-Pierre Vernant's analysis of the primordial sacrifice performed by Prometheus, according to Hesiod's *Theogony.* For, as Vernant has argued, the division of the victim's body in effect establishes the difference between gods, who are immortal and have no need of food (since they receive only the victim's bones and fat) and humans, who receive portions of bloody meat wrapped in an ox's stomach and whose lives are thus characterized by hunger, death, and ultimate bodily decay.

Whereas the Promethean model of sacrificial division (evident also in the sacrifices of the Greek city-states) served to discuss and establish the distinction between human and divine, other sacrificial patterns are more attuned to gradations of social hierarchy. Such is the case in Dinka sacrifice, as described by Godfrey Lienhardt, who presents what appears to be a "butcher's chart" detailing the assignment of different cuts of meat to different social groups, the prestige of group and cut being directly correlated. That the butcher's chart is, in effect, a diagram of social hierarchy is not lost on the Dinka themselves, who observe: "The people are put together, as a bull is put together." Lienhardt (1961) goes on to elaborate: "Since every bull or ox is destined ultimately for sacrifice, each one demonstrates, potentially, the ordered social relationships of the sacrificing group, the members of which are indeed 'put together' in each beast and represented in their precise relations to each other in the meat which it provides."

A similar pattern is also evident in one of the most ancient Italic sacrifices, the *Feriae Latinae,* a ritual that dates to the period prior to Roman domination of central Italy but subsequently was taken over by the Romans and adapted to their purposes. Thus, according to Dionys of Halikarnassos (4.49), all forty-seven cities that were members of the Rome-dominated Latin League were called upon to send representatives each year to the Alban Mount "to congregate, feast together, and take part in common rituals." Within the *Feriae Latinae,* however, were celebrated both the cohesion of the Latin League and the unequal status of its members, themes that found expression in the sacrificial banquet at the center of the rite. Thus, each city was assigned to contribute a different, carefully graded portion of food to the celebration ("some lambs, some cheeses, some a portion of milk"), while hierarchically ranked portions of meat taken from the sacrificial bull were distributed to all the participants. Given its sociopolitical importance, the distribution of meat was carefully scrutinized, and any mistake in the assignment of portions could force the repetition of the entire ritual, as could the failure of any participant to pray for the welfare of the whole Roman people. The latter offense would mark a failure of social solidarity; the former, of proper hierarchy.

A similar case is found in one of the best-documented sacrifices performed by the ancient Germanic peoples, that of the Semnones, as reported in chapter 39 of Tacitus's *Germania*:

> They say that the Semnones are the oldest and most renowned of the Suebi. This belief is confirmed in a religious ceremony of ancient times. At a fixed time, all the people of the same blood come together by legations in a wood that is consecrated by the signs of their ancestors and by an ancient dread. Barbaric rites celebrate the horrific origins, through the dismemberment of a man for the public good. . . . There the belief of all looks back [to the primordial past], as if from that spot there were the origins of the race. The god who is ruler of all things is there. Others are inferior and subservient. The good fortune of the Semnones adds to their authority. One hundred cantons are inhabited for them, and this great body causes them to believe themselves to be the head of the Suebi.

Several points must be made regarding the logic and intent of this grisly rite in which the public dismemberment of a human victim was the central feature. First, this was done in repetition or representation of creation, insofar as the sacrifice celebrating the "horrific origins" (*horrenda primordia*) was performed at the very place where the "origins of the race" (*initia gentis*) were believed to be. This comes as little surprise, however, given the well-known Germanic myths that describe creation as resulting from the bodily dismemberment of a primordial giant by the gods themselves. (For the fullest account, see Snorri Sturluson's *Gylfaginning* 6–8.) Second, the sacrifice was performed to confirm the Semnones' claim to primacy within the Suebian confederation, of which they considered themselves the "oldest and most renowned" (*vetustissimos se nobilissimosque*) members. This claim was also expressed in bodily terms: the Semnones regarded themselves as the "head of the Suebi" (*Sueborum caput*), something that was perhaps no idle metaphor, but one reflected—and justified—in the formal distribution of the dismembered remains of sacrificial victims.

The theme of creation as the result of a primordial act of sacrificial dismemberment is also common in ancient India. As one celebrated text relates:

> When they divided Man [Skt., Puruṣa], how many pieces did they prepare? What are his mouth, arms, thighs, and feet called? The priest was his mouth, the warrior was made from his arms; His thighs were the commoner, and the servant was born from his feet. The moon was born of his mind; of his eye, the sun was born; From his mouth, Indra and fire; from his breath, wind was born. From his navel there was the atmosphere; from his head, heaven was rolled together; From his feet, the earth; from his ear, the cardinal points. Thus the gods caused the worlds to be created. (*Ṛgveda 10.90.11–14*)

The text is remarkable for the way in which it describes society and the cosmos alike as having both been formed from the bodily members of the first sacrificial victim. Thus, we are first presented with a set of social homologues to the human body, wherein four differentially ranked classes—priests (Skt., *brāhmaṅa*), warriors (*kṣatriya*), commoners (*vaiśya*), and servants (*śūdra*)—derive their respective hierarchic positions and characteristic modes of action (speech, force of arms, production and reproduction, and running of errands) from that bodily part with which they are associated (mouth, arms, thighs, and feet). Similarly, a second set homologizes parts of the cosmos to bodily members or faculties: moon to mind, sun to eyes, wind to breath, and so on. Moreover, the social and the cosmic sets themselves are implicitly correlated through the mediation of the body, for the cosmos—like the body and society—is organized into hierarchically ranked vertical strata: heaven (including the celestial bodies), atmosphere (including the wind), and earth.

The logic of dismemberment thus establishes the priestly class as concerned with heavenly matters, such as sacred speech and the ritual fire, by their very nature, for priests and fire alike have their origin from the mouth (fire being thus the "eater" of whatever is placed into it, the sacrificial fire being called the "mouth of the gods"). The lower classes, in contrast, are relegated to more lowly, mundane pursuits; warriors occupy an intermediate status.

The model that is established within this myth (as also within the practice of Vedic sacrifice) is, quite literally, that of an "organic" cosmos and a "corporate" society, the parts of which are ordinarily unified but are also analytically detachable, whereupon their hierarchic interrelations become fully evident. Moreover, the corporate nature of society also finds expression within the very rhythms of sacrificial ritual. Lienhardt's observations regarding Dinka sacrifice are, once again, most instructive:

> It is at the moment immediately preceding the physical death of the beast, as the last invocation reaches its climax with more vigorous thrusts of the spear, that those attending the ceremony are most palpably members of a single undifferentiated body, looking towards a single common end. After the victim has been killed, their individual characters, their private and family differences, and various claims and rights according to their status, become apparent once more. In the account of the role of cattle, I mentioned the Dinkas' way of figuring the unity and diversity of kin-groups in the unity of the bull or ox and in the customary division of its flesh. Similarly in a sacrifice, whilst the victim is still a living whole, all members of a gathering are least differentiated from each other in their common interest in that whole victim. With its death, interest turns towards the customary rights of different participating groups in the division of its flesh. . . . Sacrifice thus includes a recreation of the basis of local corporate life, in the full sense of those words. The whole victim corresponds to the unitary solidarity of human beings in their common relationship to the divine, while the division of the flesh corresponds to the social differentiation of the groups taking part. (Lienhardt, 1961, pp. 233–234)

Although he does not use these terms, Lienhardt here masterfully describes the phases of aggregation and segmentation that mark most rituals. As is clear in the accounts of the *Feriae Latinae* and the Semnones' sacrifice, individuals and groups gather for the performance of a ritual in which they gradually surrender their sense of separate identity as they come to feel part of a broader social totality, united by bonds of kinship, polity, commensality, and/or common purpose. Then, toward the end of the proceedings, this social totality breaks into its constituent parts once again, only to be reunited at the next sacrifice. Further, as Lienhardt recognized, the moment at which the phase of aggregation ends and that of segmentation begins is that moment in which the victim is killed and its flesh divided.

Social segmentation thus coincides with sacrificial dismemberment, while aggregation corresponds to a victim that is whole. That victim, like society, contains within its body the potential to be cut into hierarchically differentiated pieces, but its life depends upon the preserved unity and cooperation of those pieces within an organic whole. These same processes also find abstract, philosophical expression at times, as in the thought of Empedocles (fifth century BCE), who describes the entire cosmos as being ruled by two competing processes: Strife, which tears things apart and finds its representation par excellence in sacrificial dismemberment (see, for example, his fragments numbered B128, B137, and B20 in the Diels-Kranz collection), and Love, the force that reunites those things rent asunder by Strife. For that matter, things are not so dissimilar when it comes to the celebrated Aristotelian tools of analysis (i.e., separating a whole into its constituent parts) and synthesis (i.e., reassembling the parts into an organic whole), whereby thought is dismembered and put back together, after the fashion of a sacrificial ox.

## BIBLIOGRAPHY

An important collection of essays on the general theme of dismemberment within sacrificial ritual has appeared under the editorship of Christiano Grottanelli, Nicola F. Parise, and Pier Giorgio Solinas: "Sacrificio, Organizzazione del cosmo, dinamica sociale," *Studi storici* 25 (October–December 1984): 829–956. Further studies on the same theme, organized by the same editors, will be forthcoming in *L'Uomo*. Also of great interest are the essays that appear in *La cuisine du sacrifice en pays grec*, edited by Marcel Detienne and Jean-Pierre Vernant (Paris, 1980). Discussion of the Dinka materials is found in Godfrey Lienhardt's *Divinity and Experience: The Religion of the Dinka* (Oxford, 1961). On the *Feriae Latinae* (and its possible connection to myths of creation by sacrificial dismemberment), see Walter Burkert's "Caesar und Romulus-Quirinus," *Historia* 11 (1962): 356–376; on the Semnones, see L. L. Hammerich's "Horrenda Primordia: Zur 'Germania' c. 39," *Germanisch-Romanische Monatsschrift* 33 (May 1952): 228–233, and Alfred Ebenbauer's "Ursprungsglaube, Herrschergott und Menschenopfer: Beobachtungen zum Semnonenkult (Germania c. 39)," in *Antiquitates Indogermanicae: Gedenkschrift für Hermann Güntert*, edited by Manfred Mayrhofer et al. (Innsbruck, 1974), pp. 233–249. I have also discussed many of these materials at greater length in *Myth, Cosmos, and Society: Indo-European Themes of Creation and Destruction* (Cambridge, Mass., 1986).

*Revised Bibliography*

**DĪVĀLĪ,** also known as Dīpāvalī, is an important renewal festival celebrated all over India in October–November at the time of the autumn equinox. Dīvālī marks the end of the rainy season and the harvest of the summer crops. The name *Dīvālī* can be translated as "row of lights," in reference to lights lit on the nights of the transition from the waning to the waxing moon. These lights stand for the hope kindled by the new season that comes at the end of the dangerous monsoon. In many ways the festival is a celebration of a new year. Accordingly, debts are paid off, and merchants close their accounts in anticipation of new wealth.

Dīvālī is a three-night festival, the last night of which is the first night of the waxing moon. The celebrations incorporate a number of mythic elements, many of which find colorful regional variations. As in any renewal rite, care is taken to cleanse and purify homes and shops, and people make certain to perform special ablutions in a ritual bath. The festival is most obviously characterized by the seemingly infinite number of oil lamps that are lit everywhere, as well as by the noise of exploding firecrackers that are said to frighten away evil spirits and to welcome the arrival of Lakṣmī, goddess of prosperity. In some regional practices the lamps are said to light the darkness for departed ancestors or to welcome the demon king Bali.

It is to Lakṣmī, however, that the people offer jewels and money, delicate foods, and special new clothes made for the occasion. Much importance is placed on the giving of gifts to all members of the family and to the neighborhood servants who help people throughout the year. Men gamble at various games in a ritual reenactment of the dice tournaments played by the gods to determine the fate of human beings.

The festival is associated with several Puranic myths. Their underlying idea calls forth what was at issue during the rainy season and centers on the notion, which holds true for ancestors as well, that underworld creatures play a crucial role in the acquisition of wealth. A well-known myth relates how the dwarf Vāmana (an incarnation of Viṣṇu) asked Bali to grant him as much land as he could cover in three steps. The generous demon king agreed. To his amazement, two of the dwarf's steps covered the earth and the sky; the third, planted on Bali's head, sent the demon to the underworld, a region that became his domain. For his generosity, Bali was then allowed to come to the surface of the earth during Dīvālī in order to bestow wealth on human beings.

Another myth, one in which the god Kṛṣṇa is said to slay Naraka (or Narakāsura, the "demon of hell"), similarly marks the momentary halt of evil underworld powers. Naraka is the son of Bhūdevī, the earth goddess, and Varāha, the incarnation of Viṣṇu as a boar, who had rescued the goddess when she lay buried under the waters of the sea. Although he was ultimately killed by Kṛṣṇa—as all demons must eventually be killed by a god—Naraka, like Bali, is nevertheless paid homage when the question of wealth is at stake.

In North India the second day of Dīvālī is reserved for the worship of the hill Govardhana, near the town of Mathura, a site of deep religious significance for devotees of Kṛṣṇa. Once Indra had captured all of the world's cattle. Kṛṣṇa freed the cows, but the enraged Indra flooded the earth with a downpour of rain to drown the valuable animals. Kṛṣṇa then raised Govardhana so that the cows would be saved. The importance of the myth is clear in the context of Dīvālī, for in Hindu thought the cow is a powerful and evocative symbol of prosperity. The ritual here primarily involves worship of cattle, but—in a play on the word *govardhana* (lit., "cow-increasing")—offerings are made to mounds of cow dung (*govar*) to ensure continued prosperity and wealth (*dhana*).

One final ritual marks the celebration of Dīvālī. Girls and women, who at the onset of the rainy season had tied protective threads around their brothers' wrists, now invite the boys and men for delicacies in exchange for gifts. This rite is accompanied by the worship of Yama, lord of the dead, and his twin sister, Yami. Yama is also known as Dharmarāja ("king of the social and cosmic order"), for that very order is then restored with the return of prosperity, which is dependent upon women and on controlled underworld powers.

# DIVINATION

*This entry consists of the following articles:*

AN OVERVIEW
GREEK AND ROMAN DIVINATION

## DIVINATION: AN OVERVIEW

is the art or practice of discovering the personal, human significance of future or, more commonly, present or past events. A preoccupation with the import of events and specific methods to discover it are found in almost all cultures. The culture possibly least interested in divination is that of the traditional Australian Aborigines, yet even they hold divinatory "inquests" at funerals to discover the identity of the sorcerers responsible for the deaths.

Much of science itself has evolved from forms of divination and may be said to continue certain aspects of it. Astronomy, for example, is deeply indebted to ancient Near Eastern and Hellenistic astrological researches; mathematics and physics were advanced by Indian, Pythagorean, and Arabic divinatory cosmological speculations; and several leading Renaissance scientists were inspired by the divinatory schemes of Qabbalah and hermitism in their search for the moral harmonies and direction of the universe. Yet it would be incorrect to label divination a mere infantile science or pseudoscientific magic, for modern science and traditional divination are concerned with essentially distinct goals. This helps to explain the continuing fascination with divination even today on the part of well-educated people, notably in regard to astrology, the *Yi Jing,* and spiritualism or necromancy (séances with the dead). Divination involves communication with personally binding realities and seeks to discover the "ought" addressed specifically to the personal self or to a group. Science, however, if faithful to its own axioms, cannot enunciate any "oughts" because of its methodological, cognitive, and moral neutrality: it only offers hypotheses about reality and is concerned with general statistical regularities, not with unique persons or events. The existential situation and binding transcendental realities are beyond its concern. It may be argued that, precisely to the degree that such modern disciplines as psychotherapy and Marxist theory leave science behind, they take on divinatory (and therefore religious) functions, and represent modern contributions to the history of divination.

**BASIC FORMS.** Anything can be used to divine the meaning of events. It is very common to assign spontaneous and arbitrary meaning to signs or omens when one is deeply anxious about the outcome of a personal situation. But the cultural form of divinatory methods and signs is seldom entirely random: each one expresses a specific logic.

A full list of divinatory agents, therefore, would amount to a catalog of both nature and culture. H. J. Rose, in his article "Divination, Introductory and Primitive," in volume 4 of the *Encyclopaedia of Religion and Ethics* (Edinburgh, 1911), classifies the most common means used to obtain insight as follows: dreams (oneiromancy); hunches and presentiments; involuntary body actions (twinges, sneezes, etc.); ordeals; mediumistic possession; consulting the dead (necromancy); observing animal behavior (e.g., ornithomancy, interpreting the flight of birds); noting the form of entrails of sacrificial victims (extaspicy or haruspicy), or the victims' last movements before death; making mechanical manipulations with small objects such as dice, drawing long or short stalks from a bundle, and so on (sortilege); reading tea leaves (tasseography), or using playing cards (cartography), etc.; decoding natural phenomena (as in geomancy, palmistry, phrenology, or astrology); and—of course—"miscellaneous." Plato—in an analysis that still forms the basis of most modern treatments (as in the world survey of divination edited by Caquot and Leibovici, 1968)—distinguished "ecstatic" and "nonecstatic" types, with the latter including all inductive and empirical systems of noting portents, studying entrails, and so forth. But ecstatic states and inductive methods can be mingled confusingly; indigenous interpretations of so-called objective omens often assume spirit possession of the omens and/or ecstatic insight in the diviner, while some mediums appear quite normal when "possessed."

It would be more useful to establish what the indigenous theory of divination is, rather than to attempt to assay the states of mind actually experienced by diviners in different cultures and periods. The same conscious experience of heightened awareness can be interpreted in one culture as deep wisdom and in another as spirit possession. Under the influence of such interpretations, in fact, an individual diviner might permit himself to drift into a deeper mediumistic trance, or on the contrary strive toward a more intense lucidity. How a condition is interpreted influences the way it unfolds and realizes itself.

Stressing the indigenous theory of divination also directs us to the cosmological assumptions and the attitudes toward the self that unit various seemingly unrelated methods. For example, cultures that stress mediumistic interpretations of trance usually also explain the casting of lots or the conformations of entrails in terms of spirit possession: divination, according to this overarching viewpoint, consists of the forms of communication developed by invisible beings to instruct humanity on the meaning of events. But cultures that have developed a concept of a decodable impersonal and elemental divine order would see the entrails or the sortilege in terms of microcosmic echoes of vaster harmonies. In general, then, we may distinguish three general types of divination, based on indigenous meanings: those based on the immediate context when interpreted by the spiritual insight of the diviner (intuitive divination); those based on spirit manipulation (possession divination); and those reflecting the operation of impersonal laws within a coherent divine order (wisdom divination).

**Intuitive divination.** The Shona of Zimbabwe esteem their *hombahomba* diviners above all other kinds because these remarkable men, consulted by strangers who travel from far off to seek their help, can spontaneously tell their visitors' names, family connections, urgent problems, and even minor experiences encountered on the journey. People speak in awe of the piercing eyes and aura of penetrating awareness of these diviners, whose fame can spread over great distances. And yet—an example of how types of divination can run into one another—the *hombahomba* may attune himself to the consultation by casting *hakata* dice (a form of wisdom divination), after which, in one reported case, the diviner became possessed before returning to a state of mind in which he could begin the inquiry.

Intuitive divination is perhaps the elementary form out of which, through various interpretations, the other two developed. It is seldom much stressed, although its distribution as hunches and presentiments is universal. The reliability of amateur intuitions is not usually considered very great, yet in many cultures extraordinary spiritual masters are often credited with this type of divinatory insight, which then has more prestige and credence than any other. For example, disciples of a *tsaddiq* or saintly master in Hasidic Judaism frequently claim that their master can look into a person's soul at first meeting and determine not only the past lives but also the future course of that person. Precisely the same claims are made for many Hindu *gurūs.* These insights by the *gurū* are regarded as far more reliable and authoritative than the various forms of wisdom divination common to India, and these in turn are more esteemed than folk mediumistic and possession divination methods.

**Possession divination.** There are many varieties of possession divination. The most common is augury: divining the message sent by spiritual beings through nonhuman creatures or things. The classic form of augury, much used in ancient Greece and Rome, consisted of attending to the flight of birds, which were thought to be seized by the gods or spirits and directed according to a code known to the diviner. But all other forms of interpreting supposedly objective spirit messages were also included in the Latin term *augurium.*

Even when human agents are seized by the spiritual beings, this does not always imply trance: a popular form of divination in ancient Near Eastern, medieval European, and even modern societies such as Mexico, is to pose a question and then attend to the first chance words one overhears from passing strangers on the street. Another almost universal method whereby spirits or divinities communicate with a person is to induce twitches or sudden pains in the body. Quite explicit meanings can be derived from this, depending on the part of the body affected and other indications, and of course varying according to the specific cultural context. The theory behind the contemporary use of the Ouija board is explicitly spiritualistic, yet all that one must do to use it is put oneself in a receptive mood: ordinary awareness remains. A very similar state is apparently involved in some cases of glossolalia, according to American Pentecostals I have interviewed, but full mediumistic trance is reported in many studies (see, for example, Felicitas Goodman, *Speaking in Tongues,* Chicago, 1979). The divinatory interpretation of dreams is another very widely used method; here manipulation by spiritual beings begins to require outright alteration of consciousness, although only when the ego has already dimmed its awareness.

Full divinatory possession of human beings may be of several theoretical forms: prophetic inspiration, shamanistic ecstasy, mystical illuminations and visions, and mediumistic or oracular trance. They differ according to the degree of ego awareness and lucidity, awareness of the ordinary world, and the theoretical recipient of the divinatory message. The prophets of the Bible seem to retain a lucid sense of themselves and the world as they exhort their audience, although they are gripped by an overmastering sense of the integral meaning of events as illuminated by God's presence. The recipient of this revelation of temporal meaning is both the prophet and the human community. In shamanistic trance the struggle between ego awareness and the spirits is often portrayed as being so intense that it forces a displacement of the shaman from this world: the shaman may fly far away to interrogate the spirits or God, and may have to struggle with bad spirits and force them to confess their role in human events. As recipient of the divinatory communications, the shaman may later report on his conversations to an assembled audience, or may permit the audience to eavesdrop on the actual interviews or even to be directly addressed by the spirits through his mouth, but in any case he remains self-possessed and afterward can recall everything that occurred. For the mystical visionary, on the other hand, the entire ordinary world is eclipsed by the ecstatic revelations, and the mystic is the sole direct recipient of the communications. The oracular medium, however, loses all awareness, it is said, and therefore often remains ignorant of the message that is communicated directly from the spiritual being to the audience.

The dependency in particular cultures or subgroups of a culture on "objective" augury methods, or on methods that progressively encroach on or even obliterate ego awareness, suggest differing views of the self, society, and the world. Satisfactory cross-cultural studies of divinatory theories from this point of view have not yet been made, but some points may be tentatively suggested. All kinds of possession divination assume a mysterious, arbitrary world governed by personal powers who are involved with a vulnerable humanity. The human self must learn how to submit to or cajole these capricious and often dangerous spirits. However, in loosely organized, relatively egalitarian societies with an emphasis on personal initiative, we can expect more confidence in the ability of the human ego to sustain its integrity when faced with the spiritual powers. This is what we find, for example, in circumpolar and related cultures in Europe, Siberia, and North America. A study by H. Barry, I. L. Child, and M. K. Bacon (cited by Erika Bourguignon, *Possession*, San Francisco, 1976) shows that hunting-fishing cultures generally depend on short-term risks and personal initiative, so that individuals are trained from childhood to be self-reliant and self-sufficient: each adult can master all the cultural skills necessary to survive, and ego alertness is highly valued. In such societies mediumistic divination is not found; instead, individuals possess an encyclopedic knowledge of portents, and of methods for obtaining auguries of the capricious spirits' intentions. The autonomous ego can negotiate its way through a mysterious cosmos, while the shaman, able to retain ego awareness and control even in the most intimate relationship with the spirits, is the group guide.

The same cross-cultural study indicates that children in agricultural societies are trained to be obedient, reliable, cooperative, and patient—qualities needed for ceaseless cultivation of crops and for interaction with fixed communities. The social group, not the individual, is the survival unit; personal success is obtained through accommodation to others. Even the powerful must submit to the more powerful and the spirits, while the weak survive only through self-effacement. Here, mediumistic trance expresses the natural state of things. A survey of African cultures by Lenora Greenbaum (in *Religion, Altered States of Consciousness, and Social Change*, edited by Erika Bourguignon, Columbus, Ohio, 1973) has shown that mediumistic divinatory trance is most common in societies having slaves and two or more hereditary (i.e., fixed) classes, such as commoners and nobility, and possessing populations over 100,000. I might add that in such societies a sense of relative deprivation and ego diminution must be common, since individuals meet people every day who enjoy other roles in life. Less advantaged groups (the poor, women, and so on) might well seek transcendental release from the resultant frustrations through mediumistic trance more often than more privileged sectors of society (see I. M. Lewis, *Ecstatic Religion*, Baltimore, 1971). In any case, here one obtains power only through radical self-effacement; even kings become divine only through being possessed. This is the opposite view from that underlying shamanism.

It is perhaps inevitable that, at the center of social power, attempts are made in such cultures to master all that can be known of the arbitrary will of the gods. The court diviners frequently compile mountainous records of precedents of monster births or other omens, the results of centuries of haruspicy, and so forth, as in Babylonia, where we see the fruit of intense efforts to maintain clarity as far as is possible. The Babylonian priests noted every heavenly sign over many centuries, identifying each celestial body with a god. But no system emerged from this, for the classical Babylonian worldview was polytheistic and predicated on power, passion, and personal whims of the divinities. Yet the result was a hierarchy of divination methods: present at the courts were alert, learned priests who interpreted the will of the gods in elaborate augury ceremonials, while among the lower classes mediumism and a much more random and confused use of omens indicated the insecurity of ego control.

When the entire social structure and even the cosmos is felt to be inauthentic, as in late antiquity, mediumistic ecstasy may tend to apocalyptic predictions of the end of the age: the muted protest becomes radical and explicit. Or mystical visions may teach the negation of the entire world. In such cases, divination merges with salvation cults.

**Wisdom divination.** The elaboration of divination systems based on a unified field of impersonal and universal processes that can be studied, harmonized with, and above all internalized by nonecstatic sages, is an important but rare development in the history of religion. It is most often found in complex civilizations that have been defeated by equally powerful cultures and therefore must integrate their own indigenous views with other perspectives. Wisdom divination is a syncretistic movement beyond specific cults, approaching the elemental ground from which all personal spirits and cultic gods as well as cultural groups arise. But the speculative effort must usually begin in court and priestly circles, for it depends on a cumulative effort of generations and a specialized learning of which, in most early civilizations, only centralized priesthoods are capable. Only after literacy and education become general can the sagelike diviner detach himself from court circles and apply himself to individual and nonpolitical concerns.

Thus it was only after Babylonia fell to Persian conquest in the sixth century BCE that its priestly thinkers were challenged by a view that placed "Truth" (the Zoroastrian *artha*) and a cosmic order founded in a supreme being above the capricious gods. The new empire embraced many cultures, making possible as a real option personal conversion to such missionizing, universal monotheisms as those espoused by the Jews and the Persians. The old social boundaries—and their gods—now became part of a vaster order, and an attempt was begun to link individual lives directly to a single cosmic pattern rather than to any intermediate hierarchies. Inevitably, the effort was eventually to lead to a kind of pagan monotheism, but it began as an attempt to confirm the polytheistic view. With the new radical improvements in mathematics and astronomy, the first personal horoscope known to us was made of a ruler in 410 BCE. The new cities and academies of the Hellenistic world spurred the fusion of Zoroastrian, Babylonian, Jewish, Syrian, and Greek currents; as Franz Cumont (1912) has made clear, astrology came to function as nothing less than a universal and syncretistic religious perspective that underlay or influenced all the religions of late antiquity. Even synagogues, as we know from recent excavations, commonly traced the zodiac on their sanctuary floors or walls.

The growing separation of divination and wisdom from the central institutions of power was resented by many kings and emperors. One of Augustus's first acts as emperor was the burning of about two thousand collections of pseudo-Sibylline oracles circulating among the people, since some of the oracles favored rival figures or criticized Roman policies, while others, by Jewish proselytizers, predicted the impending messianic era. Several Roman emperors outlawed all nonofficial divination; Constantine the Great and his successors used Christianity as an excuse to roast to death any astrologer and client caught in private consultation (see Cramer, 1954, and D. Grodzynski's article in Vernant et al., 1974). Even in modern times astrology can have political aspects: the Nazis directed certain agents to gain reputations in the United States and England as astrologers, and then to predict the success of Nazi endeavors or otherwise demoralize Western efforts. Within Nazi Germany itself, astrology was strictly an instrument of state.

Today, however, astrology serves usually as a muted protest against everyday social identity or generally accepted scientific values and cosmology. While interest in astrology is widespread, it has been especially favored by the so-called counterculture, and by many in the lower and lower-middle classes, particularly women, since it desubstantializes oppressive personal relationships, offering instead an exotic alternative identity in which faults are erased or elevated into association with a "star family" embracing strangers. In an increasingly fluid, anonymous, and heterogeneous society, pattern and typological identities are discovered within a larger cosmic harmony, and a sense of control is restored to personal life through the aesthetic and probabilistic terms in which predictions are couched. The power of such a vision is seen in the fact that it persists, even though the zodiac houses and their stellar correlates, fixed as they were during the hellenistic period, are now literally two thousand years out of congruence, making the system obsolete even in its own terms.

A quite similar history of a wisdom divinatory system is that of the *Yi Jing* in China. It was the practice in court circles of the Shang dynasty to consult the nature spirits and royal ancestors—and especially the celestial supreme being—concerning all significant state decisions. Scapulimancy was the favored technique—in the late Shang period tortoise shells were generally substituted, supplemented by sortilege with long and short yarrow stalks. These methods had their roots, respectively, in hunting-fishing cultures to the north and in agricultural tribes to the south. Although these methods already involved a conception of heavenly and earthly polarities, it was apparently only after the Shang were overthrown by the Zhou, and after the Zhou had expanded rapidly in succeeding centuries to embrace cultures throughout northern, central, and even southern China, that an elemental metaphysics arose that transcended all gods and spirits and was encapsulated in the *Yi Jing* as such. There is no reference to personal spirits or gods anywhere in the text of the *Yi Jing* in its present form, which stems from the late Zhou and former Han dynasties. Instead, all of reality is regarded as woven out of a dialectic of yin and yang forces (contracting and expanding, respectively): all things and persons are composites in the process of transformation. Using the elaborate binary code of this method, one can discover what the transformations imply, but only if one has attained true nobility and tranquility of character. Confucian mandarins and philosophers through the ages ruled their lives by this text, but only in the Ming dynasty did its use become widespread among the general populace, reflecting the growth of literacy and the escalating complexity of Chinese civilization. The *Yi Jing* had come to serve as a quiet intellectual aid to personal transcendence and mastery of immediate social pressures. This function—the same one it serves today in the West—differed from its earlier Confucian use as a guide in official life and in social activity often associated with the court.

The Chinese had a number of other forms of wisdom divination, in particular a distinctive form of astrology and an elaborate geomancy. The latter offered detailed instructions on the cosmic forces affecting any specific site, and professional geomancers were consulted whenever a house was to be built, a road laid, or a grave site chosen. Astrology too governed all aspects of village life by the later medieval period, despite the general folk use of many possession divination methods, ranging from countless omens and portents to outright mediumistic séances.

Hindu astrology combined some elements of the Chinese system and more of the Middle Eastern system into its own configuration. Other significant forms of wisdom divination include the Islamic *hati* system *(al-khaṭṭ bi-raml)* and the several derivations of it in West Africa (especially the Yoruba and Fon Ifa systems), Zimbabwe, and Madagascar.

**DIVINATION IN WESTERN RELIGIONS.** The Jewish and Christian traditions are markedly ambivalent about divination. For example, the rabbis criticized the use of folk methods found in surrounding cultures, just as the Torah itself forbids all appeals to local nature spirits or to the dead. While the efficacy of such appeals is not necessarily denied (*1 Sm.* 28), such acts were thought to suggest that God is not the one source of all events and of all truly reliable knowledge. (See *Dt.* 18:10–22; *Lv.* 19:26, 19:31, 20:6–7, 20:27; *Jer.* 10:2; and the tractates *Pes.* 113a and *Ned.* 32a from the Talmud. For a full discussion, see Cohen, 1949.) Thus prophetic inspiration directly from God, the use of Urim and Tummim in the Temple, certain kinds of omens, and even dream divination by Joseph in Egypt and at local shrines in ancient Israel were certainly acceptable. So most Talmudic rabbis permitted dream divination, water gazing, and the use of omens; contradictory views were expressed concerning astrology, but by the Middle Ages most rabbis accepted what was in effect the science of the day. Moses Maimonides, however, made a scathing attack upon it: freedom of will, he said, is fundamental to Torah spirituality; those who follow God cannot in any case by subject to the stars (see, e.g., *Dt.* 4:19–20), while a close analysis of astrology shows it to be based on poor reasoning and worse science. Necromancy was explicitly condemned in the Torah (*Dt.* 18:11), and there is very little reference to any kind of spirit possession in the Talmud; the late medieval dybbuk possession chiefly involved tormented but not malicious spirits who sought expiation for sins. Yet qabbalistic meditations resulted in a wide variety of wisdom divinatory methods based on the divine image sustaining the whole of creation, and prophetic ecstatic visions were sought by mystics from the Talmudic age on.

In Christianity some of the same themes and ambiguities reappear, but now the antithesis between good and bad divination is understood as part of a war between Christ and Satan. For example spirit possession, mediumistic and otherwise, is a frequent phenomenon and is generally viewed as demonic and requiring exorcism. However, astrological signs can be good, for they marked Jesus' birth. Dream divination by Joseph or Pilate's wife, casting lots, and mediumistic glossolalia are all approved (*Mt.* 1:20, 2:2, 2:12, 27:19; *Acts* 1:26, 10:10), unless performed by non-Christians like Simon Magus or by sorcerers (*Acts* 8:9, 13:6, 16:16). Folk methods used in the Roman Empire and afterward were readily incorporated into Christian and official usage, although the fourth-century Synod of Laodicia and the contemporaneous Theodosian Code outlawed divination (drawing on earlier precedents in Roman legislation). Thus divinatory invocation of pagan deities or spirits, schismatic prophetic movements within Christianity, and even oracular attempts to criticize or delegitimize the ruling regime were all stamped as "Satanism."

Similar attitudes continued into later European cultures, but a rich and highly varied regional folk practice of divination persisted. From Islamic civilization—itself the inheritor of Middle Eastern, Persian, and even Indian methods of divination—came scholarly catalogs of divinatory significances of dreams, omens, and studies of specialized systems such as palmistry, astrology, and crystal gazing. Astrology—despite the rejection of it in the late Roman Empire by church leaders who often cited critical analyses by earlier pagan philosophers—came to be regarded as a universal science in the Middle Ages. The Renaissance renewed acquaintance with classical criticisms (permitting astronomy to develop as an independent science), but the increasing literacy of later generations spread knowledge of these systems and encouraged devotees to elaborate their own methods further and publish studies of them. Cartomancy (including the use of tarot cards), phrenology (divination by head conformations), graphology (handwriting analysis), and many other novel systems or elaborations of earlier systems developed at this time. Pietists of the Reformation heartily condemned these alternative systems of wisdom, but continued to use dreams, omens, and even scriptures opened at random to comprehend events.

In the modern period, devotees of such systems as astrology or water witching often feel constrained to offer "scientific" explanations for the claimed success of their methods—explanations often extrinsic to the methods themselves. Extrasensory perceptions (precognition, etc.), for example, have been cited, or the "synchronicity" invoked by C. G. Jung for the power of the *Yi Jing:* with the mind tuned in by the divinatory apparatus and method, the diviner may notice the minute evidences of interconnections and processes in the environment that are usually ignored, or the diviner may in this heightened state even comprehend vaster elemental wholes leading inevitably to certain outcomes. It is even suggested that divinatory consciousness may be able to pick up unobservable rhythms in events, in somewhat the same way that a radio picks up invisible transmission. These hypotheses may describe real processes; unfortunately, they are at present untestable.

**SACRIFICIAL MOTIFS.** In any case, divination is fundamentally directed by religious, not scientific, concerns. Its basic curiosity is not about how the world is constructed apart from the pulsing heart of the observer, but about the existential meaning of particular human lives. Above all, divination illuminates suffering and alleviates doubt. It restores value and significance to lives in crisis. But to achieve this, all systems of divination demand the submission of the inquirer to transcendental realities, whether these be divine persons (possession divination) or the underlying divine order (wisdom divination). The inquirer is made to achieve spiritual distance from the self and the immediate crisis.

This recentering of the self is usually directed by sacrificial motifs and rituals. Almost all African divination, for example, ends in sacrifice to the spirits named in the consultations as responsible for the crisis, and many rites also begin with sacrifice. Very often the act of divination is simply a sacrificial rite: in Nilotic and Bantu cultures, the answer is "read" from the entrails of victims. Often the actions of the sacrificed victim give the spirit's answer. In the Democratic Republic of the Congo and nearby culture areas, chickens may be fed a partially toxic substance: if the bird dies, God has accepted it and signified "yes" to the question; if not, the answer is "no." A similar logic directs witch ordeals. As in Africa, so also in Europe is the observation of the last convulsive movements of a sacrificial victim a divination practice. Strabo tells us that the ancient Gauls often killed a slave or captive by a sword stroke in the back: the future was then told from the way he fell, his movements, and the way the blood flowed. Even wisdom divination is frequently given a mythical source in a primal sacrifice (as in the case of the African Dogon and Bambara rites, and also the Yoruba and Fon systems of divination, called Ifa and Fa, respectively. The oracle bone divination of Shang dynasty China had a sacrificial context, and the actual procedure by which one consults the *Yi Jing* is basically structured by sacrificial ideas. Mediums perhaps most dramatically embody a sacrificial logic: those initiated in the spiritualistic religions of Nigeria and Dahomey, for example, and in their perpetuations in recent centuries in the Caribbean, must undergo a symbolic and psychic death and resurrection—one so experiential that occasionally the offering to the spirits, the medium-candidate, does not rise again from the ground.

All this expresses a deeper truth, that divination requires the radical submission of the diviner and indeed the client to the transcendental sources of truth, before their lives can be transformed and set straight, before they can be reincorporated harmoniously into the world. In short, divinatory rites follow the pattern of all rites of passage. The client, having learned in the course of the rite to offer up to the divine all egocentric resistance, ends the session reoriented to the world and able to take positive and confident action in it.

G. K. Park (in Lessa and Vogt, 1965) has suggested that divination assists in political and personal decision making precisely by removing the decision from contesting parties and giving it an objective legitimacy, both through its spiritual source and its convincing ritual drama. O. K. Moore (ibid.) has added that even the "randomizing" of decision outcomes in divination is actually adaptive in situations where egoistically obvious or socially customary decisions might end up limiting personal or group survival chances. By hunting in accord with the cracks that appear on heated deer shoulder blades, the Naskapi Indians of Labrador are prevented from overhunting favorite areas and are therefore more likely to find game year-round.

Wisdom divination also often works in this way: by freeing the inquirer from customary ways of thought, it frequently reveals fresh insight into problems. Thus the cryptic proverbs or aphorisms (as in the Ifa system or the *Yi Jing*), or the nonbinding details and universalizable generalities (as in astrology), open up a cosmic perspective that in itself bestows tranquility and a renewed ability to cope effectively with crises. One learns to see behind appearances and to cultivate a continual attitude of tranquil self-offering. The momentum of wisdom divination, in short, is to internalize the basic attitude operating in all divination; it does this by rendering the structures of the transcendent into a form in which they can be grasped consciously and autonomously. The very vagueness of the answers in most forms of wisdom divination aid in this personal appropriation, making the client participate in shaping meaning out of the session.

## BIBLIOGRAPHY

Useful historical surveys of divination and related topics in world cultures include Lynn Thorndike's monumental *A History of Magic and Experimental Science*, 3 vols. (New York, 1923–1958), and Auguste Bouché-Leclerq's still very useful *Histoire de la divination dans l'antiquité*, 4 vols. in 2 (1879–1889; reprint, New York, 1975). Thorndike's history is chiefly oriented to Western culture, but the first two volumes deal with antiquity. Bouché-Leclerq focuses on classical Greco-Roman cultures. A total of seventeen learned articles on divination in particular cultures, and an additional twelve articles on astrology and other religious aspects of heavenly phenomena in world cultures, can be found in the *Encyclopaedia of Religion and Ethics*, 13 vols., edited by James Hastings (Edinburgh, 1908–1926), under "Divination" (vol. 4, 1911) and "Sun, Moon, and Stars" (vol. 12, 1921). More up to date is the excellent survey edited by André Caquot and Marcel Leibovici, *La divination: Études recueillies*, 2 vols., (Paris, 1968), which, in addition to the expected essays on the major ancient Near Eastern, classical, and Asian cultures, contains numerous essays on pre-Christian European cultures; the ancient civilizations of the Americas; native or tribal cultures in Siberia, Africa, and elsewhere; and modern folk and urban Western societies—all with helpful bibliographies. The most recent English symposium is Michael Loewe and Carmen Blacker's *Divination and Oracles* (London, 1981), with nine authoritative essays ranging from Tibetan culture to Islam.

An anthropological symposium on divination that refers to political aspects as well is *Divination et rationalité*, by Jean-Pierre Vernant and others (Paris, 1974). A useful selection of important theoretical anthropological essays on divination is included in *Reader in Comparative Religion: An Anthropological Approach*, 2d ed., edited by William A. Lessa and Evon Z. Vogt (New York, 1965); later editions include some more recent studies but omit much from the second edition. Mediumship has evoked the greatest attention from anthropologists; see, for example, *Spirit Mediumship and Society in Africa*, edited by John Beattie and John Middleton (New York, 1969), in addition to the studies mentioned in the text of the foregoing article.

For an authorative summary of what we know about ancient Mesopotamian divination, see A. Leo Oppenheim's *Ancient Mesopotamia* (Chicago, 1964), pp. 198–227, or W. H. P. Römer's "Religion of Ancient Mesopotamia," in *Historia Religionum*, edited by C. Jouco Bleeker and Geo Widengren, vol. 1 (Leiden, 1969), especially pp. 172–178. H. W. Parke has summarized his many authoritative studies on Greek mediumship in his brief *Greek Oracles* (London, 1967); he does not ignore social and political implications. Still outstanding is Franz Cumont's *Astrology and Religion among the Greeks and Romans* (1912; reprint, New York, 1960). More recent are Hans Lewy's *Chaldaean Oracles and Theurgy: Mysticism, Magic and Platonism in the Later Roman Empire*, new edition by Michel Tardieu (Paris, 1978), and Frederick Henry Cramer's *Astrology in Roman Law and Politics* (Philadelphia, 1954).

Talmudic views of divination are well discussed by Abraham Cohen in his *Everyman's Talmud*, new ed. (New York, 1949), pp. 274–297; further information is available in the article "Divination" by Shmuel Ahituv and others in the *Encyclopaedia Judaica*, 16 vols. (Jerusalem, 1971). A general survey of Muslim divination is available in Toufic Fahd's *La divination arabe* (Leiden, 1966), and in the various symposia mentioned above. On *hati* geomancy, see the article by Robert Jaulin in the collection by André Caquot and Marcel Leibovici, cited above, and Robert Jaulin's *La géomancie: Analyse formelle* (Paris, 1966). For a penetrating study of the Yoruba Ifa system, see Wande Abimbola's *Ifa: An Exposition of Ifa Literary Corpus* (London, 1976).

Any study of Chinese divination should begin with Joseph Needham's brilliant study *Science and Civilisation in China*, vol. 2 (Cambridge, 1956), pp. 216–395; an excellent bibliography is appended. Among the many perceptive studies of the *Yi Jing* is Hellmut Wilhelm's *Heaven, Earth and Man in the Book of Changes: Seven Eranos Lectures* (Seattle, 1977). A useful survey of other forms of Chinese wisdom divination as well as of allied forms of the *I ching* is Wallace A. Sherrill and Wen Kuan Chu's *An Anthology of I Ching* (London, 1977). Also see Stephan D. R. Feuchtwang's *An Anthropological Analysis of Chinese Geomancy* (Vientiane, Laos, 1974).

## DIVINATION: GREEK AND ROMAN DIVINATION

People tend to think of divination as a process concerned with the future and with such questions as "Will I marry?" and "Will I be rich?" But in ancient Greece and Rome, as in many other cultures, divination was predominantly concerned with discerning the will of the gods and other superhuman entities (e.g., demons, ghosts) and then learning how to bring oneself into harmony with them. Thus, the enquirer might try to find out why famine was harming his city: Had the dead not received the cult that was due them? Was a god being ignored? Alternatively, an enquirer might ask a god's advice: shall we institute a new political system in Athens? In the latter sort of cases, the enquirer typically presented a detailed plan to the god and then asked for his or her approval, rather than giving the god completely free rein to decide what should be done. The knowledge that one sought from divination usually was not all that different in its nature from what one could learn from another person. It differed mainly insofar as the gods, demons, and ghosts might know more because they had a greater range of sources of knowledge; they knew what was going on among the dead, among the gods, and in distant parts of the world that the average enquirer could not reach.

Almost any object, person, statement, or event could convey information; the challenge was to learn how to choose, interpret, and act upon it correctly. Sometimes divinatory information aroused debate among its recipients as to how to interpret it. For example, during the Persian Wars of the early fifth century BCE, the Athenians received an oracle from Apollo at Delphi advising them to protect themselves "by wooden walls," but prominent citizens argued for different interpretations. Themistocles (c. 524–c. 460 BCE) finally convinced the others that this meant they should increase the size of their navy (ships being built of wood) rather than seek refuge on the Acropolis, which had in former times been protected by a "wall" of thorn bushes. Themistocles was proven correct when the fortified navy saved not only Athens but all of Greece (Herodotos, *Histories* 7.140–143).

This story also demonstrates that anyone, not only a specialist, was free to interpret divinatory information; indeed, the Greek *chrêsmologoi,* or professional interpreters of oracles, had urged the Athenians to abandon their city after they heard the oracle, but their advice was ignored. Professional seers (*manteis*) traveled with armies to provide advice, but the general Xenophon (c. 431–c. 352 BCE) stated that he himself was knowledgeable enough in the arts of divination so that his seer could not deceive him with false information (*Anabasis* 5.6.29). This statement also reflects the common presumption that, far from being unimpeachable, professional diviners were motivated by the same things as other people and might put their own interests before those of their clients. Moreover, even when the source and interpretation were considered trustworthy, divinatory information might be challenged. The "wooden walls" oracle was the second oracle the Athenians had received from Delphi; they had rejected an earlier one because it offered the city no hope at all, and they asked the god for a more optimistic response. Similarly, in Rome the results of sortition (a method whereby an answer was obtained by shaking or drawing lots out of a jar) might be overturned in the civic and military arena when participants judged them to be "ill-omened." For example, if the results commanded that a man serving in the office of *flamen Dialis* (a prominent priesthood) should accept a foreign posting, the results were overturned because the *flamen* was forbidden from sleeping outside his own bed for more than two nights running. Divination, in short, was always as much a process of negotiation as it was of obtaining knowledge.

## GREECE.

Although Greek and Roman divinatory methods and the contexts in which they were used were very similar in many regards, there were also distinctions, and it is therefore best to treat the two cultures separately. We begin with Greece.

**Institutional oracles.** Both of the oracles that Athens received during the Persian Wars came from the Delphic Oracle, one of the oldest (perhaps dating to the late ninth century BCE) and most prestigious of Greek institutional oracles, which were situated in a fixed spot and administered by a priesthood. At Delphi, in an inner chamber of Apollo's temple, the Pythia (a woman who had pledged to remain a virgin) sat on a sacred tripod, wore a crown of sacred laurel, and was inspired by the god himself. Through her mouth, Apollo issued statements that were transmitted to enquirers by priests called "prophets"—literally, "those who speak for" someone else. The statements might be worded so as to require interpretation, as we have seen, but the truly enigmatic Delphi response, whose meaning proves to be quite different from what it seems (as in the story of Oedipus), is probably only a literary motif.

Although Delphi was the most famous oracle in the ancient world, there were others. Most were sponsored by Apollo (including those at Didyma and Claros), but Zeus had one at Dodona, and other gods had oracles, too. Dead heroes might also convey information through oracles: Amphiaraus had one in Oropus and Trophonius had one in Lebadeia. The means by which the information was conveyed varied from place to place; at the oracle of Trophonius, enquirers descended into an underground shrine and apparently encountered the hero himself.

**Independent practitioners.** Independent experts who went by a variety of titles provided divination as well; *ornithomanteis* (interpreters of birds' behavior), *oneiromanteis* (dream interpreters), and *teratoskopoi* (interpreters of portents) were among them. The word *mantis,* the most general term of all, might be applied to any of these and many other types. Neither the titles nor the methods of divination that they represented were mutually exclusive, and many practitioners used more than one technique as the situation demanded. *Manteis* might provide other services as well, such as purification and initiation into private mystery cults. Although myths that made *manteis* such as Melampus and Amphiaraus members of prominent royal families may reflect the status of *manteis* during some early period of Greek history, by the classical age *manteis* were marginalized members of society. For important matters it was preferable, when possible, to consult one of the institutional oracles. *Chrêsmologoi* (interpreters of oracles) not only interpreted information delivered by institutional oracles, as mentioned in the story of Themistocles, but also oracles that had been collected together and were believed to be very old, such as those of Bacis and the Sibyls. "Belly-talkers" (*engastrimuthoi*) had gods or demons in their stomachs that prophesied (see Plato, *Sophist* 252c, and Plutarch, *On the Obsolescence of Oracles* 9, 414e).

In later antiquity there were other divinatory techniques that private practitioners might employ. It is likely that many of these were available earlier but simply do not show up in the more meager sources of that time; examples are scrying (gazing at water or some other reflective surface), lychnomancy (gazing at a flame), and "direct vision"—that is, a personal encounter with a god. The later sources make it clear that the practitioners often combined and adapted divinatory procedures that we would consider separate from one another. Thus, a practitioner might call a spirit into a child to prophesy at the same time as he asked the child to scry. In short, divination was a collection of practices open to improvisation, even if modern scholars (and already some ancient intellectuals such as Cicero) have attempted to categorize its varieties.

**Everyday divination.** Divinatory methods were available to ordinary people as well. Typically, these involved a person interpreting some spontaneous occurrence that seemed significant. In the *Odyssey* (17.541), Telemachus sneezes unexpectedly, and his mother, Penelope, interprets this to mean that she will soon be rid of her troublesome suitors. Dreams were viewed as having hidden meanings (but see *Odyssey* 19.562–567, where Penelope dismisses attempts to find hidden meanings in her dreams). Although one could call in professional help for especially strange ones, the average person usually could manage without such help.

Intellectuals became fascinated with dreams: Aristotle (384–322 BCE) wrote a short treatise, *On Divination in Sleep,* in which he denied that dreams were predictive, but the Stoics went on to explore in depth the "scientific" reasons that dreams might be so. In the second century CE, Aelius Aristides kept a "dream diary" that described his nightly visions and proposed interpretations for them. Artemidorus's dream book, also from the second century, includes the dreams of people whom he interviewed, with notations as to what subsequently happened—an early effort at systematizing and testing dream interpretation. He also attempted to catalogue and categorize symbols that might appear in dreams, somewhat in the way that Sigmund Freud later would (and indeed, Freud, in his study of dreams, sometimes quotes Artemidorus). At the shrine of the hero Amphiaraus, people "incubated" (slept) in a special building and waited for the hero to advise them in dreams. Priests might help the dreamers interpret the dreams.

There are many more divinatory methods about which only a little is mentioned in the sources, making it impossible to say how common or respected they were. Aristophanes (c. 450–c. 388 BCE) shows us a woman asking a statue of Hekate outside her house whether she should go out that day (*Lysistrata* 63). At dice oracles, which were set up in marketplaces of Greek Asia Minor during the Roman Imperial period, merchants apparently took the initiative, when they pleased, of rolling the dice and then looking up the significance of the roll on a chart engraved on the base of a statue of Hermes (the god of merchants). There were also a few people who were what today would be called "clairvoyant"—that is, they could "see" what was happening in distant places (Philostratus, *Life of Apollonius* 8.26; Eunapius, *Lives of the Sophists* 468).

Sometimes the conversation of other people (especially children), when overheard by someone who needed advice, was interpreted as a divine message. The story of the conversion of Saint Augustine (354–430 CE) to Christianity plays on this practice: while sitting in his garden he heard a child on the other side of the wall sing out "pick it up and read it," which Augustine took to refer to the Bible that lay on a table next to him; later, after he had converted, Augustine decided that it must have been an angel rather than a child (*Confessions* 8.12.29).

**ROME.** Much of what was said about Greek methods of divination is also true for Rome; in fact, in many cases, Greek sources explicitly discuss Roman participation as well. The Romans, for example, frequently visited the institutionalized oracles that the Greeks had established, such as Delphi, as well as a few of their own, such as the lot oracle of the Roman goddess Fortuna at Praeneste. But Roman divination differed from that of the Greeks in two important ways. First, the state exerted far greater control over the methods that were used for public matters—and eventually tried to exert control over private divination as well. Second, although Greek intellectuals already had mocked and challenged divinatory procedures, Roman writers provide a much richer picture of debates that swirled around the topic. It must also be noted that the Romans at least believed (and were probably to some extent correct in believing) that their methods of divination had been inherited from the Etruscans, who were viewed as especially sagacious in such matters.

**Civic divination.** Roman civic divination can be divided into three main types, organized according to whether the information conveyed was sought or unsought, and to the circumstances that surrounded each individual divinatory incident.

Taking the *auspices* was an act initiated by people seeking a sign from the gods to ensure that an undertaking would be successful—that is, that the gods approved of it or were at least open-minded about it. A famous form of this type of divination was feeding sacred chickens and watching whether they consumed the food. Obviously, this was open to manipulation—a starving chicken will eventually eat. Another form required defining a *templum,* that is, designating a rectangular section of the sky that was then divided into left, right, front, and back subsections. One then watched for signs to appear within the *templum*'s subsections (e.g., lightning, particular birds such as [Jupiter's] eagle) and drew meaning from these signs. Such *auspices* were interpreted by experts known as *augures;* until they gave the go-ahead, no public business (such as elections, Senate meetings, or initiation of new priests) could be conducted. Their role was strictly interpretative, however; the actual taking of the *auspices* was carried out by a magistrate. The *augures* also determined whether ritual faults had been committed during the taking of *auspices*—if so, the act had to be repeated correctly.

*Prodigies* or *portents* were unbidden omens sent by the gods to warn humans of imminent disaster. These might take any of myriad forms: the birth of a two-headed calf or a hermaphrodite, sudden strokes of lightning, and eclipses are examples. Before a prodigy was studied, the Senate had to decide that it really was a prodigy; if so, either of two types of experts were called in: *haruspices* or *pontifices.* (*Haruspices* were from Etruria, reflecting the Roman belief that the Etruscans were masters of many religious practices, especially divinatory ones.) The *haruspices* and *pontifices* gave advice about how to avert the disaster that the prodigy had portended. Although this implicitly included interpreting the prodigy, emphasis was always on aversion rather than explanation; in this sense, Roman divination was an eminently practical rather than a theoretical art. We also hear of portents in Greece, and of experts (*manteis,* for example) sometimes being called in to interpret them, but Greek cities had no similarly complex, official system in place for dealing with them.

Entrail reading (also called extispicy or *haruspinica*) is a form of divination found throughout the Mediterranean. (Typically, the liver and other internal organs of every sacrificial animal were "read" to determine whether the gods were pleased with the sacrifice, and if the sacrifice occurred at the outset of an important endeavor, the gods' pleasure or displeasure was construed as sending a message about the endeavor itself.) In Rome, extispicy was especially associated with military matters. Before battle, the *haruspices* looked at the entrails of the sacrificial animal and determined, from the pattern of bumps and other characteristics upon them, whether the gods were pleased. If they were not, that did not necessarily mean that the endeavor had to be abandoned; the sacrifice might be repeated numerous times until the entrails signified that it was all right to go ahead.

None of the three methods just described foretells the future, strictly speaking; at most they indicate what might happen if proper actions are not taken to avert crisis, or what might happen if the gods' advice (e.g., not to go into battle) were ignored. Roman divination, even more than Greek, was an ongoing consultation with the gods in which humans attempted to discover how they must modify their behavior to maintain the *pax deorum* (peace with the gods) that lay at the center of Roman religion.

A final form of official Roman divination that should be mentioned involved the Sibylline Books, collections of oracular verses in Greek dactylic hexameter, supposedly purchased from the Cumaean Sibyl (one of several sibyls or prophetesses inspired by Apollo) during an early period of

Roman history; the collection was occasionally supplemented as time went on and was completely rebuilt after the original books were lost in a fire in 83 BCE. The collection was under the care of a priestly group called the *quindecemviri sacris faciundis* (fifteen men concerned with sacred actions), but only the Senate could decide when the collection would be consulted for advice. In later antiquity, Christians and Jews read their own meanings into these oracles, finding within them, for instance, predictions of Christ's coming.

**State control of divination.** Of course, Romans needed advice concerning private as well as public matters, and by and large the same methods were available to them as to the Greeks: everything in the world potentially carried meaning, if properly observed and interpreted. Knowledge is power, however, and periodically, particularly during the Imperial period, certain forms of divination were either condemned or kept under strict governmental control. The most important of these was astrology. In the second century BCE, catarchic astrology (the reading of star signs at the outset of an endeavor) was introduced into Rome (Pliny, *Natural History* 35.199), and by 139 BCE the Senate had already passed a law expelling all astrologers (Valerius Maximus 1.3.3). The purge was constantly repeated; the first century CE alone saw eleven new attempts to expel astrologers. Other forms of divination came under fire, as well; the emperor Augustus had more than two thousand oracular books burned to prevent unauthorized access to them. In general, these purges fell into line with other attempts by Roman rulers to control religion and thereby access to the divine—purges of Jews, of magicians, of members of mystery cults in honor of Dionysos, and, of course, of Christians.

**Response to divination.** As mentioned above, Aristotle already had formally critiqued dream divination in the fourth century BCE, and many other Greeks had challenged particular operators as being dishonest or inept. But there is more evidence for intellectual engagement with the question of how (or whether) divination worked in sources from the Roman period, perhaps because people of this time were more interested in the topic or perhaps because the sheer luck of survival has left more.

Cicero's treatise, *Concerning Divination,* is an articulate investigation of arguments for and against divination that takes the form of a dialogue between Cicero and his brother, Quintus. The latter represents those who believe divination works, particularly the Stoics; Cicero himself presents philosophical arguments against it, particularly those of the Platonists and Cynics. No resolution is reached, but in the course of the discussion Cicero not only offers a lengthy résumé of divinatory methods, but also elaborates on a division of divinatory methods that had first been proposed by the Stoics and that still holds considerable sway: that between natural divination (e.g., dreams, inspired prophecy such as that of the Delphi Pythia or the Sibyls) and artificial divination, which required special training or tools (e.g., reading bird flights, astrology, sortition). Another important topic that Cicero takes up from the Stoics is cosmic *sympatheia,* the idea that everything in the cosmos is connected to other things; thus, movements or changes in the heavenly world should be signaled by changes in the world below. Once one knew how to read and interpret the system, these changes could provide information that was not otherwise available. *Sympatheia* continued to be debated by philosophers throughout antiquity and into the Middle Ages.

**DJAN'KAWU.** The name Djan'kawu (also spelled as Djang'kawu or Djanggawul) refers to ancestral beings described in the mythology of the Dhuwa moiety, or descent group, of the Yolngu people, who live in northeast Arnhem Land in the Northern Territory of Australia. The Yolngu people divide themselves into two moieties called Dhuwa and Yirritja. People inherit their moiety identity from their father and paternal grandfather, and are required to marry someone from the other moiety. Land and water areas, totemic ancestors and ceremonies, natural species, and other phenomena are all assigned to one or the other moiety. Djan'kawu traditions are found in many patrilineal groups of the Dhuwa moiety, especially coastal groups.

The ancestral beings called Djan'kawu comprise an elder and younger sister in some groups' stories while others add a brother. Their names also vary from group to group. Dhuwa moiety myths describe the journey of the Djan'kawu "following the sun" from Burralku, an island across the sea to the east, to the eastern coast of northeast Arnhem Land, then along the coast and islands to the west towards the sunset. The Djan'kawu are said to have traveled on foot and by canoe or bark raft, each carrying two long sticks called Garninyirdi, one in each hand. The Garninyirdi were used as walking sticks on land and as paddles for the canoe.

The Djan'kawu also carried twined pandanus baskets, or dilly bags, decorated with the orange feathers of the red-collared lorikeet, and containing many strings of lorikeet feathers as well as *rangga,* which are sacred objects made of wood and other materials. The sisters had with them conical *ngarnmarra* mats of the kind that Dhuwa women use as aprons, bassinets, and mosquito nets, and which served as fishing nets in the myths and songs.

The Dhuwa stories relate how the Djan'kawu saw and named many fish, birds, reptiles, and animals on their journey. They gave birth to many children in the country of each Dhuwa moiety group, and left the powers of continuing reproduction in the water holes and springs they made with their sticks. The springs bubbled up on the beaches or in the saline mud of the mangroves, the fresh water mixing with salt water at high tide. The Djan'kawu placed sacred objects in the waters of each group and reserved some water holes for older men.

As in the doctrines of Aboriginal people from other regions of Australia, the Djan'kawu left traces of their journey, activities, and physical presence in the land and waters. In Yolngu terminology, the traces of the ancestors and the songs and other gifts that they left behind are their footprints, or *luku,* the foundation (*rom*) of ancestral law (*mardayin*). A group may identify a specific locale in their country as the place where the ancestors pulled their canoe up to the mangroves. They planted one of their sticks and it became a tree. They heard men chanting from a ceremony ground in the forest. A certain causeway of shell was their path. The Djan'kawu endowed each group with the myths, songs, dances, designs (painted or made in the sand), and sacred objects that describe and "follow" their journey, actions, and presence.

**DJAN'KAWU SONGS.** The songs of the Djan'kawu constitute a distinctive genre in the repertoire of Dhuwa moiety groups, and are called *birlma,* or clap stick songs. Male singers use heavy ironwood clap sticks to create a slow steady rhythm unaccompanied by a didgeridoo, or Aboriginal drone pipe. The songs have a chant-like sound with a low pitch and shallow melodic profile. They "follow" songs sung by the Djan'kawu themselves, and so are often sung in the first person as if the Djan'kawu themselves were singing. The songs do not have a direct narrative structure but rather evoke images related to the Djan'kawu and places associated with them.

The songs tell of the catfish the Djan'kawu caught with their *ngarnmarra* mats, of shellfish in the mangrove swamps, of flying foxes and black cockatoos (fruit bats) in the trees, of water monitor lizards in the creeks and water holes, and of monsoon rains and floods. A particularly interesting feature of the Djan'kawu songs is the way they manipulate time and space. On one level they represent the long journey of many days, during which the Djan'kawu gave birth to people from all the Dhuwa moiety groups and gave them their ancestral law. On another level the songs trace the passage of the sun through a single day, for singers often begin the song series early in the morning (for a purification ceremony, for example) and sing through the day until sunset, when the ceremony ends. On one level the songs represent the ancestral beings' journey from Burralku in the east through the lands and waters of many groups, to those belonging to people far to the west towards the sunset. On another level the songs follow the Djan'kawu around a particular group's country, through the sea to the mangroves, up to the saline mud flats and across to the swamps and lagoons, into the forest and patches of jungle. The song cycles may be construed as following the seasons of the year, ending with the monsoon rains. They also seem to recapitulate the human life cycle, beginning with conception (represented by the sisters catching fish with their conical mats and putting them in their dilly bags), and ending with the Djan'kawu, exhausted from their labors, walking or paddling toward the setting sun.

**DJAN'KAWU DESIGNS.** Designs associated with the Djan'kawu belong to the Dhuwa groups who possess the myths. They are painted on the body for ceremonies and on sacred objects; drawn with ridges of sand or soil on the earth to mark ceremony grounds; or reproduced on bark paintings or prints for sale. The Djan'kawu designs have some features in common. One is the use of a circular form that radiates vertical and horizontal bands with diagonal divisions between the bands. This design may represent the sun, a waterhole made by the Djan'kawu, or other aspects of the Djan'kawu stories. It may be drawn as two circles joined by a band, representing springs and channels in the mangroves, or repeated several times to form a grid of circles, bands, and diagonal lines. These multivalent images have many meanings, including symbolic references to a group's country that function as a kind of map, as well as references to the group's sacred objects.

A second design associated with the Djan'kawu consists of horizontal stripes of white, red, and yellow ochre painted on the body for ceremonies or on a ritual digging stick or hollow-log coffin. This polysemous design has a rich array of meanings ranging from the red-collared lorikeet to the bands on a mangrove tree left by the tides. The adult males of the moiety keep the design's other meanings secret.

**DJAN'KAWU DANCES AND CEREMONIES.** Adults and children follow the ancestors' journey in a sacred dance accompanied by male singers. The dancers move in a line or as a pair through the camp, each dancer provided with a pair of long sticks, and painted in horizontal stripes of red and yellow ochre and white clay. From time to time the dancers form a circle and spear the ground with their sticks, working them back and forth, representing the Djan'kawu making waterholes and giving birth to each group along their journey. Finally they surround the deceased (in a funeral) or the initiate (in a circumcision), or the sacred Riyawarra tree (in a Nga:rra ceremony), where the leader calls out the ancestral names of the Dhuwa moiety groups whose countries lie along the ancestral track.

The Nga:rra revelatory ceremony is an important ritual in which young men are gradually admitted to participate in secret dances and see the sacred objects. The young women learn the dances at the public ground. Each day during the ceremony, the men dance out from the men's ground to the public dance ground where the women represent the Djan'kawu sisters at the Riyawarra tree. The men then chase the women away and perform the dances of Salmon, Catfish, and other fish. The leader calls out the ancestral names of a Dhuwa moiety group, which changes on each day of the ceremony, and all the men and women participate in the Kingfisher dance.

These daily dances represent central episodes in the mythology of each Dhuwa group. According to one group's myths, the ancestral sisters leave their dilly bags full of sacred objects hanging in a tree by the swamp while they go to the mangroves to collect crabs and shellfish. The men then sneak out from a secret ceremony ground, steal the dilly bags, and take them back to the ceremony ground, where the sisters are not admitted because they are women. From that moment on, the teller of the myth remarks, the men possessed the ancestral sacred objects and the women became the "workers" at the hearth. Each group's story, however, varies in its details: in one version a fire destroyed the dilly bags, in another the men attempted to have intercourse with the women but failed, in still another the sisters were joined by a brother. But the dances are sufficiently abstract to accommodate each group's version of the story—a necessary characteristic because many Dhuwa moiety groups participate jointly with their Yirritja moiety relatives.

On the final day of the Nga:rra ceremony, the men dance out from the secret ground through the camp to the Riyawarra tree. The participants are all painted with stripes and carry the long sticks required to reenact the creative journey of the Djan'kawu. At the tree the women are lying under conical *ngarnmarra* mats. As the men surround the women, working the long sticks back and forth, the women burst out of the mats to represent the birth of children to the moiety groups. Then all participants bathe in the sea, or a lagoon or river nearby, their body paints mixing together in the water.

The Djan'kawu songs, dances, and designs may be used in other ceremonies. The men may paint a Djan'kawu design on the initiate's chest during a circumcision ceremony or on the deceased during a funeral ceremony. The Djan'kawu rituals and designs are also incorporated in purification ceremonies following a death, in which the mourners wash themselves while standing in a sand sculpture representing the springs made by the Djan'kawu.

The Djan'kawu were credited with setting down precedents for such matters as kin relations and customary rights in the countries associated with them. A body of designs and ceremonies are the ancestral inheritance of each group and form part of its ancestral law (*mardayin*). Each patrilineal group is differentiated from others by the particular constellation of sacra associated with its country (or countries), the specific details of its mythology, its particular sacred objects, and the form of its designs. The groups are linked by the common features described above.

The Djan'kawu mythology and associated sacra are but one of a vast array of Yolngu mythological traditions. A second major Dhuwa moiety tradition is that of the Wagilak sisters, whose long journey began in the south. Their story is associated with a cycle of ceremonies in a "desert" style, in which wild cotton is stuck to the body in patterns and ritual songs are accompanied by boomerangs used as clap sticks. Yirritja moiety mythology includes several long journeys as well, such as those of Lany'tjung. Yirritja patrilineal groups, however, recognize many beings, creators, and ancestors, including Shark, Honeybee, Saltwater Crocodile, Long-Necked Turtle, Whale, and Dingo. What distinguishes the Djan'kawu mythology is its association with the Nga:rra ceremony of the Dhuwa moiety.

## DOCETISM.

**DOCETISM.** The term *docetism* is primarily used with reference to ancient Christologies where the reality of Jesus Christ's physical body was denied, or at least various of the normal carnal properties and functions were refused in favor of those more spiritual or ethereal. Christ had only the appearance (Greek, *dokesis*) of a human, and only seemed *(dokein)* to be a man. Such docetists were accused by their opponents of putting forward a phantasm, and obviating the fundamental Christian hope in the resurrection with a birth and death that were not entirely real.

Beliefs in the divine origin and nature of the Christ inevitably put pressure on the full humanity of Jesus from the earliest times. Many found it hard to accept that he would eat and drink in the normal way, let alone perform more gross human functions, suffer the debilitations of old age and disease, or emit bodily fluids. Thus, some texts ascribe special characteristics to his body, such as that he could alter his appearance at will, or, in the *Acts of John,* that his eyes never closed and he left no footprints. A particular issue was his conception and birth, and here one can argue that docetic tendencies have affected mainstream Christian beliefs, where the virgin birth and associated doctrines have had enormous devotional power. Another problem was the reality of his death, and again one can track a variety of strategies that have attempted to circumvent that most human of fates, such as substitution of another on the cross or survival somehow of the experience to awaken in the tomb.

Certainly, the resurrection narratives, with their curious portrayals of Jesus unrecognized by his closest associates—or suddenly disappearing or appearing in their midst, implicate docetism in the basic Christian story, while the notion of "the resurrection body" enables it to coexist with imperatives requiring his full humanity. The disciples fear that they have seen a ghost, and thus he must eat a piece of grilled fish before their eyes (*Lk.* 24:37–43), just as he puts Thomas's hand into his side (*Jn.* 20:27).

Apart from these contentious issues about the canonical gospel narrative itself, it is clear that docetic beliefs received support (whatever the original intention) from phrasing in the early hymn embedded in *Philippians* 2:5–11, which states that Christ Jesus took "the form of a slave, being born in human likeness," as this echoes as a proof-text through the writings of adherents to such views. Conversely, *1 John* 1:1–3 and 4:1–3, and *2 John* 7 evidence anti-docetic emphasis on the flesh that has been touched. Already, by the early second century, Ignatius of Antioch and Polycarp were combating those who denied the fleshly reality of Jesus' birth, life, and death, as well as those who claimed that his suffering was only apparent. Marcion can be taken as indicative of the trajectory of an indigenous Christianity in Asia Minor that now sought divorce from its Jewish and historical origins, and for whom Jesus descended suddenly from the third heaven to Capernaum in the fifteenth year of Tiberius Caesar, fully formed but in appearance only.

Although docetism is frequently associated with Gnosticism—and many variations of such ideas can be found in the Nag Hammadi and similar writings—it is best understood as a collection of widespread tendencies that evidence the imperatives of popular piety, the impress of pagan notions of divinity or archetypal polarities between heaven and earth, and the influence of the glorified Christ already envisioned in the transfiguration and resurrection appearances. The term *docetist* first appears in a letter of Serapion of Antioch as quoted in Eusebius of Caesarea's *History of the Church* (6.12.6) with reference to those who circulated the *Gospel of Peter,* dating from around the mid-second century; but indications of pressure in this direction are evident from virtually the earliest strata of Christian belief that can be tracked historically. There is no evidence for any single sect of "docetists," and (even though Clement of Alexandria ascribes it to Julius Cassianus) no founder or point of origin can be supposed other than in theologically driven histories of heresy. However, docetic Christologies are useful in tracking the heritage of later systems, such as the understanding about the advent of Jesus (that he came "without body") assumed in Manichaeism; the duplication of the docetic Jesus in the Mandaean savior figure Anosh-Uthra; and possibly the Qur'anic teaching at 4:157 about the crucifixion (that Jesus was not killed, but rather a resemblance of him on another). It has even been suggested as a source for the development of the triple-body of the Buddha doctrine in Mahāyāna texts.

Essentially, *docetism* is a term of opprobrium utilized by opponents to highlight the supposed correctness of their own views. Its usage reflects a refusal to accept the worth or impetus driving divergent Christologies, and thus the development of varied Christianities, some of which (such as Marcionism or Manichaeism) placed a premium on a noncorporeal savior free from limitations of time or matter. The term is still found in contemporary discussions of Christology to indicate particular emphases, but it remains rooted in theological or value-laden assumptions.

### BIBLIOGRAPHY

Standard accounts of early Christian doctrine provide references to primary sources. See, for example, Alois Grillmeier, *Christ in Christian Tradition*, 2d rev. ed., vol. 1, *From the Apostolic Age to Chalcedon (451),* translated by John Bowden (London, 1975); J. N. D. Kelly, *Early Christian Doctrines,* 5th rev. ed. (London, 1977); and Jaroslav Pelikan, *The Christian Tradition: A History of the Development of Doctrine,* vol. 1, *The Emergence of the Catholic Tradition, 100–600 A.D.* (Chicago, 1971).

## DOCTRINE.

**DOCTRINE.** Most dictionaries record two related senses of the term *doctrine:* according to the first, it is the affirmation of a truth; according to the second, it is a teaching. The two are not mutually exclusive: to affirm something as true is a way of teaching it, and that which is taught is usually held to be true.

The denotation of the term is thus reasonably clear. However, the connotations (i.e., the feelings and attitudes associated with it), differ according to where the emphasis is placed in a given instance. As the statement of a truth, doctrine has a philosophical cast; as a teaching, it suggests something more practical. The first connotation prevails among the secular sciences. The doctrine of evolution, for example, comprises a body of knowledge that is appropriately characterized as a theory, but not a teaching. Philosophical discourse reveals more variation: according to the context, "the doctrine of the equality of man" may be taken either as a precise axiom belonging to a political theory, or as a practical maxim designed to guide political action.

Religious doctrines tend to be characterized by their practical intent. Even when a doctrine appears in the shape of an abstruse theoretical disquisition, it is usually the case that any speculative interest is strictly subordinated to the spiritual, which is the dominant concern. For example, the orientation of Judaism is toward practical obedience to the law of God, not speculative knowledge of his being. The doctrinal element in Judaism thus reveals an intimate connection with the notion of teaching. The most important figure is the rabbi ("teacher"); the most important word is *torah* ("instruction"), which refers to God's revelation in the Hebrew scriptures and, more specifically, to his law as presented in the five books of the Pentateuch. In a broader sense, *torah* encompasses the oral as well as the written law, together with the continuing tradition of rabbinical interpretations. The Talmud ("study") is an authoritative compilation of expositions of the law and applications of it to particular circumstances. It has been observed that the phrase "to read the Talmud," while grammatically correct, is a violation of the text's religious character, since the only appropriate response to the Talmud is to study it.

In Islam, the *sharīʿah*, or study of God's law, is of paramount importance. Here the doctrinal element is subordinated, of course, to judgments about moral and ritual behavior. The term *kalām*, however, indicates a kind of thought very close to that indicated by the English terms *doctrine* and *theology*. *Kalām* literally means "word" or "speech," and the Qurʾān is deemed *kalām Allāh*, the word of God. In the course of time, *kalām* has come to mean both a single truth and a system of truth (as is the case with the English term *doctrine*), and has played an important role in the history of the Islamic tradition.

Christianity uses the terms *doctrine* and *dogma* to designate the teachings through which salvation is offered to all those who hear and respond. An early example of such a doctrinal affirmation is Paul's claim that Christians have been "reconciled to God by the death of his Son" and that "much more, being reconciled, [they are] saved by his life" (*Rom.* 5:10).

The development of Christian doctrine is closely allied with the task of instructing catechumens who are being prepared to receive the sacrament or rite of baptism. As late as the third century, Augustine, in *De magistro* (Concerning the teacher), reveals a major concern with doctrine in this sense. His specific tractate on Christian doctrine, *De doctrina christiana*, is not an exposition of the content of Christian doctrine but a discussion of the most effective way to teach it. Indeed, the immense Augustinian corpus contains no speculative overview of Christian knowledge; his most memorable works in the field of doctrine are devoted to specific themes that troubled the faith of Christians in his time: free will (*De libero arbitrio*); divine providence *(City of God);* the Trinity (*De Trinitate*). Even the great disquisitions on doctrine by Thomas Aquinas (the *Summa theologiae* and *Summa contra gentiles*) are in the form of questions and answers that reveal an obvious affinity for the method of catechetical instruction. Luther's most important contribution to the area of doctrine is his *Longer Catechism* and *Short Catechism;* Calvin's *Institutes of the Christian Religion* is an expanded version of a small handbook he originally produced to assist Christians in understanding the teachings presented in Luther's catechisms.

The examples of such major Catholic and Protestant figures are evidence of the dominant focus of Christian doctrine on spiritual instruction. The teaching focus of doctrine has both a constructive and defensive thrust. It is, in part, an attempt to refute heresies within the church and false teachings without, as many historians of doctrine have pointed out. This polemical aspect offers a partial explanation for the greater emphasis on certain themes and the neglect of others at a particular time and place. Still, the refutation of error is not an end in itself, but a means through which to enhance the efficacy of the soteriological aspect of the teaching, which remains the paramount concern.

**A CATEGORY OF COMPARATIVE RELIGION.** Doctrine is not restricted to Christianity. There are examples in each of the world's major religious traditions of affirmations that possess the same kind of authority and intent: in Judaism, the Shemaʿ ("Hear!") with its admonition "Hear, O Israel! The Lord is our God, the Lord is one"; in Islam, the testimony of the Shahādah that "there is no god but God, and Muḥammad is his prophet." Examples of doctrine central to other religions include the doctrine of the permanent self, or *ātman*, in Hinduism; the doctrine of nonself, or *anātman* (Pali, *anatta*), in Buddhism; the Confucian doctrine of "humanity" or *jen;* the Daoist doctrine of the efficacy of nonaction, or *wuwei;* and the Shinto belief in *kami*, the presence of sacred power in things.

It is even more significant that each religion makes use of words that, though not exact synonyms for the terms *doctrine* or *teaching*, are very close to them in meaning: *torah* ("instruction") in Judaism and *kalām* ("doctrine, theology") in Islam; *darśana* ("school, viewpoint") in Hinduism; dharma ("teaching") in Buddhism; *chiao* ("teaching") in Confucianism and Daoism; *Butsudo* ("way of the Buddha") in Japanese Buddhism; *kami no michi* ("way of the Japanese divinities") in Shintō.

The prevalence of a doctrinal factor in all of the world's major religions suggests that it ought to be treated as a general category in the academic study of religion. This has, at times, not been recognized with sufficient clarity because of a romantic bias that exalts feeling over thought and deems "doctrine" an alien intrusion into a religious form of existence that is essentially nonrational in character.

However, the notion of a dichotomy between thought and feeling in the religious life is not tenable. Feelings, perceptions, and emotions require form and structure to become the content of human experience. By the same token, mysticism and rationalism reveal an intimate affinity, since most mystics become known to us through the discursive accounts of their ineffable experiences that they produce. Even the symbol systems of nonliterate societies have a doctrinal or rational aspect that gives religious shape to communal life.

Doctrine, then, is a category in the comparative study of religion that belongs with ritual, sacrament, mystical experience, and other factors whose importance has been recognized for some time. Like them, doctrine is designed to focus the mind, emotions, and will on the religious goal that the community has accepted as its ultimate concern.

**Buddhism.** Buddhism provides a striking example of the role played by doctrine in the realization of a religious goal. According to the Buddhist dharma, or teaching, the existence of man is determined by limitless craving (*tṛṣṇā*) that produces anguish (*duḥkha*) and a fundamental distortion of one's thoughts and feelings about the world. The teaching offers release from the tyranny of those disordered perceptions and a path of deliverance from the endless cycle of birth and rebirth (*saṃsāra*) to which man's obsessive desires have bound him. The teaching consists of training in the control of thoughts and feelings, conscientious ethical behavior, and an intensive discipline of inner concentration and meditation. The doctrinal component supports the posture of mind and heart that is to be assumed throughout the various stages of the training.

However, in his present state of illusion, the seeker is never able to discern the true difference between the theoretical and the practical. He does not know what is a mere palliative and what truly heals. In this state he perceives Buddhist teachings as paradoxical: metaphysical reticence is advised in meditations that seem endlessly speculative; simplicity is advocated in arcane terms. These paradoxes are themselves symptoms of the ignorance of the seeker, who does not even know what constitutes the simplicity and healing that he seeks. The doctrine or teaching leads him along a path that, by both wakening and frustrating his speculative curiosity, brings about a transformation of thought and feeling that is the prerequisite for the authentic liberation that is his goal.

The doctrine of *nirvāṇa* (Pali, *nibbāna*) is a striking case in point. The term literally means "blowing out," as when a candle is extinguished. It is used to indicate the final end of man. But what is it? Four possibilities have been suggested: (1) it is absolute nonexistence; (2) it is a positive state of bliss and tranquillity; (3) it is a state that can only be indicated in terms of what it is not; and (4) it is something ineffable, incapable of being rendered in either positive or negative terms. Depending upon the Buddhist text or school that is consulted, each of these options receives some sort of support. On what basis is one to choose among them?

The scholar-observer who, as a speculative venture, examines the doctrine from without, will probably make a choice based on historical grounds (which option is closest to the original teachings of the historical Buddha?) or on systematic considerations (which is most consistent with Buddhist thought as a totality?). On the other hand, a Buddhist will judge them according to their efficacy as religious vehicles. From this perspective, it may appear that each option makes a contribution according to changes in circumstance as the Buddhist seeker proceeds along his religious path.

The notion of *nirvāṇa* as extinction is as austere and forbidding to the average member of a Buddhist society as it is to a nonbeliever. Still, it may be effective as a means to separate the seeker from some of the distorted perceptions of "existence" that are one cause of his anguish. In different circumstances, the prospect of an end that includes bliss and tranquillity may be more therapeutic; at other times, the way of negations, or an even more intricate path of "spiritual agnosticism," eschewing both negations and affirmations, may be efficacious. While man remains in a state of bondage to his anguish and illusions, a definitive description of his final end is of little value. The authority of the doctrine of *nirvāṇa* lies rather in the therapeutic role it plays in the attainment of a goal that will only be truly known in the process of its concrete realization. When this takes place, it will become apparent that the "goal" was in the seeker's possession all the time. The doctrine has led him on an arduous journey to a destination that, once reached, coincides with the place of departure that he never left.

**THEOLOGY AND DOCTRINAL FORM.** At the present time, doctrine is frequently associated with systematic theology. For over a thousand years of church history, theology had diverse meanings, some of which were remote from those of Christian doctrine. Plato used the word *theology* to describe the stories about the gods told by poets; Aristotle used it to describe his doctrine of immutable substance. Augustine distinguished three senses: the theology of the poets, a civic theology based on public ceremonies, and a theology of nature. Sometimes the term was used in a narrow sense by Christian thinkers, who restricted it to the doctrine of God.

Muslim theologians such as al-Ghazālī (1058–1111 CE) participated in a golden age of theology devoted to the task of reconciling Greek philosophy with the faith of Islam. During the same period, Maimonides (Mosheh ben Maimon, 1135/8–1204) worked on the reconciliation of Greek thought with Judaism; Thomas Aquinas (1225–1274) undertook a similar task in respect to the Roman Catholic faith. Even more important is the fact that during the twelfth and thirteenth centuries revisions in medieval education were made that, among other things, introduced the notion of doctrinal theology as an academic discipline with a status similar to that of the secular subjects taught in the university curriculum.

Hugh of Saint-Victor (c. 1096–1141) developed an approach to theology that subsumed the two senses of the term *theory* (i.e., both intellectual endeavor and contemplation of God) under the complex notion of "speculation," which had previously been applied, for the most part, to religious meditation. Hugh characterized the method of theology as a kind of thought that is theoretical, both in the rational sense of submission to the norms of logic and in the contemplative sense of religious aspiration and vision. However, the delicate balance that he proposed is the prescription of an ideal and not what most works of systematic theology are, in fact, like. Theologians readily acknowledge that the norms of rational adequacy as a rule take precedence over a devotional focus. They deem it sufficient that theology provides rational support for the spiritual life without functioning as a direct expression of it.

The institutionalization of systematic and doctrinal theology in universities and seminaries has guaranteed for it a place of continuing importance in the history of the church from the time of the Renaissance to the present. However, it is evident that in the course of its long history the church has also made use of other forms (e.g., epistles, catechisms, creeds, tractates, and biblical commentaries) to express the concerns of doctrine. At the present time, there is some evidence that the essay is replacing the systematic tome as the preferred means for doctrinal discussions among both Catholic and Protestant thinkers.

The fourth book of Augustine's *Christian Doctrine* offers comments about doctrine that are still relevant to the contemporary scene. Augustine suggests that rhetoric is as important as logic in the communication of doctrine, though, like Plato in his attack on the Sophists, he is aware that the eloquence of rhetoric may deceive rather than enlighten. Augustine accepts, however, Aristotle's defense of the notion of a viable rhetoric that deals with the distinction between probative arguments and those based on a misuse of eloquence analogous to a formal logic that distinguishes between valid and invalid syllogisms. Augustine makes use of the rhetorical tradition derived from Aristotle to explore the capacity of Christian doctrine to teach, delight, and persuade. He recommends a subdued style for the task of careful instruction, a moderate style for condemnation and praise, and a grand style, forceful with the emotions and the spirit, for those moments when the need emerges to move the reader to action.

Contemporary experiments in the communication of doctrine through literature and other media are thus not unprecedented; they are, in fact, the continuation of a classical tradition of rhetoric toward which many thinkers, in both religious and secular disciplines, are at present showing a renewed respect.

## BIBLIOGRAPHY

The most up-to-date extended history of doctrine from a Protestant perspective is Jaroslav Pelikan's *The Christian Tradition: A History of the Development of Doctrine*, 4 vols. (Chicago, 1971–1984). The work provides many revaluations of conventional historical judgments and includes an extensive bibliographical apparatus of primary and secondary sources. Nineteenth-century studies like Adolf von Harnack's *History of Dogma*, 7 vols. translated by Neil Buchanan (London, 1895–1900), and Reinhold Seeberg's *Text-Book of the History of Doctrines*, 2 vols. translated by Charles E. Hay (Grand Rapids, Mich., 1952), among others, remain indispensable in spite of inadequacies of interpretation corrected by later historians. Bernhard Lohse's *A Short History of Christian Doctrine: From the First Century to the Present*, translated by F. Ernest Stoeffer (Philadelphia, 1978) is a brief summary that is also a helpful essay of interpretation; George A. Lindbeck's *The Nature of Doctrine: Religion and Theology in a Postliberal Age* (Philadelphia, 1984) offers an approach to doctrine that makes use of the categories developed by philosophers of language. The *Dictionnaire de theologie catholique*, 15 vols., edited by Jean-Michel-Alfred Vacant et al. (Paris, 1903–1950), is important for an understanding of doctrine from a Catholic perspective. Also useful is the *Encyclopedia of Theology: The Concise Sacramentum Mundi,* edited by Karl Rahner (New York, 1975). "Dogma," an essay by Rahner in this encyclopedia, together with his "Considerations on the Development of Dogma," in his *Theological Investigations*, translated by Kevin Smyth, vol. 4 (Baltimore, 1966), pp. 3–35, offer a sophisticated statement of the standard approach to Catholic doctrine and dogma. An informative account of the emergence of doctrinal theology as an academic discipline is G. R. Evans's *Old Arts and New Technology: The Beginnings of Theology as an Academic Discipline* (Oxford, 1980).

The following works offer useful discussions of rhetorical and literary genres other than systematic theology appropriate for contemporary statements of doctrine: Giles B. Gunn, *The Interpretation of Otherness: Literature, Religion, and the American Imagination* (Oxford, 1979); David Tracy, *The Analogical Imagination: Christian Theology and the Culture of Pluralism* (New York, 1981); Nathan A. Scott, Jr., ed., *The New Orpheus: Essays toward a Christian Poetic* (New York, 1964).

The following are useful studies of the role of doctrine in religions other than Christianity. For Judaism: Judah Goldin, ed. *The Living Talmud* (New York, 1957); Jacob Neusner, *The Way of Torah: An Introduction to Judaism* (Belmont, Calif., 1970); Leo Trepp, *Judaism: Development and Life* (Belmont, Calif., 1982). For Islam: Charles J. Adams, "The Islamic Religious Tradition," in *Religion and Man*, edited by W. Richard Comstock (New York, 1971), pp. 553–617; Fazlur Rahman, *Islam*, 2d ed. (Chicago, 1979). For the religions of India: Robert Baird, "Indian Religious Traditions," in *Religion and Man* (cited above), pp. 115–250; Ninian Smart, *Doctrine and Argument in Indian Philosophy* (London, 1964). For Buddhism: Edward Conze, *Buddhism: Its Essence and Devel-*

*opment* (Oxford, 1951); Melford E. Spiro, *Buddhism and Society: A Great Tradition and Its Burmese Vicissitudes*, 2d ed., exp. (Berkeley, 1982). For the religions of China: Tu Weiming, *Humanity and Self-Cultivation: Essays in Confucian Thought* (Berkeley, 1978); C. K. Yang, *Religion in Chinese Society* (Berkeley, 1961). For the religions of Japan: Alfred Bloom, "Far Eastern Religious Traditions," in *Religion and Man* (cited above), pp. 254–396; H. Byron Earhart, *Japanese Religion: Unity and Diversity*, 3d rev. ed. (Belmont, Calif., 1982). For the religions of preliterate societies: W. Richard Comstock, *The Study of Religion and Primitive Religions* (New York, 1972); Mary Douglas, *Natural Symbols: Explorations in Cosmology* (New York, 1970); Clifford Geertz, "Religion as a Cultural System," in *Anthropological Approaches to the Study of Religion*, edited by Michael Banton (New York, 1966), pp. 1–46.

W. RICHARD COMSTOCK (1987)

**DŌGEN** (1200–1253), more fully, Eihei Dōgen (or Buppō Dōgen, but never Dōgen Kigen or Kigen Dōgen as has been mistakenly suggested), was the founding abbot of the Eiheiji Zen monastery. Since the late nineteenth century, he has been officially designated, along with Keizan Jōkin (1264–1325), as one of the two founding patriarchs of the Japanese Sōtō Zen school, and, most recently, he has been widely celebrated as one of Japan's most creative and original religious thinkers, whose writings and novel use of language seem to anticipate many modern philosophical concerns.

Dōgen lived at a time of political and religious unrest. Shortly before his birth, the Buddhist monastic centers in the ancient capital of Nara had been destroyed by warfare in 1185, Japan's first military government (shogunate) had been established in Kamakura in 1180, and the royal court in Kyoto in 1194 had banned the establishment of independent Zen temples, which were just beginning to appear. During the year of Dōgen's birth (1200), however, the fortunes of the new Zen movement changed when the shogunate began to support the pioneer Japanese Zen teacher Eisai (1141–1215).

Dōgen entered monastic life as a youth. From 1212 to 1217 he studied the mixed exoteric-esoteric (*kenmitsu*) Buddhism of the Japanese Tendai tradition on Mount Hiei. From 1217 to 1225 he studied Zen Buddhism under Myōzen (1184–1225), who was Eisai's successor as abbot of Kenninji temple in Kyoto. In 1223 Dōgen accompanied his teacher Myōzen on a pilgrimage to China. In 1225, after Myōzen died, Dōgen became the disciple of the Chinese monk Rujing (1163–1227), who was then abbot of the major state monastery on Mount Tiantong (i.e., Mount Taibei in Zhejiang province). Two years later, in 1227, Dōgen inherited Rujing's Caodong Chan (Japanese, Sōtō Zen) lineage and returned to Japan.

Once back in Japan, Dōgen initially resided at Kenninji. In 1230 he established a new Zen community (officially designated the Kōshōji monastery in 1236) in Fukakusa outside of Kyoto, where in 1241 he was joined by a group of Zen practitioners known as the Darumashū (the lineage of Bodhidharma). In 1243 Dōgen secured the patronage of a powerful warrior family, the Hatano, and relocated his Zen community to the Hatano estates in Echizen province where the following year he founded the Daibutsuji Monastery (renamed Eiheiji in 1246). In 1253 Dōgen became deathly ill and returned to Kyoto for medical treatment, which proved ineffective. Today, Eiheiji is one of the two headquarter temples, along with Sōjiji, of the Sōtō Zen school, one of Japan's largest religious denominations. In 1878 the Meiji emperor (Mutsuhito, 1852–1912) awarded Dōgen with the posthumous name Jōyō Daishi.

Dōgen was an extremely prolific author who wrote essays, sermons, and poetry, both in literary Chinese and in Japanese. His early short compositions—such as *Bendōwa* (A talk on practicing Buddhism, 1231), *Fukan zazen gi* (Universal exhortation to practice sitting Zen, 1233), and the Chinese-language *Shōbōgenzō* (True dharma eye collection, 1235, a compilation of 301 *kōan*, or topics for Zen study)—comprise a concise introduction to key Zen doctrines and methods of practicing Zen meditation.

In midcareer, and especially after being joined by members of the Darumashū, Dōgen wrote a series of books in Japanese also collectively titled *Shōbōgenzō.* While this Japanese-language *Shōbōgenzō* apparently never reached the final form intended by Dōgen, he nonetheless completed at least three compilations: an initial draft in sixty books, a revised draft in seventy-five books, and a new draft in twelve books. After Dōgen's death, books from these three compilations were mixed together (sometimes with unrelated compositions) to produce many other separate editions, each independent from the others. In 1796, monks at Eiheiji began work on publishing an officially sanctioned "Head Monastery" (*honzan*) edition of the *Shōbōgenzō.* It was revised in 1906 to include ninety-five books, arranged in a rough chronological order that bares no relationship to the order of books in any of the three compilations by Dōgen. Each individual book in the *Shōbōgenzō* typically is organized around a series of quotations from Chinese *kōan* or Chinese translations of the Buddhist scriptures. Dōgen then comments in Japanese on each of these passages to show how they should be read and understood as expressions of religious truth. Together the books in the *Shōbōgenzō* comment on approximately 512 *kōan*, thereby providing an encyclopedic overview of Zen (and general Buddhist) teachings.

In later life, Dōgen seems to have concentrated his literary efforts on composing works in Chinese. After his death, his disciples compiled these Chinese-language compositions into the *Eihei kōroku* (Extensive recorded sayings of Eihei Dōgen, ten fascicles), which contains sermons, lectures, and verse organized into sections from Kōshōji, Daibutsuji, and Eiheiji. It contains the only writings by Dōgen that can be positively dated to his mature years between 1247 and 1252. In all, it includes Dōgen's comments on approximately 298 *kōan.* Finally, in 1667, monks at Eiheiji compiled a collection of Dōgen's independent essays on monastic procedures, which they published as *Eihei shingi* (Eihei Dōgen's monastic regulations). The proper practice of Buddhist monasticism was of major concern to Dōgen, and many of the books in the *Shōbōgenzō* also address this topic.

Dōgen died in almost complete obscurity, known only to his immediate disciples. The Sōtō Zen community he founded, however, prospered. At first it expanded slowly but steadily, and then it grew rapidly under the leadership of monks affiliated with the Sōjiji monastery, which had been founded by a fourth-generation dharma heir of Dōgen named Keizan Jōkin. During this period of expansion, manuscript copies of Dōgen's prodigious oeuvre were stored in the head monasteries of each major temple network, where they served more as symbols of religious authority and legitimacy than as sources for studying Zen Buddhism.

This situation changed during the Tokugawa period (1600–1868) as a result of government policies that simultaneously promoted Buddhist scholasticism and reorganized many Sōtō temple networks. At that time, reform-minded Sōtō monks, such as Manzan Dōhaku (1636–1714), who sought to challenge temple policies, cited Dōgen's writings to support their positions and began publishing excerpts from his Japanese-language *Shōbōgenzō.* Sōtō authorities reacted by asking the government to ban its publication, which was done from 1722 to 1796. With the subsequent publication of the Head Monastery edition of the *Shōbōgenzō*, however, Dōgen eventually came to be identified with doctrinal orthodoxy for the Sōtō Zen school. Influential Sōtō monks, especially Menzan Zuihō (1683–1769) and Nishiari Bokusan (1822–1910), interpreted Dōgen as advocating a religion of "just sitting" (*shikan taza*), in which the practice of sitting Zen (*zazen*) is itself the complete authentication of awakening (*shushō ichinyo*). Meditation on *kōan* and striving to see nature (*kenshō*; i.e., attain *satori*) are to be rejected. In this way, Dōgen's Zen came to be contrasted to other forms of Zen Buddhism, now usually associated only with Japanese Rinzai or Ōbaku Zen lineages. More recently, some Sōtō scholars have advocated a "Critical Buddhism" (*hihan Bukkyō*), which portrays Dōgen's teachings as standing in opposition to many Buddhist doctrinal norms, such as original awakening (*hongaku*), that are widely accepted in East Asia.

In 1868 the Tokugawa regime was overthrown, and Japan entered a period of rapid transformation into a modern political state, with an industrialized economy fully engaged in the world. In 1906 the Head Monastery edition of the *Shōbōgenzō* was published for the first time in a modern typeset edition readily accessible to a mass audience. It soon came to the attention of Japanese intellectuals who had not been educated in Buddhist doctrines but trained in Western philosophy. Leading scholars and educators, such as Watsuji Tetsurō (1889–1960), Tanabe Hajime (1885–1962), and Akiyama Hanji (1893–1980), discovered in Dōgen an original Japanese philosopher whose ideas and methods of analysis presented innovative responses to ontological, phenomenological, and linguistic issues posed by Western thinkers such as Martin Heidegger (1889–1976), Jean-Paul Sartre (1905–1980), and others. Dōgen's notion of time as discontinuous moments (*uji*), in particular, has attracted much attention. Just as important, but less discussed in Western-language scholarship, is Dōgen's innovative methods of reading Chinese-language texts. In a manner with many parallels to postmodern literary deconstructionism, Dōgen's Japanese-language comments frequently dissect and rearrange individual words or phrases from Chinese-language passages in ways that defy the ordinary rules of grammar to reveal hidden layers of significance. Today Dōgen's importance to philosophy is widely recognized, not just in Japan, but throughout the world.

There have been sporadic attempts to translate Dōgen's writings, especially his Japanese-language *Shōbōgenzō*, into Western languages. None of the results has been wholly satisfactory, however, with paraphrased interpretation frequently substituting for the complex linguistic gymnastics of Dōgen's original prose. Moreover, any translation must confront the thorny problem of how to reconcile the existence of at least three separate versions of Dōgen: the thirteenth-century Zen teacher, the eighteenth- and nineteenth-century Sōtō sectarian patriarch, and the twentieth-century Western (or world) philosopher. Dōgen has become too big to be defined by any one audience.

# DOGMA.

Dogma, in the strictest sense, whether embodied in the sacred scripture of the Old and New Testaments or in tradition, is understood by the Roman Catholic Church to be a truth revealed by God (directly and formally), which is presented by the church for belief, as revealed by God, either through a solemn decision of the extraordinary magisterium (pope or council) or through the ordinary and general magisterium of the church (episcopacy). It is to be accepted by the same faith that is due to the divine word itself (*fides divina*) or to the church's tradition (*fides catholica*).

This magisterial definition, as it was given by the First Vatican Council, has the following historical antecedents: (1) the ancient philosophical (Platonic-Stoic) use of the word *dogma* to designate that which seems right to all, as opinion or teaching, as foundation or decision, as decree or edict, as a rational judgment that is identical to a moral decision, or as a decree of a legitimate authority; (2) the New Testament use, in which Old Testament law is said to be the dogma of God and the decisions of the apostolic council are designated as dogmas in *Acts* 16:4; and (3) the patristic and medieval transmission of both these strains, the dogma of God in distinction to the teachings of human beings or of the philosophers. The close connection between the "dogmas of the Lord" and the "fidelity to the church" is already asserted in the *regula fidei*, the canon of truth. Finally, synodal decrees are also considered dogmas in opposition to the dogmas of the heretics. The content referred to by *dogma* also occurs in the patristic and scholastic tradition under equivalent designations, for instance, *professio* and *confessio*, or (Catholic) truth in general; *fides*, the correct doctrine handed down by the church; and, in Thomas Aquinas, over against the concept of dogma, the narrowed concept of *articulus fidei.* What led to an emphasis on the formal authority of dogma was, finally, the emphasis on the claim to the limitless autonomy of human reason in the eighteenth and nineteenth centuries.

The definition of the concept and function of dogma in the Eastern Orthodox churches, in spite of the multiplicity and differing historical development of these churches, can begin with their formal unity in terms of doctrine, law, and liturgy. Faith is based upon the dogmas that have been transmitted in part through scripture and in part through the oral *paradosis* ("handing down" of tradition) of the apostles and have then been interpreted by the councils and church fathers. Because and to the extent that the church speaks with the authority of the Holy Spirit, it is infallible in the same way as scripture. The believing acceptance of the revealed truth of faith is necessary for salvation. The dogma of the church is present and closed in the doctrinal decisions of the first seven ecumenical councils (325–787), whose formulations are considered the embodiment of dogma and the summary of the teachings of scripture. The further dogmatic development of the Latin church is rejected. Dogma in the Orthodox churches has not so much a doctrinaire-intellectual function as it does a doxological and life-defining one.

The relationship to dogma of the churches and communities produced by the Reformation is defined by the theology of the reformers, which, on the one hand, does not dispute that the church may have to make obligatory statements and that the truth of scripture may only be able to be revealed through a painstaking process. It therefore accepts at least the Trinitarian-Christological dogma of the old church as an appropriate expression of the matter of the gospel. But, on the other hand, through the principle of *sola scriptura* (over against an association of scripture and tradition), the theology of the reformers takes up a different position, scripture being for them no longer merely the source and norm of all Christian speech, teaching, and preaching, but, rather, the single final authority. All confessions and dogmas are to be measured against it. In this sense, dogmatic statements (even the Trinitarian-Christological) are only secondarily binding for Protestant theology, and then only when it has been demonstrated whether and to what extent dogmas open up an access to direct biblical instruction, where it is presupposed that scripture, on the basis of its transparency, is its own interpreter. In spite of all confessional-theological discussions among the churches and communities growing out of the Reformation, and in spite of the changing theological positions and the change in the functional definition of dogma connected with them (from orthodoxy through rationalism and Pietism and from the purely ethical and practical interpretation to dialectical and existential theology), they agree both negatively and positively. Negatively, they agree in their rejection of the Roman Catholic understanding of dogma and its function for faith and church as "doctrinal law." Positively, they agree in the conviction that God's word must not only be existentially recognized but also known as objective truth and reproduced in statements and doctrinal teachings, however these may then be interpreted and qualified with regard to their binding character.

In the question of the development of dogma, Roman Catholic theology must proceed from the fact that the church defines statements as revealed by God if they satisfy one of the following conditions: (1) Even if previously stated, they were not always expressly defined or bindingly taught as revealed. (2) They articulate the express contents of statements of the earlier tradition in very different or newly developed conceptual terms (by defending the always known meaning of the revealed statement more expressly against heretical misinterpretations, by setting off more clearly individual aspects of these statements, or by placing these aspects in a dialectical interplay of faith and reason or in a more explicit relationship to other truths of faith and of reason). (3) They refer to statements in the tradition that may not be immediately equivalent to them or explicitly capable of being traced back to the apostles or that cannot even be supposed with historical probability to have been once previously available. Thus not only theology but also revelation (to the extent that it is only present in proclamation, acceptance of faith, and practice) has a history, a "development," and a "progress" after Christ, even if this history is essentially different from the development of revelation before Christ.

The problem of the development of dogma and its solution consists in the task of demonstrating the fundamental possibility and the actuality, in individual cases, of the identity of the later, "developed" matter of faith with the apostolic matter given in Christ. The difficulty of the problem lies in the fact that, according to church doctrine, the entire "public" revelation, entrusted to the church and its teaching office and involving an obligation of belief, was closed with the death of the apostles, that is, that the church can only continue to bear witness to what it has heard about Christ in the apostolic generation and has recognized as belonging to the deposit of faith. Therefore an additional, later, ecclesial revelation is not possible, does not expand the old Christian revelation, and cannot undergo an epigenetic transformation in the sense that might be implied by modernism. Because the solution to the problem (formally speaking and in general) must be sought in the fact that a new dogma is contained "implicitly" in an old dogma or in the whole of what was previously believed, the problem and its solution may be formulated in the following way.

1. What is the status of implicitness and what is the process of explication such that these can be recognized as factually given in the development of dogma? That is, how can the identity of faith, as expressed in an actual history of faith, and revelation after Christ be explained?
2. What implications are sufficient so that the explicated can be considered as revealed by God (and not simply taught by the church with infallible authority)? Such an implication is obviously to be applied, however, in such a way that it can be said not only that the new dogma, as derivative in its truth and certainty upon the original revelation, could thus legitimately appeal to the witness of God (purely objective implication) but also that it, of itself (even if in a different form), has always been witnessed to by God's self and has always been believed by the church (subjective implication).

The problem, precisely posed, has only been clearly present since the nineteenth century, that is, since there has existed a history of dogma that not only (as still in the post-Tridentine period) doxographically collects the proofs from an earlier time for the doctrine of the present and thereby considers these proofs to be only different from the contemporary doctrine in their external form but also sees that the recognition of revelational truth has a real history after Christ.

The problem is stated differently in Protestant theology, because there is in evangelical theology no faith statement of the church that could be an absolutely binding norm for the private understanding of scripture, and thus there can actually be, from the start, only a history of theology, not really a history of dogma and faith after scripture. Behind this problem is, as its natural presupposition, the problem of the historicity of the (ever the same) recognition of truth in general and that of reconciling a present continuing immediacy of the divine revelation in the church (which is necessarily historically new) with the relegation of the present proclamation back to an earlier historical past, that is to say, back to the apostolic period.

The first three centuries of Christianity and perhaps the following one and a half centuries, which saw the development and culmination of the first three, present a history of Christian belief and dogma in a confrontational struggle with the simultaneous assimilation of a non-Christian spiritual and cultural (Hellenistic-Roman) environment. However, the second long period after the waning of antiquity, that is, from the early Middle Ages to the Enlightenment, was a time of unfolding and differentiation of the substance of faith from within its own center outward into even more systematized distinctions that, because of their one point of departure from within, could be considered without really major confrontation with external contradictions and as a more or less homogeneous abstraction presupposed by all to be self-evident. (This was so in spite of the continuing influence of Platonism and the medieval reception of Aristotelianism, and in spite of the crises that occurred with the split between the Eastern and Western churches and with the Reformation of the sixteenth century.) This was, therefore, a time for summae and simultaneously and for the same reasons a time (because the whole was taken for granted) when one threw oneself into theological questions with enormous passion and almost became lost in them. It was a time the effects of which are reflected in the great catechisms of the modern period. It was a time in which one could take for granted long papal encyclicals over relatively small questions of detail of the Christian faith; in which the magisterium reacted carefully and quickly to real or imagined attacks against individual doctrines of this detailed system; and in which one had the impression that the entire system was clear and could hardly be further developed, except in the case of individual questions, so that the major work of theology had to be turned backward upon its own history.

Today (after a long preparation since the Enlightenment, from which time also dates the defensive dialogue with liberalism and modernism) we have doubtless entered upon a new, third phase in the history of faith and thus also in the history of dogma and of theology. Today it is no longer a question of an ever more detailed unfolding of the basic substance of faith within a homogeneous environment that has a common horizon of understanding with the church. It is much more a question of winning a new understanding (naturally preserving the substance of faith which has been handed down) of the one totality of faith in a non-Christian environment, in a new epoch of a global world civilization in which world cultures that were never Christian have appeared. It is also a question of a history of faith and dogma in a new diaspora, with confrontation and assimilation to be simultaneously carried out in a radically new way that includes even the most divergent belief, that of atheism and the doubt as to whether religion in general will survive. To that extent, there is a formal similarity between the period of the history of dogma now beginning and the first period, even if the matter and the tasks of the first and the third periods are radically different.

The history of faith and dogma will probably develop in the future not in the style of the second period, as an evolutionary unfolding and systematizing differentiation of the basic substance of faith, but rather as the transposition of this lasting faith into new and pluralistic horizons of understanding. Because of the incommensurable and not synthesizable pluralism of contemporary and future horizons of understanding, transpositions of faith will have to occur by means of a plurality of theologies that, despite the necessary readiness for dialogue of these theologies among themselves, will not be able to be synthesized adequately for the preservation and rediscovery of the one faith.

The task of the magisterium in this incipient period will, therefore, hardly consist any more in the definition of "new" individual dogmas, no longer so much in the anxious monitoring of supposed or real deviations from individual traditional doctrines, but rather in the preservation of the one entirety of the faith in its basic substance and, in fact, not so much through a "censuring," but rather through the positive, constructive, collaborative work on this new interpretation of the old faith that is demanded today in a new and not necessarily Christian environment.

The history of faith and dogma will continue, but it will have a different character, not so much the history of individual, newly articulated statements of faith and of the theology that reflects upon them, but rather the history of the restatement of the old basic substance of faith in the confrontation with and assimilation of the future horizon of understanding. It is self-evident that this history will be then no longer merely the history of the formulation of early Christian and Western dogmas and their theology (including their export to other countries) but rather the history of the faith and dogma of a universal church, however little we can concretely imagine today what is materially and formally meant by that. This naturally does not exclude but rather includes the fact that the changing new conception of the one entirety of the Christian substance of faith will also have consequences for the interpretation of many or all individual doctrines.

## BIBLIOGRAPHY

A summary introduction to the history of the concept of dogma and the history of the problem of the development of dogma from a Catholic point of view can be found in Georg Söll's "Dogma und Dogmenentwicklung," in *Handbuch der Dogmengeschichte*, vol. 1, fasc. 5 (Freiburg, 1971), which includes an extensive bibliography. From the Protestant perspective the following articles in *Theologische Realenzyklopädie*, vol. 9 (Berlin and New York, 1982), pp. 26–125, should be consulted: "Dogma" by Ulrich Wickert and Carl H. Ratschow, "Dogmatik" by Gerhard Sauter, Anders Jeffner, Alasdair Heron, and Frederick Herzog, and "Dogmengeschichtsschreibung" by Wolf-Dieter Hauschild. See also Karlmann Beyschlag's *Grundriss der Dogmengeschichte*, vol. 1 (Darmstadt, 1982), pp. 1–54.

The relationship between kerygma and dogma (also in conversation with Protestant positions) is analyzed in Karl Rahner and Karl Lehmann's *Kerygma and Dogma* (New York, 1969), Walter Kasper's *Dogma unter dem Wort Gottes* (Mainz, 1965), and Karl Rahner and Joseph Ratzinger's *Offenbarung und Überlieferung* (Freiburg, 1965).

The problem of the development of dogma from a theological-systematic perspective is treated by Karl Rahner and Karl Lehmann in *Das Problem der Vermittlung*, "Mysterium Salutis," vol. 1 (Einsiedeln, 1965), pp. 727–787; by Karl Rahner in "The Development of Dogma," in *Theological Investigations*, vol. 1 (New York, 1961), pp. 39–77; by Karl Rahner in "Considerations on the Development of Dogma," in *Theological Investigations*, vol. 4 (New York, 1966), pp. 3–35; by Joseph Ratzinger in *Das Problem der Dogmengeschichte in der Sicht der katholischen Theologie* (Cologne, 1966); and from an evangelical point of view by Gerhard Ebeling in *Die Geschichtlichkeit der Kirche und ihrer Verkündigung als theologisches Problem* (Tübingen, 1954). An instructive analysis of the more recent Catholic models of the development of dogma can be found in Herbert Hammans's *Die neueren katholischen Erklärungen der Dogmenentwicklung* (Essen, 1965). For the modernist theological-critical approach, the broadly based source study by Émile Poulat, *Histoire, dogme et critique dans la crise moderniste*, 2d ed., rev. (Paris, 1979), should be consulted. It is written, however, from a somewhat sociological perspective.

With regard to the theory and the history of the development of dogma (as well as of the historiography of dogma), the prolegomena of the classic handbooks and manuals of dogmatic history are to be consulted: for example, those by Harnack, Seeberg, Ritschl, Köhler, Schwane, Tixeront, et al. In addition, see, for Catholic theology, *Handbuch der Dogmengeschichte*, edited by Michael Schmaus et al. (Freiburg, 1971–), which is arranged according to treatises; for the Protestant perspective, see Alfred Adam's *Lehrbuch der Dogmengeschichte*, 2 vols. (Gütersloh, 1965–1968), and *Handbuch der Dogmen- und Theologiegeschichte*, 3 vols., edited by Carl Andresen (Göttingen, 1980–1984). Recent positions can also be found in Avery Dulles's *The Survival of Dogma* (New York, 1971) and Gerald O'Collins's *The Case against Dogma* (New York, 1975).

## DOGON RELIGION.

The Dogon inhabit the cliffs of Bandiagara, an area located in the southwestern region of the bend of the Niger River in Mali. This area consists of a vast, rocky plateau that ends in its southern part in a 124-mile-long (200-kilometer-long) cliff overlooking a vast plain. Numbering approximately 225,000, the Dogon are cultivators of millet and other cereals and breeders of small livestock; owing to the scarcity of permanent water sources on the plateau and on the cliffs, they have had to exploit all resources available to them. Onion and pepper gardens and plantations of large trees (ficus, baobab) surround the villages whose clay houses picturesquely conform to the jagged contours of the rock.

The Dogon are well known in ethnographical literature. Since 1931 they have been the subject of numerous publications by the French ethnologist Marcel Griaule (1898–1956) and by other researchers schooled in his methods. The Dogon are perhaps best known for their art, whose consummate form is sculpture in wood (masks, statuettes, locks).

The traditional religion of the Dogon is complex and involves, among other things, a rich myth of origin, belief in a unique god, and an intricate cult of the ancestors. Christianity has had little impact on their culture, but Islam, during the late twentieth century, made significant inroads, without, however, destroying the vitality of long-standing religious beliefs and practices.

**The Creation Myth.** The Dogon myth of origin provides both an explanation of the world and a justification of Dogon social organization. The creation of the world was the deed of the god Amma, the one god and image of the father who existed before all things. He traced the plan of the universe using 266 signs (a number corresponding to the gestation period for human beings). The design (the preliminary act of creation) corresponds to thought, which "conceives" before action or speech. Following an unsuccessful initial attempt, from which he salvaged only the four elements (water, earth, fire, and air), Amma placed in the "egg of the world," or the original placenta, two pairs of androgynous twins in the form of fish (to Sudanese peoples the catfish *Clarias senegalensis* represents the human fetus). Their gestation inside the egg was interrupted by an act of rebellion: one of the male beings prematurely left the "mother" (the placenta), deserting both "her" and his female counterpart, thus prefiguring the birth of single beings even though Amma had envisaged twin births. The solitary being descended into space and primordial darkness, taking with him a piece of the placenta that became Earth. Aware of his solitude, he traveled through space, attempted to reascend to heaven to join his female twin again, and even sought her out in the bowels of Earth, an incestuous act that brought to a climax the disorder he had already introduced into the world by leaving the placenta. The piece of placenta rotted and thus death appeared on earth.

Amma put an end to the male being's disorderly acts by transforming him into a fox, an animal that occupies a very important position in Dogon ideology. This small, wild creature, which is known more properly as *Vulpes pallida*, goes about only at night and never drinks water from ponds near the village—which, for the Dogon, explains why the fox was chosen to symbolize this enemy of light, water, fertility, and civilization.

The mythical fox Yurugu (also known as Ogo) was condemned to an eternal search for his lost twin. Moreover, he lost the ability to speak when Amma, from whom he had stolen speech, punished him by cutting off his tongue (indeed, actual foxes emit only a brief, almost clipped cry); but he still retained the power to foretell the future by "speaking" with his paws.

Unable to restore total order to his universe, Amma sought to mitigate the disorder let loose by the fox; he sacrificed Nommo, the other male twin who had stayed in the egg. Nommo's dismembered body purified the four cardinal points of the universe, and the blood that flowed forth gave birth to various heavenly bodies, edible plants, and animals.

Amma then burst the *Digitaria exilis*, a minuscule grain into which he had "rolled" all the elements of creation; these elements emptied into an ark of pure earth (the remains of the placenta). In that ark Amma also placed Nommo, whom he had already resuscitated, and his other "sons," the four pairs of heterosexual twins who are the ancestors of the human race. He lowered the ark from the heavens by means of a copper chain; the ark crashed onto Yurugu's earth at the time of the first rainfall, which formed the first pool of water. The sun also rose for the first time. Nommo went to live in the pool while the eight ancestors settled on the spot where they had landed. Using the pure earth from their ark, these ancestors created the first cultivated field, and cultivation then spread throughout Yurugu's impure earth (the bush).

The ancestors initially communicated by means of cries and grunts until one of the Nommo twins, the master of water, life, speech, and fertility, taught them language at the same time that he instructed them in the art of weaving. He then revealed to the ancestors such other fundamental techniques as agriculture, blacksmithing, dance, and music. The first human society was thus founded; marriage was introduced when the ancestors exchanged sisters.

The descent of the ark is analogous to birth. The ancestors of humanity who began their life on earth can be seen as newborns emerging from the maternal womb; the ark is the placenta, and its chain is the umbilical cord; the rains are the fetal waters.

**CULTS AND SOCIAL ORGANIZATION.** The four male ancestors founded the four major religious cults, which are also the pillars of social organization; among the Dogon, social order cannot be dissociated from religion. The eldest of the ancestors, Amma Seru ("witness of Amma"), is associated with the creator god and with air (sky). The patriarch of the extended family is Amma Seru's representative in the human community. His residence, known as the "big house," is the focal point of the paternal lineage, and this is where the altar to the ancestors is situated. The altar is composed of pottery bowls (deposited there whenever a family member dies) into which the patriarch pours libations in honor of the ancestors.

Paternal lineages combine to form a totemic clan; all members of a particular clan must respect the same taboo, be it animal or vegetable. The clan is headed by a priest whose vocation is revealed through trances that incite him to seek an object hidden by dignitaries of the clan at the death of the priest he will succeed. He remains subject to these trances, which force him to wander through the countryside prophesying; he is said to be possessed by Nommo. As the representative of the ancestor Binu Seru ("witness of the *binu*"), the priest is responsible for the cult of the *binu*, the ancestors associated with the various animal and vegetable species. According to the custodians of profound knowledge, the *binu* are also symbols of the different parts of Nommo's dismembered body; the ensemble of these *binu* represents the body resuscitated in its entirety. The cult itself is associated with water, and its ritual is celebrated in sanctuaries whose façades are periodically redecorated with paintings done in thin millet paste; each transformation favors a specific event—the coming of the rains, the harvesting of various crops.

The cult of Lébé is dedicated to the ancestor Lébé Seru ("witness of Lébé") who, having died, was subsequently brought back to life in the form of a large snake; this ancestor is associated with Earth (the planet and soil, as well as the mythic archetype Earth), and with vegetation that periodically dies and comes back to life. His priest is the *hogon*, the most senior of the region, whose authority once had political impact, since it was he who administered justice and controlled the marketplaces. The *hogon* and the totemic priest together celebrate the feast of sowing (*bulu*) before the coming of the rains; they distribute to the villagers the millet seeds that have been stored in the preceding year. These seeds are thought to contain the spiritual essence of this cereal. The mythical snake Lébé is said to visit the *hogon* every night to lick his body and thus revitalize him.

The fourth ancestor, Dyongu Seru ("witness of healing"), has a different status. He was in effect the first human to die, following the breach of an interdiction. His cult is celebrated by the mask society (which exists only on the cliff and on the plateau). It is an exclusively male association, which all boys enter after their circumcision; each one must carve his own mask and must learn the society's secret language. The dance of the masks takes place as part of funeral ceremonies for men. Objects of death, the masks are strictly forbidden to women, who are associated with fertility and the forces of life. Women can only observe the dances from far away.

The death and resurrection of Dyongu Seru are commemorated through the Sigi, a spectacular ceremony that takes place every sixty years; the last one was held between 1967 and 1974. This feast also marks, on the human plane, the renewing of the generations (sixty years is thought to be the average human life span) and, on the celestial plane, the revolution of the "star of *Digitaria exilis*" around the "star of Sigi," or Sirius. The Dogon's longstanding knowledge of this Sirius satellite, which was only recently discovered by astronomers, is a mystery that science has not yet uncovered. The ceremony, celebrated from village to village over a period of eight years, includes dances executed by men in single file (each generation is ranked according to age-group). Their costumes and paraphernalia refer to both maleness and femaleness: for example, the cowrie shells that decorate the dancers' costumes and the fish-head design of their embroidered bonnets are symbols of fertility; when they drink the ritual beer, they sit on a ceremonial seat, which is a masculine symbol. Another important component of the Sigi ceremony is the erection of the "great mask," a single tree trunk or log carved in the shape of a snake to represent the resurrected ancestor.

Dyongu Seru is associated with fire, death, the wilderness (in his role as hunter and healer), and, consequently, disorder—connections that, in turn, link his cult with the mythical fox Yurugu who, on a more mundane level, is commemorated in divination rites. Diviners trace framed grids in the sand, and during the night small foxes come to eat the food offerings placed on these "tables"; the configuration of spoors left by the animals are then interpreted as responses to questions about the future. Yurugu, however much decried for being the source of disorder, is respected for his ability to foretell the future, a gift that even Amma could not take away from him. In effect, by liberating himself from all rules through his act of rebellion, Yurugu placed himself beyond time. Ultimately he incarnates individual liberty, in opposition to the group solidarity essential for the survival of traditional societies, and therein lies his ambiguity.

The Dogon religious universe is also peopled by various categories of spirits who haunt the wilderness, the trees, and inhabited sites; these spirits are the outcome of Yurugu's incestuous coupling with Earth. They represent natural forces and the original proprietors of the soil, with whom men had to ally themselves in order to gain possession of cultivable land. Offerings presented to these spirits on different occasions propitiate them and renew the original alliance.

**SPEECH AND BEING.** A human being is viewed as a whole composed of a body and the eight spiritual principles of both sexes. A vital life force (*nyama*) animates the entire being. The ambivalence of the human condition (that is, its simultaneous maleness and femaleness), which recalls the law of twin births ordained by Amma but later destroyed by Yurugu, is mediated by circumcision and clitoridectomy; these procedures free the child from the influence of the opposite sex (located in the prepuce and the clitoris) and thus have an equilibrating function. Death destroys the tie that holds together the various components of a person's being; funeral ceremonies assure that each component is restored to its place and facilitate the transference of the vital force from the deceased to an unborn child, who will establish a cult for that ancestor.

Speech is fundamental in Dogon thought. It forms itself in the body, all of whose organs contribute to its "birth," and like human beings, it possesses vital energy and spiritual principles. The four basic elements enter into its composition, but water is the most essential component. In symbolic rapport with all technological processes, especially the art of weaving (the organs of the mouth are said to "weave" sounds), speech is both creative (on the divine plane) and fertilizing (on the human plane); in fact, intercourse between spouses is successful only if "good words" make the woman fertile. Speech is also the cement that holds together all social relationships and facilitates the advance of society, its progress and survival.

If ancestor worship and the belief in Amma dominate the religious beliefs of the Dogon, the mythical figures who command their worldview are Nommo and Yurugu: the two incarnate opposed and complementary principles (order/disorder, life/death, humidity/dryness, fertility/sterility) that wrangle over possession of the universe. That struggle, which is constantly rekindled, assures both the equilibrium and progress of the world.

## BIBLIOGRAPHY

The most complete and most detailed version of the Dogon origin myth is given in Marcel Griaule and Germaine Dieterlen's *Le renard pâle* (Paris, 1965). The first published version of the myth can be found in *Dieu d'eau: Entretiens avec Ogotemmêli* (Paris, 1948), Griaule's very popular book translated into English by Robert Redfield as *Conversations with Ogotemmêli* (London, 1965). Griaule's *Masques dogon* (Paris, 1938) still remains the definitive reference work on the mask society and on funerary ceremonies, as does that by Michel Leiris, *La langue secrète des Dogons de Sanga* (Paris, 1948), on the society's secret language. For information on perceptions of the person in Dogon society, one can consult Dieterlen's *Les âmes des Dogons* (Paris, 1941), even though our understanding of this question has been considerably enriched since that book's publication. Speech and its utilization at different levels of social life is analyzed in my own study *Ethnologie et langage: La parole chez les Dogon* (Paris, 1965), which has been translated into English by Dierdre La Pin as *Words and the Dogon World* (Philadelphia, 1986).

## DOGS.

Recent archaeological discoveries place the domestication of the dog thousands if not tens of thousands of years prior to that of any of the other animals with which humanity has shared its cultural evolution. This shared heritage is reflected in the ritual, mythology, and religious doctrine of nearly every human society. The ancient Phoenicians, Chinese, Meso-Americans, and Egyptians buried, entombed, or mummified dogs, separately or together with their human masters; archaic astronomical systems from Europe, Asia, Africa, and North America identify star clusters or planets with supernatural dogs; and dogs figure prominently in a wide variety of myths and rituals, particularly those concerned with death and afterlife.

The place of *Canis familiaris* in religious traditions closely corresponds to the social roles, behaviors, and spatial orientations of dogs in relationship to humans, as protectors of the home, in hunting, and in herding. In every case, the dog is located at a problematic boundary between "us"—the living members of a human community—and "them": the dead, wild animals, interlopers, and human enemies of that community. As a watchdog, it prowls the zone of demarcation between within and without, inhabited space and outside world. As a herding animal, it constitutes a moving periphery, enclosing the herd that it guards from savage predators and human rustlers, but also culling animals that have been designated for slaughter. In the hunt, the hound leads—seeing, hearing, and scenting the prey before its master, who follows its bark, is able to do so—and fetches back small game in its mouth. Man's best friend has a dark side as well: the domesticated dog can turn rabid, predatory, or feral, in which cases it may endanger the very humans and livestock it normally protects. Furthermore, the dog's gluttony may be a stronger impulse than its faithfulness to its master, and its indiscriminate eating habits allow it to consume carrion, excrements, and other impure substances, including the bodies of humans slain in battle.

All of these canine qualities and behaviors have made for an intimate association between dogs and death in the world's religions. Gods of death, such as the Greek Hekate, the Indian Yama and Bhairava, and the Teutonic Garmr, are often identified with or accompanied by dogs that guard the gates to their realms. Very often, the dog is cast as a hellhound that tracks down and even devours the errant dead, for which reason the dead may be buried together with a sop to distract it, as in the case of the Sārameya—the twin dogs of the Indian death god Yama—the Greek Cerberus, and the Nicaraguan Tausun Tara. Alternatively, the dog serves as a psychopomp, a guide who leads or herds the recently deceased over the dangerous paths leading to the world of the dead—hence the sacrifice of dogs or the burial of dog effigies with the dead in Nahuatl, Chamba (northern Nigeria), and ancient Chinese traditions. In several northern European traditions, a spectral pack of dogs accompanies the storm god Woden, or the Christian Devil, on his wild hunt after the souls of the damned. At different periods, the Tibetans, Kalmuks, Parsis, Bactrians, Hyrcanians, Mongols, Javanese, and Kamchatkans have exposed their dead in "sky burials," relying on necrophagous dogs and birds of prey to consume the bodily remains and thereby carry off the pollution of death.

Numerous myths of the origin of death involve a dog. In several western African traditions, the dog is a messenger whose failure to deliver a message to a high god results in human mortality. A central Asian mytheme, found from the Balkans to Siberia and northern Japan, features a primal dog who is charged by a *deus otiosis*-type figure with protecting the bodies of a primal human pair; the dog succumbs to the temptations of the Devil, who befouls humans and dog with his spittle, thereby rendering them mortal.

Judaism, Christianity, and Islam generally cast the dog in a negative light, especially by emphasizing its impurity, and often identify dogs as demons or minions of the Devil. A striking exception is the role of the dog in the early Christian and later Islamic myth of the "Cave of the Seven Sleepers," which draws on a widespread Indo-European mytheme that has a faithful watchdog guard the mouth of a cave where six saints sleep for hundreds of years. From the high Middle Ages down to the twentieth century, a greyhound was venerated in the Dombes region of southeastern France as Saint Guignefort, the healer of sick children, in spite of repeated attempts by the Roman Church to suppress the cult of this decidedly noncanonical saint.

In Zoroastrianism, the dog plays a particularly positive role in postmortem ritual. A dog is fed three times daily for three days following a death, as a conduit for nurturing the soul of the dead. In the celebrated rite of *sag did*, the powerful gaze of a "four-eyed dog" drives away the demonic Nasus spirits that swarm around the corpse of the deceased. In Zoroastrian otherworldly geography, one or two four-eyed dogs are present at the Cinvat bridge in order to aid the souls of the just to cross over to the "Best Existence," which lies beyond. The same four-eyed dog is found, this time with a negative valence, in ancient India, where this creature was put to death beneath the feet of a horse representing the king, as a part of the famous *aśvamedha* sacrifice. This apotropaic (evil-averting) sacrifice identified the dog with the king's rival in what was essentially a ritual of royal conquest, which concluded with the sacrifice of the horse itself.

This doubling of dogs' eyes is not limited to Indian or Indo-Iranian religions, and is of a piece with a broader phenomenon of doubling in the symbolism of death. Four-eyed dogs are found in the mythology and ritual of numerous cultures, including the Ibo of Nigeria who behead a four-eyed dog (that is, a dog with pronounced markings over its eyes) when burying their chiefs. This they do in order that the dog may transfer its powers of clairvoyance to the deceased. Similar practices involving dogs of this sort are found in hunting rituals in many parts of Africa, while Finnish and Slavic traditions employ four-eyed dogs to root out and protect against evil spirits. Hellhounds are often found in pairs, or with two heads (as in the case of the Greek Orthos, Cerberos's less famous elder brother); and the name of the Indian Yama may itself be read as "Twin," the brother of Manu, "Man," who sacrifices him. As the first being to die, Yama becomes the lord of the world of the dead. A parallel mytheme is found in ancient Rome, in which Romulus kills his twin brother Remus (whose name is an Indo-European cognate of Yama) as a foundation sacrifice. In Mesoamerica, the Nahuatl dog god Xolotl is considered to be the twin brother of Quetzalcoatl, and together the two represent the planet Venus, as the morning and evening stars respectively. The eastern and western entrances to East Asian Buddhist temples are guarded by Foo (or Foh) dogs, which are said to symbolize the yin and yang principles. In ancient Egypt, the jackal- or dog-headed Anubis of Cynopolis was considered to be the "opener" of the northern paths of the dead, while the wolf-god Up-uaut or Ap-heru of Lycopolis opened the southern paths. Likewise, the "entrance" to the Milky Way, the starry path of the gods and the dead in several Indo-European traditions, is guarded by two dogs, Canis Major and Canis Minor, with the dog star Sirius being located in the former constellation of the Greco-Roman system. Located at the threshold of two worlds, these beings that symbolize the transition between death need two bodies, two heads, or four eyes to look both backward and forward, toward both the living and the dead who live in a symbiotic relationship not unlike that obtaining between man and dog.

In Roman mythology, the aforementioned twins Romulus and Remus, who had been forsaken at birth, are suckled and protected by a she-wolf in a cave at the base of the Palatine hill. They enjoy the same mythic fate as Cyrus, the founder of the Achaemenid dynasty and the Persian Empire: according to Herodotos, the infant Cyrus, who had been left to die at the order of the Median king Astyages, was saved by a Median woman named "Bitch." Other versions of the story, such as that of Trogus Pompeius, simply state that Cyrus was raised by a she-dog, as were also the Greek Aesculapius, the Persian Afrasiyab, and Lugaid Mac Con of Irish legend. A variation on this Indo-European mytheme of a dynastic founder or culture hero being fostered by an animal nurse, is a central and east Asian ethnogenic myth, which likely spread into the circumpolar regions. This is the myth of the origin of a people or race through the union of a human woman and a male dog, a most illustrious example being that of Chinggis (Genghis) Khan, as is related in the opening lines of the *Secret History of the Mongols* (c. 1240 CE). The Inuit of the central Arctic trace the origin of the "five human races" back to the union of the daughter of the primordial human pair, a maiden named Uinigumasuittuq ("She Who Did Not Wish to Marry"), with the family dog, Siarnaq. A similar myth is found among several of China's "southern barbarian" peoples, including the Man, Yao, and Liao. In both Chinese and European medieval literatures, this mytheme, which was transmitted along the Silk Road from its original Central Asian source, underwent a transformation that made it a stock fixture of world mythology. As it traveled east and west, it became an account of a remote "Kingdom of Women" that shared its borders with a "Kingdom of Dogs." During the mating season of the former, these dogs, or Dog-Men would cohabit with the women, with female offspring being kept by the women, and males by the dogs or Dog-Men. This was the source of the rich European mythology of races of Dog-Men (Cynanthropoi) or Dog-Headed Men (Cynocephali), who figure in the Alexander Legend and the writings of Marco Polo, as well as in the legends of several medieval Christian saints, who sought to convert these monsters to the true faith.

Numerous mythical traditions cast supernatural dogs in various types of foundation myths. According to the mythology of two Mesoamerican peoples, the Huichol and the Tlapanec, the repopulation of the earth is effected, following a great flood, through the union of a man and a she-dog. The Nahuatl Xolotl reanimates humanity at the beginning of a new creation cycle by fetching the bones of dead humans from a prior cycle back to his dwelling and bleeding on them from his penis. The North American Shoshone and Achowami, as well as several African peoples, identify the dog as the bringer of fire to humanity. Maya manuscripts depict the dog as the bringer of maize to the world, while several southern Chinese and Southeast Asian myths portray the dog as swimming over the waters of a primal flood while carrying grains of rice on its tail, to feed a starving humanity.

Poised on the uncertain boundary between humanity and animality, wildness and domestication, inside and outside, the living and the dead, purity and impurity, even the divine and the demonic, dogs have, throughout the long history of their relationship to humans, been especially "good to think with," whence the abundance of mythology, ritual, and religious precept that we humans have generated around canine modes of being in the world.

### BIBLIOGRAPHY

The most comprehensive surveys of dogs in world religions concentrate on mythology. These include Freda Kretschmar's *Hundestammvater und Kerberos,* 2 vols. (Stuttgart, 1938; reprint, New York, 1968), Maria Leach's *God Had a Dog: Folklore of the Dog* (New Brunswick, N.J., 1961), and Patricia Dale-Green's *The Lore of the Dog* (Boston, 1967). Studies with a wide cultural area focus include David Gordon White's *Myths of the Dog-Man* (Chicago, 1991), which limits itself to Europe and Asian mythology, Barbara Frank's *Die Rolle des Hundes in afrikanischen Kulturen* (Wiesbaden, 1965), and Wilhelm Köppers's "Der Hund in der Mythologie der zirkumpazifischen Völker," *Wiener Beiträge zur Kulturgeschichte und Linguistik* 1 (1930): 359–399. Several studies extensively treat the dog in death-related mythology and ritual. These include Manabu Waida's "Central Asian Mythology of the Origin of Death: A Comparative Analysis of Its Structure and History," *Anthropos* 77 (1982): 663–701, Bruce Lincoln's "The Hellhound," *Journal of Indo-European Studies* 7, nos. 3–4 (Fall/Winter 1979): 273–285, Manfred Lurker's "Der Hund als Symboltier für den Übergang vom Diesseits in das Jenseits," *Zeitschrift für Religions- und Geistesgeschichte* 35 (1983): 132–144, and Franke J. Neumann's "The Dragon and the Dog: Two Symbols of Time in Nahuatl Religion," *Numen* 22, no. 1 (1975): 1–23.

Works focusing on a single cultural area include Mahasti Ziai Afshar's *The Immortal Hound: The Genesis and Transformation of a Symbol in Indo-Iranian Traditions* (New York, 1990), Eduard Erkes's "Der Hund im alten China," *T'oung Pao* 38 (1944): 186–225, Frank Jenkins's "The Role of the Dog in Romano-Gaulish Religion," *Latomus* 16, no. 1 (January–March 1957): 60–76, Carla Mainoldi's *L'image du loup et du chien dans la Grèce ancien d'Homère à Platon* (Paris, 1984), and Jean-Claude Schmitt's *Le saint lévrier: Guignefort guérisseur d'enfants depuis le XIIIe siècle* (Paris, 1979), which focuses on the remarkable cult of a greyhound, which persisted well into the twentieth century in the Dombes region of southeastern France.

DAVID GORDON WHITE (2005)

## DOLGAN RELIGION.

The Dolgans are a small, Turkic-speaking nationality living on the Taimyr Peninsula in northern Siberia. Their primary occupations are hunting and fishing; they also breed a small number of domesticated reindeer, which are utilized as means of transport during nomadic migration. During the winter season the Dolgans live in the forest-tundra zone, and toward summer they migrate northward into the tundra in pursuit of wild reindeer herds. In 1989 there were seven thousand Dolgans, 80 percent of whom spoke their native tongue, which is derived from the Yakut language. The Dolgans appeared as a distinct nationality during the last three hundred years and are largely descended from the Tunguz and the Yakuts; their religion had its origin in the culture area of their formation.

The Dolgans are converts to Christianity, and they bear Russian names. Their calendar—a six-sided small stick carved from mammoth bone—is known as the *paskaal* (from Russian *paskhal'nyi*, "relating to Easter"); the basic Russian Orthodox holidays are marked on the sides of the *paskaal.* The old men who can calculate time by this calendar are called *paskaalcit* and are deemed to be sages. Icons are found in each Dolgan dwelling, but the Russian Orthodox saints represented on them are no more revered than are the other spirits of the Dolgan pantheon.

In their mobile dwellings (*urasa*), special sanctity is attached to the four foundation poles (*suona*) in which the spirits who protect the people living in the *urasa* dwell. After a successful hunt, these poles are smeared with the blood of a wild reindeer and purified by the smoke of burning fat. When a dwelling's owner dies, the weeping of the *suona* is heard. The cover of the *urasa* is sewn out of reindeer chamois, on which are drawn the sun, moon, reindeer, or *urasa*, according to a shaman's instructions. The *urasa* functions as a barrier impenetrable to evil spirits. In building a permanent dwelling, the Dolgans leave two tall trees by the side of the entrance, so that the souls of the dwellers may live in their branches. The trees are termed *serge* ("post") in Yakut.

The Dolgans call all supernatural beings *saĭtaan*, a word of Arabic origin brought to the Dolgans by the Russians, who borrowed it from Turkic-speaking Muslims. In practice, small stones and anthropomorphic and zoomorphic images carved from wood or reindeer antler, as well as certain household objects, figure as *saĭtaan*s.

All these objects are revered because they are bearers of spirits, either independently or by means of the shaman. A *saĭtaan* may be a personal helper of its owner or the protector of an entire family or nomadic group; it may, for example, be the hook used to hang the caldron in the *urasa*. Facing the hook, the Dolgans smear it with the blood or fat of a slaughtered animal and address it, saying, "May the caldron hung on thee be full lifelong!" One type of *saĭtaan*, with human form, is called the *baĭanaĭ*. The idea of the *baĭanaĭ* and the term itself are borrowed from the Yakuts, among whom Bai-baianai is master of the forest. But among the Dolgans a *baĭanaĭ* becomes the personal helper of the hunter who made its image. However, the *baĭanaĭ* acquires power only after the shaman animates the figurine by placing his breath within it. Before going on a hunt, the hunter smears his *baĭanaĭ* with the fat of a wild reindeer and tosses it into the air in order to divine his chances of catching game. If the figurine falls on its back, there will be success; if it falls on its belly, there will be failure. Wooden images of birds and animals, called *singken*, also belong to the category of *saĭtaan*s that assist hunters. Hunters carry them along on the hunt, together with the *baĭanaĭ*.

At the beginning of each winter month, the hunter purifies his *baĭanaĭ* with the smoke of burning fat. Upon killing a wild reindeer, he cuts the fat from the animal's knee and suspends it from the figurine. After a particularly successful hunt, the Dolgans feed not only the *baĭanaĭ* but all their *saĭtaan*s. They hang them on poles over the hearth, into which they throw small pieces of fatty food. Then they arrange a low table near the hearth and place on it pieces of the heart and lungs of slain animals. Afterward, the *saĭtaan*s are smeared with blood and placed in a box, where they remain.

During nomadic treks, white or piebald reindeer carry the boxes containing *saĭtaan*s and icons in cases. Such a reindeer is decorated with a beaded, embroidered headband and a bell is hung on its neck. This reindeer is always placed just before the end of the animal train; the reindeer transporting the dwelling poles is tied to it. When they arrive at a new place, the Dolgans avoid setting up their *urasa* where another stood earlier, since strange *saĭtaan*s might prove powerful and feel wrathful toward the newcomers.

The activities of the Dolgans are accompanied by many religious rites. After killing a reindeer, the hunter smears his rifle with its blood. The bones of a reindeer that has been eaten are buried in the ground, and a tripod of poles is placed above them so that other reindeer will not go near that place. Upon killing an arctic fox, the hunter cuts off its nose so as not to give away his luck with its skin. The Dolgans rarely hunt bears, which they fear and which they regard as women transformed into beasts. The hunter who has killed a bear lies on its back imitating sexual intercourse. Then the participants in the hunt take out the bear's heart, eat it, and caw like ravens. While fishing, the Dolgans present to the Master of the River or Lake beads or scraps of red wool tied to nets. Near the body of water they hang a fox skin from a rope attached to the ends of two sticks thrust into the ground. Some Dolgans throw small, flat pieces of dough into the water; impressions of crosses worn on the body are made on these.

Shamans play such a large role among the Dolgans that the emergence of each new shaman is met by his kinsmen with great joy. According to Dolgan tradition, a shaman owns one to three Tuuruu trees, the term designating the "world tree" among the Tunguz, and he sets the souls of the persons under his protection on their branches. Signs of a shaman's power are the number, height, and extent of branching of his trees. A weak shaman's tree will be sickly, and the people in his charge may die. On the second day after death, the shaman must accompany the dead person's soul into the netherworld.

Among the Dolgans, as among the Yakuts, shamans are called *oĭun*; a female shaman is called *udaghan,* as among the Yakuts, Buriats, and Mongols. The Dolgans divide shamans into several categories according to their ability. The strongest shamans, *ulakan oĭun,* can cure diseases, divine events, and generally know all that happens on earth. In the past, the frequent wars between groups of Dolgans were decided by shamanic duels, with each shaman trying to increase the *ilbis* or power of the war spirit of his group. He sheltered the *kut,* or soul, of his leader on a cloud and killed the soul of the opposing leader. The shamanic séance, which in some cases continued for several days and nights, is called *kyyryy* by the Dolgans, from the Yakut word *kyyr,* "to hop."

In the spring, when the first grass appeared, the shaman performed the annual shamanic ritual Djilga Kyyryy, by which he would divine what awaited his nomadic group. This ritual, the greatest religious festival of the year, is also called D'yly Oduuluur. To conduct this rite a new *urasa* was made, and seven or nine images of birds with heads turned toward the sun were fastened on top of the poles making up the *urasa*'s frame. The shaman departed on these birds to meet the chief of the upper world in order to secure his support for the forthcoming year. During this festival, the Dolgans and their shaman performed the ritual dance Kisi Kaamy Gynan ("people's step-by-step procession"). They circled the hearth three times clockwise, then exited from the tent and continued the same movement around it. This festival probably came to the Dolgans from their neighbors the Nganasani, who called it Any'o Dialy ("big day") and conducted it on the summer solstice. However, the dance is Yakut in origin.

BORIS CHICHLO (1987 AND 2005)
*Translated from Russian by Demitri B. Shimkim*

**DÖLLINGER, JOHANN** (1799–1890), more fully Johann Joseph Ignaz von Döllinger; Roman Catholic professor of dogmatics and church history at the University of Munich (1826–1872), who became the controversial center of scholarly liberal Catholicism in Europe. Son of a pious Catholic mother and an educated, anticlerical father, he was ordained at age twenty-three and served briefly as a curate before finishing his doctoral dissertation and being appointed to Munich. There he was somewhat novel among Roman Catholics, though not unprecedented, in his emphasis upon the scholarly study of church history.

The key principle in Döllinger's thought, "organic growth," or "consistent development," gave not only approval but also limits to changes in the Catholic church. Early in his career, defending established developments in Catholicism, he denounced mixed marriages, affirmed the authority of the pope (1836), and favored the policy that Protestant soldiers be required to kneel at the consecration when they were present at a Catholic mass (1843). Likewise, in his works on Luther (1851) and the Reformation (1846–1848), he denounced the break in historical continuity effected by the Protestant schism. Later in his career, however, he came to oppose as "inconsistent with tradition" new prerogatives of the papacy, such as the opposition to modern scholarship and the assertion of infallibility. In 1863, Döllinger organized, without ecclesiastical permission, a meeting of one hundred Catholic theologians in Munich, to evaluate the scientific study of history. In his opening address he denounced scholasticism and called boldly for a thorough use of critical tools in examining church history, independent of Roman authority. Although hailed by liberal Catholics throughout Europe, such principles were soon condemned by Pope Pius IX, in his 1864 *Syllabus of Errors* and in his encyclical *Quanta cura.* Such disagreements intensified as rumors grew that unrestricted papal infallibility was to be affirmed at the First Vatican Council (1869–1870). For his opposition to infallibility, Döllinger was excommunicated, with both haste and publicity, in March 1871, by Archbishop Scherr of Munich. Some have seen the excommunication as gratuitous. Döllinger's opposition resulted partially from conciliar secrecy, which kept him from learning until too late the restrictions placed on infallibility. Because of the enforced ignorance, some of his arguments (1869–1871) sound more rhetorical than relevant.

Döllinger provided a rallying cry for the development in Germany of the "Old Catholic" church (which denied papal infallibility). He admitted he belonged to this church "by conviction," but he never formally joined. His refusal of an offer to become the first German Old Catholic bishop hampered that church's growth. Even after excommunication, he continued to attend Roman Catholic services, even though he was denied the sacraments by his excommunication. Despite political ability sufficient to hold national office under Ludwig I of Bavaria, neither his scholarship nor his statecraft was adequate to reconcile Catholicism with modernity. As important to Germany as Cardinal Newman was to England, Döllinger influenced Lord Acton and widened the ambit of historical consciousness in the Roman Catholic church. He has not yet found his definitive place in that church's history. Extolled in a book by his close friend the Old Catholic priest Johannes Friedrich (*Ignaz von Döllinger*, 3 vols., 1899–1901), he also was castigated by the Jesuit Émile Michael (*Ignaz von Döllinger*, 1892), whose criticism was so severe that Döllinger was repudiated even by the usually nonjudgmental modernist Friedrich von Hügel. The definitive Döllinger biography has not yet been written.

### BIBLIOGRAPHY

For an interesting survey of Döllinger's development, from apologist for Rome to staunchly pre-Vatican I Roman Catholic, see Peter Neuner's *Döllinger als Theologe der Ökumene* (Paderborn, 1979). Showing similarities and differences between Newman and Döllinger, though with surprisingly superficial analysis of some materials, is Wolfgang Klausnitzer's *Päpst-liche Unfehlbarkeit bei Newman und Döllinger* (Innsbruck, 1980). Lacking in details, but with an evenhanded treatment of the Vatican I infallibility controversy, is Walter

Brandmüller's *Ignaz v. Döllinger am Vorabend des I. Vatikanums* (Saint Ottilien, 1977). Important correspondence is included in the work edited by Victor Conzemius, *Ignaz von Döllinger: Briefwechsel 1820–90,* 3 vols. (Munich, 1963–1971). An unsurpassed bibliography of Döllinger's writings, including translations, is in Stephan Lösch's *Döllinger und Frankreich* (Munich, 1955).

## DOMESTIC OBSERVANCES

*This entry consists of the following articles:*

JEWISH PRACTICES
CHRISTIAN PRACTICES
MUSLIM PRACTICES
HINDU PRACTICES
CHINESE PRACTICES
JAPANESE PRACTICES

### DOMESTIC OBSERVANCES: JEWISH PRACTICES

Besides the synagogue, the home has traditionally been a main focus of religiosity both for the Jewish family as a unit and especially for women. Women were traditionally excluded from the duty of Torah study, which for men was, and to some extent remains, a major focus of spirituality. Moreover, women were not obligated to observe many of the religious practices that bound men. In particular, their place in public synagogue ritual was minimal. Consequently, domestic rituals, and especially those governed by women, are important focuses of their spirituality. For all Jews, certain ritual customs (*minhagim*) and rabbinic laws (*halakhot*) actually require a domestic setting. These rituals may be divided into those that are held on specific occasions of the Jewish calendar and those that are a constant presence in daily life.

**PERIODIC DOMESTIC OBSERVANCES.** The annual festival cycle begins in the spring with Passover, which focuses on two major domestic activities: the thorough cleaning of the home to remove leavened food, and then the Seder, the Passover eve feast, which has traditionally been led by the father and requires the participation of the children. Shavuʿot, in early summer, is accompanied by only minor domestic customs, such as decorating the home with greenery and partaking of dairy foods. The period of mourning for the destroyed Temple, which follows in midsummer, affects the home in a fashion opposite to that of the festivals: enjoyment of music, food, new clothing, and vacations, and joyfulness in general, are restricted. The fall holy days start with Ro'sh ha-Shanah and Yom Kippur, which are primarily synagogue-centered occasions but which include secondary domestic activities. On Ro'sh ha-Shanah, foods symbolizing good fortune are served at the family meal, and on Yom Kippur, family elders bless the young. During the weeklong Sukkot festival the domestic focus is again pronounced. Temporary booths or huts (*sukkot*) are erected near or adjacent to each family home. Meals are eaten there, and some males follow the rabbinic tradition of sleeping in the booths at night. People entertain guests and generally pass time in the family *sukkah.* Ḥanukkah, in early winter, is focused domestically as well. Lights are ritually kindled in the home, and special holiday foods are prepared. Ḥanukkah also has indoor child-centered activities (gift-giving and living-room games). In late winter, Purim requires a formal feast at home, and women and children become particularly involved in the traditional sending of gifts of food to friends.

**PERENNIAL DOMESTIC OBSERVANCES.** Besides seasonal events, the Jewish home also has perennial ritual activities, primarily on the Sabbath, when the routine of the home is transformed. Domestic rituals are observed on the Sabbath: candles are lit by the housewife on Sabbath eve; the Qiddush ("sanctification of the day") is chanted at the first of the three mandatory festive meals; families sing Sabbath songs (*zemirot*) and sometimes study Torah together. Of these customs, candle-lighting is a major rite for women, a virtual symbol of female religious identity. In recent times, with the attenuation of many more-burdensome Jewish customs, candle-lighting has remained vital and thus has become more prominent. According to some traditions, parents formally bless their children on Sabbath eve, and Sabbath night is a preferred time for conjugal relations. In the home the Sabbath ends with the ceremony of *havdalah* ("separation" of the Sabbath from the week), which involves the use of wine, spices, and a special braided candle, and at which a new fire is lit. Another perennial domestic ritual element is the display of religious artifacts. Foremost of these is the mandatory *mezuzah* inscription of biblical verses, encased on all doorposts. Brass or silver candelabra, wine goblets, and collections of Judaica books are common in the more prosperous homes. It is a custom to leave a section of wall in the home (about one square foot) unpainted, as a symbol of pain over the destruction of ancient Jerusalem (*zekher le-ḥurban*).

The celebration of rites of passage spills over into the home through the holding of festive meals. Domestically, the most marked rites of passage are mourning rites, which restrict the bereaved to their homes and require them to receive condolence visits. Memorial candles for the dead are lit at home. In the past, marriages in Mediterranean countries were patrilocal and some marriage observances paralleled mourning rites. The bridal couple were restricted to their new home for seven days of festivity, and daily rites were held in the presence of visitors. In our time, owing to the attenuation of patrilocality, the practice among many young Orthodox bridal couples, both in Israel and elsewhere, is to travel distances to visit their kin, and to be hosted in different homes where rites are held for the duration of seven days.

In Orthodox and traditionally observant families, the home is the scene of innumerable daily acts of individual piety: the ritual washing of hands upon arising, before meals and after voiding; the uttering of grace after meals, and of shorter benedictions before and after the partaking of any food. Prayers are recited upon waking and upon retiring at night, and three daily prayer services (*shaḥarit,* in the morning, *minḥah*, in the afternoon, *maʿariv*, in the evening) are required of all adult males. In recent times, because of the weaker hold of the community, weekday prayers are frequently said at home rather than at the synagogue; hence, the role of the home in daily prayer has increased.

The most pervasive home observances are those that concern food and conjugal relations. Observance of the rules of *kashrut* (maintaining a ritually pure, kosher kitchen), is dependent upon the foods introduced into the home, and on the separation of various categories of foods in the kitchen and dining area. *Kashrut* also requires the services of extra-domestic agents, such as a *shoḥet* (ritual slaughterer), and of manufacturers of kosher foods. The maintenance of "family purity" (*ṭaharat ha-mishpaḥah*) depends to a greater extent on the privacy of domestic practice. Family purity consists of the maintenance of a monthly schedule of conjugal separation and reunion based on the menstrual cycle, and on the woman's periodic immersion in a *miqveh* (ritual bath). While the availability of an external agent, the *miqveh*, is required here as well, the element of domestic autonomy in this area of intimacy is nonetheless very strong. The autonomy of the home in this area was curtailed in traditional times (in Northern Europe roughly until the mid-nineteenth century, in Mediterranean lands until close to the mid-twentieth century). Decisions concerning the proper timing of immersion were not handled exclusively by the woman then, but rather in conjunction with a circle of elder females, family and neighbors. If there was any physiological irregularity, male rabbis were consulted. In contemporary Orthodoxy, middle-class sensitivities concerning the privacy of sexual matters have eliminated the role of the outside female circle; rabbis are consulted only in the most unusual cases. But it is in the maintenance of *kashrut* that the role of the home has increased most in contemporary times, and has assumed a novel symbolic weight. The affective term *kosher home* is now commonly used in reference to *kashrut* observance, which has gained much greater prominence in relation to its historical place in Jewish practice and thought. Over time, additional domestic practices have become more prominent (contemporary domestic Sabbath practices are innovations of the late sixteenth century). Most recently in the West, the pressure of Christmastime commercialism has encouraged Jewish families to elaborate the observance of Ḥanukkah, especially with parties, gift giving, and the decoration of the home, as an ethnic counterpoint to Christian symbols such as the tree and Santa Claus.

There are two major exceptions to this development (i.e., the increasing emphasis on Jewish domestic ritual). One is the virtual disappearance of the *ḥallah*-separation rite. Married women baking their bread used to separate and burn a small portion of the dough, as a symbol of the tithe that was due the priests in Temple times. *Ḥallah*-separation used to be a major female responsibility, similar to Sabbath candle-lighting and to the maintenance of family purity (*niddah*). But as bread production has shifted from a domestic to a commercial setting, the rite has become uncommon. Another exception is in practices of the Hasidic movement, which encourages male groups to congregate by themselves, or at the court of the *rebbe*, the sect leader. In these congregations, adult males eat the third of the three required meals together, away from their families, on the Sabbath afternoon. Hasidism also encourages men to spend some of the holy days and Sabbaths at the distant court of the *rebe*, again separating them from their families.

## BIBLIOGRAPHY

For a masterly, though brief, overview of the position of formal *halakhah*, see Aaron Lichtenstein's "Ha-mishpahah be-halakhah" in *Mishpeḥot Yisraʾel: Divrei ha-kinus ha-shemonah-ʿasar le-maḥshavah Yehudit* (Jerusalem, 1976), pp. 13–30. On Ashkenazic Jewry, Jacob Katz's *Tradition and Crisis: Jewish Society at the End of the Middle Ages* (New York, 1961) provides a fine sociological overview; much pertinent information is scattered in the chapters on the family, religion, and Hasidism. In a shorter monograph, *Tsibbur ve-yiḥidim be-Maroqo: Sidrei ḥevra ba-kehillot ha-Yeḥudiyot ba-meʾot ha-18–19* (Tel Aviv, 1983), I describe eighteenth- and nineteenth-century Moroccan Jewry and thereby provide documentation for a section of Sephardic Jewry; some of this material appears in English in "Women in the Jewish Family in Pre-Colonial Morocco," *Anthropological Quarterly* 56 (July 1983): 134–144. A comprehensive ethnographic survey of religious and other home feasts in a village of Moroccan immigrants in Israel is given in Moshe Shokeid's "Conviviality versus Strife: Peacemaking at Parties among Atlas Mountains Immigrants in Israel," in *Freedom and Constraint: A Memorial Tribute to Max Gluckman*, edited by Myron J. Aronoff (Assen, Netherlands, 1976). One such feast is described in detail in my *Immigrant Voters in Israel: Parties and Congregations in a Local Election Campaign* (Manchester, 1970), pp. 140–147. The qabbalistic sources for some of the comparatively recent domestic Sabbath customs are cited in Gershom Scholem's *On the Kabbalah and Its Symbolism*, translated by Ralph Manheim (New York, 1965), pp. 142–146. In an overview of U.S. suburban Jewry, *Jewish Identity on the Suburban Frontier* (Chicago, 1979), Marshall Sklare and Joseph Greenblum analyze the novel weight of Ḥanukkah child-centered activities.

## DOMESTIC OBSERVANCES: CHRISTIAN PRACTICES

Contemporary forms and practices of Christian religious life in the home vary widely among the various denominations and branches of Christianity, as well as among ethnic and socioeconomic groups within those broader divisions. The usual division of Western Christians into Roman Catholic and Protestant is, for the purpose of the present discussion, more suitably replaced by a distinction between those denominations, such as Roman Catholic, Episcopalian, and Lutheran, with strong liturgical traditions, and those, such as Baptists and Pentecostals, that have a less fully developed ritual heritage.

Western Christians often adorn their homes with religious images such as crucifixes and holy pictures, and Eastern Christian homes traditionally contain an icon corner where images of Christ and the saints are honored and where family prayers are said. A lighted candle or oil lamp usually burns before these icons. In the homes of families of the Eastern churches and the Western churches with more developed liturgies, palm or other branches blessed in church on Palm Sunday may be placed behind these images.

Traditional Roman Catholics sometimes provide small fonts for holy water at the doors of bedrooms, and during the month of May a Marian shrine may be set up in a corner of the home. The blessing of a new home, usually conducted by a priest, is practiced by some liturgically oriented Christian families of both East and West, with Eastern Christians observing an annual renewal of the house blessing during the period following the Feast of Theophany (Epiphany) on January 6.

Some form of grace, said daily at the main meal or at each meal, is common among Christians, at least on special occasions. Also common among most denominations is the practice of an adult or older member of the family hearing a child's bedtime prayers. Christian families observe the Lord's Day (Sunday) in various ways. A festive meal is often part of the day, which may be honored as a day of rest. Among some families of the nonliturgical traditions, family gatherings for prayer, often held early in the morning and consisting of Bible readings, hymn singing, and prayers by a leader, are customary.

Devout Christian families often say prayers for sick family members. These prayer services can include the laying on of hands and anointing with oil by a priest (in the liturgical traditions) or by a layperson (in the nonliturgical traditions). These rites of anointing are usually reserved for the seriously ill and dying in more conservative religious families. In the Eastern tradition, a priest, or, among Western Christians, a layperson or priest sometimes brings the Eucharist from the church to the sick person; in the less liturgically oriented churches the Lord's Supper may be celebrated by an ordained person in the sickroom.

Families of different denominations observe anniversaries of the deaths of family members and friends in various ways. Not uncommon among Eastern Christians, especially those of Slavic extraction, is the custom of burning a lighted candle before a picture of the deceased person during the day of the anniversary. A festive dinner, with gifts for the honored person, is commonly given on the saints' name days of family members, and various national groups enjoy festive meals featuring traditional ethnic foods on the feast days of their important saints.

The cycle of feasts and seasons of the Christian calendar provides many occasions for religious observances in the home, especially among Christians with strong liturgical traditions. During the pre-Lenten Carnival season, doughnut making and pancake suppers are common, such customs originating from earlier times when lard and other meat products had to be consumed before the beginning of Lent. While Lenten fasting and abstinence have become merely token or even nonexistent among many Western Christians, Eastern Christians commonly abstain from meat, butter, eggs, milk, and other animal products throughout this period, as well as during other penitential times. Some families in the nonliturgical churches are returning to the ancient practice of fasting twice weekly, usually on Tuesday and Friday. In the West during Lent, families often give money saved by having simple meals to charitable organizations. Also, soft pretzels continue to be served in some homes, a practice that originated in the Middle Ages when the shape of the pretzel was thought to resemble the crossed arms of a person at prayer. Hot cross buns, another customary food of medieval origin, are served in some Christian homes on the Fridays of Lent and during the last days of Holy Week.

Eastern Christian families continue their tradition of creating intricately decorated Easter eggs to be included in a basket of foods (with sausage, butter, cakes, and other foods proscribed during Lent), which is taken to the church and blessed at the all-night Easter service and eaten at a holy breakfast following that service on Easter morning. A similar breakfast has become popular among some Western Christian families in recent years following the restoration of the Easter Vigil service to its original time in the middle of the night. Two unique Eastern Christian family customs practiced during this season should be noted: (1) the bringing home of a lighted flame from the matins service of Holy Saturday (held on Holy Friday evening) and the marking of the form of a cross on the underside of every door lintel with smoke from this flame; and (2) the blessing of and picnicking at the graves of departed relatives and friends on the Sunday following Easter Day.

Many Western Christian families observe a similar memorial custom, but in the autumn season rather than at Easter. Picnicking at the graves of the departed on November 2 (All Souls Day) is common especially among Hispanic Christians; visits to cemeteries on that day, or the following Sunday, are also made by members of various denominations.

Eastern Christians continue the ancient practice of preparing fruit on the Feast of the Transfiguration of Christ (August 6) and flowers on the Feast of the Dormition of Mary (August 15) to be taken to the church for a special blessing. Some Western Christians have renewed a similar practice of bringing freshly baked bread to the church to be blessed at Lammastide (the first two weeks of August).

The Advent season encompasses immensely rich and varied family observances. The custom of the Advent wreath enjoys widespread popularity in the West. On the Advent wreath, constructed from a circle of evergreens surmounted by four candles (usually three purple and one rose colored), Christians light one additional candle each week during the four weeks of Advent. In some families the wreath is lighted before the evening meal to the accompaniment of brief prayers and often the singing of the Advent carol *O Come, O Come, Emmanuel.* Among Western Christians three traditional feasts during Advent are regaining the popularity they had in earlier centuries: Saint Barbara's Day (December 4), when a dormant branch of flowering cherry, known as the Barbara branch, is brought indoors and blooms on or near Christmas Day; the Feast of Saint Nicholas (December 6), which is often celebrated with small gifts placed in the children's shoes left outside bedroom doors on the eve of the feast; and the Feast of Santa Lucia (December 13, usually the date of the earliest sunset of the year), which is observed with customs dating from pre-Christian times and features saffron-yellow yeast buns, known as Lucia cakes, baked in the form of a spiral sun.

Among Hispanic people the last nine days of Advent are known as Posadas ("lodgings"). Children, portraying Mary and Joseph seeking shelter on their way to Bethlehem, go from door to door and are turned away repeatedly. Finally, the last home welcomes them, which then becomes the site of a joyful service and feast.

Some families honor the religious significance of the traditional Christmas tree by a ritual blessing of the tree. Often they place a crêche or nativity scene under or near the tree and adorn it with other traditional decorations, such as candles and glittering tinsel.

A festive family dinner on Christmas Eve is common among many ethnic groups, often with a prescribed number of courses (usually seven, nine, eleven, or twelve) limited to fish or vegetable dishes. The fact that the day before Christmas was one of strict fast and abstinence in previous centuries accounts for the tradition of a meatless festive meal. Ethnic variations abound at this Christmas Eve meal; among the better known is the Polish custom of the distribution by the head of the family of portions of a waferlike rectangle of unleavened bread, known as *oplatek,* with prayers and good wishes for the holy season and the coming year.

The Feast of the Epiphany (traditionally celebrated on January 6 but observed by some denominations on a Sunday near that date) is little observed in most Western Christian homes, although Twelfth Night parties on the eve of the feast, a custom dating from the Middle Ages, continue to be held or are being revived. In Hispanic cultures, January 6, known as the Day of the Three Kings, is a major feast, and families of Slavic extraction continue the centuries-old custom of using blessed chalk to mark the doorways of their homes with the numerals of the current year and the initials of the Three Kings. Known as the Feast of Theophany among Eastern Christians, January 6 celebrates the manifestation of God's presence in the world that was given at the baptism of Jesus. Water, as the primal element representing all creation, is blessed in the churches and preserved by families at home; the custom of the reverent drinking of some of this blessed water by members of the family persists, and the priest uses the same water to bless the home on the traditional annual visit during this season.

Recent developments in Christian domestic religious observance include the adoption by some Christian families of Jewish feasts. These include Ḥanukkah near the winter solstice, with its custom of lighting the menorah (an eight-branched candelabrum), and the feast of Purim in the spring, when the story of Queen Esther is read aloud to the accompaniment of joyous noisemaking by children. Christian families celebrating these festivals serve traditional foods, such as potato pancakes for Ḥanukkah and prune-filled three-cornered pastries for Purim. Of particular interest is the celebration of the Seder (the Jewish Passover meal) in some Christian homes during Holy Week. As Christians rediscover the centrality of Jewish Passover imagery to their own beliefs and practices, especially its relevance to the Eucharist, they have begun to extend invitations to family and friends to celebrate a Seder with them annually; some families follow the Jewish ritual strictly, while others adapt it in various ways.

## BIBLIOGRAPHY

Much information on the domestic practice of European Catholics up until recent times can be found in Pius Parsch's *The Church's Year of Grace*, 5 vols. (Collegeville, Minn., 1953–1959). Francis X. Weiser's *Handbook of Christian Feasts and Customs: The Year of the Lord in Liturgy and Folklore* (New York, 1958) deals more directly with domestic practices among Catholics of European heritage prior to the Second Vatican Council. No comparable texts exist on domestic practices among families of the nonliturgical traditions or of those of the Eastern Christian tradition, although Constance J. Tarasar's *The Season of Christmas* (Syosset, N.Y., 1980) provides much information on family practices among Eastern Christians for the period between November 15 and February 2.

The more recent contemporary trend toward self- or family-generated ritual is discussed by Virginia H. Hine in "Self-Generated Ritual: Trend or Fad?" in *Worship* 55 (September 1981): 404–419. My book *Passover Seder for Christian Fami-*

*lies* (San Jose, Calif., 1984) provides an example of the adaptation of Jewish traditions among contemporary Christians. The bimonthly periodical *Family Festivals* (San Jose, Calif., 1981–) offers numerous examples of contemporary adaptations by Christian families of observances from diverse non-Christian religious traditions.

## DOMESTIC OBSERVANCES: MUSLIM PRACTICES

Owing to the segregation of the sexes and the belief that a woman's primary roles are as wife, mother, and manager of domestic affairs, the traditional Muslim home is largely the domain of women. Accordingly, many religious practices that occur within the home are performed exclusively by or facilitiated by women; these tend to be less formal and are often placed in the realm of folk practice. None of the five obligatory Muslim religious observances—the profession of faith, daily prayers, fasting, the pilgrimage, and almsgiving—is fundamentally bound up with the home. Indeed, public religious institutions and performances are generally the provinces of men. Women may attend the mosque and public religious gatherings, but their presence is seldom essential and frequently discouraged. They often remain onlookers or are relegated to separate areas where it is difficult to follow the central activity, such as a sermon, in any detail. Thus women's religious activities tend to take place in the home, where they can exercise some control and express their religiosity with a degree of freedom.

**THE HOME ENVIRONMENT.** Even within the home, a woman's behavior reflects on her family's reputation in the Muslim community. It is expected that she will be modest and circumspect in her dress and behavior, keep a good home, and be careful in performing her religious duties. Women are responsible for the protection of family health and well-being, which is achieved in part through vows and procedures to ward off the evil eye; both practices are popularly regarded as Islamic. Women are also charged with the care of young children and must see to their religious upbringing.

As managers of the home, women are responsible for creating and maintaining an environment conducive to proper Muslim behavior for all family members. Consequently, conventional domestic tasks take on religious significance. Ritual purity (*ṭahārah*) is an essential precondition for acts of worship. Things such as blood, certain bodily fluids, wine, pigs, and dogs are regarded as ritually unclean (*najis*). A person, place, or object that comes into contact with any of these must be properly cleansed in order to be ritually pure (*ṭāhir*). The state of ritual purity may be achieved by ritual washing *(wuḍūʿ, ghasl)* for personal cleanliness and by washing in running water or a sufficiently large body of water for objects. Women are themselves often considered ritually unclean because of menstruation, childbirth, and child care and must work hard at keeping themselves and their families, as well as their homes, appropriately clean. Clothes to be worn for prayer and other religious observances must be ritually pure. The vessels in which food and drink are cooked and served should be scrupulously clean as well. Some women devote a great deal of time and energy to these tasks: cleanliness is indeed next to godliness and often a prerequisite for it. In two *ḥadīth*s (traditional accounts), the Prophet is reported to have drawn attention to the importance of ritual purity, saying "Purification is half of faith," and "The key to Paradise is worship [*ṣalāt*]: the key to worship is purification" (M. M. Ali, *A Manual of Ḥadīth*, Lahore, 1944, pp. 41–42).

The preparation and consumption of food also have religious overtones. Bread, the archetypical food, is regarded as a symbol of God's generosity and must be treated with respect. Housewives take care not to dispose of uneaten bread with other scraps; rather, it is fed to beggars or animals or transformed into breadcrumbs for later cooking. Because certain foods are said to have been preferred or recommended by the prophet Muḥammad, their preparation has religious merit. In Iran dates are said to have been recommended by the Prophet as the first food to eat upon breaking the Ramaḍān fast. Other dishes are prepared as the result of vows to particular saints or, for Shīʿī Muslims, to the *imāms;* their distribution is regarded as a praiseworthy religious act. In addition, entire meals are prepared for religious reasons and served at home. These include evening meals during the fasting month of Ramaḍān, to which the poor may be invited, or ritual meals served in consequence of vows, such as the *sufrah*s in Iran. Women are expected to know when and how to prepare dishes that have religious significance: some Iranian women, for example, recognize a different dish as appropriate for each night of the month of Ramaḍān. The exact round of meals is a matter of local tradition, known to the women of a particular town or region. The careful avoidance of prohibited foods in cooking is equally important. As the primary guardians of their families' Muslim identity, Chinese Muslim women go to great lengths to avoid cooking with pork and pork products in the midst of the non-Muslim, pork-eating Chinese majority.

Hospitality is considered one of the hallmarks of a good Muslim, and the burden of caring for guests falls chiefly on the shoulders of the host family's women. Here too, this responsibility takes on particular importance in areas where

Muslims are a minority and proper accommodations and food are hard to find.

**RITUALS AND CEREMONIES.** Specifically religious domestic observances for which time is set aside and special preparations are made include Qurʾanic readings during Ramaḍān and special sermons at which women may officiate. In Iran and Iraq, Shīʿī Muslim women attend sermons combined with mourning for the martyred *imāms,* particularly on ʿĀshūrāʾ (10 Muḥarram), which commemorates the seventh-century CE martyrdom of Imam Ḥusayn and other men in his family along with the imprisonment and mistreatment of the women. The rituals may be sponsored by and for women; if sponsored by families and attended by men as well, separate areas are set off for the women.

Observances to mark regained health and answered vows may take place at any time of the ritual year. Auspicious days, such as the Prophet's birthday, are preferred. In Iran, ritual dinners (*sufrah*s) are often held on such occasions. A sermon commemorating the martyrdom of the *imām* or saint who answered the vow is followed by a dinner at which foods associated with the holy figure are served. Friends and family join in preparation of the dinner, then celebrate the answered vow and take home some of the remaining blessed food for their menfolk and children.

Many ceremonies marking rites of passage are held at home, and women play a major role in preparing for them. Among the ceremonies marking important stages in Muslim life are the formal naming of a child, circumcision, wedding contract ceremonies, and the reading of the Qurʾān over a body before it is taken away for washing and burial.

In Ethiopia, Egypt, the Sudan, and the Arabian Peninsula women participate in *zār* ceremonies. *Zār* refers to both the belief in possession by spirits (*jinn;* sg., *jinni*) and ceremonies designed to alleviate illness caused by spirits. The ceremonies, which involve dancing and trance, often take place at the homes of afflicted women. Women who attend do not feel that belief in the *zār* and its effectiveness conflicts with Islam. *Jinn* are mentioned in the Qurʾān and are popularly identified with the spirits that can possess and trouble people.

The extent to which a woman is willing and able to participate in group religious activities depends on her socioeconomic status, her education, the attitudes of senior men and women in her family, and her stage of life. For more observant and less traditional women, legitimate religious activity is determined by formal interpretations of religious law and includes formal religious education. Highly educated or strictly observant Muslim women may regard certain rituals, such as the *sufrah* or *zār*, as non-Islamic and avoid them. Denigrated practices are often viewed as vestiges of pre-Islamic rituals. Iranian Shīʿī *sufrah*s, for example, somewhat resemble *sufrah*s displayed in Zoroastrian ritual contexts. Women bearing heavy responsibility for the care of young children, food preparation, and housework have little time to attend religious gatherings.

Women perform essential services to their families and define themselves as good women in discharging their duties as Muslims, but the opportunity to socialize with other women in preparing for and celebrating religious occasions doubtless constitutes part of the rituals' attraction as well. By participating in individual and group religious observances at home, women are able to express their religious sentiments in ways that suit them personally and are socially acceptable. As women move into the public world of education, paid employment, and politics, circumspect behavior at school and in the workplace is added to their responsibilities as representatives of their families and their faith.

## BIBLIOGRAPHY

An excellent introduction to the religious practices of Muslim women, with particular attention paid to women in Iraq, can be found in Robert A. Fernea and Elizabeth W. Fernea's "Variation in Religious Observance among Islamic Women," in *Scholars, Saints, and Sufis*, edited by Nikki R. Keddie (Berkeley, 1972), pp. 385–401. *Women in the Muslim World*, edited by Lois Beck and Nikki R. Keddie (Cambridge, Mass., 1978), is a useful collection of articles; part 4, "Ideology, Religion, and Ritual," includes information on women in Algeria, Morocco, Egypt, Iran, and China. Further material on the status, responsibilities, and views of women in contemporary Muslim societies is presented in *Women and the Family in the Middle East: New Voices of Change*, edited by Elizabeth W. Fernea (Austin, Tex., 1985).

A detailed explanation of ritual purity is provided under "Taharah" in the *Shorter Encyclopaedia of Islam*, edited by H. A. R. Gibb and J. J. Kramers (Leiden, 1953). For information on food preparation and hospitality, see Aida Sami Kanafani's *Aesthetics and Ritual in the United Arab Emirates: The Anthropology of Food and Personal Adornment among Arabian Women* (Beirut, 1983), esp. chap. 2, "Food Rituals," and chap. 10, "Islam, Rites of Hospitality and Aesthetics." See also Bess Ann Donaldson's *The Wild Rue: A Study of Muhammadan Magic and Folklore in Iran* (1938; reprint, New York, 1973). Women's religious practices in Iran are discussed in two articles in *Unspoken Worlds: Women's Religious Lives in Non-Western Cultures*, edited by Nancy Auer Falk and Rita M. Gross (San Francisco, 1980). Erika Friedl's "Islam and Tribal Women in a Village in Iran" (pp. 159–173) provides an interesting contrast to the material on urban women in my article on *sufrah*s, "The Controversial Vows of Urban Muslim Women in Iran" (pp. 141–155).

Lucie Wood Saunders describes the involvement of two Egyptian village women in *zār* ceremonies and includes references to other articles on the *zār* in "Variants in Zar Experience in an Egyptian Village," in *Case Studies in Spirit Possession*, edited by Vincent Crapanzano and Vivian Garrison (New York, 1977), pp. 177–191. Fatimah Mernissi's "Women, Saints and Sanctuaries," *Signs* 3 (1977): 101–112, offers a compelling discussion of women's visits to local shrines in Morocco.

Patricia Jeffery's *Frogs in a Well: Indian Women in Purdah* (London, 1979), one of the few works on Muslim women outside the Middle East, studies the domestic life and religious responsibilities of the women of *sayyid* families who administer a shrine south of Old Delhi.

Elizabeth Fernea has also worked on a number of films that vividly present the role of religion in Muslim women's lives. In particular, *A Veiled Revolution*, by Fernea and Marilyn Gaunt (1982, distributed by Icarus Films, New York), addresses the issue of veiling in contemporary Egypt, and *Saints and Spirits*, by Fernea and Melissa Llewelyn-Davies (1979, distributed by Icarus Films, New York), portrays personal dimensions of religious experience among Moroccan women. *Some Women of Marrakesh*, by Llewelyn-Davies and Fernea (1977, Granada Films, London) provides a finely detailed look at the lives of traditional women in Morocco.

## DOMESTIC OBSERVANCES: HINDU PRACTICES

The Hindu home provides a necessary center for all social and religious life. A man has not fulfilled his duties and obligations to his ancestors unless he has been a householder. A woman is considered to be auspicious and blessed while she is married, and incomplete if she is not. Indeed, neither men nor women in Hindu society normally perform calendrical or life-cycle rituals unless they are wedded and their spouses are still alive. The home is where the major turning points in the life cycle (birth, marriage, and death) occur. Although practical considerations now make the hospital and the temple possible alternative locales, Hindus still associate such major occasions with the family living quarters. Traditional domestic architecture, wherever possible, anticipates the celebration of these periodic and grand events at home.

**HOUSEHOLD OBSERVANCES.** At a symbolic level, the household of a couple serves as a miniature of cosmic principles. Ideally, a home should be laid out as a series of rooms surrounding a single, larger courtyard. This is the same plan that astrologers use to depict the organization and movement of planetary deities and that priests use in laying out a sacred space for ritual purposes. Because of physical constraints, a shortage of proper building materials, and other economic and social concerns, contemporary Hindu homes in South Asia frequently deviate from the traditional ideal. Nonetheless, life in a modern house can still be linked, in several symbolic ways, to this basic design.

Where Viṣṇu is the prime deity it is common to have a tulasi plant growing in the family courtyard. This plant, treated as sacred, will always be tenderly cared for. Even when the tulasi itself is missing, a distinctively shaped pedestal intended for it often forms part of the basic household layout. No exact parallel exists for homes where Śiva is the foremost god. Nonetheless, there are other ways to mark off the symbolic center of family living space for special occasions. One common practice is to erect a square canopy made of bamboo stakes, mats, cloths, and vegetable greenery. This structure will generally be tied to one or more green branches, which serve symbolically as ritual center posts. Often these are further festooned with small pouches of grain, suggestive either of household fertility or simply of abundance. Like the tulasi plant, the ritual post functions as the *axis mundi*. Alternative expressions of the same idea take form through elaborate floor designs, complete with a pleasing vertical centerpiece. During the month of October–November, Hindus in Bengal traditionally put an oil lamp on a pole tied to the roof. Now often replaced by an electric bulb, this light helps the ancestors see their way in an annual journey made across the sky. In South India similar lights are placed on the central pillar of the temple for the same period. These folk concepts utilize a pillar-of-heaven concept. In this way, Hindu homes symbolically link family and temple life to ordered energy in the cosmos at large.

The Hindu home also shares its form with cosmic space by its customary orientation to the four cardinal points. Walls, doors, and even sleeping or eating locations inside are often identified in this manner. In Tamil-speaking areas people say that, ideally, the main door of the house should face the rising sun. The building's interior lines will then presumably allow the passage of morning air and light through the house in straight lines. Some orthodox homes in the South actually have a large mirror that faces the eastern entry, where a hall leading through the whole is not possible. This way the same effect is achieved in an illusory but still highly visual manner. Similar cosmic overtones govern other aspects of house layout. The family hearth, for example, recalls the sacred fire used in many Hindu rituals, just as a domestic well (if there is one) symbolically leads to the underworld. A typical Hindu residence also reserves space for the gods. The household shrine can be as grand as a separate room or as simple as a small picture or wall niche. Often a family's favorite gods are pictured in poster form, but they can also be represented in other, more traditional ways, such as by lamps, pots of water, or measures of grain.

No verbal terminology explicitly associates the parts of the house with parts of the body, yet the two are intimately linked. Indeed, the human body is considered by many Hindus to be a temple of the Lord, just as the household living space is a shrine. Hence daily bathing is a key part of the Hindu toilet, and the body should be internally cleansed by fasting in preparation for important events. Similarly, daily sweeping is essential to the maintenance of the house, as is the regular whitewashing or repainting of interior walls. The use of a medicinal cow-dung wash on the floors is also part of traditional preparations for many ceremonial events. After such preliminaries, homes in many parts of India are further decorated with powdered floor designs, ritual wall paintings, bunches of specially tied leaves, or strings of flowers. These adornments help protect a dwelling against evil spirits and serve, as well, to beautify personal space. Similarly, a Hindu's own body is frequently beautified with scented powders after bathing. Protective strings or amulets, and black eye paste, can be added to ward off various unwelcome forces.

In a striking way, images of fire and cooking further link these two forms—the human body and the "body" of the home—within Hindu religious life. On the domestic hearth each day, foodstuffs are transformed through water and heat into consumable meals. Human digestion also provides a fire that refines and transforms food internally. Fire, for a Hindu, is itself a god (Agni), yet it is also the vehicle through which offerings at domestic rituals are carried to other gods via an open flame and rising smoke. Food consumption is often seen as a parallel process that makes offerings to an internal god. Thus all eating, but especially the partaking of full meals, is a semisacred activity. Orthodox Hindus bathe and change into clean clothes before meals, and prefer not to talk while seated for any significant feeding purpose. Many Hindus are also sensitive about having maximum privacy at this time. No one but an approved cook should tend the domestic hearth, and no one but the eater should look at the meal set before him. Because of the presence of an internal fire, the period reserved for food consumption is also a time of transformation. The threat of mismanaging this process, and hence of subsequent spiritual and physical disorder, is always present at such moments. Careful controls surround the eating process for this reason.

Firm rules also govern body movements in the home. Because personal or household space should be respected and kept clean, shoes or sandals must always be left at the door. Furthermore, Hindus are very aware of the symbolism of vertical placement. The lowest floor of a house is reserved for unclean visitors. Washermen or itinerant merchants sit or stand there. Higher levels are reserved for honored guests and for family members, while the very highest spots are used for sacred shrines and for valued photos of deceased relatives. One always sits and lies at a level lower than that allocated to these revered symbols. Similarly, much family etiquette revolves around bowing to senior members, often touching their feet. Women generally cover their shoulders (and in the North, their heads) in the presence of certain relatives. Such gestures indicate an attitude of special respect. Correct male behavior is similar. Men partially uncover themselves (legs, head, chest) when performing services for pay, thus acknowledging inferior status, but cover up (at least their legs) to express deference to senior relatives and to gods.

It is difficult to delineate male roles from female roles in discussing domestic observances. In wealthy homes male servants often cook, but among close relatives it is usually women who tend the family hearth. An exception arises when women in the house are menstruating, at which time they are not supposed to touch anything in the kitchen, or indeed to even enter that room. If no other female relatives are available, men may temporarily assume the task of food preparation at this time. Hindus can also be quite particular about taking cooked food from strangers, since in such a case they know little about the caste and pollution restrictions that were observed during its preparation. Many Hindu men who travel, or who live alone for other reasons, learn to cook for themselves.

A somewhat similar division of labor by gender governs worship at domestic shrines. Many Hindu women regularly tend a family altar, laying or hanging fresh flowers around the gods and saying prayers. In homes where elaborate daily rituals are performed, however, these are usually left to a senior male. Such intensive worship is by personal preference and is generally associated with individual orthodoxy. It is also common for families to conduct day-to-day rituals themselves but to hire a priest-specialist for the more elaborate work associated with honoring family gods during special festivals or at key domestic events.

**RELATION TO NONDOMESTIC OBSERVANCES.** It would be incorrect to draw any sharp division between Hindu household rites and nondomestic observances. The human body, the domestic living space, and the public temple, as pointed out earlier, are ritually similar. Worship relating to one, for a Hindu, is often equivalent to worship at another.

Hospitality, another key theme, also runs through both temple and domestic events. The reception accorded special household visitors has its own rituals of greeting, seating, and feeding. Gods are treated as household guests, while human visitors may be treated like gods. Foods appropriately offered a guest, as well as the sequence in which they are presented, have been codified in detail. In traditional circles even the serving dishes used to welcome guests are made of special metals and molded into special shapes. Details of gesture and posture are also important when one is receiving visitors. Such gestures are sometimes carefully described in folktales. Details of such hospitality rules, but not the principles, vary by region and by a family's social or community status.

For any Hindu, the house guest *par excellence* is the religious mendicant. Many devout, well-to-do people make a point of feeding ascetic wanderers daily. Family honor and personal merit both increase with the generous giving of food to one who has renounced the world. Popular religious legends tell of gods who become beggars in order to test a devout householder. These holy persons challenge the donor, testing to see if he or she is willing to sacrifice personal abundance for religious devotion. In all such encounters divine grace enters the household with the guest's presence, just as a deity is thought to enter the household shrine during worship. It is not uncommon, furthermore, to give foods that were first offered at the family shrine to strangers who later appear at the door.

Public and domestic elements also come together in other Hindu observances. One tradition, becoming more and more popular at present, is the hymn-singing evening among friends. This event can be held in a public temple, but it is also commonly organized in private. The participants either seat themselves facing a household shrine or use an image taken from that altar as a centerpiece. Such gatherings redefine space in a personal home, so that it becomes more like the space of the public temple.

Hindu domestic rituals spill into the wider world in other ways. A good illustration is provided by the popular southern rite called Poṅkal. This is the special boiling of raw rice *(poṅkal)* on a festive occasion, and its subsequent offering to one or more divinities. The symbolism of Poṅkal carries with it many of the associations between body, home, shrine, and cosmos already mentioned. At an overt level, Poṅkal transforms raw rice into a milky, mushy gruel that is then offered to a god or goddess with a short ceremonial *pūjā*. In a third step, the same food is later distributed among the key participants and eaten. At a deeper level Poṅkal is symbolically associated with the harvest of rice or the birth of a child. In each of these three transformations there is both careful control and the application of heat. In Poṅkal the cooking is confined by a pot; in a field rice is ripened or cooked by the sun, there held to the earth in which it was planted; in gestation a child matures or "cooks" inside the mother's belly while still confined to her womb. The Poṅkal ceremony is also linked to key calendrical festivals such as the Tamil New Year, where yet a further temporal transition is celebrated.

The *poṅkal* is generally cooked in new pots, often on a new stove. Normally it is prepared in the open, on a house threshold, or at the border of a temple compound. In this sense cooking *poṅkal* is a little like cooking at a picnic. The place is unusual and the method of preparation slightly different from normal. There is also a special ritual involved in the cooking, whereby each pot must boil up and spill out in an auspicious direction, but not substantially overflow. This rice-cooking ritual may be performed at home and the product directly offered to deities there, or it may be prepared in an open temple yard by women from separate households. It will then be offered to a publicly enshrined god or goddess. The rite of Poṅkal thus moves a key domestic activity out of the inner sanctum of the kitchen and into more marginal and more open spaces. The preparation of this most vulnerable of food substances, boiled rice, is also opened up on such occasions to an unusual degree of public view. Both these changes suggest the temporary merger of domestic with wider human domains.

If the cooking of *poṅkal* involves a relaxation of the distinction between household and temple, it is also a key ritual in events that mark the overlap of a household social grouping with other key dimensions of community structure. A share of Poṅkal rice, for example, is often offered to immediate family ancestors. Furthermore, cooking *poṅkal* is a common ritual ingredient of festivals celebrated by much larger groupings of kinfolk, such as whole lineages, clans, or subcastes. The preparation of *poṅkal* is also a big event at calendrical celebrations for the village goddess. Here members of many different castes participate overtly. By joining in such an event, they define their common membership in a unit larger than the hamlet or single community.

**POLLUTION.** Hindu men and women both contract ritual pollution upon the death of close relatives. Complex rules govern how long one is disqualified from participating in festival events after a family funeral has taken place. Both sexes also suffer from temporary pollution after sexual intercourse (requiring a bath) and after eating foods cooked by persons of low caste (traditionally requiring additional acts of expiation). Hindu women acquire pollution during childbirth and menstruation as well. The rules vary by caste, region, and the general orthodoxy of the household as to the action and precautions necessary in such circumstances. Most urban or educated Hindus now consider some or all of these pollution ideas outdated. The enforcement of such restrictions persists, however, in many rural areas.

The Hindu concept of pollution is still imprecisely and incompletely understood by theorists, but it is known that this idea interweaves, in complex ways, such elements as domestic precautions, detailed rules for social intercourse, and several concepts of danger. Pollution, for the Hindu householder, involves a social misalignment, the loss of bodily substances, or a lapse in key biological functions. Either matter is out of place or primal energies have been misaligned. Pollution-linked restrictions serve to prevent such disorders from spreading. As in the Poṅkal ceremony, unusual admixtures and the heat that they generate are a necessary force in transformation. Such processes, though necessary, must be properly contained and monitored in order to confine the chaos produced as their by-product. Hindu domestic ceremonies symbolize the need for regulation and control. They thus ensure a fruitful channeling of vitalizing and heating forces of many kinds.

**SEE ALSO** Rites of Passage, article on Hindu Rites.

## BIBLIOGRAPHY

Two classical sources of great importance on domestic matters are *The Dharmaśāstras*, best summarized by P. V. Kane in *History of Dharmaśāstra*, 5 vols., 2d ed., rev. & enl. (Poona, 1968–1975); and *The Laws of Manu*, translated by Georg Bühler, Sacred Books of the East, vol. 25 (1886; reprint, Delhi, 1964). No recent sourcebook provides a reader with the same colorful detail on a full range of Hindu domestic practices and at the same time charts an overview of first principles. Current works, however, do give a better idea of day-to-day household observances. An in-depth discussion of cooking, gastronomy, and food exchange, for example, can be found in Ravindra S. Khare's *The Hindu Hearth and Home* (Durham, N. C., 1976). A more technical treatment of a broad range of domestic and temple ritual is provided by Carl Gustav Diehl in *Instrument and Purpose: Studies on Rites and Rituals in South India* (Lund, 1956). Another excellent description of household ceremonies, especially those celebrating the life cycle of individuals, is to be found in Margaret S. Stevenson's *Rites of the Twice Born* (London, 1920). A still earlier work by Abbé Jean Antoine Dubois, *Hindu Manners, Customs and Ceremonies*, translated by Henry K. Beauchamp (Oxford, 1906), describes the whole range of Hindu ceremonials he encountered between 1792 and 1823, during his so-

journ in southern India as a Catholic missionary. Though highly judgmental in places, the ethnographic detail he includes retains its value to this day. Much contemporary information about rural domestic practices in the North is contained in Ruth S. Freed and Stanley A. Freed's *Rites of Passage in Shanti Nagar* (New York, 1980). Information on central India can be found in Lawrence A. Babb's *The Divine Hierarchy: Popular Hinduism in Central India* (New York, 1975), and traditions in the Tamil-speaking area of South India (especially those surrounding the Poṅkal ceremony) are discussed by Louis Dumont in *Une sous-caste de l'Inde du Sud; Organization sociale et religion des Pramalai Kallar* (Paris, 1957).

## DOMESTIC OBSERVANCES: CHINESE PRACTICES

Chinese domestic rituals are rich and varied, differing from place to place and over time. We know most about the observances of the southeastern provinces (Kwangtung, Fukien, and Taiwan) in the nineteenth and twentieth centuries; what follows reflects this imbalance in our knowledge. Widespread hints and a few fuller accounts of other provinces and other periods, however, give us confidence that, despite considerable variation in specific rituals, the same basic themes have shaped domestic ritual throughout China for several hundred years.

The Chinese word *jia* means both "house" and "family," and everywhere in China there exists a close ritual connection between the building and its inhabitants. It is convenient to divide Chinese domestic rituals into three types: those concerning the house itself, those dealing with the life cycle of the family and its members, and those calendrical rites that are ordinarily performed by the household corporately, or by one or more household members for the benefit of the family as a whole.

**Rites of the House.** The placement and spatial proportions of a house are believed to affect greatly the fortunes and well-being of its inhabitants. Before building, then, care is taken to site and orient a house in a way favorable to those who will live in it. This is done by selecting a site, if possible, with the advice of a geomancer, a specialist in the technique of *feng-shui* ("wind and water"). A geomancer can tell from the topography of a potential site and its surroundings how well the "cosmic breaths" or "natural forces" *(qi)* set up by building the house will harmonize with those of the natural environment and the potential inhabitants. Geomantic siting and orientation are particularly important in a farmhouse, which can be built without regard to streets or nearby structures.

An urban house, of course, must be built on an empty lot and must face a street, so the opportunities for geomantic siting and orientation are correspondingly restricted. But in both urban and farm houses, the internal proportions of construction are another important consideration in assuring a harmonious dwelling. Such measurements as the size and placement of gates and doors, the arrangement of rooms, and, in particular, the placement of the ritual altar are deemed to affect the relations between a house and its inhabitants. Accordingly, not only geomancers but also carpenters must be familiar with correct proportions; carpenters' manuals contain both explicit instructions for the proper proportioning of a house and an occasional hint at how to cause discord in an enemy's family by purposefully building the house incorrectly.

Disharmony in family relations is sometimes attributed to bad geomantic siting or improper proportioning or layout of a house. To correct such spatial dissonance, it is not uncommon for people to erect a screen to prevent the direct entry of certain undesirable forces or spirits, reorient a door so it will face the domestic altar at a different angle, or perhaps build or take down a wall in order to restore harmonious relations between a house and neighboring structures. In extreme cases, houses geomantically diagnosed as incurable may be abandoned in favor of more salubrious sites.

Not only must a house harmonize with its spatial surroundings, it must also be occupied at a harmonious, and thus auspicious, time. A family moves into a new house during a two-hour period selected by a horoscope reader (who may double as a geomancer) to harmonize with the hours, days, months, and years of birth of as many of the family members as possible. The actual act of moving is marked by lighting incense to the household gods and ancestors on the new altar. The full celebration of moving into a new house is an elaborate one, often complete with major ritual sacrifices, officiated by Daoist or other priests, and including a large feast for relatives, friends, and neighbors.

Even after taking all prudent geomantic and horoscopic precautions, a family may still find its house a source of domestic disharmony. Certain rituals are designed to protect against this or to remedy it should it occur. Families who have moved into a previously occupied house will protect themselves against the spirit of the original owner, who is thought to reside in the house: on certain calendrical holidays this spirit, Ti-chi-chu ("lord of the foundation"), is worshiped with a small offering. In many areas, exorcisms, performed by Daoist or other priests, are employed either as precautions against possible haunting or in order to banish a ghost or spirit thought to be causing trouble.

In addition to such malevolent spirits, more benevolent or protective spirits also reside in the Chinese house. The local gods and family ancestors are enshrined on an altar, usually a prominent feature of a central parlor or another auspiciously located room in the house. They are the object of many of the calendrical and life-cycle rituals described below. Besides these, the house also plays host to some lesser spirits, the most important of which is Zaojun, the so-called kitchen god or, more accurately, "lord of the stove." The stove god is a low-ranking divinity, but many people consider him important because he is a sort of spy, sent by the Jade Emperor in Heaven to report on the activities of household members. As there is one stove for each household, even if there is more than one household in a dwelling, each household also has its own stove god, represented either by a picture or by his title written on red paper and pasted on the wall near the stove. This provides the stove itself with a certain sanctity. Thus, polluting substances (such as laundry, which is presumed to contain menstrual blood) cannot be placed on or hung in front of the stove, any more than these substances can come in contact with the altar. In addition, in some areas people ritually send the stove god back to Heaven to make his report on one of the last days of each lunar year; sometimes they place a bit of sticky candy on his lips so that his report will be brief and inarticulate, or alternatively, a bit of opium to soften his mood. Some families occasionally offer incense to a minor divinity associated with the household pigs or other livestock; rituals and stories surrounding this spirit are not as important or as elaborated as those concerning the stove god.

**LIFE-CYCLE RITUALS.** Domestic rites and celebrations accompany almost every stage in the life cycle of family members, including pregnancy, birth, early childhood, marriage, family division, death, and the passage to ancestral status. At each stage, both the family as a social unit and the house as a ritually charged space play an important part.

When a woman becomes pregnant, a spirit known as the "fetus spirit" (*taishen*) comes into being. This spirit, thought by some to be the soul of the unborn child, is not yet firmly attached to the fetus, but migrates around the house, changing its position from day to day. By reading a ritual calendar, people can discern, for example, that the fetus spirit will be in the bedroom today, on the roof tomorrow, in the front door the day after, and so on. No one worships or propitiates the fetus spirit, but all must be careful not to offend it for fear of harming the unborn child. Thoughtlessly driving a nail into a wall where the fetus spirit is staying, for example, may cause the child to be born with a harelip; sawing or cutting cloth in the fetus spirit's current room can cause missing limbs or digits; moving things that have long lain still at a time when the fetus spirit is in that room can cause spontaneous abortion.

Aside from such considerations, the pregnant woman has but few ritual restrictions placed on her. Birth ordinarily occurs in the woman's bedroom. The blood of birth, like the blood of menstruation, is polluting, and thus offensive to the gods. For one month following the birth, a new mother is treated as being in a state of ritual pollution, and is confined to the house. During that month, the room where the birth took place is also considered polluted, as is anyone who enters it. For a first son, a first-month feast often marks both the lifting of the state of pollution and the introduction of the child to the community; for subsequent sons and for daughters the ritual is often omitted.

A mother with young children has special ritual duties incumbent on no one else; she makes daily prayers and offerings to Chuangmu ("bed mother"), a low-ranking spirit whose special concern is the health and growth of young children. Closely associated with the bed, the bedroom, and motherhood, the Bed Mother is ignored by other members of the household; she is also, unlike such domestic spirits as the Lord of the Stove, unaffected by pollution. After a woman's children are all of school age or older, she will no longer need the special protection of the Bed Mother, and will cease the prayers and offerings to her.

Since no rituals have marked puberty or other coming of age for Chinese boys or girls in late traditional or modern times, the next ritually important event in the life cycle of the family is marriage. Marriage, like the other life-cycle rituals mentioned above, is closely connected with both the family group and the house itself. After the initial negotiations and matching of horoscopes of the prospective spouses, the first major ritual is the engagement, in which members of the groom's family (but in most areas, excluding the groom himself) deliver the betrothal payment (*pinjin*) and other gifts to the bride's family, and the groom's mother places a ring on the bride's hand. A few weeks or months later, at a horoscopically determined day and time, the marriage itself takes place. The day before the wedding, members of the groom's family go to the bride's house to exchange some ritual presents for the bride's dowry, which they then proceed to take home with them. Part of the dowry—the clothing, jewelry, cosmetics, and bedroom furniture—is installed in the "new room" (*xinfang*), ideally a newly built room, but minimally a newly outfitted one, in which the new couple will sleep. The next visit of the groom's relatives fetches the bride herself, who comes in splendor in a red sedan chair, and at a ritually auspicious moment is carried into the bedroom, the act marking the actual wedding. Later, she and her new husband worship the ancestors of his house, symbolizing the incorporation of the bride into her marital family. A feast follows, introducing the family's bride to relatives and neighbors.

With all sons bringing their brides to live as part of a joint family, the household will, inevitably, grow too large and its conflicts too intense to remain together as a joint corporation. The eventual establishment of separate household groups involves not only the equal division of property and residential space among the brothers but also the division of ritual responsibilities. After the households are divided, brothers may continue to share an altar for household gods and ancestors, but they can no longer share a stove or a stove god. A simple ritual of division involves a final common meal, followed by division of the ashes from the original stove and the consecration of a new stove, with a new stove god, for each of the newly independent households.

Death, like other phases in the life cycle, is an affair both of the family and of the house. A person's death places all family members, as well as the house (whether or not the person died at home), in a state of ritual pollution for a month, and initiates the most elaborate and sustained series of life-cycle rituals. At a ritually auspicious time, a priest or monk, depending on local tradition, places the body in its elaborately painted wooden coffin, which remains in the family's parlor until the burial. A paper soul-tablet with its own incense burner is set up on a special table adjacent to the family's altar. Copious offerings of food and incense are made night and day until the funeral, which must occur at a ritually opportune time, and thus may be delayed several weeks. The funeral involves the participation of many people besides the family members, and as such, is not a purely domestic observance. But the connection to the house remains strong; the two ritually crucial acts of the funeral, those that must be performed at proper times on pain of severe illness for family members, are carrying the coffin out of the house and lowering it into the grave. The family pays all funeral expenses, including a modest feast for a large gathering of relatives, neighbors, and friends. Those who come to pay their respects help offset the cost by bringing the family gifts of money.

After the funeral the temporary, paper spirit-tablet remains on its table for a few weeks, after which it is moved to the family altar, where it is still worshiped separately from the wooden tablets of previously deceased ancestors. After one or two years, a carved wooden tablet replaces the paper one, and the deceased takes a place among the ancestors of the household, to be worshiped as part of the domestic ritual calendar.

**CALENDRICAL RITUALS OF THE FAMILY.** Calendrical rituals center around the altar, which is usually divided into two halves. The left-hand part (which stands at the observer's right when facing the altar) is the ritually superior half, and enshrines the household gods. These may include deities of Buddhist origin such as Guanyin or one of the Buddhas; historical heroes, such as the Three-Kingdomsera fighter Guangong or one of the more local heroes; or purely traditional gods of the folk religion, such as Tudigong ("earth spirit"). There is usually a scroll hanging on the wall behind the gods' half of the altar, depicting whatever gods are popular locally. Families who feel particular devotion to an individual god may in addition place that god's carved wooden image on the altar in front of the scroll. A single incense pot serves for offerings to all the gods or, if need be, to a particular god on his or her birthday or other special occasions, such as the anniversary of the day when the god saved a family member's life or aided in some other extraordinary way.

The subordinate side of the altar, the right side (which stands at the observer's left), is the seat of the family's ancestral tablets. Depending on region and on individual preference, there may be a separate tablet for each ancestor or married pair of ancestors, there may be a single tablet-cabinet, containing rectangular wooden strips, one for each ancestor or pair, or the names of all the ancestors may be written on a broad, rectangular wooden board. In any case, the names of individual ancestors are always written on the tablets, together with their birth and death dates, and often the number of sons erecting the tablet. Exactly which deceased forebears are worshiped as ancestors varies from household to household, but the general rule is that a family should worship the household head's father and mother, father's father and father's mother, and so on back three to five generations from the current head. In fact, however, other ancestors are often included. For example, if a woman with no brothers marries into the family, she will bring her ancestors' tablets with her, and if a man marries into his wife's family, he may also bring his parents' tablets, or more if he has no brothers to take care of the tablets at home. Ancestors with surnames other than that of the primary ancestral line of the household cannot be worshiped together with the primary ancestors; they must have their own incense burner, and may be relegated to a separate, subordinate altar.

Daily devotions at the altar include incense offered morning and evening, first to the gods and then to the ancestors. Often, a third stick of incense is placed in a burner just outside the front door of the house and offered to dangerous ghosts. Any family member may perform these simple rites; in practice the duty most often falls to the senior woman.

More complex offerings to various spirits may come on the first and fifteenth days of each lunar month, corresponding roughly to the dates of the new and full moon, respectively. These offerings may include presentation of food and burning of ritual money as well as the customary lighting of incense. But the truly elaborate domestic offerings are reserved for special occasions of three kinds. First are the holidays, which are dispersed differently through the Chinese lunar and solar years from one region to the next; only the New Year and the Mid-Autumn festival, celebrated the fifteenth day of the eighth lunar month, approach universality. Second are the birthdays of individual gods, on which occasions households may worship individually or as part of a larger, community celebration. Finally, there are the death-day anniversaries of the family's individual ancestors; these are of course different for each family.

For any of these three sorts of calendrical occasions, each family will prepare and present its own offerings, which always include incense, food, and paper money, and may also include other paper offerings, such as clothing for the ancestors, and on some occasions firecrackers. Offerings always differ according to the particular occasion and according to which spirits are being worshiped. As a general rule, gods receive large, symbolic offerings, such as whole fowl or meat cuts and "gold" paper money. Ancestors receive smaller and more intimate presentations, including food cooked, chopped, and ready to eat, along with silver spirit money and in some places clothes or other practical goods, burnt in paper form. Ghosts, worshiped in many places in the seventh lunar month, receive massive and impersonal offerings, such as uncooked foods, and always the lowest denomination of paper money.

A calendrical ritual of any sort represents the discharge of a family's ritual obligations, either alone or along with other households in the community. At the same time, ritual occasions of this sort provide families with the opportunity to socialize and to strengthen ties with other families. All food offerings are eventually eaten, and all but the simplest are elaborate and expensive enough to be suitable for entertaining guests. Even on the private occasion of an ancestor's death-day, a family will invite a few relatives or neighbors to a ritual meal, and on a major community holiday or god's birthday every house in a village or a city street will be full of guests from outside the local community. On these holidays, as on so many other private and public occasions, the Chinese family affirms its good standing and its unity through ritual.

## BIBLIOGRAPHY

The best single source of modern analyses of Chinese domestic observances is Arthur P. Wolf's edited collection *Religion and Ritual in Chinese Society* (Stanford, Calif., 1974). Particularly informative for domestic rites are Wolf's "Gods, Ghosts, and Ancestors," pp. 131–182; Stephan Feuchtwang's "Domestic and Communal Worship in Taiwan," pp. 105–129; and Wang Songxing's "Taiwanese Architecture and the Supernatural," pp. 183–192. A good general account, including interesting descriptions of exorcistic rituals, is David K. Jordan's *Gods, Ghosts, and Ancestors* (Berkeley, 1972). Maurice Freedman's writings are notable for their comprehensiveness and wealth of ideas, particularly those concerning ancestor worship and geomancy. See particularly his *Lineage Organization in Southeastern China* (London, 1958), *Chinese Lineage and Society: Fukien and Kwangtung* (London, 1966), and many of the articles collected and reprinted in *The Study of Chinese Society: Essays by Maurice Freedman*, edited by G. William Skinner (Stanford, Calif., 1979). These latter include not only treatments of ancestor worship and geomancy but rich accounts of marriage rituals as well. The most detailed and satisfying study of ancestral rites, including those in the home, is Emily M. Ahern's *The Cult of the Dead in a Chinese Village* (Stanford, Calif., 1973).

All the above sources concern the three southeastern provinces of Taiwan, Kwangtung, and Fukien; accounts of domestic rites in other areas of China consist primarily of descriptions of festivals and of life-crisis rituals, with little analysis. Good descriptions for Shantung can be found in Martin C. Yang's *A Chinese Village: Taitou, Shantung Province* (New York, 1945) and Reginald F. Johnston's *Lion and Dragon in Northern China* (New York, 1910); for Hopei, there is much useful material in Sidney Gamble's *Ting Hsien; A North China Rural Community* (New York, 1954; reprint ed., Stanford, Calif., 1968).

## DOMESTIC OBSERVANCES: JAPANESE PRACTICES

The Japanese dwelling once was a sacred place in which images and symbols of numerous deities and spirits were the object of purely domestic ritual. Over the past century, and with increasing acceleration since the end of World War II in 1945, both the number of objects of veneration and the frequency of the rituals directed toward them have declined precipitously. Despite the decline, there nevertheless remain ceremonies and practices that speak directly to the notion that the dwelling and its occupants will enjoy the protection of an array of tutelary deities and spirits so long as they are fittingly propitiated.

In analyses of Japanese religious behavior it is common to distinguish three general domains: Buddhism, Shintō, and folk beliefs and practices. Although the categories are by no means exclusive, this tripartite division affords a useful way of organizing a discussion of change. The postwar period has seen the near eclipse of domestic practices belonging to the realms of folk religion and Shintō. Both were closely bound up in the annual cycle of agricultural and fishing communities, whose way of life has been irreversibly altered by the massive social and economic transformation of the twentieth century. Shintō, furthermore, has long been deprived of its privileged position as the vehicle for the government's efforts to construct a national cult centered on emperor worship. Rites in the Buddhist idiom alone survive as the chief focus of domestic religious observances.

Before turning to these Buddhist rites, however, it is appropriate to survey briefly the rapidly vanishing world of household deities and spirits, for only a generation or two ago their benign presence was thought essential to the well-being of the domestic unit. Few dwellings would have contained all of them, given the very great regional variation in these matters, but it is safe to say that most would have had at least one.

Known by many names, the *yashikigami* (house deity) was found in one form or another throughout the country. Customarily enshrined in the corner of the house yard or on other land owned by the family, it served as the tutelary deity of the household or the community and in some places was thought to represent the spirits of the ancestors of the contemporary population. The rites associated with the house deity were essentially Shintō in character, but lacked any connection with the state cult. Equally common, perhaps, was the *toshi no kami* or *toshigami* (year deity), enshrined in the Shintō style on a shelf set high on the wall of the main room of the house. As the name implies, it was venerated chiefly at the New Year, at which time its vaguely tutelary powers were invoked to see the family safely through the coming year.

Once almost universal but quite rare since the disestablishment of state Shintō was the practice at the New Year and on some other festival occasions of hanging a scroll in the *tokonama* (alcove) of the main room of the house bearing the characters *Tenshō kōtaijin* (i.e., the name Amaterasu Ōmikami, the sun goddess, founder of the imperial line). Offerings to this premier deity of the Shintō pantheon consisted of rice or glutinous rice cake and branches of the *sakaki* tree. Less ordinarily enshrined in homes than in places of business, Inari, usually referred to as the fox god but in reality the goddess of rice, was found in some house yards. In other areas, an image of the *bodhisattva* Jizō (Skt., Kṣitigarbha), the protector of children, was installed somewhere outside the house and, like Inari, was made the object of occasional offerings.

Many houses contained a pair of images of two other deities thought to bring good fortune. Ebisu, usually depicted with a large fish under his arm, and Daikoku, shown standing or sitting astride bales of rice and holding a hammer from which money and other valuables flow, were placed together on a separate shelf, and offerings of food were made to them periodically. Daikoku appeared in another form as well, as the largest of the four main pillars supporting the roof of the house. Called *daikoku bashira*, this post was the central point of the geomantic diagram from which all auspicious and inauspicious directions were calculated. Although no offerings were made to it, care was taken that the pillar was not defaced and that no one leaned disrespectfully on it.

Ritual of a combined folk and Shintō character is also a feature of the construction of the house itself. The site itself is protected by the placing of emblems of purity and sanctity called *shimenawa* (twisted straw rope) and *gohei* (folded white paper streamers). When the ridgepole is raised, a priest or the head carpenter, accompanied by the head of the house and his sons, performs rites designed to secure the good fortune of the family and from atop the structure throws down rice cakes to family members, helpers, and neighbors. The ceremony is followed by a feast featuring numerous dishes symbolizing prosperity, longevity, and felicity. Less widely practiced in cities than in the countryside, both the sanctification of the house site and the ridgepole ceremony are still widely observed.

There remain three other major domestic deities associated directly with the dwelling itself, *kama no kami* (deity of the stove), *suijin* (deity of the well), and *benjō-gami* (deity of the toilet), all of whom received offerings primarily at the New Year. The first was enshrined on a shelf, where offerings of rice, tea, *sakaki* branches, candles, and incense were made. The well god, represented by a stone image or a small clay shrine set near the well or pump, received offerings of flowers. The toilet god has been of little importance in most areas for a long time, but was given a little rice at the New Year. Of the minor household deities, many were worshiped in limited areas or by certain kinds of households. It would be impossible to enumerate them here.

Until the end of World War II, which ended in a defeat so catastrophic that the carefully crafted structure of national Shintō was totally discredited, most houses had a shelf for Shintō deities called the *kamidana*. Made of plain wood and bearing unglazed pottery vessels for offerings, it held a miscellany of amulets (*fuda* or *omamori*), souvenirs from Shintō shrines, and most particularly a talisman from the imperial shrine at Ise, seat of the imperial ancestors. At the end of the war many people took down the *kamidana* or failed to incorporate one into new dwellings built in the postwar period. Nonetheless, the practice of collecting amulets from both Shintō shrines and Buddhist temples remains a vigorous one, and almost anyone on a visit or pilgrimage will purchase them to bring back to keep in the house, on his or her person, or, more recently, in the family automobile. These amulets are for easy childbirth, traffic safety, curing alcoholism, success in school examinations, and a host of other mundane concerns. Never the object of veneration or offerings, they are thought to serve a generally protective function.

Most of the rites associated with the household deities so far discussed are performed rather casually. An offering may be made by anyone who thinks of it, although the wife of the family head or the grandmother of the house is most likely to discharge this function as part of her domestic duties. Very different are the rites associated with veneration of the spirits of the deceased members of the household, for in this context the family coalesces as a worshiping unit. These rites center on the *butsudan* (Buddhist domestic altar), a cabinet with doors that normally stands in the main room of the dwelling. The altar doors are opened only when a ceremony is held or someone wishes to speak to the ancestral spirits. Although the altar may contain certain Buddhist paraphernalia, perhaps an image of a *bodhisattva* or scroll bearing a picture or sacred text, it is first and foremost the repository for the memorial tablets of deceased family members. For this reason it is called the ancestor shelf (*senzodana*) in many parts of the country.

On major occasions of worship, priests may be called to the home to conduct the services, but all the other ceremonies for the ancestral spirits are performed by members of the family. They may assemble as a collectivity or approach the altar individually, but on such occasions the presence of a ritual specialist is not required. Because the matter is rather complicated, it will be well at this juncture to lay out the variety and kinds of circumstances that lead the living members of the household to interact ritually with the spirits of their dead kin.

Particular attention is given the ancestral spirits on four occasions in the annual ritual cycle: New Year, the vernal and autumnal equinoxes, and Obon (Festival of the Dead) in the middle of July or August by the Western calendar. By far the most important of these is Obon, when the spirits are welcomed back to the house and given a feast by the members of the family. They remain for three days and are sent off again with gifts of food and flowers. On all four of these calendrically determined occasions, the collectivity of the ancestors is worshiped by the collectivity of the family. Other occasions for domestic worship center on the deceased individual. Special offerings and sūtra reading mark every seventh day of the first forty-nine days after death. Memorial services are held at the altar in a sequence of anniversaries of the person's death (*nenki* or *shūki*), generally the first, third, seventh, thirteenth, seventeenth, twenty-third, twenty-seventh, thirty-third, fiftieth, and one-hundredth. Depending on the family's sectarian affiliation and preferences, one of the last three anniversaries may terminate the series of observances for the deceased as an individual. In addition to these prescribed rites, rice, tea, and other foods are placed in the altar daily, usually at the time of the morning meal. For the more elaborate and formal rites, most people deem it appropriate that the family head officiate, but at all others any member may make the offerings. Inasmuch as responsibility for care of the ancestors is conceived as an extension of a woman's domestic role, it is not surprising to find that adult female members of the family are heavily involved in the daily offering of food and drink to the ancestral spirits, who are clearly thought to remain in need of care and sustenance.

More casual, less routinized contact between the living and the domestically enshrined ancestors is also common. Individuals may petition the ancestors for assistance in some endeavor, report successes to them and apologize for failures, seek their advice rhetorically by raising problems and expressing doubts about the best course of action in some matter, and offering them a portion of gifts of food brought to the family by visitors. At such times no formal offerings are made, but such interaction, in which conventional rather than ritual speech is used, clearly supports the contention that, as David W. Plath (1964) has put it, the Family of God is the family and the dwelling the site of the most intense religious activity in which most Japanese ever engage.

Until recent times the house was also the site of births, weddings, and funerals, as well as a number of other events marking stages in the life cycles of its members. Each was marked by the preparation of ceremonial foods and the display of ritual objects. Auspicious and festive occasions, as well as somber and inauspicious ones, were observed in the context of a concern for the continuity of the domestic unit, celebrating the addition of new members through birth or marriage, changes in their social position, and transition to the realm of ancestorhood. Today, however, women give birth in hospitals and weddings are held in commercial establishments. Only the funeral service remains a household event.

The annual round is punctuated by the observance of a combination of secular and religious occasions on which, as in the life-cycle events, special foods are prepared by the women of the house and ritual objects specific to the event are displayed. There is still considerable variation in the scheduling of these rites and practices, but the establishment of a series of national holidays and adoption of the Western calendar in rural and urban areas alike have served to encourage standardization of the annual cycle. Many official holidays and not a few informal practices retain some vestiges of religious elements, although for the most part these have become much attenuated in recent years.

The annual ceremonial calendar begins with the great three-day celebration of Oshōgatsu, the New Year, which is essentially a family-centered holiday. Decorations are placed in and around the dwelling and offerings made to the ancestors and the deities. In many rural areas January 15 is marked as Koshōgatsu, Little New Year, by the preparation of special foods and other observances. On March 3 families with daughters celebrate Momo no Sekku or Hina Matsuri, Girls' Day, by setting up displays of dolls and making or purchasing special cakes and preparing a meal of auspicious dishes. The vernal equinox, Shūbun no Hi, today observed on March 21, is a religious occasion for cleaning the family graves and venerating the ancestors. On May 5 families with sons mark Boys' Day, Tango no Sekku or Shōbu no Sekku, by flying cloth banners and carp streamers over the house, displaying objects such as miniature helmets, spears, swords, and masculine dolls, and as on Girls' Day, preparing or purchasing special cakes. Since the end of World War II, both these days have been combined into Children's Day, May 5, but the old distinction is still widely observed.

Tanabata, the Star Festival, now held on July 7 for the most part, is the occasion for practicing calligraphy and setting up branches of living bamboo festooned with decorations in the yard of the house. The Festival of the Dead, Obon, is the paramount religious holiday. Formerly held on the thirteenth to the fifteenth days of the seventh lunar month, it is now observed in July in some areas and in August in others. The autumnal equinox, Shūbun no Hi, like the vernal, is an occasion for veneration of the ancestral spirits. The annual cycle formerly concluded with Setsubun, the eve of Risshun, first day of the old solar year. Today it falls out of sequence about February 3. Each family member eats a number of boiled beans equal to his or her age in years and tosses roasted beans outside the house with the cry "Oni wa soto, fuku wa uchi" ("Devils out, good fortune in"). Like many of the formerly religious occasions, Setsubun increasingly is regarded as an observance children will particularly enjoy.

With the passage of time, many of these festive occasions, which formerly played such a significant role in the life of the household, will continue to fade in importance, and their meaning will be lost. Already most young Japanese have seen them performed in the traditional manner only in costume dramas on television or read about them in accounts of life before World War II. Nonetheless, the core of domestic ritual concerned with the care of the ancestors of the house remains the bedrock on which rests what is left of the sacred character of the domestic unit in Japanese society.

### BIBLIOGRAPHY

In the interest of encouraging further reading, only sources in English are cited here. For treatments of the annual ceremonial cycle, household deities and spirits, and other religious practices centering on the family dwelling and its residents, see Richard K. Beardsley, John W. Hall, and Robert E. Ward's *Village Japan* (Chicago, 1959); Ronald P. Dore's *City Life in Japan: A Study of a Tokyo Ward* (Berkeley, 1958); John F. Embree's *Suye Mura: A Japanese Village* (Chicago, 1939); Edward Norbeck's *Takashima: A Japanese Fishing Community* (Salt Lake City, 1954); and Robert J. Smith's *Kurusu: The Price of Progress in a Japanese Village, 1951–1975* (Stanford, Calif., 1978). These topics are also dealt with in two important articles: Hiroji Naoe's "A Study of *Yashiki-gami*, the Deity of House and Grounds," in *Studies in Japanese Folklore*, edited by Richard M. Dorson (Bloomington, Ind., 1963) and Michio Sue-nari's "Yearly Rituals within the Household: A Case Study from a Hamlet in Northeastern Japan," *East Asian Cultural Studies* 11 (1972): 77–82. Domestic veneration of the ancestors is discussed in detail in my study *Ancestor Worship in Contemporary Japan* (Stanford, Calif., 1974), which includes an exhaustive bibliography on the subject. An excellent succinct statement concerning the meaning of the ancestral rites is David W. Plath's "Where the Family of God Is the Family: The Role of the Dead in Japanese Households," *American Anthropologist* 66 (April 1964); 300–317.

**DOMINIC** (1170–1221), Christian saint and founder of the Order of Friars Preachers, popularly known as the Dominicans. Born at Caleruega in Old Castile, Spain, of parents of the lesser nobility, Domingo de Guzmán received his early education for the clerical state from his archpriest uncle before going to Palencia to study arts and theology from 1186 until 1196. In the latter year he became a canon regular of the reformed cathedral chapter of his home diocese of Osma, where he was ordained to the priesthood and spent the next seven years. A diplomatic mission to Denmark in 1203 brought Dominic, as the traveling companion of his bishop, Diego d'Acebes, into contact with the Albigensian, or Catharist, movement in Languedoc.

This dualist heresy, which had its origin in the teachings of the Persian religious thinker Mani (216–276), had come to western Europe from the Bogomils of Bulgaria, spreading along medieval trade routes in the eleventh and twelfth centuries. The Albigensians (the name derives from the city of Albi, near Toulouse) offered a viable religious alternative for many men and women in southern France who were disenchanted with the institutional church, and the austere lives of the Albigensian teachers, known as the perfect, often stood in marked contrast to the wealth and immoral behavior of the Roman Catholic clergy.

Confronted with a profound challenge to Catholic teaching and authority, Innocent III (1198–1216) had enlisted the services of the Cistercians as preachers among the Albigensians. When Dominic and Diego arrived at the papal court in 1205 on their way home to Spain, after the unsuccessful completion of their Danish mission, Innocent sent them to join the Cistercian preaching mission. The nine years of Dominic's preaching among the Albigensians (1206–1215) constituted the germinating period for his understanding that the ecclesial crisis represented by the Albigensian movement could be met only by a group of doctrinal preachers who would proclaim the gospel and live in apostolic poverty. While in Languedoc, Dominic established a form of religious life for a group of converted Albigensian women at Prouille. This first community of Dominican nuns marked the beginning of countless ways in which women over the centuries would come to share in and help create the Dominican vision.

In 1215 Dominic gathered his first companions in Toulouse, and with the approval of Bishop Fulk they began to preach and live a communal religious life within the diocese. Dominic's vision, however, extended far beyond the confines of Languedoc. Hence he accompanied Fulk to the Fourth Lateran Council in 1215 to obtain papal approval for his dream of a band of doctrinal preachers available to serve the universal church wherever there was need. Innocent III approved of Dominic's idea in principle, but since the council had just forbidden the establishment of any new religious orders, the pope told him to return when he and his companions had selected an already approved rule under which they would live.

Dominic and the first friars chose the rule of Augustine, the rule under which Dominic had already lived as a canon regular, supplemented with legislation borrowed from the Premonstratensians and modified in ways appropriate to their new circumstances. In a series of three bulls between December 1216 and February 1217, Honorius III (1216–1227) officially approved Dominic's plan for a universal preaching brotherhood and addressed its members as "the Order of Preachers."

In 1217 only four years remained of Dominic's life, but they were to be years of intense activity in which he set forth the basic design for the Order of Preachers with bold strokes. Since Dominic believed that doctrinal preaching was required to meet the spiritual needs of men and women in an increasingly urban and academic culture, he saw study as essential to a universal preaching mission. Upon his return from Rome in 1217, Dominic dispersed the first sixteen friars gathered in Toulouse throughout Europe, sending seven of them to establish a religious house at the University of Paris. From the dispersal in 1217 until the spring of 1220, Dominic was on the road, preaching, visiting the friars he had sent out, gathering new members for the order, founding new houses, and seeking continued papal support for the work of the preachers.

Dominic's thought has survived not in his writings, for only a few of his letters are extant, but rather in the formative guidance that he gave to the first two general chapters of the order in 1220 and 1221. The idea of a general chapter was not unique to Dominic; begun by the Cistercians in the previous century, it had become the common form of unifying and promoting the life of a religious order. Dominic, however, saw the general chapter not as a gathering of abbots but as an assembly of brothers elected by their peers who would legislate for the common good. In Dominic's vision the master of the order was to be the center of unity on the universal level, the provincial on the regional level, and the prior on the local level. But the friars themselves, functioning through the general, provincial, and local chapters, were to assume responsibility for carrying on the life and mission of the order.

Under Dominic's dynamic leadership, the chapters of 1220 and 1221 established the basic constitutional framework that would ensure constant flexibility in adapting the order's preaching mission to diverse situations. They gave a primary place to study as essential to doctrinal preaching, embraced mendicant poverty, provided for dispensations from the constitutions when necessary so as not to impede preaching or study, and universalized the mission of the order by establishing eight provinces in western Europe. The chapters of 1220 and 1221 brought Dominic's vision to life: an order of preachers whose preaching would flow from a life of study and common prayer, lived in a community of brothers professing the vows and being jointly responsible, through a chapter system of representative government, for a universal preaching mission in cooperation with the bishops and with the papacy's protection and support.

Dominic fell ill during a preaching tour in Lombardy after the meeting of the general chapter of 1221, and he died in Bologna (where he is buried) on August 6, 1221. In 1234 he was canonized by Gregory IX (1227–1241), and he is commemorated in the Roman calendar on August 8. The influence of Dominic perdures in the shared vision of a religious family of men and women dedicated to preaching the gospel to all people while living in a community that is committed to common prayer and simplicity and whose members are jointly responsible for their life and mission.

### BIBLIOGRAPHY

The most scholarly and reliable biography of Dominic is the work by M.-H. Vicaire, O.P., *Saint Dominic and His Times,* translated by Kathleen Pond (London, 1964). The documents that constitute the primary sources for Dominic's life have been collected by Francis C. Lehner, O.P., in *Saint Dominic: Biographical Documents* (Washington, D.C., 1964).

THOMAS MCGONIGLE (1987)

**DOMINICANS.** The popular name of the Order of Friars Preachers (Ordo Praedicatorum, abbreviated O.P.) was derived from the name of the order's founder, Domingo de Guzmán (1170–1221), generally called Dominic. In France the Dominicans were once known as Jacobins, from their priory of Saint Jacques at the University of Paris, and in England they were known as Black Friars, from the black mantles that they wore over their white habits.

Along with the Franciscans, the Dominicans constitute the heart of the mendicant friar movement of the thirteenth century. After the renaissance of the twelfth century, the presence within medieval society of a growing number of urban-dwelling and literate laypeople, critical of and often alienated from the institutional church, posed a great pastoral problem. The secular and religious clergy at the beginning of the thirteenth century seemed ill equipped to meet the spiritual needs of an urbanized laity and unable to cope with the rapid spread of the Albigensian and Waldensian heresies in the cities of southern France and northern Italy.

Between 1215 and 1221, Dominic with papal approval founded a religious order whose members would not be bound by monastic stability but would be itinerant doctrinal preachers, living a life of poverty in community and educated to minister to the spiritual needs of a literate urban laity. The presence of the Dominicans at the burgeoning universities of Europe established a mutual relationship that would have profound consequences for the history of European thought. From the local priory, which was seen as an ongoing theological school for preachers, to the great centers of study at Paris, Oxford, Bologna, and Cologne, the houses of the order constituted a vast educational network. Albertus Magnus (1193–1280) and Thomas Aquinas (1225–1274), with their monumental achievements of utilizing the insights of Aristotelian thought in the formulation of a new Christian philosophical and theological synthesis, represent the best of the Dominican tradition of study at the service of preaching the gospel in ever new and challenging milieus.

The same creative élan that marked the Dominican presence at the great university centers of Europe was also manifest in missionary activity. Within the first hundred years of their existence, the Dominicans had established missions in Scandinavia, the Baltic area, eastern Europe, Greece, Persia, the Holy Land, and North Africa.

Dominican emphasis on doctrinal preaching led popes and bishops to use the order in the work of the Inquisition. This darker aspect of Dominican history is somewhat counterbalanced by the positive impact that the order's model of government by elected representatives had upon the emerging parliamentary system of Europe.

From its earliest days the Order of Preachers embraced not only priests, student brothers, novices, and lay brothers, all of whom constituted what came to be called the first order, but also contemplative nuns (the second order) and women religious and laypeople living in the world (the third order). The first order grew rapidly in the first hundred years of the order's existence. In 1277 there were 12 provinces and 404 priories with about thirteen thousand friars whereas in 1303 there were 18 provinces and 590 priories with about twenty thousand friars. Because the Black Death took a great toll in the middle of the fourteenth century, the number of Dominican friars probably never exceeded thirty thousand at any one time during the Middle Ages.

The monasteries of Dominican second-order nuns, which numbered 4 during the last years of Dominic's life, increased to 58 in 1277, 141 in 1303, and 157 in 1358. Munio of Zamora, seventh master of the order (1285–1291), drew up a rule in 1285 for lay men and women who wished to be Dominicans while continuing to live in the world. It is impossible to estimate how many men and women shared the Dominican life and mission as members of the third order, but Catherine of Siena (1347–1380), mystic and doctor of the church, stands as an eloquent witness to the third order's profound influence upon medieval society.

The German Dominicans Meister Eckhart (1260–1327), Johannes Tauler (1300–1361), and Heinrich Suso (c. 1295–1366) were leaders in the fourteenth-century mystical movement, but like all other religious orders the Dominicans experienced a considerable loss of members and a marked decline in observance and morale as a result of the Black Death. Raymond of Capua, twenty-third master of the order (1380–1400), inaugurated a reform movement in the last decades of the fourteenth century that resulted in the renewed life of the order in the fifteenth century, exemplified by Antoninus of Florence (1389–1459), Fra Angelico (1387–1455), and Girolamo Savonarola (1452–1498).

The Dominicans Johann Tetzel (1465–1519) and Thomas de Vio Cajetan (1469–1534) played key roles in the events that inaugurated the Reformation, and Dominicans were to be found both joining the ranks of the Reformation preachers and defending the old faith before and after the Council of Trent (1545–1563). Although religious changes in Europe caused the disappearance or decline of the Dominican provinces in northern Europe, seven new provinces were founded in Central and South America. Dominican missionary activity in the New World was rendered illustrious by the preaching of Louis Bertrand (1526–1581), by the charitable work of Martín de Porres (1579–1639) and Juan Macias (1585–1645), and by the struggles of Bartolomé de Las Casas (1474–1566) to protect the Indians from the exploitation of Spanish colonial officials.

Although the order numbered between thirty and forty thousand friars and nuns in forty-five provinces in the seventeenth century, and Thomism flourished under such distinguished commentators as John of Saint Thomas (1589–1644), much of the outward structure of the order was swept away during the difficult period from 1789 to 1848. Under the impulse of the French Dominican preacher Jean-Baptiste-Henri Lacordaire (1802–1861) and the outstanding leadership of Vincent Jandel, seventy-third master of the order (1855–1872), the Dominicans entered upon a new spring in the mid-nineteenth century that ultimately produced in the early decades of the twentieth century the biblical scholar Marie-Joseph Lagrange (1855–1938) and the Thomistic theologians Reginald Garrigou-Lagrange (1877–1964) and Juan Arintero (1860–1928).

Dominican theologians Yves Congar, Dominic Chenu, and Edward Schillebeeckx were leaders in the new theological movement that flourished after World War II in Europe and culminated in Vatican II. The renewal of the order in accordance with the norms of the council began with the publication of the new constitutions written at the general chapter held at River Forest, Illinois, in 1968. The four subsequent general chapters have continued the renewal process and given special emphasis to new forms of preaching and to the modern media of communication, the ministry of social justice, and the development of the order in South America, Africa, and Asia. In 1974 the concept of the first, second, and third orders was replaced by that of the Dominican family. New emphasis was given to the common mission of the men and women of the order to preach the gospel, while recognizing the diverse ways in which the ministry of preaching is carried out by the clerical, religious, and lay members of the order.

Over the past seven centuries 18 Dominican men and women have been canonized, and 334 members of the Dominican family have been beatified. Furthermore, 4 popes, 69 cardinals, and several thousand bishops have been drawn from the Dominican order to the service of the universal church. In 2000, the Dominican family throughout the world included 5,171 brothers in solemn vows, 4,672 priests, and 477 lay brothers. In 1983 there were 4,775 nuns in 225 cloistered monasteries, 40,816 women religious in 140 congregations, and 70,431 laity or secular Dominicans.

## BIBLIOGRAPHY

The most scholarly history of the Dominican order from its beginnings to the Reformation is *The History of the Dominican Order,* 2 vols., by William A. Hinnebusch, O.P. Volume 1 is titled *Origins and Growth to 1500* (New York, 1966); volume 2, *Intellectual and Cultural Life to 1500* (New York, 1973). Hinnebusch's untimely death in 1981 prevented his completing two further volumes that would have taken the history of the order from the Reformation to the present. However, a concise summary of the material planned for the two final volumes can be found in his work *The Dominicans: A Short History* (New York, 1975).

The publication of two works edited and translated by Simon Tugwell, O.P.—*Early Dominicans* (New York, 1982) and *On the Beginnings of the Order of Preachers by Jordan of Saxony* (Oak Park, Ill., 1982)—have provided excellent selections of primary documents necessary for an understanding of the early history of the Dominican family. Both works also contain superb introductions to the sources of Dominican spirituality.

*Revised Bibliography*

**DÖMÖTÖR, TEKLA** (1914–1987) was a Hungarian folklorist and pioneering scholar of folk religion in the Hungarian context. Born in Budapest, Hungary, she studied English and German philology at the Pázmány Péter University in Budapest from 1932 to 1936. Her Ph.D. dissertation (1937) was about German medieval ritual drama. She became a university teacher in 1953, then was professor and chair of the folklore department in Budapest—the university's first woman chairperson and professor—from 1973 to 1984. Her primary field of research was the history of Hungarian theater and Hungarian folk customs and folk beliefs. Beginning in the 1960s she participated in international conferences and societies of European folklore. In 1985 she won the Herder Prize for fostering comparative folklore research in central Europe.

Dömötör's major works are devoted to Hungarian folk calendar customs and Hungarian ritual poetry, including references to folk beliefs and folk legends. Extending her earlier popular books, she wrote the first new summary on Hungarian folk beliefs (1981 in Hungarian, English translation 1982). Dömötör wrote a biographical sketch about János Honti (1910–1945), the closest friend of her husband, Aladár Dobrovits, professor of Egyptology at the Budapest University. In this biographical sketch of Honti, who was one of the first modern Hungarian folklorists and who was killed by the Nazis, she gave a detailed picture of the work before World War I of the Hungarian Section of the Folklore Fellows in organizing the rich Hungarian folklore collections.

Dömötör's monograph on Hungarian folk beliefs is a careful work. She avoids the use of such basic religio-scientific concepts as the term *mythology* as regards the Hungarians. Contrary to many Finno-Ugric scholars, she prefers historical interpretations of folklife and belief and is reluctant to say anything about "Hungarian shamanism." In the introduction she lists the previous attempts to describe the "ancient Hungarian religion," but in general she finds unconvincing their reconstructions and historic stratifications concerning the ancient Hungarian "mythology" or "religion," because in such works "the scope of speculation remains very wide indeed" (1982, p. 42). When Hungarians adopted the Christian faith (during the reign of King Stephen I, 997–1038), the old pattern of social organization disintegrated, to be replaced by the emergence of a feudal social structure. According to Dömötör, Hungarian medievalist historians have interpreted the true historic data related to beliefs and customs according to their own expectations. Regarding the time of the Reformation, she discusses "diabolic beings," evil-eye cases, and witches. The witch trials existed in Hungary until 1768, and their pattern does not significantly modify the general European picture. At the time of the Enlightenment a tendency toward teaching the people not to trust superstitions appeared.

Dömötör did not address the later sociohistorical stratification of Hungarian folk beliefs. She wanted to draw an overall picture of the nineteenth and twentieth centuries. The major chapters of her description are: animistic beliefs (mythical beings, metamorphosis, *ignis fatuus,* "fair lady," "fair maid" and fairies, revenants and ghosts, demons of nature, giants and dwarfs, the devil and his accomplices, Lucy, malevolent spirits, bogeymen, demons of disease, changeling, werewolf, dragon, snake, and other mythical animals and plants); the "cunning folk" (people with special skills); healers and their cures; magic (and divination); the magical power of words (incantations and prayers); man and nature (creation of the earth and weather lore); laicized traditions of the church (popular religion), pilgrimages, and sects; and the living and the dead (grave posts).

As is evident from these contents, Dömötör's book does not give a deep historical analysis and does not follow any system of phenomenology of religion. The order of the several subchapters in the book remains unexplained. In fact the differences between old traces of "mythology," folk beliefs, superstitions, and forms of everyday popular religion are not distinguished or systematized. Dömötör was afraid of making any terminological or theoretical suggestions or conclusions. The fear of giving concess to mystical or nationalistic interpretation (of the primordial Hungarian religion) paralyzed the systematization of Hungarian worldview studies. On the other hand, most of the data Dömötör refers to are historically correct, put into European context, and without boasting speculations. In particular she refers to the results of Géza Róheim, Vilmos Diószegi, Éva Pócs, and Mihály Hoppál but with idiosyncratic restrictions. Superfluously she stresses the importance of the social context, whereas in fact she was never a follower of any social or historical interpretation of the beliefs. (Except for some slogans, she was never a Marxist either.) Empiricism and eclecticism prevail in her studies on Hungarian folk legends and folk customs. Dömötör wrote the short entry "Hungarian Religion" in the first edition of *The Encyclopedia of Religion,* however, without any reference to gender problems.

VILMOS VOIGT (2005)

**DONATISM** is the name given to the schism that divided the North African church from around at least 311 until the end of the sixth century. The immediate cause was the refusal of part of the clergy and congregations of Carthage, supported by bishops from Numidia, to accept the election of the archdeacon Caecilian as bishop of Carthage in succession to Mensurius. It was claimed that one of Caecilian's consecrators, Felix of Apthungi, had been a *traditor* (i.e., one who had handed the scriptures to the authorities during the Great Persecution of 303–305) and was therefore unworthy. It was also claimed that Caecilian had maltreated confessors in prison at Carthage by preventing food supplied by well-wishers from reaching them.

In the background of the schism, however, were important theological and nontheological issues. Since its emergence into history in 180, the North African church had been a church of martyrs. Its members believed themselves to be under the continuous guidance of the Holy Spirit. For many, the ideals of purity, integrity, and zeal for martyrdom took precedence over that of universality. Under Cyprian's guidance, the church had decided that a valid sacrament could not be administered by a cleric in a state of sin or to one who was outside the church. Congregations should separate themselves from a priest who was a sinner. In addition, in the latter part of the third century, the less romanized province of Numidia had become a separate province of the church, and its primate had acquired the right of consecrating each new bishop of Carthage. Now the bishops of Numidia were eager to assert the claim of their province in the government of the North African church.

These factors helped to consolidate opposition to Caecilian, and in 312 he was condemned to deposition by a council presided over by the primate of Numidia. The emperor Constantine, however, supported Caecilian, put a considerable sum of money at his disposal, and exempted from municipal levies clergy loyal to him. In April 313, the opposition appealed to Constantine, outlining their complaints against Caecilian and requesting arbitration from bishops in Gaul, as Gaul, they claimed, had not suffered in the persecution.

Long-drawn-out legal processes ensued. Constantine first delegated the opposition's complaint to Pope Miltiades, himself an African, but on the rejection of the pope's decision in favor of Caecilian (October 5, 313) by the opposition, summoned a full council of Western bishops at Arles on August 1, 314, to decide the issue. The opposition, now led by Donatus of Casae Nigrae in southern Numidia, rejected this decision also. Only after the acquittal of Felix of Apthungi in February 315, another appeal, and the dispatch of a commission of bishops to Carthage did Constantine conclude that Caecilian was innocent; he pronounced judgment in that sense on November 10, 316.

Persecution (317–321) failed to destroy the Donatists, as they were now known. Under Donatus's leadership they became the majority party among North African Christians, and this predominance was only threatened temporarily by the exiling of Donatus by the emperor Constans in 347/8. Under the emperor Julian the Donatist leaders returned in strength. Their leader was now a cleric named Parmenian who was not a North African but described as a "Gaul or Spaniard." As bishop of Carthage, until his death in 391/2, he witnessed Donatism at the height of its power in North Africa. His death, however, was followed by schism between his followers. The new bishop of Carthage, Primian, was supported by the Numidians but opposed by Maximian, a descendant of Donatus who represented more moderate tendencies within the church.

The Maximianist schism was contained and unity within the Donatist church restored at the Council of Bagai on April 24, 394. Four years later, however, one of the principal Donatist leaders was implicated in the revolt against Emperor Honorius by the native chieftain, Count Gildo. On its failure, the Donatist church faced attack by the North African catholics, now ably led by Aurelius, bishop of Carthage, and Augustine of Hippo. Augustine took advantage of the fact that nearly all Christendom had remained loyal to Caecilian and hence regarded his Catholic successors as the true bishops of Carthage. In addition, by their practice of rebaptizing converts the Donatists rendered themselves liable to the antiheretical laws of the emperor Theodosius. Moreover, the extremist Donatists and social revolutionaries known as Circumcellions, who since 340 had been terrorizing the landowners of the day and the Catholic population in general, were considered a menace to civil authority. Augustine persuaded the government of the emperor Honorius to promulgate edicts banning the Donatists in February and March 405 and finally in May 411 maneuvered them into a conference with the Catholics under an imperial commissioner, Marcellinus, to decide what party was the "catholic church" in North Africa.

In the previous twelve years Augustine had written a series of tracts designed to show that there was no historical justification for the schism and that rejection of universality as the standard of catholicism as well as erroneous teaching on the church and sacraments made the Donatists heretics. In addition, Bishop Aurelius's yearly conferences of Catholic bishops of Carthage had revitalized the organization and sense of purpose of the catholics. When the conference met, all the advantages lay with them, although the Donatists still managed to match the Catholics in number of bishops, namely 284. After three session of debate Marcellinus gave his decision against the Donatists. This was followed on January 30, 412, by an edict that effectively banned Donatism, confiscated Donatist property, and ordered the exile of Donatist leaders.

This time the repressive measures succeeded. Augustine provides evidence for the conversion of Donatist congregations and surrender of Donatist church property. The Circumcellions, however, remained active and eventually contributed to the downfall of Roman Africa when the Vandals invaded from Spain in 429. In the Vandal occupation (429–534) little is heard of the Donatists, but at the end of the sixth century, after the Byzantine reconquest, Donatism emerged again in southern Numidia. Descriptions of the progressive advance of the movement are found in a series of letters from Pope Gregory to his representatives in North Africa, to imperial officials, and to the emperor Maurice. After 601 nothing more is heard of the movement. Only further archaeological investigation of Numidian rural sites is likely to add to our information about the final phase of the sect.

Donatism demonstrates the continuance in the West of the biblical rigorist and individualist pattern of early Christianity that placed individual holiness under the guidance of the spirit as its highest ideal. The Donatists were the true successors of Tertullian and Cyprian in the African church, and they were protesters. Church and state must always be separate. Martyrdom must be accepted as a Christian duty. As far as the Donatist was concerned, the conversion of Constantine might never have taken place. In addition, Donatism, unlike any other Christian movement in the Roman Empire, gave scope for revolutionary stirrings among the peasantry, for it expressed the peasants' hopes for the great reversal of material fortunes that would presage the millennium. Its forceful repression by church and secular authorities also provided precedents for the persecution of heresy in the Middle Ages and in the Reformation and Counter-Reformation periods.

Material remains of Donatism are still to be seen in North Africa, especially in Numidia, where the great church of Bishop Optatus of Timgad (388–398) is an outstanding monument to Donatism at the height of its power. Many Donatist chapels have been found in rural sites of Roman and Byzantine date in Numidia. Some Donatist literature has survived, notably the circular letter written by Bishop Petilian of Constantine to his clergy about 400; it is preserved in Augustine's *Contra litteras Petiliani.* Tyconius was a Donatist biblical exegete of first caliber whose work was used extensively in the early Middle Ages by orthodox writers such as Bede. Finally, Donatism found expression in peasant art forms, especially in woodcarving. These art forms often incorporated a biblical text or the watchword used by the Circumcellions, "Deo laudes."

W. H. C. FREND (1987)

**DONG ZHONGSHU** (also Tung Chung-shu, c. 195–c. 115 BCE) is one of the most important thinkers of Han dynasty (206 BCE–220 CE) Confucianism. His concept of the relationship between Heaven and humans has been influential for the development of Confucianism. Yet Dong's contribution to the history of religion is a matter of dispute due to diverging evaluations of the sources connected to him. Today, four sorts of sources with possible information about Dong Zhongshu exist.

**SOURCES.** The *Records of the Grand Historian (Shiji)* written by Sima Qian around 100 BCE contains a biography of Dong Zhongshu, the earliest and most reliable source about his life and thought. According to *Shiji*, Dong in his early years was interested in the principles operating within the forces of yin and yang. On the basis of these principles he created a ritual that should seek and stop the rain, and he attempted to interpret historical and contemporary anomalies and catastrophes as omens.

In the biography of Dong Zhongshu in the *Dynastic History of the Han* (*Hanshu*) written by Ban Gu at the end of the first century CE, Dong is depicted rather as patriarch of Han Confucianism and as a political teacher. Appended to the biography are three memorials, which contain a question-and-answer exchange between Dong and Emperor Wu. In these memorials Dong refers to two ultimate authorities that should serve as guidelines for the Han government: Heaven and antiquity. Dong claims that Heaven responds to human action according to the same principles that Confucius's judgments of praise and blame respond to the action of the historical actors in the *Spring and Autumn Annals* (*Chunqiu*). According to Dong, Confucius inserted his judgments in the *Chunqiu* in correspondence with the laws and the will of Heaven, and has thus proven how Heaven responds to human action. Heaven's response is not a conscious choice—it is mechanical and automatic, but it does not always respond in a one-to-one analogy to the actions. Instead, Heaven appears as a rather lenient and gracious force that starts signaling with small tokens of anomalies as warnings before sending harsh punishments in the form of catastrophes.

The *Chunqiu fanlu* (*CQFL*) is a post-Han collection that was probably edited six centuries after Dong's death. It is a compilation of extremely heterogeneous and contradictory materials, including chapters on *Chunqiu* exegesis, Huang-Lao philosophy (the philosophy of the Yellow Emperor Huangdi and Laozi which focuses on questions of inner spiritual self cultivation, the void, the dao, the emptying of the mind, non-action and non-being), Confucian virtues, state institutions, cosmological speculations on *yin-yang, wuxing*, Heaven and Earth, and sacrificial and rain rituals. Which of these materials was written by Dong Zhongshu is highly controversial.

Other Han sources contain many quotations from Dong Zhongshu, but larger fragments of his writing are also transmitted. The "Wuxing zhi" chapter in *Hanshu* includes Dong's commentaries and explanations to historical and contemporary anomalies and catastrophes. Furthermore, the fragments of the *Chunqiu jueyu*, a handbook on law cases ascribed to Dong, give an impression of the pragmatic and formal usage of the *Chunqiu* as a book of legal precedents.

**CRITICAL INTERPRETATION OF THE SOURCES.** The evaluation and interpretation of these sources determines the different reconstructions of Dong Zhongshu's life, religion, and philosophy.

In the sources that most probably stem from Dong's hand—in *Shiji* and *Hanshu*, in the first 17 *Chunqiu* exegetical chapters and the ritual chapters of the *CQFL*, as well as any of the above mentioned fragments—Dong Zhongshu is never connected to *wuxing* or to Huang-Lao thought. He appears as a specialist on prognostication and religious rites employing the theory of yin and yang. Moreover, he is depicted as an important political thinker and instructor who professes Heaven and antiquity as the most important models upon which a state should be molded. In the *Chunqiu jueyu* he is quoted as an important exegetical voice in legal court cases. These sources present him as a serious traditional scholar whose thought was rooted in the classical Confucian writings and in his belief in a Heavenly way and its signs.

There is little theoretical innovation in his work. It is rather mainly important in the history of thought because of decisive selections and new evaluations of traditional concepts like the will of Heaven, the law of stimulus and response, correspondence between human action and Heaven, love for the people, cyclical change of institutions, and human nature. Dong is not developing these concepts further but rather applies and combines old traditions in new contexts like text exegesis, modification of cosmological cycles, devaluation of yin (punishment) against yang (education), or the introduction of a lenient aspect in Heaven's clockwork of mechanical resonance. Innovative is Dong's connective approach through which he interrelates different areas such as prognostication, human nature, politics, cosmology, and text exegesis on the basis of a singular Heavenly scheme that reaches into all of these realms. However, he therewith does not intertwine these realms into one unified system that could function as a universal organism, but rather establishes structural parallels and analogies in order to defend his moral, political, and philosophical position against Legalists, Mohists, and Huang-Laoists.

**CRITIQUE ON TRADITIONAL INTERPRETATIONS OF THE SOURCES.** Dong Zhongshu appears rather differently under the premise that he is the author of the whole *CQFL*, a premise which has been upheld by the mainstream of traditional scholarship. As the material of the *CQFL* is so abundant, complex, and comprehensive, Dong, as the assumed author, has subsequently been depicted as the architect of Han Confucianism, the founder and theorist of Han cosmology and Han political philosophy who ingeniously created the great synthesis of *yin-yang, wuxing,* and exegetical scholarship on the Confucian classics in a great unified theological and teleological system.

Further research shows that this picture can not be upheld. Han Confucianism is a collective term covering highly complex and contradictory philosophies of very different synthetic teachings, which vary strongly from thinker to thinker. Dong's philosophy is neither theological nor teleological, but rather a traditional philosophy of a balance of extremes. Heaven as a willful institution plays a crucial role in Dong's philosophy; however, this institution is strictly subdued to the working rules of yin and yang and should not be compared to a deity. Dong's *Chunqiu* scholarship is nowhere connected to or mixed with cosmological theories. It rather develops from concrete text exegesis to a theory of abstract political and moral principles. Although historical *Chunqiu* precedent cases are sometimes taken to illustrate cosmological principles, theories of cosmology and of *Chunqiu* scholarship remain strictly disconnected.

The central position of Heaven as a model and argumentative foundation of the design of the imperial position within the political philosophy of the *CQFL,* and, moreover, the interpretation of the *CQFL* material as a systematic whole, has led Chinese reformers at the end of the nineteenth century to declare Dong Zhongshu's Confucianism to be the correct and pure form of Chinese Confucianism. Accordingly, this ostensible systematic and religious Confucianism, constructed as an indigenous form of unified Chinese national state religion, was used to oppose Western religion and culture. In a counterreaction, Chinese Marxist histories of Chinese thought evaluate Dong's philosophy as feudal idealist theology because of this alleged fixation on Heaven as the systematic center of his thought. It is correct that Heaven in Dong's writings is revived as a central philosophical authority. However, the way in which Heaven is brought into the argumentation is far from "theology" in the sense of a unified religious system founded in something like *theos.* Dong's theories, and even the theories concerning Heaven in the later chapters of the *CQFL*, merely reflect a cosmo-political discourse and nowhere show an attempt to unify or systematize different models of Heaven's operations. Therefore, they should not be regarded as an innovative outline of a Chinese theology, but rather be read in the context of other cosmopolitical writings of Dong's time contained in the *Lüshi Chunqiu,* the *Huainanzi,* and the *Xinyu.* Religious theory in Han times developed rather in the realm of the search for immortality in the *fangshi,* Huang-Lao, and Mohist spheres. Dong Zhongshu used the concepts of Heaven and yin and yang for political, prognostication, and ritual purposes. He did not formulate a religious theory of his own.

**DÖNMEH.** The followers of the Ottoman Jewish messiah Shabbetai Tsevi (or Shabtai Zvi; 1626–1676), subsequent to his conversion to Islam, are known as the Dönmeh. Despite hostility originating from the belief that they had converted to Islam deceitfully, though perhaps with a salvific intent, the Dönmeh adhered to Tsevi and his successors. They maintained a certain degree of unity even after their removal in 1924 from Salonika, which had become their capital early on, to Turkey (where they are still present). Tsevi's conversion is understood to have been the model for their own, undertaken in imitation of his and intended to assist him in his attempt to defeat demonic forces associated with Islam by descending among them. There were, however, several different theologies and theologians of the Shabbatean sects, including some that did not convert to Islam or counsel conversion until long after the seventeenth century, and several that converted sincerely, whether to Christianity, to Islam, or to Turkish secular, progressive nationalism. All the sects retained a certain unity based in their history, their belief (or the memory of one) in Tsevi's divine role and destiny, and their practice of a number of rituals and customs from the late seventeenth century recalling Tsevi's passion and his liberationist, even antinomian, praxis. In general it may be more useful to consider the Dönmeh as a movement of revitalization, looking back to the *conversos* of Iberia, and as counterparts of their contemporaries, the Portuguese-Dutch Jews.

Among themselves the Dönmeh (Turkish: turners, converts) are known collectively as the *maʾaminim* (Hebrew, believers); few of the earlier sectarian groups—Izmirli (from Izmir), also known as *kabayeros* (knights); Yakubiler (followers of Tsevi's brother-in-law); Konyousos (followers of Tsevi's chief successor, Barukhya Russo Counio)—remained distinct after the rise of secular Turkey and the population transfer of 1924. The members of the groups occupied themselves as merchants, bureaucrats, and artisans and developed a great interest in progressive schooling, religion serving as moral instruction, and scientific training served by modern pedagogy. Basic beliefs (in the messiahship of Shabbetai Tsevi and in his "spiritual [antinomian] Torah" and its trinity), practices (spousal exchanges, consumption of ritually impure foods), and festivals (invented by Tsevi or commemorating deeds of his passion) have held the Dönmeh together to a certain degree. This cohesion has been assisted by bonds of secrecy and privacy and by the marginalization of the group from both Jewish and Islamic communities. Dönmeh attachment to progressive social politics has been of great importance and can be seen as arising from this marginalization.

The most important literature of the Dönmeh that remains from the early periods includes their prayer book, collections of praise-songs, and some homiletic material. The late nineteenth century witnessed the rise to prominence of Dönmeh in Ottoman Salonika. Dönmeh bankers and textile and tobacco merchants played a large role in global trade and finance; headed the city's Chamber of Commerce; founded influential progressive schools, literary journals, and architectural styles; and engaged in local and then imperial politics—serving as mayors, members of parliament, and ministers, and generally espousing modernization and, in time, secularization. Some Dönmeh became so committed to radical new philosophies and political ideas that they played an important role in the revolutionary movement that deposed the sultan in 1908 and laid the groundwork for the creation of the Republic of Turkey in 1923. At the same time, many remained faithful to ancestral Shabbatean traditions.

Because they were considered Muslims by the Greek government, the Dönmeh of Salonika were subject to deportation to Turkey as part of the population exchange of 1923–1924. Relying on their Jewish origins, some Dönmeh asked the Greek government to excuse them from the expulsion, as other Dönmeh approached Turkish officials with the same aim. Despite their protests, the estimated ten to fifteen thousand Dönmeh were compelled to abandon their native Salonika. Immediately following their arrival in Turkey in 1924, the Dönmeh faced a wave of controversy as Muslims sought to determine whether they were Jews or Muslims, foreigners or Turks. For over two decades, newspapers published sensationalized accounts of Dönmeh beliefs and practices. Throughout the 1930s many kept Shabbetai Tsevi's memory, traditions, and customs fully alive. Actively practiced customs included the recitation of passages from traditional Dönmeh literature—such as "*Shabtai Zvi, esperamos a ti*" (from the *kaddish*, as in the Dönmeh prayer book)—at the Festival of the Lamb held on the seashore, and at other Dönmeh feasts, fasts, burials, and festivals.

After World War II the Dönmeh managed to integrate into the mainstream of Turkish society, marrying into secularized Muslim families and almost entirely losing their distinctive religious beliefs and customs, other than rituals attending burial at predominantly Dönmeh cemeteries in Istanbul. At the same time, Dönmeh retained social ties among themselves by sending their children to the originally Salonikan Dönmeh schools relocated to Istanbul and serving on their boards, residing in the same neighborhoods in Istanbul, maintaining the textile and tobacco businesses and business relationships established in Salonika, and retaining membership in the same Masonic lodges.

Anti-Dönmeh journalism in Turkey has increased in intensity since the 1990s. Typically driven by anti-Semitic, populist, and religious motives, this writing has defined the Dönmeh community in ways that stress its alienation from Turkish social, political, and religious norms.

**DONNER, KAI.** Finnish scholar Karl Reinhold (Kai) Donner (1888–1935) united British anthropology and Northern ethnography. Born into a Swedish-speaking family, Donner was educated in the religious liberalism and bilingualism that prevailed in Finnish universities at the beginning of the twentieth century. His father, Otto Donner, was a professor of Sanskrit and comparative linguistics at the University of Helsinki; in 1883 he founded the Finno-Ugric Society, a nationalistic organization that studied the languages, ethnology, and history of Finno-Ugric peoples.

In 1908 Donner's studies in Budapest introduced him to Hungarian research in Finno-Ugristics (Hungarian is an Ugric language). Three years later he went to Cambridge University, where he became familiar with British anthropological models. This is significant because until the turn of the twentieth century Finnish scholars wrote mainly in German and rarely ventured outside the spheres of German and Russian science.

The ranking scholars of British anthropology at that time were A. C. Haddon and W. H. R. Rivers in Cambridge, who established the first British anthropological field laboratory on the western Pacific islands of the Torres Strait. Other leading lights were Charles G. Seligman, Edward Westermarck, and Bronislaw Malinowski in London, as well as Robert R. Marrett and Alfred R. Radcliffe-Brown at Oxford. The Torres Strait study launched functionalism (a theory that emphasized the interdependence and importance of institutions and behavioral patterns—particularly cultural practices—for a society's survival) as a method for conducting field work; this became Donner′s model for his studies in Siberia.

Donner's association with these British anthropologists was formative and through them he learned the basics of ethnological field work. Haddon introduced him to Malinowski; Sir James Frazer, another Cambridge fellow and author of the seminal *Golden Bough,* donated his portable grammophone for Donner's linguistic studies. Donner was also deeply influenced by Rivers's article "The Genealogical Method as Anthropological Inquiry," published in a 1910 issue of *Sociological Review*: "I have had only positive results from its use among the Samoyeds and later on in Finland," he remarked. "It will be the key to the gate to the world already gone. It makes [it] possible to remember in a touchable manner the old beliefs and customs, ancestral worship."

Donner made two expeditions to Siberia, the first a two-year venture, begun in August of 1911, in which he travelled from Tomsk to Narym, Tymskoye and in the settlements by Ob and Tym rivers—the main areas of the Samoyedic peoples, who numbered about 18,000 at that time. Donner's second tour took place in 1914, during World War I and the Russification of the Samoyeds he had met during his first tour.

Donner categorized his Siberian field data according to the typological and genealogical models he learned in Britain. He was particularly influenced by Haddon's 1908 publication *The Study of Man,* which defines ethnology as "description of a man, a tribe, people in a smaller or larger area" demanding special characteristics from the scholar. Donner used these methods in Siberia even though he believed that the Samoyeds had little collective knowledge about their ancestors. Haddon's genealogical methods, for example, helped explain the inheritance of shamanic prestige symbols in a Ket River clan that Donner described in 1915. He also used anthropometry (the collection, correlation, and comparison of human body measurements) as a research tool.

Between his two Siberian treks he took part in a research seminar led by Westermarck at the University of Helsinki, where he was encouraged to write his doctoral thesis on the Samoyed. Although there was no department of religious history at the university, Heikki Paasonen (1865–1919), a Finno-Ugrist, suggested that Donner write his dissertation on comparative religion instead of philology (the study of languages and literature) as he had intended.

Donner's fieldwork followed Castrén's footsteps as faithfully as possible, although he sought to disprove some of the less-likely hypotheses proposed by Castrén—whose nationalistic fervor had sought too many relatives on the Finnish family tree. Donner believed, for example, that Castrén´s inclusion of Uralic and Mongolian-Turkic peoples in the Finno-Ugric family was wrong. While they shared some common vocabulary, this was due to their long-lasting contacts in Siberia.

Donner's field notes are also interesting from a historical perspecitve. On his journeys he met Russian officials, Orthodox missionaries, European emigrants, as well as other Finns who were merchants, ministers, and even prisoners in Siberia. His memoir *Siperian samojedien keskuudessa vuosina 1911–1913 ja 1914* (Among the Siberian Samoyed), first published in 1915, was republished in 1979 with a preface written by his son Jörn Donner (b. 1932), a filmmaker and author.

## DOSTOEVSKY, FYODOR

(1821–1881), Russian novelist. Fyodor Mikhailovich Dostoevsky's childhood was spent in the constrained atmosphere of a Muscovite charity hospital, where his father served as a doctor. It was the murder of his father (1838) that was alleged by Freud to have determined the course of Dostoevsky's epilepsy. This theory is usually discounted, but there is no doubt about the epilepsy itself, nor about its capacity to inspire in its victim something of a "higher awareness." Early symptoms of the condition were experienced in 1849 during his first period of imprisonment. By this time the young Dostoevsky, a graduate of the Academy of Military Engineering in Saint Petersburg, had already established a reputation with some works of fiction, the earliest and most acclaimed of which was *Poor Folk* (1846).

But it was not for his writings that Dostoevsky had been arrested. His crime was having participated in a utopian-socialist discussion group. At a time of repression in the aftermath of the European revolutions of 1848, Dostoevsky and his fellow "conspirators" found themselves arbitrarily sentenced to death. Only minutes before the execution was the sentence commuted. The years of penal exile in Siberia that followed (four years of hard labor and four of military service in the ranks) could not efface the memory of the cynically contrived mock execution, and Dostoevsky was to return to this near experience of death more than once in his later fiction.

The penal exile itself provided ample material for a semidocumentary study of it, *Notes from the House of the Dead* (1860–1861), which was to be published on Dostoevsky's return to European Russia. Part of the book was to be serialized in the short-lived journal *Vremia*, which Dostoevsky founded with his brother (1861). Despite the suppression of this journal, Dostoevsky was to revert to journalism throughout the years to come in order to ensure a modest income. But the greater part of his rarely adequate income was derived from the serial publication of his novels and novellas in the well-established literary periodicals of the day.

It was in the second of Dostoevsky's own periodicals, *Epokha*, that the first of his major works appeared, *Notes from the Underground* (1864). This anguished work ushered in the period (and introduced some of the thematics) of the great novels. The majority of these novels were composed in western Europe, to which Dostoevsky withdrew to escape his creditors. He found it necessary to mortgage his writings for some time, much to his disadvantage. Only after completing abroad much of *Crime and Punishment* (1866), all of *The Idiot* (1868), and *The Possessed* (1871–1872) was Dostoevsky in a position to return to his homeland. *A Raw Youth* (1875) and the unfinished *The Brothers Karamazov* (1879–1880) were thus exceptional in being composed on Russian soil by this most Europhobic of Russian patriots. Even so, with rare exceptions (such as *The Gambler*, 1867) all the novels have a Russian setting.

This is not to say that the novels are restricted by their time and place, deeply rooted though they are in each. In the dismal byways of Dostoevsky's Saint Petersburg or his provincial towns, problems and myths with universal implications are encountered. The significance of suffering, the limitations of reason, and the importance of free will are debated as early as *Notes from the Underground.* Each of the major novels has moral and religious problems at its center. Yet answers to these problems are not necessarily to be expected. Rather (as one of Dostoevsky's characters urges in *The Idiot*), "it is the continuous and perpetual process of discovery [which is important], not the discovery itself." Dostoevsky does not set himself up as an arbitrator between the characters engaged in this process. Indeed, in *The Possessed* and *The Brothers Karamazov* he even abandons his role as narrator to "independent" surrogates.

It is one of these surrogates who notes that "reality strives toward fragmentation." The world of the novels is replete with disorientation and disorder. Yet in the privacy of his notebooks Dostoevsky still insists that there is or ought to be some "moral center" or "central idea." However eroded such a central idea may be, however obscured in the contemporary mind, merely to depict its erosion should not be sufficient for someone like himself who has progressed to his "hosanna" through what he describes as "a great crucible of doubt."

After his second marriage (1867), and especially in the last decade of his life, Dostoevsky gradually reverted to the Orthodox Christianity of his youth. Indeed, even in the darkest days of his exile, he had never abjured his residual loyalty to "the image of Christ," regardless (as he wrote in 1854) of whether it corresponded to the truth or not. Nor had he abandoned a certain faith in some kind of golden age, yet to be recaptured. But none of this was enough to overcome a deep-seated reluctance, an organic inability, to proceed with a didactic novel. The creative process inevitably involved him in the production of works that are multicentered and polyphonic in both their philosophical and psychological concerns.

Nevertheless, he continued to nurture the hope that he might one day "compel people to admit that a pure and ideal Christianity is not an abstraction, but a vivid reality, possibly near at hand; and that Christianity is the sole refuge of the Russian land from all its evils." Toward the end of his life it seemed that *The Brothers Karamazov* might prove the appropriate vehicle for such a demonstration. The saintly figure of the elder Zosima would be called upon to act as the principal spokesman of faith in the work. Thus, the spokesman was required to perform a task to which his author was ill-suited. Equally important, the faith that Dostoevsky invokes was curiously diluted, even secularized. Not that it fails to reflect a "process of discovery"—but necessarily a part of that process are the incisive arguments presented by Ivan Karamazov and his Grand Inquisitor, critics of the divine dispensation.

The Dostoevsky whom one emperor had seemingly sought to execute was to be offered a state funeral by another. The didacticism that had little opportunity to flourish in the novels had found an outlet in the brash and chauvinistic journalism of the writer's later years—hence at least some of the acclaim which accompanied him to his grave. But it was the reputation of a novelist who had given his readers an insight into his crucible of doubt which was to live on. Had he not taken pride in the fact that he "alone had brought out the tragedy of the underground"? It was a tragedy, he had noted in 1875, "which consists of suffering and immolation; of the awareness of that which is better, and of the inability to attain it."

## BIBLIOGRAPHY

Generally recognized as an outstanding survey of Dostoevsky, and one written with considerable insight into his development as a religious thinker, is Konstantin Mochul'skii's *Dostoevsky: His Life and Work* (Princeton, 1967). Another wide-ranging survey is provided by Richard Peace, *Dostoyevsky: An Examination of the Major Novels* (Cambridge, U.K., 1971). This contains interesting material on the novelist's treatment of religious sectarians. Robert L. Jackson's *Dostoevsky's Quest for Form* (New Haven, 1966) is concerned with the subject's

idealism and his reluctance to confine himself merely to the phenomena of everyday life. Malcolm V. Jones, in his *Dostoyevsky: The Novel of Discord* (London, 1976), discusses the centrifugal forces in the fiction with erudition and tact. The classic treatment of the novelist's polyphonic technique is Mikhail Bakhtin's *Problems of Dostoevsky's Poetics* (Ann Arbor, Mich., 1973). By contrast, L. A. Zander in *Dostoevsky* (London, 1948) argues that his subject is essentially a proponent of Orthodox Christianity. Less partisan is the useful study of *The Religion of Dostoevsky* by A. Boyce Gibson (London, 1973). The symposium *New Essays on Dostoyevsky*, edited by Malcolm V. Jones and Garth M. Terry (Cambridge, U.K., 1983), contains my analysis of the teachings attributed to the elder Zosima, "The Religious Dimension: Vision or Evasion? Zosima's Discourse in *The Brothers Karamazov*," pp. 139–168.

SERGEI HACKEL (1987)

## DOUBLENESS.

The prehistoric cultures of Europe used images of doubles to indicate potency or abundance. This can be seen in the frequent use of double images of caterpillars, crescents, eggs, seeds, spirals, snakes, phalli, and even goddesses. Dualism is also expressed by two lines on a figurine, or in the center of an egg, vulva, or seed, and by a double-fruit symbol resembling two acorns.

The exaggerated buttocks of Upper Paleolithic and Neolithic figurines (called "steatopygous" in the archaeological literature) are probably a metaphor of the double egg or breasts, that is, of intensified fertility or pregnancy. Such figurines usually have no indication of other anatomical details; the upper part of the body is totally neglected. An intensification of the meaning can be seen in whirls, snake coils, spirals, and lozenges engraved on the buttocks of figurines created during the Copper Age of east-central Europe (5500–3500 BCE). Obviously, the fat female posteriors that appear on prehistoric figurines had other than erotic significance or simple aesthetic purpose. They were, in fact, the actualization of a cosmogonic concept. Egg symbolism made manifest certain basic beliefs, hopes, and understandings concerning creation, life origins, and the birth process as well as reverence for supernatural potency, expressed by the doubling device, the "power of two."

A glyph formed by two ellipses connected at one end—a double grain or double fruit—appears on ceramics, seals, and megaliths throughout the duration of Old Europe (6500–3500 BCE). The sign may have been retained from the Upper Paleolithic period: a sign of two connected ovals that look much like buttocks can be seen in Magdalenian parietal art. Similar signs are engraved on Irish megaliths. The double-fruit glyph continued to be significant in Minoan ceramic art. By the middle Minoan period, it can be seen in association with a tree and a sprouting bud, incorporated in the hieroglyphic inscription on seals.

The mystique of the power of two lingers in European folk tradition, especially in the East Baltic countries, which have remained a repository of ancient beliefs and traditions. Latvians have preserved to this day the word *jumis* and the deity of the same name. The meaning of the word is "two things grown together into one unit," such as apples, potatoes, and so on. *Jumis* and *jumm*, Finnish and Estonian words considered to be ancient borrowings from the Baltic, mean "two things or beings joined together," "bundle of flax," and "divinity who gives wedding luck."

Twin ears of rye, barley, or wheat—a relatively rare phenomenon in nature—are a manifestation of *jumis.* When a double ear is found at harvest time, it is brought home by the reaper and put in a place of honor on the wall beside the table. In the following planting season, the *jumis* is mixed with the seed grain and sown in the field. *Jumis* is a force that increases wealth and prosperity, signified by double ears, double fruit, and double vegetables.

Neolithic images of the great goddess are frequently marked with two dashes over the hips, arm stumps, between the breasts, or on the pubic triangle. Often two horizontal or vertical lines are painted or incised across the face or a mask of the goddess. The double line also typically appears on mother and child figurines, which suggests that these lines may have connotations of resurgence and new life.

Double-headed goddesses convey the idea of twin birth on a cosmic plane. Figurines of "Siamese twins" are known throughout the Neolithic period and the Copper Age. The heads of these figurines are beaked and masked; the bodies are marked by chevrons, meanders, and crossbands. These attributes identify the image as a bird goddess. In Anatolia and the Agean area, two-headed figurines continue into the Archaic period of Greece. The twin aspect of the great goddess is also expressed by double-bodied or double-necked vessels from the early Bronze Age in the Aegean, Crete, and Malta.

## DOUBT AND BELIEF.

[*This entry is a philosophical discussion of the interrelation of doubt and belief in the Western tradition.*]

Doubt and skepticism, although popularly accounted antithetical to religious belief and alien to the religious attitude, are in fact inseparable from every deeply religious disposition. The fact that twentieth-century philosophical critique of religion focused on questions of meaning rather than on questions of truth (the usual preoccupation in the nineteenth century, when T. H. Huxley coined the term *agnostic*) does not at all diminish the importance of doubt as part of the intellectual process of religious belief. All authentic religious faith, indeed, may be viewed as a descant on doubt.

**THE MEANING OF DOUBT.** The word *doubt*, although often regarded as the opposite of *belief*, signifies primarily vacillation, perplexity, irresolution. These primary meanings are discoverable in the Latin word from which *doubt* is derived: *dubito*, which is grammatically the frequentative of the Old Latin *dubo*, from *duo* ("two"). To doubt means, therefore, to be of two minds, to stand at the crossroads of the mind. The regular German word for doubt (*Zweifel*, from *zwei*, "two") brings out the vacillating connotation more obviously than does the English word. In German, *Zweifelgeist* means "skepticism, the spirit of doubt," and *Er zweifelte was er tun sollte* means "He was in doubt what he should do"—that is, he was of two minds about it. The Greek *doiazō* ("I doubt") also exhibits this two-mindedness.

Doubt, therefore, is not to be equated with unbelief or disbelief but rather with a vacillation between the two opposites: unbelief and belief. In doubt there are always two propositions or theses between which the mind oscillates without resting completely in either. To the extent that religious people deprecate doubt, what they are deprecating must be indecision rather than unbelief, and what skeptics find praiseworthy in it must be not unbelief but a willingness to recognize two sides to a question. Doubt is the attitude of mind proper to the skeptic, who is by no means necessarily an unbeliever any more than a believer. The only serious reproach that either believer or unbeliever may justly direct to the skeptic is that of declining to make up his mind in one direction or the other—that is, a moral rather than an intellectual reproach.

**MODES OF DOUBT.** Doubt may be considered in three modes: an attitude of mind, a philosophical method, and a necessary ingredient in or component of belief.

1. The characteristic attitude both of the ancient Greek thinkers and of the Renaissance men who admired and followed them has doubt as one of its fundamental inspirations. (By *attitude* is meant here an inclination of the will.) That is, rather than conceiving philosophy as a way of showing this or that proposition or thesis to be such as to lead logically to a settled conviction, thinkers in this tradition insist upon an openness of mind sustained by an ongoing attitude of questioning. Even when inclining to one view or another, such thinkers will always not only pay homage to doubt as a methodological principle but will endeavor in practice to keep their minds constantly alert to the claims of both sides of every question: they will show a judicial rather than a prosecuting or defensive attitude. Such an attitude, to the extent that it is successful in terms of its own aims, is creative, engendering openness of the will as well as of the mind. Like all attitudes it is, of course, susceptible to deformity. It may be feigned, for instance, to disguise a moral unwillingness to reach a decision because of the implications of making such a commitment. That the attitude of doubt can lead to such a moral deformity or perversity is of itself, however, no argument against its salutariness or its integrity. It is an attitude that has sustained the greatest minds of all ages in human history; a notable exemplar is Socrates.
2. Doubt as a philosophical method is exhibited in the thought of many important thinkers. Celebrated instances include Augustine and Descartes. In Augustine's dictum "*Si fallor, sum*" ("If I doubt, I exist") and in the well-known Cartesian formula "*Cogito, ergo sum*" ("I think, therefore I am") are to be found intellectual assurances that in the act of doubting one's own existence is an awareness of that existence, since if one can catch oneself doubting, one cannot be doubting that one exists and so at least one can be certain of the proposition "I exist," whatever that proposition be taken to mean. Doubt, then, is a methodological point of departure as well as an implicate of all thought. Thinking, in the sense in which it is understood in this intellectual tradition, which goes far beyond any computerlike function of the human brain, entails doubting.
3. While both of the foregoing modes of doubt are relevant to questions of religious belief, that which most sharply illuminates an understanding of the nature of religious belief is the notion that doubt is an implicate of religious faith and therefore of the religious belief that formulates that faith. By taking the view that authentic religious faith does not entail blind, thoughtless belief but must always be accompanied by an element of doubt, we recognize that such faith and the belief that formulates it are in some way sustained by doubt, making doubt and belief as inseparable from each other as are, in the human body, the arteries and the veins. If one hopes to preserve the vigor and vivacity of one's thought, one must conserve in it the element of doubt that sustains it. Authentic religious faith, whatever it is, can never be as the schoolboy is said to have defined it: believing steadfastly what you know isn't true; instead, it must always entail doubt. Some religious philosophers in the modern existentialist tradition, such as Kierkegaard, Unamuno, and Marcel, have emphasized that a faith unshaken by doubt cannot be authentic faith at all but is a mere blind nodding without either intellectual content or moral decision. I have called faith a descant on doubt, by which I mean, of course, that it rises beyond the doubt that is at the same time its necessary presupposition: one cannot have a descant with nothing to descant upon, nor can a descant ever leave the rest of the music permanently behind it.

Contemporary religious thinkers in the tradition of Kierkegaard talk of the "leap of faith," a phrase that sometimes exasperates their hearers. How does one jump from doubt to belief without injuring, not to say destroying, the integrity of the belief? Before dealing with this vital question, we must first clarify the relation between faith and belief, more particularly as these terms arise in religious contexts.

**Faith and Belief.** In religious literature faith and belief often have been identified with each other. In medieval usage the Latin *fides* ("faith") generally means both. Even in the New Testament the distinction between the two is not entirely clear, for the Greek word *pistis* ("faith") often has the older connotation of intellectual conviction alongside the notion of trust, the bending of one's whole being to God in complete confidence in his infinite goodness and in his ability to guard and to guide one's entire life in the best possible way. The thirteenth-century Thomas Aquinas, who became a quasi-official spokesman of the Roman Catholic church, and even Martin Luther, leader of the sixteenth-century Reformation, when they wrote of *fides*, often meant intellectual assent as much as an act of the will. The classic Lutheran dogmatic treatises usually distinguished three elements in *fides: notitia* ("knowledge"), *assensus* ("assent"), and *fiducia* ("trust"). By this they implied that both intellect and will are involved in *fides;* nevertheless, following Luther himself, they recognized *fiducia* as the principal element and the others as subordinate to it.

In much Christian literature, however, not least among heirs of the Reformation, the term *faith* is invested with a volitional connotation and *belief* with an intellectual one. The distinction is useful, for faith has an ethical content, with implicates of courage and perseverance that are irrelevant to intellectual assent to any proposition or thesis, religious or otherwise. Nevertheless, faith also entails a metaphysical stance. The object of faith is an "is," not merely an "ought to be." It is the postulated real, so that no matter to what extent authentic faith may be called volitional rather than cognitive, an act of the will rather than an intellectual affirmation, it must be somehow connected with the intellectual activity by which it comes to be formulated. Since, as we have seen, thought itself implies doubt, every assertion of belief that is not to be dubbed mere credulity presupposes an intellectual choice between two alternative possibilities. And since, as we have seen, doubt is an implicate of belief and all authentic faith has in it an intellectual element of belief, then doubt must be called an implicate of faith, no matter how much the volitional element in faith be emphasized.

Beliefs, moreover, cannot be held in isolation: they are part of a creedal system that may be called authentic only to the extent that they are not mere uninformed opinions or thoughtless presuppositions. As soon, therefore, as we start developing either faith or reason, the question of accepting this belief and rejecting that one inevitably arises. Without the coherence that is thereby achieved, one would seen be in a position like that parodied in apothegms such as "I believe there is no God and Our Lady is his mother." So although faith is an act of the will, it must be expressed not only in a particular belief but by a whole system of beliefs, each of which is believed to illumine the others. Hence there is in the mainstream of Western theological tradition the tendency to set forth creedal statements that call for believers' assent, as does, for example, the Nicene Creed. In Indian thought and practice, by contrast, one may hold one's own view (*darśana*) without repudiating that of another that seems logically incompatible with it. That attitude, however, arises from an emphasis on the inadequacy of all formulations of truth *(dharma)*. The West, except in the more philosophical types of religious literature and in the more mystical varieties of religious experience, has been less skeptical about the capacity of religious symbols to portray the realities of the spiritual dimension of being.

Faith, although it entails an intellectual element of belief, plays a special and often misunderstood role in the Bible and therefore in all biblically oriented Jewish and Christian thought. A classic series of illustrations of the fundamental religious significance of faith is provided by the author of the *Letter to the Hebrews* (*Heb.* 11), who points to the actions of Abraham, Noah, and other biblical figures, upholding them as exemplars of the courage of those who have lived by faith. Such faith is typified in Abraham's going out "not knowing whither he went" (*Heb.* 11:8). It is closely akin to trust. We should note carefully, however, that although Abraham's courage may have been boundless, his ignorance was by no means absolute. He was not totally uninformed. He did not wander forth haphazardly as in a game of blindman's buff. Yet, considerable as his knowledge presumably was, his act entailed both great personal courage and a firm personal conviction that he could rely on the guidance and guardianship of God, in whom he reposed his trust and to whom he dedicated both his courage and his intelligence, using all the willpower and the knowledge at his disposal.

The "knight of faith," whom Kierkegaard depicts in *Fear and Trembling,* engages in a paradoxical movement that presupposes and transcends the "purely human" courage that mere renunciation of the world demands. His is a uniquely humble courage that makes him perfectly obedient to God. Faith is "the greatest and hardest" enterprise in which one can engage, entailing as it does a leap beyond even the highest ethical decisions of which anyone is capable. From all rational standpoints the leap is absurd, running counter to everything to which human wisdom directs our attention as reliable guideposts to right decision and noble action: common sense, logic, and experience. In his journals, Kierkegaard expressly asserts that "faith's conflict with the world is a battle of character. . . . The man of faith is a person of character who, unconditionally obedient to God, grasps it as a character-task that one is not to insist upon comprehending" (*Journals and Papers*, vol. 2, pp. 13–14). Kierkegaard was by no means an enemy of either the aesthetic or the intellectual or of the ethical life of man; his concern was to show the uniqueness of faith as a category transcending all other modes of human consciousness.

This distinctiveness that Kierkegaard saw in faith has warranty in the New Testament, from which he drew his principal inspiration. Through such faith the Christian is saved (*Eph.* 2:8) and made righteous in the sight of God (*Rom.* 5:1). Inseparable though faith is from belief, it is not to be equated with it. It has a quality that distinguishes it from every other activity of mind and will. Nevertheless, having recognized that distinctiveness, we must now explore further the relation of faith to whatever cognitive status can be assigned to belief.

Prevalent but erroneous is the notion that faith, especially in the tradition of the Protestant reformers, excludes claim to knowledge of God. Hence faith is often contrasted with sight. In the teaching of the Christian school at Alexandria, faith tended to be treated as a vestibule to knowledge, a prolegomenon to a Christian gnosis. By contrast, the reformers glorified living by faith. Yet the French reformer Calvin expressly states: "Faith consists in the knowledge of God [*cognitio Dei*] and of Christ" (*Institutes* 3.2.5). He is not claiming knowledge of God as God is in himself (*apud se*); he does mean that we know him as he is in his dealings with us (*erga nos*). Faith, then, ever for so doughty a champion of its volitional character, has a cognitive element in it. Indeed, as good theologians no less than great mystics have always seen, faith yields a kind of knowledge, a gradual unfolding of awareness of God in human experience, apart from which awareness faith could not be indefinitely sustained. This awareness of that to which the name God is given is formulated in a set of beliefs that express in one way or another the stance to which faith leads the person who exercises it. Faith, practical and volitional as it is, is the means by which the knight of faith actually arrives at what he comes to call communion with (that is, entailing knowledge of) God. Just as we learn to drive or skate or play the piano less from books than by doing the thing, so through faith we arrive at the cognitive element to which it leads and is expressed in a set of beliefs.

Human knowledge is always limited and subject to revision, except in the case of mathematics, which is a closed system, a vast tautology that is indispensable as an instrument in scientific inquiry yet incapable by itself of yielding new information. Knowledge of the empirical world, based on observation and experiment, can never yield certainty. As Kant showed, we cannot know the "thing-in-itself." Doubt is therefore inseparable from all inquiry into and discoveries about the empirical world. Yet through advancement in the sciences we do have a better grasp of the world around us than did our primitive ancestors. We would not propose to go back to our forebears' view that the earth is flat with a blue dome of sky above it, but we must be prepared to doubt that our present knowledge of astronomy is irreformable and to recognize that a thousand years hence it, too, may seem primitivistic. When the knight of faith, whose adventures take him to a dimension beyond the empirical world as commonly understood, expresses his faith in a creedal statement, he can claim only a kind of knowledge. Many philosophical objections attend his claim. For instance, has he merely experienced a psychological state within himself, or has he in any sense encountered the ground of existence, the ultimate reality? Or, again, might he have encountered God through the superego of his own psyche? He can never be consistently and constantly sure; yet his faith, ever challenged by such questions, survives the challenges. When the authentic believer goes on to proclaim his belief "in" God, he is speaking from experience, as is the swimmer who says he believes "in" swimming and knows that he knows what he is talking about.

Since the knight of faith is engaged in a practical, not a theoretical, inquiry, his method, like the method of the sciences, is inductive. The inductive method used so habitually and extensively in modern science entails making hypotheses and subjecting them to tests that result in their verification or falsification. While the knight of faith cannot verify or falsify the beliefs that express his faith in the same way that the scientist tests his hypotheses, his procedure is in some important respects analogous. As the creative scientist invests his time and may stake his reputation on the eventual verification of his hypothesis, so the knight of faith stakes his life and his final destiny on his. Although he cannot hope to provide a definitive, assent-compelling verification of his faith here and now, the claim implicit in his faith is verifiable or falsifiable in the long run. Such faith entails risk. It is, as Pascal saw, a gamble; yet it is by no means a mere idle gamble, for it is informed by one's whole interpretation of life, as the scientist's hypothesis is no mere guess, but is founded on the whole range of his scientific experience and inquiry.

We have seen that in the thought of the Middle Ages faith (*fides*) was generally equated with belief. The great thinkers of the thirteenth century were much more familiar with deductive methods of reasoning than with inductive ones. Despite the foundations for inductive methods that were laid by original medieval minds such as Robert Grosseteste, Roger Bacon, and Johannes Duns Scotus, medieval science did not advance as physics, chemistry, and biology have advanced in recent times. The medieval men certainly did not lack powers of observation. They made astonishingly perceptive discoveries and invented many ingenious technological tools. They were hampered, however, by not taking seriously enough those inductive methods by which modern science has made its advances. For the same reason they tended to underestimate the meaning and power of faith as the volitional, practical, risk-taking catalyst of authentic awareness of God, apart from which both the beliefs and the doubts that spring from it must lack authenticity. This peculiar role of faith was expressed in the nineteenth century by John Henry Newman. In his *Apologia pro vita sua* he reports that it was not logic that carried him on any more than it is the mercury in the barometer that changes the weather: "The whole man moves; paper logic is but the record of it."

The difference between the medieval and the post-Renaissance understanding of the nature of faith may be due also, at least in part, to a general change of outlook that the Renaissance brought about in respect to the nature of man. In medieval thought the will was treated as but one of several "faculties," or powers of the soul. Such was the change wrought by the Renaissance that a tendency developed to see the will as virtually synonymous with the whole person. In this view the whole person is the agent; hence the act of faith comes to be seen more and more as an act of the will.

**BELIEF AND KNOWLEDGE.** The twentieth-century philosopher Bertrand Russell, in one of his best books, *Human Knowledge* (London, 1948), reminds us that "all knowledge is in some degree doubtful, and we cannot say what degree of doubtfulness makes it cease to be knowledge, any more than we can say how much loss of hair makes a man bald" (p. 516). He goes on to say that all words outside mathematics and logic are vague. After pointing out that empiricism as a theory of knowledge is inadequate, though less so than any previous one, he concludes that "all human knowledge is uncertain, inexact, and partial" (p. 527).

Russell's thought on this subject represents a development of the empiricist view championed in the eighteenth century by David Hume. According to Hume all human knowledge is reducible to more or less strong beliefs. Although some modern philosophers have argued for a clear distinction between knowledge and belief, they show only that it may be convenient to dub certain very strong beliefs knowledge in order to distinguish them from other beliefs that are weak. While I may feel so certain about some beliefs that I wish to assign to them a special place among my beliefs and so call them knowledge, I can never claim to be entirely certain that I have examined all possible alternatives, if only because I cannot know all the possible alternatives. When belief in a geocentric universe was fashionable, many must have felt confident that such a universe was demonstrable beyond a shadow of a doubt. If anyone doubted it, he could be asked to follow the movement of the sun from its rising to its setting and so be shown conclusively that the sun moved; yet that conclusion would be wrong according to today's reckoning.

For practical purposes one may choose to call one's strongest beliefs knowledge, but it can never be knowledge in the sense of an infallible grasp of truth or an acquaintance with reality. Even to say "I know I am in pain" is not an exception since it adds nothing to saying "I am in pain." If I did not know myself to be in pain, I could not be in pain; and if I were in pain, I could not have neglected to notice it. Of course I feel pain; but to say "I know" is to claim knowledge of what pain is, and this I cannot properly claim. Nor could such a claim to know result in any objective knowledge at all. As my friend you would presumably trust my word; nevertheless, you would be entitled to disbelieve me. John Austin in his essay "Other Minds" (*Proceedings of the Aristotelian Society*, supp. vol. 20, 1946) recognized this by pointing out that saying "I know" registers the highest possible cognitive claim in a form that authorizes someone to rely on the statement, so that it functions in a way similar to "I promise." Thus the claim to know is no more than a strident way of asserting a particular belief.

It is one thing to contend that everyone has the right to be sure of his beliefs; it is another thing to affirm that the beliefs are justified as claims to knowledge. By claiming to know, I would claim—judiciously or rashly—to have no doubt. If I affirm that something is a known fact, I am contending that no one has any need or any right to doubt it. No alleged facts, however, can be said to be so indubitable, and none, therefore, is so indisputable. When in creedal statements such as the Nicene Creed or the so-called Apostles' Creed we use the traditional "I believe" or "We believe," we exhibit the characteristically religious disposition of openness and its implication of the possibility of doubt. This doubt may be transcended by faith, yet the faith is meaningless apart from it. Perceptive, then, was the poet Alfred Tennyson's observation that more faith lives in honest doubt than "in half the creeds"; for unless the believer's affirmation recognizes the possibility of doubt, his faith has no vitality. The absence of doubt is the height of irreligion. Both the will to believe, which the psychologist and philosopher William James popularized in the late nineteenth century, and the will to doubt, which Bertrand Russell said he would prefer to preach, are necessary for a lively faith. When the authentic believer says "I believe," he omits a hidden qualifier—"*Nevertheless*, I believe." For if there can be nothing (outside the tautologies of logic and mathematics) that justifies a claim to certainty, then doubt is proper to every belief. Authentic belief does not sidestep doubt. On the contrary, when one seriously intends to live by faith, one does not at all claim that the formulation of that faith is adequate or irreformable.

**NIHILISM AND CERTAINTY.** The role of doubt in belief can be clarified by a glance at two extremes: nihilism and certainty. Nihilism (from the Latin *nihil*, "nothing") consists in the dogmatic tendency to deny not only the existence of God but the permanence of any entity. According to such a view one can therefore say nothing that is absolutely true of anything since no claims to truth have any objective grounds. A classical exponent of nihilism in its intellectual aspect is Gorgias in Plato's dialogue of that name. In contrast to the earlier philosopher Protagoras, who held that "man is the measure of all things" (i.e., truth is relative to persons and circumstances), Plato's Gorgias taught that there can be no truth at all. On the practical or ethical side the nihilist denies all "higher" and "objective" values. In the nineteenth century the German philosopher Friedrich Nietzsche held that the interpretation of existence that Christianity bequeathed to Europe was fundamentally a life-negating pessimism. A particular form of nihilism emerged in Russia. Mikhail Bakunin (1814–1876) taught that society's only hope lies in its destruction, while, even more radically, Dmitrii Pisarev (1840–1868) taught that society is so evil that its destruction is a good in itself. Existentialism, by contrast, is not necessarily nihilistic, although some forms of it (e.g., those of Jean-Paul Sartre and Albert Camus) have nihilistic elements in them.

Certainty is a peculiarly difficult concept. After the Renaissance, John Locke, George Berkeley, and David Hume all paved the way for Kant's demonstration that we can have no certain knowledge of the "thing-in-itself." Noteworthy is the fact that down to the present century the papal index of prohibited books included these writers only in respect to those of their works that cast doubt on the possibility of certain knowledge. Although from Augustine to Thomas the medieval thinkers had discussed the conditions of certain knowledge, all of them held that at least some kind of knowledge is possible. Otherwise, how else could one know, for instance, that God exists? Modern thinkers, however, have generally been reluctant to recognize the possibility of absolute certainty except in the realm of logical and mathematical relationships that are (as we have seen) tautologies. Russell distinguished three kinds of claims to certainty: (1) logical, or mathematical, certainty—for example, if we grant that man is a rational animal, we may be certain that by implication man is an animal; (2) epistemological certainty, according to which a proposition is credible in the highest degree as a result of the abundance of evidence adduced for it—for example, we can be certain that the earth moves around the sun; and (3) psychological certainty, which occurs when a person merely feels no doubt about the truth of a proposition—for example, if after having known you for two minutes I were to say, "I am an excellent judge of people, and I know for certain that you are not to be trusted."

**THE ROLE OF DOUBT IN AUTHENTIC FAITH AND BELIEF.** Superficial critics of religion tend to ask, "How genuine is the believer's belief?" Such a question never yields—nor could it ever yield—any satisfactory answer. The questioner, having taken care to steer between the Scylla of nihilism and the Charybdis of a claim to certainty, would more fruitfully formulate the question by asking, "How genuine is the doubt behind the belief?" For when a believer says, "In spite of *x*, I believe *y*," that which is most likely to determine the significance of *y* is knowledge of the content to be assigned to *x*.

Doubt is a profound expression of humility. Without the humility that is and always has been at the root of all creative philosophical and scientific inquiry from Socrates onward, pretensions to religious faith are shown for what they are: at best a caricature, at worst a mockery, of religion. For humility is not only the virtue that corresponds to the vice of pride—which according to the teachings of all the great religions of the world is the fundamental obstacle to spiritual perceptivity; it is also closely connected with love, which is in Christian teaching the spring of all virtues. So faith and love respectively have as their implicates doubt and humility. If humility be radical enough it can become the best means of access to God, who "resisteth the proud, but giveth grace unto the humble" (*Jas.* 4:6). We may also say with E.-Alexis Preyre that "the man whom doubt, pushed to its extreme consequences, has led to total indetermination may 'find' God or not. But if he find God, the faith of that man is immovable" (*À l'extrême du scepticisme*, Paris, 1947, p. 168).

Laughter is likewise relevant to the spirit of humility and doubt. To be able to laugh at oneself is surely the hallmark of humility. Neither the religious fanatic nor the antireligious propagandist is likely to be able to do so, and so neither can ever laugh lovingly about religion. The mirth that springs from self-forgetfulness is a potent instrument in the attainment of religious insight, for it springs from deep humility and a childlike love that have matured into intellectual openness and awe before the mystery of being. That is impossible apart from doubt.

Faith, to have any value at all, emerges in personal encounter with divine being: "*Scio cui credidi*" ("I know whom I have believed"; *2 Tm.* 1:12). In childhood we learn to trust those who surround us with love. In due course we discover that, like all human beings, they, too, have their limitations. The deeply religious person, however, claims to have encountered the being in whom alone such trust may be placed without reserve, and so such a person sets no limits on the faith that issues from the encounter. What such a person may and should question is what precisely the encounter signifies and how it is to be interpreted. If the faith does not entail any doubt at all, surely it is a straw in the wind.

Moreover, without a willingness to doubt, religious tolerance is impossible. True, religious tolerance is not in itself the mark of authentic faith, for it may spring from mere indifference to or ignorance of the cardinal issues of the religious consciousness; but a faith that is fundamentally intolerant of any expressions of religion other than its own merely reveals its lack of confidence and the trivial nature of its thrust. Genuinely religious persons, whatever their beliefs, are always thoroughly impressed by the mystery of faith. The tendency to explain rather than to contemplate mystery is the vice of much popular, institutional religion and has immensely contributed to the disunity of Christendom as well as to the maintenance of barriers between one religion and another. The apocalyptic literature of religion unfolds the presence of mystery; it does not purport to explain it. Genuine religion is always full of wonder and therefore full of doubt, while irreligion is wonderless. With wonderless belief the devotee can offer only wonderless love, which is tantamount to blasphemy since it entails a casualness such as one might properly express in saying, for instance, "Of course I love candy, doesn't everyone?" Such religion, shorn of doubt, lacking humility, and therefore loveless, surely reveals its own ignorance and depravity, for it expresses a mere narcissistic looking at oneself in a mirror rather than an outpouring of love to the source and ground of being, apart from which religion is indeed vain.

**BIBLIOGRAPHY**

The classic source on doubt as a philosophical method is René Descartes's *Discourse on Method* (especially part 3). For a discussion of a "doubtful faith" that can partake of rational checks and balances yet allow beliefs that go beyond theoretical knowledge, see Immanuel Kant's *Critique of Judgment* (especially section 91). Another classical treatment of the nature of belief is Blaise Pascal's *Pensées*. Søren Kierkegaard's singularly important perceptions on doubt and belief are scattered throughout his works, but especially important are his *Journals and Papers*, 7 vols., edited and translated by Howard V. Hong and Edna H. Hong, assisted by Gregor Malantschuk (Bloomington, Ind., 1967–1978) and his *Either/Or*, 2 vols., translated by David F. Swenson, Lillian M. Swenson, and Walter Lowrie, with revisions and foreword by Howard A. Johnson (Princeton, 1959). John Henry Newman discusses belief in terms of an "illative" sense in *An Essay in Aid of a Grammar of Assent* (1870; reprint, with an introduction by Étienne Gilson, New York, 1955) and in his *Apologia pro vita sua*, 2d ed. (1865; reprint, New York, 1964). On the meaninglessness of "radical" doubt, see G. E. Moore's "The Refutation of Idealism," reprinted in *Philosophical Studies* (London, 1922); "A Defence of Common Sense," in *Philosophical Papers* (New York, 1959); and *Some Main Problems of Philosophy* (New York, 1953), especially chapter 1. Frederick R. Tennant's theory of belief and faith is expounded in his *Philosophical Theology*, 2 vols. (Cambridge, U.K., 1928), especially volume 1, chapter 11, and in his *The Nature of Belief* (London, 1943), especially chapter 6. Martin C. D'Arcy, S.J., in *The Nature of Belief* (London, 1931), gives an account consonant with the Thomist tradition. Also important are Dorothy Emmet's *The Nature of Metaphysical Thinking* (London, 1945) and John Hick's *Faith and Knowledge*, 2d ed. (Ithaca, N.Y., 1966). In several of my books, notably *Christian Doubt* (London, 1951) and *God beyond Doubt* (Philadelphia, 1966), I have discussed faith as a descant on doubt.

**DOV BER OF MEZHIRICH** (c. 1704–1772), Hasidic teacher and leader of the movement from 1760. A scholar and an ascetic qabbalist from his youth, Dov Ber sensed a lack in the rigorous routine of study, fasting, and self-mortification that provided the standards for intense Jewish spirituality in his day. Tradition has it that he was a physically frail man, rendered so in part by the voluntary self-denial of his early years.

Toward the middle of the eighteenth century, Dov Ber came under the influence of Yisraʾel ben Eliʿezer (1700–1760), the Besht, a wandering healer and folk teacher and the central figure of a spiritual revival movement that had met with some modest success among Jews in Podolia. The Besht, though a person of significantly less rabbinic learning than Dov Ber, was a natural mystic and a charismatic personality who probably had mastered the supranormal powers of perception. Their meeting transformed Dov Ber's life. The Besht taught a religion of divine immanence, of the palpable presence of God in each place, each moment, and every human soul. In this teaching Dov Ber felt his own religious life come alive, and he was liberated by it from the excessive demands of his earlier asceticism.

While the death of the Besht occasioned a struggle for leadership in the nascent movement, most of the master's disciples followed Dov Ber as he moved the center of Hasidic teaching westward to Volhynian Mezhirich, where he served as preacher *(maggid)*. In the twelve years of his leadership, he attracted to Hasidism a dazzling group of young seekers, many of whom were to become important teachers, leaders, and authors in their own right. These include such well-known Hasidic figures as Menaḥem Mendel of Vitebsk, Shneʾur Zalman of Lyady, Levi Yitsḥaq of Berdichev, Elimelekh of Lizhensk, and Aharon of Karlin. It was Dov Ber who sent them forth to spread the Hasidic message throughout the Jewish communities of eastern Europe, and it is largely due to his impact that Hasidism became a far-flung and important force in Jewish history. His death in 1772 occurred just as the controversy and bans against the Ḥasidim were first being issued by the rabbinical authorities.

Dov Ber was a mystic intoxicated by the single idea of *devequt* ("attachment to God") as a return to the state of primal nothingness. He taught a panentheistic doctrine that bordered on acosmism: the transcendent God also fills all the worlds; his life force is the only true vitality in all of being. The outer human self as well as the exterior appearance of all reality are the infinitely varied garb of God. As the devotee learns to transcend such externals, he will find only the One, that nothing that is in fact the only Being. Paradoxically, this highly abstract immanentism was combined frequently with entirely personalistic religious metaphors. God is often described by Dov Ber as a father who reduces the intensity of his presence in the world, a process called *tsimtsum*, the way a patient parent lessens the complexity of a concept while trying to impart it to a beloved child.

Much of Dov Ber's work focuses on issues of devotion. He taught that proper prayer must be for the sake of the Shekhinah (the exiled divine presence) and that supplication for one's own sake was selfish. Prayer as practiced in the Mezhirich circle was an ecstatic ascent to *devequt*, with the externals of worship successively cast aside as the worshiper, even while continuing to recite the prescribed liturgy, basked in the glow of God's presence. The heights of such prayer bordered on the prophetic; moments passed in which the worshiper's own voice was silenced as "the Shekhinah spoke from his mouth."

Unlike earlier Jewish mystics, who seemed to shy away from unitive formulations in discussing their experiences, Dov Ber freely advocated union with the divine. The human soul, wholly identified with *shekhinah*, the lowest of the ten divine emanations, had to return to *ḥokhmah*, or primordial wisdom, the highest of the ten and often called by the name *Ein*, representing the divine *nihil*. In this act of mystical self-annihilation, man served as a channel by which all the divine energy released in creation was reunited with its source, effecting a foretaste of ultimate redemption.

In Dov Ber's teaching, the messianic urgency that characterizes much of the earlier Qabbalah is set aside or "neutralized"; the immediate and highly individual act of *devequt* seems to mitigate the need for the long-range and collective striving for *tiqqun*, or cosmic redemption. This neutralization was also made possible by a vision that denied the ultimate reality of evil, considered an illusion that stood as a temporary barrier to our sight of the good.

Dov Ber's teachings were edited by his students and published after his death in *Maggid devarav le-Yaʿaqov* (1784), *Or Torah* (1804), and *Or ha-emet* (1899). He is also frequently quoted throughout the many writings of his disciples, and his dominant influence is felt throughout the later Hasidic literature.

### BIBLIOGRAPHY

Dov Ber's *Maggid devarav le-Yaʿaqov* has been published in a critical edition by Rivka Schatz Uffenheimer (Jerusalem, 1976). His other works are available in reprinted traditional editions. While no work of Dov Ber's as such has been translated into English, the reader can obtain an idea of his teachings from the works of his disciple Menaḥem Naḥum of Chernobyl, *Upright Practices* and *The Light of the Eyes*, translated by me (both, New York, 1982). Dov Ber's thought is the chief subject of Rivka Schatz Uffenheimer's important study *Ha-Ḥasidut ke-misṭiqah* (Jerusalem, 1968). For biography, see volume 1 of Samuel A. Horodetzky's *Ha-Ḥasidut ve-ha-ḥasidim* (Tel Aviv, 1951), pp. 75ff.

## DOVES SEE BIRDS

## DRAGONS.

The etymology of the term *dragon* (from the ancient Greek *drakōn* and the Latin *draco, -onis*) points to serpents, for the Greek term means "serpent," and it refers to real snakes as well as to mythical snakes or snakelike figures; the Latin term may also refer to actual serpents. By dragons we mean mythical creatures shaped like serpents or with serpent features, and often endowed with features or parts belonging to various animals (a body like a lizard's or a crocodile's, with a feline's or a reptile's head, a bat's wings, an eagle's or a lion's paws and claws, and a mouth endowed with many tongues and pointed fangs). Dragons are often presented as fierce, devouring monsters; according to many traditions, they spit fire; they may be chthonic, aquatic, or aerial beings.

Even though the specific shape of the dragon's monstrous body becomes increasingly standardized in time and assumes a heraldic fixity in the art of many cultures, as in the European or in the Chinese and Japanese, the dragon is better defined by its meaning and function in mythical thought than by that shape. Dragons are the symbols of elements, forces, or principles present, or active, in the cosmic (or precosmic) world. They thus express, in mythical language, aspects of the natural setting of the various societies, and the dangerous or positive qualities of those aspects, such as drought or rain, flood, and so on. Beyond this "natural" meaning they possess a more complex value on the cosmic level, being forces of stability or of disorder, of staticity or of dynamism, of death or of life. Again, they may have a similar meaning on a "social" or "political" level, symbolizing the enemies, or, in some cases, the champions, of a given culture, society, group, or class. In this case also, however, the symbolism of this first level expresses a second-level, "cosmic" symbolism of evil, disorder, and injustice, or of protection and strength.

The main Old World traditions about dragons can be classified in two different groups. A tradition belonging to cultures located in the western part of Eurasia and in some parts of East Africa presents dragons as chaotic beings, responsible for death and disorder, and vanquished by gods or heroes. This tradition has its roots in the ancient mythologies of the Near East, and of the Indian, Iranian, and European world, and it continues into the Christian culture of the European Middle Ages as well as into the Christian mythology of Egypt and Ethiopia. A second tradition is typical of East Asia (notably China, Japan, and Indonesia) and presents dragons as powerful and helpful beings. The distinction, however, is not a totally simple and straightforward one, for "positive" aspects are present in the dragon lore of the western area, notably in India (where myths present dragonlike beings that are similar to the dragons of East Asia), and dragon-slaying myths are not unknown to the East Asian cultures. In order to respect the complexity of the material, a more detailed treatment is required, based upon specific aspects and motifs of the dragon lore of the Old World, rather than upon the usual twofold classification.

**Dragons in Cosmogonies and Eschatologies.** The most ancient traditions about dragons go back to the Sumerian, Akkadian, and Egyptian mythologies of the first three millennia BCE. In these contexts dragons (often clearly serpentine; in some cases, as in that of Tiamat, of different, though unclear, shapes) represent forces or elements that interfere with the correct order or functioning of the world, and they are vanquished by gods who shape and organize the cosmos and, through their victory, acquire authority and power over the newly ordered world. The god Enlil defeats a monstrous being, the Labbu, in a Sumerian text. The god Marduk vanquishes the monsters Tiamat and Kingu in the Akkadian text *Enuma elish* of Babylon. In the mythology of the Syrian city of Ugarit (end of the second millennium BCE) the god Baal defeats the monsters Yamm ("sea") and Mot ("death"). The dragon Apopis is slain by the god Seth in Egyptian mythology. In similar mythical traditions the serpentine Vṛtra is killed by the warrior god Indra (or by the hero Trita) in Indic mythical narratives that go back to the *Ṛgveda*. In the Hittite texts of Bogazköy, the serpent Illuyanka is killed by the storm god. In Greek mythology, Zeus slays the monster Typhon, who had a hundred snake heads, and Apollo kills the female serpent (*drakaina*) at Delphi, and then builds his own sanctuary on the spot where the monstrous being has been slain.

In some cases, these myths have been interpreted as myths of fertility and of the seasonal pattern, because the victorious deity is often a storm god, and drought, rain, and the life of vegetation are often at stake. But the cosmogonic quality of these myths is clear in all cases: in order to construct, or to defend, the world order, the god has to destroy the primeval, chaotic dragon. In some cases (as in that of Apsu and the female Tiamat, who represent two parts of the original watery chaos, and of the younger monster Kingu) the dragonlike monster represents the preexisting, static, chaotic matter that must be broken, divided, and restructured to build the cosmos. In other cases (as in the myths about Apopis, the serpent who tries to stop the sun from rising and setting, or of Vṛtra, the "withholder" who blocks the cows symbolizing water and dawn) the serpentine monsters are beings that cause staticity and death by stopping the correct functioning of the world, and they must be eliminated.

The Hebrew Bible contains many traces of an ancient mythology, wherein Yahveh, in primeval times, defeats monsters that are extremely similar to the dragonlike beings dispatched by the various Near Eastern gods: to names already present in the more ancient Ugaritic texts (*Yamm*, *Mavet*, or *Mot*) one can add names such as *Peten*, *Nahash*, *Rahab*, *Leviathan*, *Tannin*, *Behemoth*. Indeed, this seems to have been an ancient Israelite myth connecting creation to the fight against one or more primeval monsters, and thus a cosmogonical motif alternative to the one(s) contained in the first chapter of the *Book of Genesis*.

Given the structural correspondence between cosmogonies and eschatologies, it is not surprising to find that eschatological myths of various societies show a dragon as the being (or as one of the beings) responsible for the lapse into chaos and death that is to take place at the end of time. Thus in late biblical texts (e.g., *Dn.* 7, *Jb.* 7:12), as well as in Judaic and Christian texts of "apocalyptic" content (e.g., *Rv.* 12–13, 20), the primeval dragon is said to have been defeated but not totally destroyed, and to return at the end to wreak havoc, only to be finally annihilated. Other religious traditions also present dragonlike beings as eschatological enemies: thus the Germanic mythology (the Midgarðr serpent of the *Prose Edda*) and the Iranian (the serpentine Azhi Dahaka, later called Zohak, who is chained to Mount Demavend by the hero Thraetaona/Feridun and who returns at the end of time).

**Dragons as Abductors and Devourers.** To the above themes one should connect the similar mythical complex that presents dragons as robbers who steal wealth or abduct women, and the theme of the devouring dragon. In some of the "cosmogonical" myths listed above (e.g., in the Ugaritic myth of Baal, Mot, and Yamm) the"chaotic" enemy is also presented as a devourer, or as a tyrant levying tribute; in other cases, such as the ancient Egyptian myth about Astarte and the sea (nineteenth dynasty), a goddess is sent (as "tribute"?) to the monster by the gods it terrorizes. But a more precise motif of this type has recently been reconstructed and called the Indo-European cattle-raiding myth. In the mythologies of many Indo-European-speaking societies (Indic, Iranian, Hittite, Greek, Roman, Germanic, and Armenian) versions or traces of a type of myth have been found, wherein a monstrous, serpentine, three-headed being steals cattle from a hero or a community; a god or hero retrieves the cattle and dispatches the monster. The Indic example is the very myth of Indra (and/or Trita) mentioned above, that is clearly cosmogonic; the Hittite example is the myth, also cited above, of Illuyanka and the storm god. This overlapping, and the eschatological developments of the Germanic and Iranian myths of this group (see above), point to a typological and historical connection between the theme in question and the cosmogonical myths mentioned in the preceding section, though there is no consensus among scholars on the original cosmogonic value of the cattle-raiding myths.

In the Iranian myth belonging to this group, the monster Azhi Dahaka/Zohak steals not cattle (though an interpretation of the stolen female as cattle has been proposed for the most ancient versions) but royal women, and his opponent Thraetaona/Feridun regains the young women (and, in the later versions, the usurped throne) by defeating the dragon. This theme of a dragon who steals women and is defeated by a hero who thus regains them is no less widespread than the theme of the devouring or greedy dragon. It is attested in ancient Greek mythology (e.g., the hero Perseus saves Andromeda from the dragon), and it is a central theme in medieval and modern dragon lore in Europe and Asia, appearing in folk tales collected from the oral tradition of European peasants down to the nineteenth and twentieth centuries, in which a "princess" is stolen by a dragon (or by some other monstrous enemy) and recovered by a young man of the lower social strata, who kills the monster and is promoted, often by gaining the hand of the "princess." In other folk tales of the same traditions, the dragon steals or devours vital elements such as light or water, or pollutes the soil or the air of whole regions.

**DRAGONS AS WITHHOLDERS AND CUSTODIANS.** The tradition of the dragon as a greedy usurper, robber, devourer, or withholder may be combined with two other widespread motifs: the theme of the serpent who in primeval times deprived humankind of immortality—a theme attested, for example, in the biblical *Book of Genesis* (3:1–15) and in the Mesopotamian *Epic of Gilgamesh*—and the widespread theme, which is especially important in many Asian mythologies, of the snake that resides at the foot of the tree of life or the cosmic tree. Such combinations probably gave rise to the theme of the dragon as a custodian of the tree of life or of other sources of immortality or longevity: one should quote the ancient Greek myth of the dragon that guarded the golden apples of the Hesperides, killed by Herakles when the hero conquered the apples, or the *nāga*s of Indic tradition, that guarded the White Mountain and its wonder-tree Mahāsankha, "tall as Mount Meru," that produced a special fruit. In other cases the dragon is shown not guarding but attacking the holy tree: thus, in Iranian mythology (*Bundahishn* 18.2) the reptile created by Ahriman that damages the miraculous plant Gayo-kerena, or, in Germanic traditions, the serpent Níðhǫggr that attacks the roots of the cosmic tree Yggdrasill.

The theme of the dragon as guardian of the tree of life or cosmic tree is connected typologically to the theme of the dragon who guards treasures, widely attested in China, India, and Europe. See, for instance, the ancient Greek tradition about the dragon that guarded the Golden Fleece and was killed by the hero Jason, who thus obtained the precious token of kingship; the serpents guarding the gold of Apollo among the Scythians (Herodotus, 3.116); and the Germanic myth of the snake Fafnir who guards the gold coveted by Regin and is killed by the hero Sigurd. The theme of the dragon guarding the tree of life became an important iconographical motif in ancient and medieval art of Asia and Europe: it is found, in a rigid heraldic scheme, even in the reliefs of the Baptistery of Parma and of other medieval churches.

**DRAGONS AS ENEMIES AND DEVILS.** In other traditions, dragons are ever-active, menacing symbols of evil. In some cases, their symbolic value is drastically "historicized," and they are identified by various societies or groups with real, external enemies such as foreign nations or oppressive powers and rulers. It has been shown that in many traditions of the cattle-raiding myth type the serpentine cattle raider (or abductor of women) is seen as the representative of an enemy (often non-Indo-European) group, against which the society that created the myths was engaged in a continuous warfare; in the Hebrew Bible and in the most ancient Christian texts the various monsters listed above are quoted to indicate neighboring nations (Egypt, Assyria, Babylon, etc.) or tyrannical rulers that oppressed Israel or persecuted the believers.

In later Judaic and in other religious and magical texts of the eastern Mediterranean of Hellenistic and Roman times, dragons and serpents are increasingly presented as symbols and instruments of the evil forces, and from this background, as well as from the eschatological value of dragons in biblical and other traditions (see above), the identification of the dragon with the enemy of God, Satan, arose. This interpretation was already explicit in the "canonical" Christian apocalypse (*Rv.* 20:2; see above), and it became the most generally accepted in the Christian world. In the new Christian context, numerous hagiographic and other traditions contained a restructured version of the ancient mythical theme of the battle against the dragon or monster, in which the dragon was an embodiment or an emissary of Satan. The best-known type of battle between a holy being and the devilish dragon in Christian traditions opposes the satanic enemy to a warrior figure. One might mention Saint George, a saintly knight of Anatolian origin, who often replaced the "pagan" dragon slayers of local, pre-Christian traditions; or Michael, the Archangel, an important figure of Christian angelology that is presented as a dragon slayer already in the earliest texts (*Rv.* 12:7–9). These two figures are extremely popular in Christian iconography from the earliest times; they are usually shown dispatching the satanic dragon with a lance or sword, clad in full armor, and Saint George is often depicted on horseback.

Saints George and Michael are not, however, the only Christian dragon-slayers. The Virgin Mary, mother of Jesus, for example, is often depicted as trampling a serpent, as the Second Eve who defeats the forces of evil, in fulfillment of the verse of the *Book of Genesis* (3:15) that announced an eternal enmity between the seed of Eve and the serpent; the iconographical type continues, today still, in Catholic sacred art. Finally, other dragon-fighters of Christian tradition, such as Saint Marcellus of Paris (fifth century) or Saint Hilary of Poitiers, appear not as warriors, but as bishops, their weapon against the dragon being not the sword or lance but the bishop's pastoral staff. The connection established by the hagiographic sources between their victory over the dragon and their role as culture heroes and as peaceful leaders of their communities shows that their treatment of dragons (often not slain, but tamed or chased away) has specific meanings, different from those of the other Christian narratives about dragons, and probably less concerned with a theological symbolism: we are told of Hilary that "he gave more land to humankind, for colonists migrated to the place that had been held by the beast" ("addidit terra hominibus, quia in loco beluae incola transmigravit").

**Dragons as Givers of Fecundity and Life.** In spite of the systematic "demonization" of dragon figures in the Christian Middle Ages, specialists of European folklore and medieval culture have shown that many aspects of the dragon lore of Europe point to a more complex symbolic and mythical value of dragons. It will suffice here to quote the heraldic use of dragons in crests, banners, and insignia, from late antiquity to modern times; the identification (that has been compared to "totemic" practices of tribal societies) of nations and lineages with dragons; the presence of dragons (often as symbols of fecundity and prosperity) in liturgical processions (such as the Rogations of western Europe) or in folkloric festivals (such as Carnival).

The "positive" traits of dragons in European traditions show the dragon lore of Europe to be polysemous. They may be usefully compared to the "positive" traits of dragons in East Asia, and especially in China, where dragon figures are no less polysemous than in the Western tradition. In China, the theme of dragons as forces or beings that have to be controlled and confirmed in order to "create" the cosmic order is well attested by, for example, the Confucian *Shujing* (Book of stories). That text recounts how the mythical emperor Yu, the founder of the Hsia dynasty, who gave the world its correct order, built the first canals, freed the land from the chaotic waters, and chased away the serpents and dragons, forcing them to reside in the marshes.

To this tradition one could add many others, such as the deeds of the dragon-slaying emperor Chuan-hin. However, one should note that Nü-kua (the goddess who ordered the world in primeval times according to another ancient text, the *Lizi*, and killed the black dragon) and her spouse, the mythical emperor Fuxi, are represented as dragonlike beings in sculptures of the first centuries CE. This paradox of the dragonlike dragon-slayer is emblematic of the complexity of Chinese dragon lore. Chinese dragons embodied the fertilizing qualities of water, and the importance of rain in the agricultural life of that region explains the increasingly ouranic traits of dragons, their wings, their connections with lightning.

Far from being a mere symbolic expression of the natural elements, however, Chinese dragons represent the rhythmic forces that rule the life of the cosmos. This is explicitly stated by the Daoist Zhuangzi, who writes that the dragon is a symbol of rhythmic life because it embodies the waters that guarantee the living order of the cosmos by their harmonious movement. The cosmic value of dragons as symbols of rhythm and flux is not distinguished, in this text, from their value on the level of the material elements of nature.

The connection of Chinese dragons with rain is well exemplified by the ritual practices of ancient China; during droughts, images of the Ying dragon, a water figure, were made, to propitiate rainfall. Yet dragons are also important in rituals of cosmic renewal, as is shown by the presence of dragon masks during the lamplit, nightly festivities that close the Chinese New Year feast; and many traditions and practices point to the other value of dragons as symbols of cosmic rhythm. In particular, this is clear in the symbolic correspondences and ties between dragons and the Chinese emperors or Sons of Heaven who were also representative of cosmic rhythms and givers of fecundity. Thus we are told that an emperor of the Hsia dynasty ate dragons in order to ensure magically the welfare of his kingdom, and that when that same dynasty underwent a crisis and lost its vital force, dragons appeared to reestablish the correct rhythmic flux in various ways. Finally, mythical dragons were responsible for the ascension of monarchs to the heavenly regions, as happened, we are told, when Huangdi, the Yellow Emperor, was abducted with several members of his court by a bearded dragon and carried to the sky.

Throughout Southeast Asia, in South India, Indochina, and Indonesia, dragons are water figures and symbols of fertility. This is attested not only by narrative traditions but also by ritual practices. Thus, in modern Cambodian weddings the bride is identified with the moon, her teeth are treated as if to deprive them of serpent venom, and the rituals are explicitly connected with myths about a dragonlike royal ancestress; in Tenasserim (Burma), to stop the rainy season and to bring in the dry weather, a statue of Upagutta, a mythical serpent king, is plunged in water and offered sacrificial gifts, in a ritual that is a symmetrical reversal of the Chinese dragon rite mentioned above.

**Dragons as Parents and Ancestors.** Many traditions of Asia and Europe present dragons as the parents of heroes and holy men and as the mythical ancestors of kingly dynasties. The ancient Greek myth of the origin of the Boeotian city Thebes combines this theme with the theme of the serpent as guardian and withholder: the hero Kadmos kills the dragon that barred the way to the site of the future city and then sows the dragon's teeth in the earth, thus giving rise to the Spartoi ("sown men"), who become the first Thebans. Alexander the Great (r. 336–323 BCE) was believed by some to be born from his mother's encounter with a god in the shape of a serpent, and a similar legend was told of the Roman emperor Augustus. According to a Chinese tradition, the princess Liu was resting by a pond with her husband, when she was raped by a dragon and conceived thus the future emperor Gaozu; and the culture hero Fuxi was said to have been born from a pond that was famous for its dragons. Similar traditions are attested in Annam and Indonesia; and the Indian kings of Chota Nagpur were believed to have descended from a *nāga*, or serpentlike spirit, named Puṇḍarīka.

A series of Asian traditions recount the birth of a famous kingly ancestor or holy man from a prince or priest and a *nāgī* (female counterpart to the male *nāga*). Thus, according to a Palaung myth, the *nāgī* Thusandi and the son of the solar deity, Prince Thuryia, gave birth to three sons who became the kings of three lands (China, the land of the Palaung, and Pagan). Similar traditions about the origins of royal dynasties from female dragon figures exist in South India, Indochina, and Indonesia. In India the birth of the sage Agastya from the *apsara* Urvasi is recounted in a comparable fashion.

In the legends, the dragon-woman is often recognized as such suddenly, because she smells strongly of fish, or because she is spied upon while she takes a bath and plays in the water with a *nāga*. In modern traditions of this kind from Cambodia, the female dragon is a moon figure, and her mythical marriage with a solar prince is the prototype of today's marriage rituals, as well as a symbol of cosmic union between opposites. Similarly, the traditions about the birth of a dynasty from the union of a watery, dragonlike female and a fiery solar male are symbolic of a primeval unity of opposites that prepares the new cosmos represented by the new dynastic order.

A comparable symbolic interpretation has not been offered by scholars for the European traditions of the same type, that also derive princely dynasties from dragonlike females, and are known both from medieval chronicles and other texts, and from modern folklore. In the best-known of these European narrative traditions (the story of the extrahuman female Mélusine or Mélusigne, often classified as a fairy by its medieval redactors) the female protagonist is spied upon by her husband, who discovers that she turns into a snake when taking a bath. The Mélusine stories have been compared to the myth told by Herodotus (4.8–10) about the birth of the ancestors of the three Scythian "tribes" from the hero Herakles and a powerful female being, who was half woman, half serpent, but decidedly chthonic rather than watery.

## BIBLIOGRAPHY

G. Elliot Smith's *The Evolution of the Dragon* (New York, 1919), although outdated, is still useful as a general study. The best discussion of dragons and their symbolic meaning is in Mircea Eliade's *Patterns in Comparative Religion* (New York, 1958), chaps. 5 and 8. This book has an excellent bibliographical appendix. On dragons as chaotic beings of primeval times and on the theme of the cosmogonic battle against such monsters in the ancient Near East, Indic, and Greek worlds, see Mary K. Wakeman's *God's Battle with the Monster: A Study in Biblical Imagery* (Leiden, 1973). For still wider comparative material, see Joseph Fontenrose's *Python: A Study of the Delphic Myth and Its Origins* (Berkeley, Calif., 1959).

On the "cattle-raiding myth," see Bruce Lincoln's *Priests, Warriors, and Cattle: A Study in the Ecology of Religions* (Berkeley, 1981), esp. pp. 103–122. On the Indo-European myths about the fight against the dragon, consult Viacheslav Ivanov and V. N. Toporov's "Le mythe indo-européen du dieu de l'orage poursuivant le serpent: Réconstitution du schéma," in *Échanges et communications: Mélanges offerts à Claude Lévi-Strauss*, edited by Jean Pouillon and Pierre Maranda, vol. 2 (The Hague, 1968), pp. 1180–1206.

A good source for medieval European dragon lore, especially the theme of the bishop as a dragon tamer, and an important critical study is Jacques Le Goff's "Culture ecclésiastique et culture folklorique au Moyen-Âge: Saint Marcel de Paris et le dragon," in *Richerche storiche ed economiche in memoria di Corrado Barbagallo*, edited by Luigi De Rosa, vol. 2 (Naples, 1970), pp. 53–90. This essay has been translated as "Ecclesiastical Culture and Folklore in the Middle Ages: Saint Marcellus of Paris and the Dragon," in Le Goff's *Time, Work and Culture in the Middle Ages* (Chicago, 1980), pp. 159–188. Le Goff and Emmanuel Le Roy Ladurie's "Mélusine maternelle et défricheuse," *Annales: Économies, sociétés, civilisations* 26 (1971): 587–622, offers a source on Mélusine.

Bibliography for East Asian dragons can be found in Eliade's *Patterns in Comparative Religion* (cited above), Barbara Renz's *Der orientalische Schlangendrache* (Augsburg, 1930), and Hampden C. Du Bose's *The Dragon, Image, and Demon, or The Three Religions of China* (London, 1886). On the mythical serpentine ancestress in Southeast Asia, see the bibliography provided by Eliade (cited above), adding Éveline Porée-Maspéro's "Nouvelle étude sur la nagi Soma," *Journal asiatique* 236 (1950): 237–267.

## DRAMA: DRAMA AND RELIGION

Although it can be said that the presentation of drama and religious ceremony are analogous, the two practices are not always directly related in world history. The notion popularized in the early twentieth century by the Cambridge School that drama springs directly from ritual has been largely discredited. However, religious practices and dramatic presentation often share many common elements: costume, storytelling, a playing space, and an audience. Also many of the world's dramatic forms are derived from religious rituals and are still, in some way, connected to religious celebration. With that in mind, drama has had a long, sometimes intimate, sometimes adversarial relationship with religion.

Scholars generally assign drama and religious ritual to a continuum with the following divisions: ritual with performative elements, ritual drama, drama presented as part of a religious festival, and secular drama. While this continuum cannot be used as a trajectory of theatrical development, it provides a useful tool with which to understand the many kinds of relationships theatrical performance has had with religious practice. Some societies developed rituals with advanced elements of performance but never developed anything approaching a secular drama. Conversely, some societies adopted a secular performance form independent of religious ritual. At the same time, many in Western society have assigned the secular theater a religious importance and power, particularly during the mid–twentieth century, when interest in so-called primitive cultures surged.

**RITUAL COMPRISING PERFORMATIVE ELEMENTS.** To understand the relationships between these various forms and concepts it is useful to examine the ritual practice of Egungun. Egungun ritual influenced later performance forms in Yorubaland and what came to be known as Nigeria. Yoruba religion centers on deities related to nature (the *orisha*) and ancestor worship. The followers of Yoruba believe human spirits travel back and forth to a spiritual plane between lives, and followers look to the spirits of their ancestors for guidance.

The ancestor may appear to someone in material form embodied by a dancer from the Egungun secret society. The ancestor can be summoned at particular times of need or may appear regularly during cyclical rituals, such as the Egungun Festival. The dancer wears elaborate costumes, which consist of a mask and long strips or panels of fabric. The dancer whirls around so that the long strips of fabric fan out and create a breeze. This breeze is said to be a blessing passed from the ancestors to the living. No one may touch the dancers, however, and men with whips or sticks keep the dancers and the spectators separated.

The Egungun ritual contains other performative elements, including songs of praise for the *orisha* and satirical sketches. The ritual does not possess the elements of a ritual drama in that it does not contain a set narrative, characters, or specific dialogue, but according to Joel Adedeji (1972), Egungun had a direct influence in the development of dramatic forms such as the Yoruba Alarinjo theater and on the postcolonial drama of such writers as Wole Soyinka (b. 1934) (Adedeji, 1972, p. 254).

**RITUAL DRAMA.** The earliest known record of ritual drama comes from an Egyptian stele erected around 1868 BCE. It is the account by Ikhernofret of his participation in the Mysteries of Osiris at Abydos. The stele reads like a list of heroic accomplishments: "I overthrew the enemies of Osiris. I celebrated the *Great-Going-Forth,* following the god at his going. I sailed the divine boat of Thoth." The drama he is recounting, often called the *Abydos Passion Play,* recounts the life, death, and resurrection of Osiris. It is difficult to get an accurate idea of how elaborate or developed the performance may have been or where one might place it on the continuum between ritual and drama.

Another example of ritual drama is the Mayan dance drama *Rabinal Achí* (also known as the Dance of El Tun). Scholars have long studied the accounts of ritual warfare among the Mayans, but in the 1990s Nikolai Grube deciphered the glyph for the word *dance.* Several precolonial dances have survived, including the Dance of Giants, a solstice ritual of the lunar gods in conflict with the solar gods, and a pole dance in which dancers attached to ropes wound tightly around a pole slowly descend (fly) to the ground from the top as the ropes unwind.

The text of *Rabinal Achí* is the only Mayan precolonial dramatic text to survive. In the nineteenth century a Quechéactor named Bartolo Zis first transcribed the text into Queché using the Roman alphabet. The French priest-explorer Charles Brasseur de Bourbourg, after seeing a performance, convinced Zis to recite it to him. The drama retells the story of the ritual warfare between the Rabinal and Queché warriors during the Mayan Classic period (300–900 CE). In the story the Rabinal warrior has captured Cawek, a Queché warrior. Rabinal brings Cawek before the Rabinal chief, where Cawek's request to say good-bye to his homeland is met with silence. Cawek leaves the room and returns sometime later angry at the idea that anyone might have assumed that he had fled. He then bravely faces his sacrificial death.

The dancers of the drama, the Twelve Yellow Eagles and Twelve Yellow Jaguars, wore elaborate costumes and masks. The drama was accompanied by music, and Brasseur included musical notation in his description. His version includes two trumpets (probably European-style) and a drum, although scholars assume that other native instruments were used in the precolonial performances. The anthropologist Georges Reynaud made special note of the "parallelism" of the dialogue. The ritualistic dialogue consists of "parallel" responses in which the second speaker repeats what the first speaker says before adding more dialogue to the conversation. The dialogue also contains ritualistic salutations and closings.

Dancers continued to perform the ritual drama into the twenty-first century, although as Carlos Escobar (2001) points out, some question how much the text must have changed through the ages, especially after the Spanish priests outlawed such rituals in 1625. Zis inherited the oral text in secret, and subsequent translations present an even greater filter of the text. Richard Leinaweaver (1968) noted that in a twentieth-century production the masks, costumes, and musical instruments were placed on a sacred altar the night before the drama was staged, a syncretic practice that performers of the sacred *autos,* the Catholic liturgical dramas, also occasionally observe (Leinaweaver, 1968, p. 15).

**THE DIFFERENCE BETWEEN RITUAL AND SECULAR DRAMA.** Ritual drama developed in many societies in large part because drama and religious ritual share so many elements and structural qualities. As Richard Schechner notes in *Between Theater and Anthropology* (1985), both employ the use of "restored behavior," or behavior that is repeated. The repetition sets dramatic performance and ritual behavior apart from the behavior of everyday life. The distance of the performers from the behavior makes the behavior "symbolic and reflexive" in a way that regular behavior is not.

Religious ritual and dramatic performance both employ the use of a "frame" to set these behaviors apart from everyday life. These may be as complex as the concentric circles of ritual sacrifice that separate the world of the sacred from the world of the profane or as simple as the rectangle of the proscenium arch in the Western theater. But herein lies the key difference between ritual and the performance of secular drama.

Arnold van Gennep (1960) explained that in the ritual, such as the rite of passage, the ritual subject moves through three phases: separation, transition, and incorporation. The subjects pass through the ritual frame into a marginal, or liminal, state where their status is ambiguous. Then the subjects are restored to everyday life in a new state, with a new status. Henri Hubert and Marcel Mauss (1964) also defined ritual as "a religious act which, through the consecration of a victim, modifies the condition of the moral person who accomplishes it or that of certain objects with which he is concerned" (Gennep, 1960, p. 13). As Victor Turner (1982) noted, while ritual behavior can be defined as obligatory, collective, integrated, and transforming—or liminal—secular drama is optional, individual, removed, and although it may question the status quo or experiment with form, it is ultimately void of the transforming quality of ritual. It is, therefore, merely *liminoid.*

**DRAMA OF RELIGIOUS FESTIVALS.** Of the secular dramatic traditions, many coincide with religious festivals, and many of those can be traced back directly to a ritual drama or a ritual practice. Nigerian scholars have traced the Egungun ritual origin of Alarinjo theater, the court theater of the Oyo Yoruba kingdom that predated colonialism. While the drama may be tied to religious practice, dramatic traditions such as Alarinjo demonstrate an elaborate theatrical practice in which artisans train for specific tasks within the theatrical art, such as acting, dance, costuming, mask making, set design, or music. Often a system of guilds and schools control the selection and training of the artists and oversee the production of the theatrical event. In other words, artists are producing art for art's sake.

**SANSKRIT DRAMA.** Scholars know very little about the origin of Sanskrit drama, a performance form that remained popular from approximately the second century CE to the ninth century. While some say that Sanskrit drama has its origins in the popular traditions, others argue that it shares many elements with certain religious rituals. Regardless of its origins, the Sanskrit theater of India has a close relationship with Hindu temple festivals. According to Farley Richmond and his colleagues (1990), the *Nāṭya Śāstra,* the ancient Indian dramaturgical text, equates dramatic performance with holy sacrifice (Richmond et al., 1990, p. 47). The *Nāṭya Śāstra* also gives Sanskrit drama divine origins. In the story, Brahmā creates drama as an alternative to the less desirable behavior in which people were engaged. The gods gave the priests the charge of creating and maintaining the dramatic tradition (Richmond et al., 1990, pp. 25–26).

While Sanskrit drama, in its ancient form, did not last past the ninth century, other forms grew up in its place. Wealthy families offer *kathakali* performances at temple festivals and other important events. *Kathakali* evolved from a Sanskrit drama derivative and plays devoted to celebrating the life of Kṛṣṇa. Although it may have sprung from devotional worship, *kathakali* is an institution unto itself. The *kathakali* actor undergoes extensive training from a young age. *Kathakali* students learn elaborate makeup art specific to their character types. In addition to the dance steps, the actor must learn a series of hand gestures and complex facial expressions. It is through the face that the actor evokes the appropriate *rasa* and reflects the psychic state of the character.

**THE ORIGINS OF GREEK DRAMA.** Also associated with a religious festival, Greek tragedy supposedly evolved from dithyrambs, or choral dance drama, to honor the demigod Dionysos. To some extent, high school and college textbooks have oversimplified the relationship of tragedy to Dionysian worship, influenced perhaps by the century-old theory of Gilbert Murray that rituals of vegetation deities, specifically the Dionysian *sparagmos* (ritual rending), were evident in the tragedies of Euripides. However, as William Ridgeway suggests (and Herodotus before him), dithyrambic performance was not limited to religious worship as the people of Sicyon used the dithyramb as a tribute to ancestors and dead heroes. Also while the dithyramb may have influenced the development of tragedy, the dithyramb continued to develop as an independent form. Scholars have begun to look at Greek dramatic forms as having a multitude of influences instead of looking for one ritualistic ur-drama that must have predated Aeschylus.

In the sixth century BCE Peisistratus established the Greater Dionysia. The festival included many activities celebrating wine and fertility, such as the procession of the phallus. Like two of the other Dionysian festivals, the Greater Dionysia included dramatic contests. According to the *Marmor Parium,* the first tragic contest occurred in 534 BCE. Although the priest of Dionysos occupied the central seat at the dramatic performance, the dramas themselves do not reflect a particular religious belief. Rather, they reinforce Athenian class and political ideology. Athenian playwrights of the fifth century BCE seem particularly interested in analyzing the benefits of Athenian institutions, such as democracy or the courts. The plays were performed at a religious festival but other than that have very little connection with religious thought.

**RELIGION AND DRAMA AT ODDS.** While many religions included drama as an important part of religious observance, some religions (especially the Christian and Islamic) forbade theater. Even before Rome became a Christian empire in the late fourth century CE, the early Christian Church looked with disfavor on dramatic performance. Tertullian wrote *De Spectaculis* at the end of the second century CE, sometime after his own conversion to Christianity. He devoted his entire treatise to explaining why Christians should not attend any of the entertainments such as races, gladiatorial combat, Atellan farce, and tragedies.

Most of Tertullian's explanations are simple: Christians should not take pleasure in watching others being harmed, nor should they witness licentious behavior. His thinking also reflects some of the complexities of early Christian thought. He noted that watching such entertainment aroused passions that could lead to sinful feelings and actions. Tertullian condemns the practice of acting itself, stating: "[God] regards as adultery all that is unreal. . . . He never will approve any putting on of voice, or sex, or age; He never will approve pretended loves, and wraths, and groans, and tears" (chapter 23). Tertullian found the very idea of performing a role sinful.

In the first half of the treatise, Tertullian lays out what seem to be the most vehement of his reasons for avoiding the entertainments: their pagan origins. The fact that the theater of Rome was a temple of Venus and that the Greek theater came from the Dionysian festivals, Tertullian states, are reason enough to avoid theatrical entertainment. The theater became the site of conflict between Roman pantheism and emerging Christianity.

The Catholic Church, in its quest for a monopoly on spectacle during the medieval period, continued to campaign against the theater, decreeing excommunication for anyone who attended theater instead of church and declaring that no plays should be performed on Sundays. While very little evidence exists of secular drama's persistence and development during this time, scholars deduce that the continual stream of declarations by the church is evidence enough.

**LITURGICAL DRAMA: MEDIEVAL RITUAL DRAMA.** In the late medieval period the Catholic Church began to develop a theatrical practice of its own. Many scholars believe that the liturgical drama grew out of the Mass in the form of a trope, or a lengthened musical passage used to elaborate some moment in the liturgy. The most widely cited trope is the *Quem Queritis,* the trope that accompanies the Easter Mass in the form of a dialogue between the three Marys and the angel at the tomb. This simple passage was accompanied by stage directions written in the tenth century by Bishop Ethelwold in the *Regularis Concordia,* instructing the monks to position themselves around the tomb "in imitation of the angel seated in the tomb, and of the women coming with spices to anoint the body of Jesus" (Gassner, 1963, p. 37). The tropes were performed on the *platea* (a flat space in the front of the church) in front of a mansion (a small structure that signified a location such as the sepulcher, manger, or Hellmouth).

The theory of the development of liturgical drama holds that these miniature dramatic presentations in the form of tropes became more elaborate and developed into the later outdoor vernacular religious drama, following the ritual-to-drama trajectory. But some scholars, such as Dunbar Ogden (2002), dispute that, pointing to the fact that the tropes continued to develop as a separate form parallel to the outdoor drama (Ogden, 2002, p. 35).

**CYCLE PLAYS, MIRACLE PLAYS, AND MORALITY PLAYS: MEDIEVAL RELIGIOUS DRAMA.** With the establishment of the Feast of Corpus Christi as a churchwide celebration by Pope Urban IV in 1264, outdoor religious drama began to form. Whether it developed from the trope or not, the festival allowed for several developments: the presentations could be much more elaborate outdoors, and the stories could be performed in the vernacular because they were situated outside of the formal Mass. Furthermore, since the festival was an annual festival, all the events of the church calendar were covered at one time, allowing for the dramatization of the life of Jesus or even the entire Bible from the Creation to the Last Judgment. The outdoor cycles continued to use the mansion and *platea* staging from the indoor pieces.

In addition to the cycle plays, groups of performers began to perform miracle plays and morality plays. Miracle plays dealt with the lives of saints or participated in debating a church controversy. *The Croxton Play of the Sacrament* examined the issues of transubstantiation and whether Jews can convert to Christianity. Morality plays instructed the audience in how to be a good Christian. For instance, *Everyman* instructs Christians to attend confession regularly in order to assure that their accounts are in order when death unexpectedly arrives.

**CHRISTIAN DRAMA IN THE AMERICAS.** By the dawn of the Renaissance, Christian drama was popular all over Europe from the cycles of the British Isles to the *autos* of Spain. The *autos* quickly spread to the Americas with the colonization of much of the New World by the Spanish in the sixteenth century. The priests who accompanied the conquistadors attempted to supplant indigenous rituals with *autos* to indoctrinate the indigenous people in the ways of Christian practice.

The priests also encouraged the converted native people to stage their own Christian pageants, which became an opening for the performance of political subversion. Many scholars have noted the contradictory semiotics of *La conquista de Jerusalén* (The conquest of Jerusalem, 1543). The Franciscans charged the indigenous converts of Tlaxcala to perform the pageant during the Feast of Corpus Christi. The frame of the pageant is the liberation of Jerusalem from the Moors. In a layering of symbols, the Christians were dressed as the new captain general of New Spain. The Moors were dressed like the former captain general, the conqueror of the Aztecs, Hernando Cortés. This created a performance of the "reversal of the conquest," with the indigenous people defeating Cortés at Jerusalem.

**CHURCH INFLUENCE ON MODERN SECULAR DRAMA.** With the Renaissance came a new secular drama, especially in places where the religious drama was outlawed to prevent religious conflict in a Europe increasingly divided along Catholic and Protestant lines. In England, Elizabeth I outlawed religious drama in 1559 and specifically suppressed cycle plays in 1570. University students continued to study the classic plays of Rome and used them as models along with a variety of other sources, including the Bible, for Renaissance drama. Christopher Marlowe's *Doctor Faustus* (c. 1588) reflects the conflicting cosmologies of the medieval world and the English Renaissance. The play resembles a morality play with the forces of good and evil fighting for Faustus's soul. Although Faustus condemns himself to hell for the knowledge he gains, he remains a Renaissance man, a humanist, and a seeker of scientific truth.

In Italy, with the power of the church on the wane, powerful Italian families, such as the Medici family, began to celebrate an Italian culture that preexisted the church. The Medici family poured money into creating spectacles that often used Roman mythology as the main theme. But Christian morality maintained an influence on the high arts, and morality occupied an important position as a central component of the concept of verisimilitude in drama. The neoclassicists, who advocated returning to the ideals of Horace and Aristotle in the sixteenth century, stressed that truthfulness meant a higher, moral truth rather than a specific, historical truth.

Christian clergy continued to be a powerful force in shaping the direction of the development of Western drama. A few years after Protestants in England had managed to successfully close the theaters during the Commonwealth, the Protestant minister Jeremy Collier helped to put an end to Restoration comedy when he wrote his "Short View of the Immorality and Profaneness of the English Stage" in 1698. Unlike some of his predecessors, Collier felt that drama should not be banned because drama could be used for didactic purposes. But Collier disliked how evil was rewarded in Restoration comedy. He objected to the licentious behavior of Restoration comedy characters, particularly the women. He also objected to characters taking the Lord's name in vain and mocking the clergy. These were sentiments that were shared by the increasingly powerful merchant class, initiating a sea change in the nature of English drama.

**MODERN THEATER AS RELIGION.** While experimental movements in the nineteenth and twentieth centuries seemed to challenge the Christian moral imperative, many avant-garde artists became interested in the spiritual practices of non-European cultures. One of the most influential of these artists was Antonin Artaud (1895–1948). In 1931 Artaud witnessed a Balinese dance at the Colonial Exposition, a performance that had an immediate and profound effect on Artaud and launched his writings about his "Theater of Cruelty." For Artaud, the key to the truth lay hidden deep within the human psyche, a psyche that had been perverted and repressed by civilization. Artaud wanted a theater that would act on the senses with sounds and images visceral enough to force the members of the audience to see their true selves. For Artaud, the so-called primitive societies of Bali and Mexico had escaped the effects of European civilization and were able to convey something deeper in their performance by way of gesture and facial expression.

This primitivism of Artaud's Theatre of Cruelty influenced several avant-garde artists: Jerzy Grotowski of the Polish Laboratory Theatre, Richard Schechner's Performance Group, Julian Beck and Judith Malina of the Living Theatre, and Joseph Chaikin of the Open Theatre. Grotowski (1968) sought to use ritual to induce actors into "casting off his everyday mask" and to lose themselves as a kind of sacrifice (Grotowski, 1968, p. 34). He advocated a theater without lights, a stage, or elaborate costumes so that he could remove the separation of the actors from the audience; and he used long and arduous rehearsal workshops to create *communitas* among his actors.

In 1968 the Open Theatre embarked on the Bible Workshops, a series of improvisations designed to explore some of the concepts in the Bible. Through these workshops the Open Theatre explored the life of Jesus and the stories in *Genesis.* Chaikin encouraged the company members to read Carl Jung and Joseph Campbell to inform their exploration. The improvisations developed into the dramatic work *The Serpent: A Ceremony,* a play that drew connections from modern political assassinations to what the group believed were the roots of such violence in the Bible.

**FEMINIST SPIRITUALITY AND THE THEATER.** In the 1970s and 1980s cultural feminist theater took up the use of ritual in performance. As Jill Dolan noted in *The Feminist Spectator* *as Critic* (1988), many women left avant-garde groups and formed their own when it became clear to them that women's issues were being ignored. As part of the feminist theater movement in France, Hélène Cixous reiterated Artaud's belief that gesture and movement could somehow subvert language, which to Cixous was phallocentric. But as Dolan pointed out, women's groups in the United States rarely followed her lead and looked instead to discover a feminist narrative, which was seen as cyclical and connected to the earth. The cultural feminist groups often used ritual in performance. For example, the group At the Foot of the Mountain used ritual as a companion to their performance of *Ashes, Ashes* in which they asked the audience to visualize saying good-bye to someone close to them as the apocalypse approached. Dolan recounted a ritual performed in conjunction with *Story of a Mother II* in which the group encouraged the audience to celebrate mother-daughter relationships and their matrilineal history. This development in cultural feminist theater fit within a larger trend by cultural feminists to return to Wiccan spirituality in what was perceived as a return to a matriarchal society that predated patriarchal religions such as Christianity.

**POSTCOLONIAL DRAMA AND RELIGION.** In the nations formerly colonized by the British, many scholars have documented the ways colonial administrators, uneasy with the idea of using Christianity to teach English morality, used Shakespeare in place of the Bible. Now, as part of the project to revive national traditions, many native dramatists have employed religious elements from their precolonial cultures.

Miguel Ángel Asturias used the Mayan dance of Los Gigantes in his play *Soluna* (1955), a title that literally means *Sun/Moon.* The central character envies the spiritual life of the indigenous peasants around him. He has been told that a mask he received from a sorcerer will make time run backward. He dreams that the peasants act out Los Gigantes, the Mayan ritual fight between the agents of the Sun and the agents of the Moon. When he awakens, the train carrying his wife, who had been in the process of leaving him, wrecks after an eclipse and an earthquake, and she returns to him. While Asturias appropriated Mayan spiritual elements in his work, it should be noted that Asturias was not a Mayan but rather a white Guatemalan anthropologist who studied with Georges Reynaud at the Sorbonne. Some scholars have been critical of his European-informed look at the Guatemalan native people.

Wole Soyinka has written about Yoruba spiritual practices in his plays, such as *Death and the King's Horseman* (1975), which involves Egungun and the ritual suicide of the king's horseman on the night of the king's burial. The foreign administrators, who lack understanding and sensitivity to the Yoruba religion, continually trivialize Yoruba practice, even to the point of wearing Egungun costumes to a Western masked ball. They attempt to stamp out the "barbaric" customs and interfere with the horseman's task to tragic effect.

**THE FUTURE OF DRAMA AND RELIGION.** The future of drama and religion is impossible to predict. In some cases, religion will continue to act as a censor, suppressing seemingly objectionable material, as in the case of funding being pulled from four performance artists who were National Endowment for the Arts recipients in 1990. Certainly the two will continue to share common elements, especially their creative potential. As Schechner says of ritual, dramatic performance "opens up a time/space of antistructural playfulness" where creative choices and solutions can be explored and rehearsed (Schechner, 1993, p. 233). The exploration of new religious ideas will continue to spur new material and create new dramatic practices, and drama will continue to be shaped by religious ideas.

## DRAMA: ANCIENT NEAR EASTERN RITUAL DRAMA [FIRST EDITION]

It is now commonly recognized that drama in the ancient Near East originated as a program of ritual acts performed at seasonal festivals, especially at the New Year festival. The central theme of this program was "off with the old, on with the new"; it was designed to mark the end of one lease of communal life and to ensure the next. The program is attested in many parts of the world and survives—albeit in attenuated form—in folk plays still performed in northern Greece and in such popular diversions as the English mummers' play.

The principal components of this ritual program are as follows:

1. The deposition (or even execution) of the reigning king, regarded as the embodiment of communal life momentarily ended, followed by the installation of a successor, regarded as a new avatar (or incarnation) of the ideal, perpetual kingship ("Le roi est mort; vive le roi!"). Often a temporary king is appointed during the interval.
2. The ceremonial "marriage" of the new king to a chosen bride in order to ensure the continued fecundity of the people. This epitomizes a brief period of sexual license observed by the community as a whole to the same end.
3. A combat between principals or teams symbolizing, respectively, new year and old, summer and winter, rainfall and drought, or simply life and death. When waged by principals, the victor (necessarily the embodiment of regeneration) becomes the king. Often the defeated antagonist is identified as a dragon who has impounded the subterranean waters and caused drought, or who has embroiled the sea and rivers and brought floods. His discomfiture ensures the irrigation of the soil in proper measure, and the power to control it is then formally vested in the victorious new king.
4. A communal feast, whereby members of the community recement their bonds of kinship by commensality, thus becoming companions in the literal sense of the word. The community's gods are thought to be present either as guests or as hosts. The ancestral dead are likewise in attendance, since the ongoing existence of the community necessarily involves the past as well as the present and future ("Our founders are with us in spirit").

Often the ritual program takes the form of the burial and subsequent disinterment of a puppet representing the temporary death and subsequent revival (resurrection) of vegetation and fertility.

Six factors turn this ritual program into drama in the modern sense of the term:

1. It comes to be interpreted as the representation in present time of a situation or process that essentially transcends the particular moment when it is performed—that is, as the punctualization of something essentially transtemporal. This is accomplished by representing the successive functional acts as incidents (or episodes) in a myth or story, the actors then impersonating supernatural beings, such as deities, or demons.
2. There is shift of focus from the ritual plot to the interplay of characters. The actors are no longer cardboard figures representing such abstractions as old year and new, life and death; the combat becomes one of conflicting personalities.
3. The action comes to be performed by a professional class (e.g., priests) rather than by the community as a whole. The broad masses then constitute an audience. This converts drama in the original sense of the term, namely, something done (Gr., *draō*, "do"), into theater, something watched (Gr., *theaomai*, "watch"), that is, into a spectacle.
4. Subsidiary elements are introduced in order to enhance popular interest and attention. Familiar songs are inserted in which the audience may join; messages are repeated verbatim when delivered, so that latecomers to the performance may catch up with the preceding action; the several incidents are tricked out with details drawn from traditional folklore; things are done abortively twice and successfully only at the third try, thereby increasing momentum and excitement.
5. The ritual combat is sometimes rationalized as the commemorative reenactment of a historical event, the actors being identified with traditional heroes and their adver-

saries. In certain parts of Greece, for instance, the opposing teams were portrayed as the followers of Alexander and Darius respectively, and in the English mummers' play they become at times King George and Napoleon. Indeed, by this process the ritual purport may be obscured altogether, as when the folk play develops into the enactment of an incident from scripture (e.g., the Flood, the Annunciation, or the Crucifixion in the medieval mystery plays or the story of Esther in Jewish plays staged at Purim).

6. In the course of time, when the original function of the performance has been forgotten, the action may degenerate into burlesque, farce, or masquerade, as is often the ase in the modern survivals. This development eventually gives rise to comedy.

The earliest examples of ritual drama come from the ancient Near East. They are preserved in hieroglyphic and cuneiform texts emanating from the civilizations of the Egyptians, the Babylonians and Assyrians, the Hittites of Asia Minor, and the Canaanites of ancient Syria. These texts date in general from the second and third millennia BCE, although their contents in several cases represent traditions older than the documents themselves. Most of them are explicitly associated with seasonal ceremonies, either being accompanied by a formal "order of service," or else containing interspersed liturgical rubrics. It should be observed, however, that since the ritual drama was (and still is) often performed in pantomime, the dialogues being recited and the story narrated by a "lector," some of the texts appear to be scripts for these "presenters" rather than libretti for the actors.

**EGYPT.** The Egyptian texts are the oldest. The *Ramesseum Coronation Drama* is inscribed on a papyrus unearthed in 1896 in the precincts of the Ramesseum at Thebes. The manuscript dates from the reign of Sen-Wosret (Sesotris) I (c. 1970 BCE), but it is believed that the contents go back some thirteen centuries earlier to the time of the first dynasty. The text was designed for the ceremony of installing (or reinstalling) the pharaoh at a New Year festival. It includes such elements of the ritual pattern as the combat, the death of the old king and the lamentation over him, the investiture and enthronement of the new king, a communal feast attended by the governors of the several provinces (nomes) of Egypt, and various acts (for example, the threshing of grain and the milking of goats) designed to promote fertility.

The successive ritual acts are construed as an enactment of the mythic discomfiture of the god Osiris by his evil brother Seth. The combat is taken to represent the fight between them. The new king is identified with Horus, son of Osiris, who avenged his father and defeated Seth. The two sacred women who bewail the slain king are the goddesses Isis and Nephthys, who bewailed Osiris. The official who invests the new king is the god Thoth, who adjudicated the contest between the gods. The various regalia are explained symbolically: the maces handed to the new king are the testicles of Seth wrested from him by Horus and then grafted upon himself to increase his vigor. The threshing of the grain represents the belaboring of Osiris by his rival. Interspersed rubrics identify the actors with their mythic counterparts and list props for the various scenes.

The *Edfu Drama* is engraved, with illustrative reliefs, on one of the walls of the temple at Edfu (Idfu; ancient Bekhdet); this text was composed for a ritual performance at a spring festival. Its central theme is the reinvigoration of the king as the epitome of communal life. It consists of a prologue, three acts (subdivided into scenes), and an epilogue. At one point, there is mention of a "chief lector," and since there is no indication of separate speakers, it is probable that the action was performed in pantomime and that what we have before us is simply the script for that "reciter."

The contents include such ingredients of the ritual pattern as the combat, the installation of the victor as king, and a "sacred marriage" at which he is the bridegroom. The action is interpreted mythically: the king is the local god, Horus of Bekhdet; his adversary, termed "the Caitiff," or "Monster," is identified as a hippopotamus (analogous to the dragon elsewhere), and the bride is the goddess Hathor of Dendera.

The *Memphite Theology* (or *Memphis Drama*), inserted on a slab of black granite now in the British Museum, was written in the reign of Shabaka (c. 712–697 BCE), but a preamble states expressly that it was copied from an original, which has been dated by modern scholars some eighteen centuries earlier. It was designed to be performed at a festival.
