VERSION 4.5

FOLIO 4.5—YOUR SOLUTION FOR PUBLISHING PROFESSIONAL INFORMATION ON CD-ROM AND DVD

For more than a decade, Folio has earned a reputation as the most effective solution for publishing electronic information on CD-ROM or DVD. Chances are, you're already one of more than 600 companies that depend on Folio technology.

Folio 4.5 builds on that reputation with new tools and features that make it even easier to collect disorganized data from different sources, transform it into searchable, useful information, and publish it on CD-ROM or DVD.

A MORE BUSINESS-SAVVY APPROACH

Folio 4.5 is still your best CD and DVD publishing option because it squarely addresses the business issues you care about most:

LOWER COSTS

Folio 4.5 makes the process of assembling, editing, and publishing electronic information efficient and cost effective—even for non-technical editors and content managers. An intuitive Folio Editor makes it possible for anyone to define styles, establish fields, and create links with minimal training. A flexible distribution kit automates the process of securing, packaging, and publishing content—complete with Folio's remarkable Windows client application—on CD-ROM or DVD. And simple, royalty-based pricing and innovative licensing programs are designed to match your business model perfectly.

PROVIDE THE BEST POSSIBLE USER EXPERIENCE

A proven, full-featured Windows client offers your customers an impressive arsenal of search and annotation tools, so they can find information more quickly, personalize it, and place it in its proper context —without actually modifying the original content. This makes the information you publish more accessible, relevant, and valuable.

MAINTAIN SECURITY AND CONTROL

Folio 4.5 makes it easy to protect intellectual property—by granting the right people secure, controlled access to the right information at the right time. This includes the ability to specify who can access information, how long they can use it, and how many people can access information simultaneously.

CREATE NEW REVENUE OPPORTUNITIES

Precise, exacting Folio 4.5 security and access controls can help you protect your most valuable information. They can also help you market and sell that information more effectively—by allowing you to create subscriptions, sample publications, limited-time trials, and more.
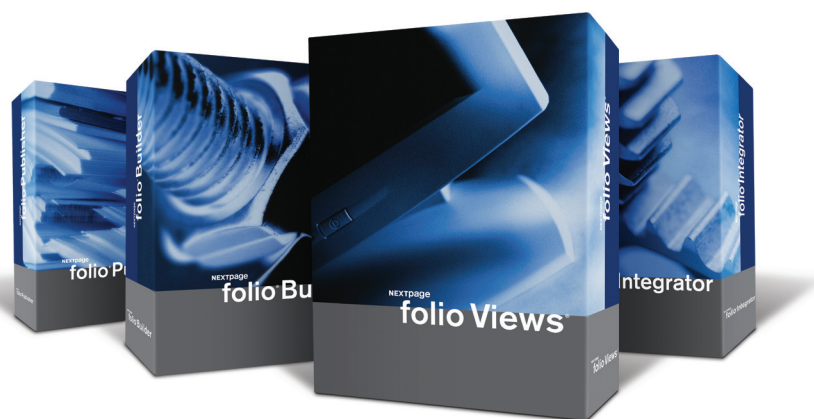

Proven. Trusted. Complete.

NEW CAPABILITIES FOR TODAY'S WORLD

Folio 4.5 expands Folio's legacy as the most proven and innovative electronic publishing solution with an impressive list of new features and capabilities.

New import Filters—With Folio 4.5, you can combine information in many different formats—including Microsoft Word 2003, 2000, and XP—into a single, searchable Folio Infobase.

DVD Publishing—Digital Versatile Disc (DVDs) are capable of storing more than 4.7 gigabytes of information. Folio 4.5 lets you take advantage of this remarkable storage capacity with fully certified DVD distribution capabilities.

Improved Content Validation—Intuitive new tools make it easier to check your content for errors and invalid links, so you can publish error-free titles more quickly and efficiently.

THE FOLIO 4.5 PRODUCT SUITE

The Folio 4.5 publishing suite consists of four proven products that work together to create a comprehensive electronic publishing solution.

Folio Views®—An intuitive, full-featured Windows client application that gives users all the tools they need to find, organize, and annotate large collections of information.

Folio® Builder—A collection of tools that simplify and automate the process of converting, compiling, and editing information from many different sources to create one searchable and secure Folio Infobase.

Folio® Publisher—Software that makes it easy for professional publishers to package and sell information titles, a full-featured Folio Views client, and a redistribution license on CD-ROM or DVD.

Folio® Integrator—A software developer's kit that allows corporations and publishers to build customized interfaces, develop specialized capabilities, and integrate Folio technology into existing systems and applications.
